Truly a formidable list. No candid mind will fail to admit that the case for optical refinements in mediæval architecture is now quite as convincing as it is in Greek. In fact, one might hazard the opinion that these evasions of a too rigid symmetry are characteristic of any architecture that is really alive. In the light of the facts we must revise our view of the mediæval architects. They were not inspired dreamers, but knew what they were about. Wherever the Middle Ages are really studied the same thing results. We find not the romantic, instinctive people of historical fiction, but men essentially like ourselves, and a society not picturesquely disordered, but highly organized. Professor Goodyear's studies of mediæval architecture gain a credibility from the parallel investigations in literature and art of such scholars as Petit de Julleville, Gaston Paris, Xavier Kraus, and Emile Mâle.

Part of the art collection of Mrs. Charles H. Steinway was sold at the Fifth Avenue Art Gallery, in this city, last Friday. The highest price paid was $5,100 for an Edward Branders canvas, Near Boulogne, while a Henner painting brought $2,500, and one by Berne-Bellecour, $3,100.

Ch. des Granges, the French writer on the history of art, died recently. He was born in 1825. For many years he was director of *La France illustrée* and also of *L'Etoile du foyer*, and he was one of the oldest members of the Société des Gens de Lettres.

Finance.

MOODS OF THE INVESTING PUBLIC.

Two weeks ago, it was quite universally declared that "Wall Street sentiment" was cheerful. The week before it had been exceedingly gloomy. Last week, pessimism was again in the ascendant. These fluctuations apparently reflected the shifting ideas regarding the general investing public. They could not have been altogether a result of visible financial causes. If much has been made of the gold exports, the large demands on capital by corporations, the abnormal excess of imports over exports, the high cost of living, there is the one obvious comment that all these conditions existed in 1909, and were followed by a violent rise in the Stock Exchange.

The mood of an investing public may or may not be the mirror of fundamental financial conditions. Money, or credit, or both, the public must have if even a favorable mood is to be of any value to the markets; but except in case of a panic month or a really serious business depression, it is likely to have these at command, if it wishes to use them. What combination of circumstances—political, social, or financial—could be imagined much more unfavorable on its face to a public's mood for excited speculation than the state of affairs to-day in London? Nevertheless, the London public selected this moment for its plunge.

Our own public's mood in 1908 was a psychological study. Conditions of trade were distinctly unfavorable; almost all precedent favored a year of genuine hard times and Stock Exchange depression. Harriman, however, guessed the public's mood, started the ball of speculation rolling, and the public scrambled after it. Indeed, by Harriman's own admission, the speculating public actually snatched the stock market away from him after the November election, and rushed along at a pace which extorted a warning even from the initiator of the movement.

There are occasions when the outside public's mood is as hard for capitalists and speculators to discover as it seems to be to-day; and there are times when the most ordinary sagacity can discover it. A notable instance of the latter sort was 1901. The American public's imagination had been fired by what it saw in the markets of the day. Our "foreign trade credit balance" had risen from $23,190,000 in 1895 to $649,000,000 in 1900. Wall Street, which, in 1895, had been forced to apply to London for help in a crisis of its own, was now subscribing to British war loans in blocks of $100,000,000. Holders of stock of industrial companies which were absorbed and amalgamated, found themselves made rich overnight. Railway shares were bought up on the Stock Exchange in unprecedented amounts and at violently advancing prices, and the public, which did not then know that the purchasers were other railway companies who were about to issue bonds to raise the money, supposed that boundless reserves of individual capital were being tossed into the investment market.

The resultant mood of wild enthusiasm, which grew into passionate resentment at any one who predicted an untimely end to the speculation, was nothing more than the Wall Street of 1901 might reasonably have expected. What it did not expect was the instantaneous change in the public's mood after the 9th of May. So far from regarding that spectacular crash as a passing incident of the period, the public's attitude, during at least the three succeeding years, was one of suspicion and distrust. Whatever inducements Wall Street dangled before its eyes, the public would not buy, and before very long promoters and syndicates who had accumulated stocks, in expectation that the April craze of 1901 would forthwith be resumed, were liquidating at a prodigious loss.

Never, perhaps, have the moods of the general public been more sharply contrasted than in the present condition of things at London and at New York. Such London critics as have kept their heads in the "rubber craze" are beginning to draw comparisons with the famous South Sea Bubble, for the fury of speculation in enterprises of whose actual value the English public knows nothing whatever. Yet at this very moment the American public seems to be gazing in sullen apathy at the market for stocks and bonds, and a day's half-million-share sales on the Stock Exchange are notoriously made up of swapping of stock by rich professional operators on the floor.

With two such diametrically opposite phenomena, in markets so closely affiliated with one another, it is impossible not to wonder which mood, London's or New York's, most truthfully reflects the real situation of the day, and which gives the better clue to the financial future. Perhaps one answer is, that our own speculative markets had their fling in 1909, and that this is the morning after; whereas London waited until 1910. As for London now, very few people in this country doubt to-day that the London "rubber mania" is riding for a fall, and riding fast, or that, with the political complications now overhanging England, the fall will be severe. The one grain of comfort may be found in the plausible inference, even granting such presumptions, that the mere fact of the London public's ability to engage in such a speculation means in England, at all events, public prosperity behind the excesses of the markets. At any rate, this was so with ourselves in 1901, when the departure from our market of the chastened, angry, and crestfallen speculative public had not the slightest influence on the country's wonderful expansion in legitimate trade activity.

English Literature
IN ACCOUNT
With Religion
By Edward M. Chapman.
Author of "The Dynamic of Christianity."

This unusual book is a study of the debt of English literature, through the past century and a half, to the religious impulse. No serious student of literature can read the book without drawing from it a flood of new light upon the ideals of the nineteenth century, while it has of course special interest for those vitally concerned with religious matters. $2.00 *net*. Postage 17 cents.

PSYCHOLOGY OF POLITICS AND HISTORY
By the Rev. J. A. DEWE, M.A., Honours Graduate of History, School of Honours, Victoria University, Manchester, England; recent Professor of History in Military College of St. Thomas, St. Paul, U. S.; Professor of History in Ottawa University, Ottawa, Canada. Crown 8vo. $1.75 *net*.
LONGMANS, GREEN, & CO., New York

Memoirs of Henry Villard
Journalist and Financier
1835-1900
Two volumes, with Portraits and Maps, $5.00 *net*. Postage, 35 cents.

An autobiographical record of the varied and romantic career of the war journalist who subsequently became a power in the financial world, and carried the Northern Pacific Railroad to completion. Full of incident and valuable for its reminiscences of Lincoln and other prominent men of the time, as well as for its descriptions of important battles of the Civil War.

"A book of extraordinary interest. It is written with great ability, in a clear and flowing style; it details with perfect candor the incidents of a great career; it is an admirable report of great events, all of which the writer saw, and a large part of which (after 1870) he was; it exhibits the rise and growth of a rich and powerful personality and a character at once remarkable for its simplicity and its variety."—JOHN WHITE CHADWICK, in the *New York Times* Saturday Review.

HOUGHTON MIFFLIN COMPANY
BOSTON AND NEW YORK.

Letters and Memorials

OF

Wendell Phillips Garrison

Editor of The Nation 1865–1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait. It likewise preserves the notable letter of appreciation addressed to Mr. Garrison by more than two hundred contributors to the *Nation* on the completion of his fortieth year of service, and his acknowledgment thereof.

Price $1.50 net, postpaid

Houghton Mifflin Company

BOSTON NEW YORK

Books for the Teacher and the School Library

LIPPINCOTT'S EDUCATIONAL SERIES

Edited by DR. M. G. BRUMBAUGH, Superintendent of Schools, Philadelphia

Thinking and Learning to Think . . . Cloth, $1.25

By NATHAN C. SCHAEFFER, Ph.D., LL.D.

Superintendent of Public Instruction for the State of Pennsylvania.

A series of clear and practical lectures on the difficult art of teaching pupils to think, designed to throw light upon this one important phase of pedagogy, without in any way pretending to supplant the systematic treatise on psychology and logic.

History of Education . . . . . Cloth, $1.25

By E. L. KEMP, A.M.

Principal of East Stroudsburg Normal School.

This book traces very carefully the development of institutions, theories, methods, courses of study, branches of learning, pedagogical training, and maintenance, in all principal countries of ancient and modern times. It is well proportioned, and free from bias or prejudice. It grew from experience in the class-room, and is adapted to use there, especially for normal schools and teachers' reading circles.

Kant's Educational Theory . . . . . Cloth, $1.25

By EDWARD FRANKLIN BUCKNER, Ph.D.

Professor of Philosophy and Education in the University of Alabama.

The literature that creates unrest by arousing inquiry is all too rare. It is believed that this volume will do much to quicken an interest in fundamental educational principles.

The Educational Process . . . . . Cloth, $1.25

By ARTHUR CARY FLESHMAN

Pedagogy and Training, State Normal School, Slippery Rock, Pa.

The author has had an extended discipline in the theory and the practice of educational things, and presents in this volume his best thought as guidance for those who possess the hunger to know the meaning of every act of the teacher in terms of purpose and in formula of law.

The Study of Nature . . . . . Cloth, $1.25

By SAMUEL CHRISTIAN SCHMUCKER, A.M., Ph.D.

Of West Chester (Pa.) State Normal School.

The author, with rare insight and skill, has here given to teachers in orderly array such typical exercises and such appreciative interpretation of the things in our common environment as to make delightful the interpreting of nature to a child.

Modern Methods for Teachers . . . Cloth, $1.50

By CHARLES C. BOYER, Ph.D.

Professor of Pedagogics in the Keystone State Normal School at Kutztown, Pa.

A manual for normal schools, reading circles, and the teachers of all grades.

SCHOOL LIBRARY NECESSITIES

Lippincott's New Gazetteer

Edited by ANGELO HEILPRIN and LOUIS HEILPRIN

A geographical dictionary of the world, giving an accurate picture of every corner of the globe in its minutest details, as it exists in the twentieth century.

"Libraries having few reference-books will find in this volume a mine of geographical information, which will practically supply their needs in its field."—*Public Libraries, Chicago.*

Over 2,000 pages. Quarto. Sheep, $10.00 net; half Russia, $12.50 net.
Patent thumb index, 50 cents extra.

Chambers's Cyclopedia of English Literature

NEW REVISED EDITION

A clear and comprehensive survey of English literature from the beginning to the twentieth century.

Contains an authentic biography of every American and English writer of note, whether poet, dramatist, novelist, or historian, including a portrait wherever it has been possible to secure a satisfactory likeness.

It is the cheapest authoritative reference work of similar scope now in print.

Illustrated with approved portraits and drawings. Over 2,500 pages. Complete in three imperial octavo volumes. Cloth, gilt tops, $12.00 net per set.

Lippincott's Dictionary of Biography and Mythology

By JOSEPH THOMAS, M.D., LL.D.

This magnificent work, which for years has been in its department without a rival in the estimation of scholars, has lately undergone an extensive revision, and is now offered in a greatly improved form, embracing, besides the revision of the articles included in previous issues, numerous new biographical sketches of persons who have lately become of sufficient prominence to merit mention.

Octavo. Sheep, $8.00 net; half morocco, $10.00 net.
Also a Subscription Edition in two volumes.

Worcester's Dictionaries

NEW PRIMARY—NEW SCHOOL—NEW ACADEMIC—NEW COMPREHENSIVE

NEW and REVISED EDITIONS

"The remarkable beauty of the Chartres sculptures makes this book a very desirable possession." —Times.

SCOTTISH EDUCATION, School and University, From Early Times to 1908. By **John Kerr, M.A., LL.D.** Net, $2.00

"Dr. Kerr's book is an admirable attempt to present within comparatively narrow limits, and from the standpoint of the reader, as well as the educationist, the story of how Scotland attained to that intellectual pre-eminence which has won the admiration of the world."
—Sheffield Daily Telegraph.

AN ELEMENTARY TREATISE ON THE DYNAMICS OF A PARTICLE AND OF THE RIGID BODIES. By **S. L. Loney, M.A.,** Professor of Mathematics at the Royal Holloway College (London), sometime Fellow of Sidney Sussex College, Cambridge.

YELLOWSTONE PARK
A new 1910 Booklet in Colors, Free

The "Wylie Way" in Yellowstone is the highest expression of the art of camping—the result of 27 seasons' actual experience. Each permanent camp an ensemble of pine-embowered tent-cottages, every tent framed, *floored* and *heated*. Cozy sanitary camps, dry, bracing air, comfortable transportation and stupendous scenery — all making the "Wylie Way" the outing experience of a lifetime. Six day tours (or longer) start daily, June 14th to September 15th, from both Park Gateways. Wylie's four-color cover, beautifully illustrated 1910 handbook is of compelling interest to travelers. Free. Address

Important New Macmillan Books

THIRD EDITION NOW READY

Mr. Winston Churchill's — **A Modern Chronicle**

The new novel by the author of "RICHARD CARVEL," "CONISTON," etc.

"By far the strongest and most interesting book Mr. Churchill has written."—*Daily News.*

"Innate, sustained humor, strong human sympathy, and a captivating 'art of putting things' . . . are concerned with a heroine original and fascinating."—*North American, Philadelphia.*

Illustrated, cloth, $1.50

Mary S. Watts's *important novel* — **Nathan Burke**

is one over which the critics are uncommonly enthusiastic: "Extraordinarily worth while," says a Chicago daily; "infinitely interesting," pronounces the *New York World.* It is long, leisurely, capital in kindly, humorous touches of portraiture, a book to keep and read again.

Cloth, 12mo, $1.50

Mr. F. Marion Crawford's *last unpublished fiction* **The Undesirable Governess**

is a highly amusing comedy of manners in the setting of English country life—a book to make Mr. Crawford's admirers regret that he did not more often indulge in such light-hearted, amusing analyses of the varied social life around him.

Illustrated, cloth, $1.50

Gertrude Atherton's *new novel* — **Tower of Ivory**

is greeted by the best critics everywhere as her "really great novel. Strong virile character study, a searching analysis of motive, a skilful solution of an intricate soul problem—the fruits of her maturity are everywhere evident."

Cloth, $1.50

Robert Herrick's *coming novel* — **A Life for a Life**

Ever since the issue of "The Common Lot," Mr. Herrick has held the rank of being the most authoritative analyst of modern social conditions. His new novel is in a totally different field from his "Together," but equally forcible, equally interesting, equally vital to an appreciation of modern American life.

Cloth, $1.50

NEW OUT-DOOR BOOKS

Manual of Gardening
By L. H. Bailey

Director of the Experiment Station at Cornell University, Editor of "Cyclopedia of American Agriculture." A practical guide for anyone who wishes to have attractive home grounds or to grow flowers, fruits, and vegetables for home use. *Profusely illustrated*

Cloth, $2.00 net; by mail, $2.14

Manual of Practical Farming
By Dr. John McLennan

It covers practically, without confusing technical terms or tables, modern methods of doing the work which almost every farmer is likely to undertake.

Cloth, illustrated, $1.50 net; by mail, $1.61

How to Keep Hens for Profit
By C. S. Valentine

Interesting papers on American breeds, modern ways of housing, egg foods, handling chicks, common-sense treatment of common diseases, etc.

Cloth, 12mo, $1.50 net; by mail, $1.61

How to Keep Bees for Profit
By Dr. D. E. Lyon

A full account of the best methods of bee-keeping by an expert and an enthusiast. *Ready this week*

Mr. Clifton Johnson's *new book*
The Picturesque St. Lawrence

Uniform with the little book on "The Picturesque Hudson" issued last fall. A capital handbook for the summer wayfarer.

Illustrated by the Author. Cloth, $1.25 net

Mr. Jack London's *new essays*
Revolution

A sincere, straightforward, vigorous statement of beliefs worthy respect because based on personal experience. *Cloth, 12mo. $1.50 net; by mail, $1.62*

Dr. Shailer Mathews's *new book*
The Gospel and the Modern Man

Prof. Mathews, holding the chair of Historical and Comparative Theology at the University of Chicago, is one of the foremost students of the relation of Christian truth to modern social conditions.

Cloth, 12mo. Ready this week

William Allen White's *new book*
The Old Order Changeth

By the author of "A Certain Rich Man," who states, in clear, readable essay form, his reasons for a faith in the future political order which is none the less keen-sighted for being refreshingly optimistic.

Cloth, 12mo. Ready this week

New volumes STORIES FROM AMERICAN HISTORY *Each: Cloth, $1.50 net; by mail, $1.61*

Frederic L. Paxson's *new book*
The Last American Frontier

Flooded with the human interest of the overland mail, the engineer's construction camps, and other forces wiping out the frontier.

Illustrated

John R. Spears's *new book on the*
American Merchant Marine

The romance of the adventurous men who carried the flag of American commerce into every port of the seven seas.

Illustrated

H. Addington Bruce's *new book*
Daniel Boone and the Wilderness Road

Like the other volumes of the series, a record of romance and adventure, none the less exciting for being true.

Illustrated

Published by THE MACMILLAN COMPANY 64-66 Fifth Ave. N. Y.

The Nation.

NEW YORK, THURSDAY, MAY 5, 1910.

The Week.

Mr. Taft's defence of Secretary Knox is another illustration of the way he suffers from the defects of his qualities. Loyalty to a subordinate, resentment at what he considers injustice to one who is faithfully working for him, and his genial good nature, all impel him to the rescue. And so we have a generous, kindly, well-meant defence of the Secretary of State. Without mincing of words he upholds Knox's policy in Nicaragua, by inference even to that shirt-sleeves diplomacy denunciation of Zelaya which is unparalleled in the history of our State Department. He even goes so far as to insist that our relations with South and Central America have never been so friendly; that Mr. Knox has gallantly carried on the policy of Mr. Root with gratifying success. Now, as it is impossible to conceive of Mr. Taft's saying anything he does not honestly believe, this would seem to be another case where the President is ignorant of the facts. Why does Mr. Taft not seek to obtain unbiassed information from men doing business with South America or from unbiassed South Americans? He would, unless we are wholly misinformed, speedily hear from all sides that Mr. Knox has undermined the work done by Mr. Root and roused a feeling of uneasiness and antagonism where previously better relations had existed than for a decade past—since the conquest of Cuba aroused general anxiety.

Newspaper comment on Gov. Hughes's proposed resignation shows a clear appreciation that the service he has rendered is not merely to the State of New York. It has awakened thoughtful men everywhere to perceive the possibilities of the office of Governor. They see that here are openings which appeal to masterful men and to the keenest of intellects. It is apparent now that if a man has the right qualities, whether in Indiana, Minnesota, Ohio, or New York, here is a straight road to a nation's esteem. But it will be objected that this has always been the case; that Grover Cleveland, for instance, won his Presidential nomination by his stalwart administration at Albany during less than two years. That is true, but a long list of mediocrities, since Cleveland, has made us forgetful of the fact, and we have failed, too, to note the rapidly growing importance of the office. This is due not only to the material development of such a State as New York, but to changed political conditions and the new industrial and social problems with which Congress has been called upon to deal in the last ten years. The readjustment of the relationship of State to nation has been one of the most striking political developments of the past few years, second only to the change in the relation of all administrative officials to corporate entities. Nobody dreamed in Mr. Cleveland's Governorship of a Public Service Commission. We were still in the hey-day of the *laissez-faire* policy. The volume of legislation was comparatively small; we had certainly not entered upon the present era of far-reaching legislation in every field of social and philanthropic endeavor.

Something of this kind was in Mr. Root's mind when he made his now famous speech warning the States that if they did not exercise their present powers and functions, the Federal Government would. It is quite suggestive, therefore, that when Gov. Hughes acted upon this advice and came out in opposition to the proposed income-tax, on the ground that certain State rights were endangered thereby, Mr. Root should be found arguing on the other side. But the case illustrates clearly how the interests of State and nation are likely to conflict. The corporation-tax, avowedly imposed more for the purpose of building up Federal control of corporations than for the sake of revenue, is another case in point. This tax may prove in practice to work injury to the taxing-power of the State. Plainly, it calls for careful study by watchful Executives, particularly if radical departures are to be jammed through Congress, like this tax, without giving the country any opportunity to pass upon them. Certainly, every one will agree that the pressing character of these corporation questions alone calls for more men like Mr. Hughes in high office.

The defeat of the Taggart machine in Indiana is the best news that has come out of that State for many a long day. Throughout the Union it will hearten Democrats who wish to purge their party of degrading associations. How Taggart could have attained his prominence and influence has never been explained. A man of less than mediocre abilities, without charm of personality, Taggart is the kind of man who would figure admirably as the head of a country grocery. Had he been the choice of the convention for the Senatorship, there would have been a united outcry from the Republican press the next morning that the stupid old blundering Democratic donkey was more than ever a donkey, and less than ever to be trusted. All that they can say is that Kern is a friend of Taggart. But Kern is a wholly respectable figure, if not a great one. Indiana has had worse representatives in the Senate than he would be—we are inclined to say than he will be. For this action, with Taggart's frank admission that his "machine is on the scrap-heap," ought to insure a Democratic successor to Senator Beveridge unless Taggart should play false. As for the Governor, he is entitled to great credit for his stand. Gov. Marshall is demonstrating anew that courage in an honest public man in high position is invincible. He has made his party shake off Taggartism without himself having a machine or stooping to play politics under cover.

The Tennessee press has not grown quite reconciled as yet to a Governor with a soft spot in his heart for assassins. The question has been kept alive by a formal statement issued by three judges of the Supreme Court of the State, constituting a majority of that tribunal, in which they accuse Gov. Patterson of resorting to intimidation in order to force a favorable decision in the Cooper case. With a Governor who holds a club for recalcitrant judges in one hand and a fountain pen eager to sign pardons in the other, the fine free spirits that chafe under the law of Tennessee must be in great good humor.

Nine hundred and fifty-six pardons in three years and two months is a record to be proud of. Of the 956 happy partakers of executive clemency, 152 were guilty of murder, 124 of larceny, 175 of carrying concealed weapons, and 103 of violating the liquor laws—good-natured amusements all, that make for the peace and well-being of a community. No wonder common report speaks of a book-agent who entered the Governor's office and said, "Pardon me, I——," and the Governor, reaching for a blank, said: "Certainly, what was it you did?"

The committee of wholesale dry goods merchants of New York is just now calling attention to some effects of the cotton schedule that make curious reading in these days of complaint of high prices. The committee's letter gives a list of ten representative classes of cotton goods, with the net cost of each as imported, the duty under the Dingley law, and the duty under the Aldrich law. Samples of the goods are enclosed, with a view perhaps to increasing the feeling of reality; and they certainly do look like the very kind of thing that a man's wife would be apt to buy. Well, on the average, the duties on these cotton goods under the new tariff are just about half again as high as they were under the Dingley act. There have, indeed, been reductions in the tariff, but it looks as though great care had been taken not to make any reduction in cases where the result would be an increase of foreign competition. With the monstrous woollen schedule left as it stood, and the cotton schedule aggravated as shown in this exhibit, Republican spellbinders will have a hard time in any joint debate on the tariff in the autumn elections.

The promotion of the cause of peace has been a constant object of Mr. Carnegie's endeavors. The dedication at Washington of the magnificent building devoted to the uses of the Union of American Republics is an event which will take rank alongside that of the Peace Palace at The Hague, which, like the Washington building, was provided by his munificence. President Taft, at the dedication, spoke for permanent and unbroken peace among all the twenty-one Republics of America; Mr. Carnegie's speech sounded the note of universal peace, and in several of his sentences he put the case of the reasonableness of peace and the unreason and injustice of war in a telling way. Perhaps the argument to which attention might most profitably be directed is the declaration that one of the chief missions of the Palace of the American Republics should be to promote the manifestation by each of those Republics of an "earnest desire for the prosperity of all their neighbors." The greatest source of international hostility to-day is the vicious delusion that the gain of one nation in commercial prosperity must mean the loss of some other.

The resignation of Dr. Charles W. Needham of George Washington University is received with expressions of regret by the Washington press, where it is regarded as an act of self-sacrifice. There has been for a long time past an embittered struggle over the affairs of this institution, and the climax was reached when it was brought out before a Congressional committee that the Corcoran endowment fund of $200,000, left to the university to be kept intact, had all been expended with the exception of a small balance in the shape of a mortgage on the President's house. Dr. Needham explained, if accurately reported, that it had only been borrowed, and that the trustees planned to replace it as soon as they could raise the money elsewhere—which bears a curious similarity to the plea of the embezzling bank cashier. College endowment funds ought to be sacred, even in the eyes of college presidents and boards of trustees. We think Dr. Needham's resignation quite in order. Education of all kinds in the District of Columbia is ever in hot water. There is always some bitter fighting with a political tinge, which usually finds its way into Congress before it ends, and this new row ought to make those people pause anew who think that the seat of the Federal Government is the proper place for a great or a "national" university.

Mr. Edward Payson Weston has done it again. It has, of course, taken him somewhat longer to walk from Los Angeles to New York than it took M. Paulhan to fly from London to Manchester. But so far have we moved forward in civilization that the two men's achievements in the most primitive and the newest modes of human locomotion are welcomed with almost equal enthusiasm. We have not quite learned yet how to fly and we have forgotten more or less how to walk, and it is good that we should be reminded simultaneously of what lies before us and what lies behind. For what Weston has done is to remind us that, go as far as we like in cleaving the atmosphere or sailing the depths of ocean, we are destined to remain, in the end, children of earth, drawing sustenance from her as well as the resources and the strength and the agility which we utilize in speeding or diving or flying. Long after Zeppelins and biplanes and monoplanes have grown commonplace, people will still be walking on earth's pathways for the value of the effort and the joy of looking at green things. Walking is destined to remain for a good many years to come the favorite recreation of the lovers, philosophers, and dyspeptics who make up the bulk of the world's population.

The author of a short paper in the *Green Bag*, entitled "Is Lying Increasing?" does nothing more than raise the question. But whether or not lying is on the increase, there can be little doubt that, with the increasing complexities of civilization, it is becoming constantly more difficult to find out the truth. And especially is this the case with the great mass of us who are compelled to judge by the printed word without the jury's advantage of studying the witness's face and behavior. In so complex an affair, for instance, as the Ballinger case, gathering up as it does the acts and writings and spoken words of two-score men in a dozen States for a period of five years, what endless opportunities are present for the misstatement, the suppression, the under-emphasis, the improper correlation of facts that make all the difference between truth and what is not truth! All this aside from the fact that even the most blatant falsehood will impose on the crowd, if repeated with sufficient frequency and vociferousness.

We note with regret a growing editorial niggardliness on the part of our leading religious publication, the *Outlook*, in the matter of its weekly sermonettes. On last week's cover it announced only the following articles from the Roosevelt-Abbott Editorial Troupe:

CITIZENSHIP IN A REPUBLIC.
Mr. Roosevelt's Sorbonne Lecture.

THE PIGSKIN LIBRARY.
An Editorial by Mr. Roosevelt.

MR. ROOSEVELT IN EGYPT.
By Lawrence F. Abbott.

THE HABIT OF IMMORTALITY.
An Editorial by Lyman Abbott.

This is not only a limited bill of fare, but it is unfair, we are assured, to other members of this hard-working literary combination. If we are correctly informed, there are three more articles which could and should have been added to the weekly five cents' worth:

ROOSEVELT AND THE RAILROADS.
By Ernest Hamlin Abbott.
(*Washington Correspondent.*)

DR. ABBOTT'S AID TO AFRICA.
By Kermit Roosevelt.

KINDLY KILLINGS OF KERMIT.
By Theodore J. Abbott.

The simple addition of these articles would, we are sure, have removed all grounds for complaint that the *Outlook's* readers are not getting enough Roosevelt-Abbott matter.

With one of its most contentious provisions stricken out, the British budget for 1909-10 has at last been passed by the Lords and signed by the King. Agricultural land is relieved of the 20 per cent. increment value duty, which was possibly the chief cause of the budget's previous rejection by the Peers, who represent so strongly the landed interests. The leader of the opposition in the Upper House again condemned the Government for surrendering to the Irish; but, broadly speaking, the Lords may be said to have acted on the conclusion that the country did not reject the budget at last winter's election. Now comes the unprecedented effort to collect the arrears on the 1909 income and property tax, of which the London cables estimate upwards of $60,000,000 to be collectible. This will draw on the reserves of the banks, with an effect not easily calculable off-hand. Another year's income-tax is almost due. Is it not probable that many taxpayers, being only human, may have spent last year's money reserved for the collectors? But with all the back taxes and super-taxes he expects to collect, the Chancellor of the Exchequer's final balance-sheet shows a surplus of only $14,500,000, after a reduction of the annual contribution to the sinking fund amounting to $17,500,000. Mr. Lloyd-George frankly admitted that his estimate of whiskey revenue was a failure. With an increased duty of ninety cents a gallon, consumption promptly fell 22 per cent. and the revenue by $14,000,000. Many of the budget's new taxes have already been felt; others soon will be. The questions of the House of Lords and of "tariff reform" still remain, and it may be doubted whether the passing of the budget will clear the strained political situation to any notable degree.

"Important as is the honesty and the efficiency of the German city," says Frederic C. Howe in an article in the May *Scribner's*, "it is the bigness of vision, boldness of execution, and far-sighted outlook on the future that are most amazing." The remark is perfectly just; and surely the lesson for us lies as much in the largeness of plan and in the enlightened foresight as it does in the honesty and efficiency. Given the honesty and efficiency, however, all the rest would, we may be sure, in the course of a reasonable time be added unto us. But the honesty and efficiency must be a permanent and assured possession, not a thing for which we must fight desperately most of the time, and which we enjoy breathlessly while it lasts. There are other qualities in the German character, and other peculiarities in German institutions, which go to account for the splendid results that have been accomplished in German cities in the course of the past twenty years; but no one can reflect on the paralysis of higher endeavor which has necessarily accompanied the wretched state of American city politics without feeling that therein lies the prime cause of our failure to do anything that compares with the achievements of Berlin, or Munich, or Frankfort, or Hamburg. But we are progressing, beyond a doubt; and twenty years from now there will be a different story to tell.

Vive la France! Every time the Englishmen arrange the supreme carnival in the air, a Frenchman takes the Dover packet, when he happens to have his flying machine packed up, arrives defiant, and wins. Paulhan, Frenchman, beats the world to Manchester, guided at night by a rocket-flying train rumbling along on the utterly contemptible earth below. Pooh! So much for Farman, Englishman, who lives in France and occasionally flies himself! England was excited enough without having a German in the race. From London to Manchester at nearly forty-five miles an hour, when he was flying—a thing calculated to make the question of the Dover-Calais tunnel assume a new aspect. The Guardsman, too—he who opined that the use of cavalry in war was "to give tone to blooming rabble"—will tug at his moustache dubiously, and no doubt the incident conveys its suggestion for him and for others, although at present a well-aimed bullet could have stopped the flight at any moment. But this was peace, not war; and therein lies magnificence. It was a sporting event of a high order. And what matter whether it be aloft or below, Blériot or St. Yves? *Toujours le sport!*

The importance attached at Constantinople to the uprising in northern Albania is shown by the fact that the command of the troops in the field has been assumed by Shefket Pasha, head of the Turkish armies, and the man who led the patriot troops against Constantinople after the mutiny of a year ago. In the uprising against the régime of Abdul Hamid the Albanians took an important part, but it seems that the present trouble has been largely brought about by a too rigorous application of reform methods among a people used to a generous measure of lawlessness. For the new constitutional régime in Turkey the situation is weighty for more reasons than one. If the insurrection is put down with a fair degree of dispatch and effectiveness, it will add greatly to the prestige of the new Government. The Albanians are the most turbulent subjects and the best fighters in Turkey, and if the Government shows itself fit to cope with them, it can deal with any domestic disturbances that may come. In the second place, it will be instructive to see how good a showing the Turkish soldier of to-day can make against a formidable opponent. Rumor has it that demoralization has fallen upon the Turkish soldier, who, even when unpaid and starved in the old Hamidian days, was yet a first-rate fighting animal, courageous and devoted. The admission of non-Mussulmans into the army is said to have created discontent; and possibly the possession of a little more spending money has proved detrimental to good discipline.

AN ISSUE HARD TO KILL.

If any one had predicted, a year ago, that the tariff would to-day be the liveliest of political issues, he would have been laughed at. The Republican Administration had just come in, with an electoral majority of 159, and a popular plurality of a million and a quarter. The opposition party had long been lukewarm on the subject; and the victorious party, moreover, was pledged to a revision, which it immediately undertook. The country would be content, for the time being, with what it had got, and there would be peace or a long truce on the tariff question—such at least was the natural view at the beginning of the Taft Administration. And this view received a great accession of strength from another source as the extra session of Congress proceeded. The exhibition made by a large number of the Democratic Representatives and Senators was of a kind to dissipate the last traces of hope that anything could be made of tariff reform sentiment. These gentlemen seemed to feel no embarrassment at all about going in for such share of the tariff pork-barrel as interested any of their constituents; they showed precisely the same spirit as that which directs the most orthodox protectionists. It looked, for a time, as though tariff reform were as dead as a doornail.

By the time the Payne-Aldrich bill was passed, however, the state of the atmosphere had completely changed. The persistence of the Republican insurgents in demanding a genuine fulfilment of campaign promises, and the vigor of their protests against the final failure to do so, constituted one of the most gratifying exhibitions of political vitality and independence that have been witnessed in our country for many years; and it soon became evident that there was a mighty public sentiment behind them. From that time to this, the tariff issue has been looming larger and larger on the political horizon. One of the substantial evidences of the strength of this sentiment is furnished by the steady growth of the idea of the tariff commission; there is now a fair prospect of an effective commission, such as was recommended by the President. If Mr. Taft had had the wisdom to confine his dealings with the Payne-Aldrich bill, since its passage, to this recommendation of a commission looking to amendment of the tariff, he would have strengthened instead of weakening himself, and would have prevented the present demoralization of his party. But his and its loss has been the country's gain; the Winona speech acted as a call to independent sentiment to show its strength, and the call has been responded to with a vigor surpassing all expectation. That all this will put backbone into the Democratic party, the signs of the time strongly indicate.

The sensational victory of Mr. Foss in Massachusetts was the outcome of a campaign fought on the tariff issue; and although in the case of Mr. Havens the crucial question was that presented by the candidacy of the discredited Aldridge, yet in Rochester, too, the Democratic fight was made on the issue of tariff reform. The centre of interest then shifted to Indiana, where Gov. Marshall opened the convention with a speech of uncompromising vigor attacking the protective system—a reminder, by the way, of the unambiguous position of his Ohio confrère, Gov. Harmon. Mr. Marshall appealed to the Democrats of Indiana to "proclaim their undying opposition to the system of protection, and by their votes to register the will of the people against its iniquities." A somewhat demagogic flavor in the Governor's speech does not detract from the significance of the fact that he gave the tariff the leading place in it; on the contrary, it rather adds to the evidence that the issue is one to which the country is wide awake, and which is therefore likely to be taken up with enthusiasm by the party leaders.

Unquestionably, in addition to resentment against the treachery of the Payne-Aldrich act, the high price of the necessaries of life has contributed powerfully to intensify interest in the tariff. Nor is it essential that the rise in prices be traced directly to the tariff in order to justify this feeling. It is indisputable that the tariff does result in making many prices higher; and even if we have been laboring under its weight all along, yet it is natural that we should cry out most against it when we most feel the pressure of high prices. And there is another point, which was effectively urged by Senator Newlands in a debate in the Senate a few days ago. The exclusion of foreign competition, he pointed out, may have been just as complete in certain lines ten years ago as it is to-day; but, under cover of that exclusion, there has been going on a steady suppression of domestic competition; so that while the Trusts ten years ago "were not able to take advantage of the entire 45 per cent. of tariff duty, they have, by a gradual process of consolidation and combination and the destruction of free competition at home, been able to raise monopoly prices to the height of the tariff wall." All this may not be literally true, but there is enough truth in it to make a serious element in the just arraignment of the protective system. It furnishes a connection not only between protection and high prices, but between protection and the recent rise in American prices, through the connection of the tariff system with the Trust system; and it goes far to break the force of the old-time argument of protectionists that domestic competition would certainly make all things right after an industry had been nursed through the years of its tender infancy.

PENSIONS MILITARY AND CIVIL.

Our arguments against the bill creating a retired list for the surviving volunteer officers have brought us several protests, one of which we print in this issue. We have also been taken to task for accepting a published statement that Mr. Taft would not veto this measure should it pass Congress. There is, we are informed, no basis for this report. We sincerely hope not; as we said at the time, this is an excellent opportunity for Mr. Taft to exercise that veto control of pension bills which made Mr. Cleveland's reputation in his first term for dogged courage and fidelity to his trust. This particular bill is, we are free to admit, no worse than many which have slipped through Congress. Every soldier of the bummer, or camp-follower, type is now entitled to a pension if he served ninety days—no matter whether he was injured in the war or not. Service under fire or in campaigns is no longer the test. Only the other day, we called attention to the attempt of the majority of the House Committee to pension a deserter who never enlisted until the hard fighting was all over and during his entire service was never within a thousand miles of the scene of war.

This kind of pensioning is, we submit, an insult to the honest soldiers,

whether enlisted men or officers—to those men who did their duty and by their sacrifices made the survival of the Union possible. Where they are genuinely in need the United States has always been liberal to a hitherto undreamed of degree. Soldiers' homes are scattered over the country; special pension bills, in deserving cases, pass Congress by the hundred, not merely on behalf of officers, but also for the benefit of their kin. A case in point is the pension of $100 a month voted last week to the widow of the late Gen. O. O. Howard. He had been drawing a retired major-general's pay from 1886 until the time of his death, and had had a full major-general's pay for years before his retirement. Yet the condition in which he left his widow necessitated prompt action. No one objected. But where the widow of one distinguished general is taken care of, we pay pensions to the wives or daughters of dozens of men who never heard a hostile shot fired and did not marry until years after the close of the war. It looks as if the whole pension policy had been planned so as to discourage thrift among the veterans, most of whom were under thirty when they left the army, with their best working years before them.

But most we resent the long assumed attitude that these old soldiers have a claim upon the Government the measure of which they shall alone determine. These men enlisted to save the Union, knowing full well what they were risking, and the Government made them no pledges of future Treasury aid. Must American patriotism be on a cash basis? To read the number of applications for pensions of Spanish war veterans, one would think that they enlisted for the sole purpose of obtaining for life a small government income—and, of course, only a few thousand saw any fighting. Are there no Americans who decline to cash in their patriotism for gold? Some, of course, must have aid, and no one grudges it to them. But on the pension rolls are hundreds and thousands of men—some millionaires—whose pensions are not even pin-money, yet who feel that they are entitled to them of right. What kind of example does this set to the youth of America?

So far as the proposed volunteer retired list is concerned, it would take in, if he is alive, the major of the Pennsylvania regiment who declined to lead his men against Pickett's division at Gettysburg on the ground that the tactics assigned to the major of a regiment a place in the rear of his men. It would add at least $13,000,000 a year to the tremendous military budget which is sending our taxes up. The lowest estimate of those who favor the bill is something under ten millions. It would place the man who has been forty-five years in civil life on the same footing with the retired regular officer who has given all his years to the service of the country in the Indian wars, in Cuba, and the Philippines. To argue that the volunteers are more entitled to a retired list than the regulars, is merely another illustration of the way in which desire to obtain Treasury aid—to be supported at public expense—befogs the issue. Men who would die rather than enter a poorhouse and live at the cost of the community, see no wrong in living at the cost of all the taxpayers, believing that, because they donned a uniform forty-nine years ago, they now have an inherent right to aid in their old age.

There is a special reason for speaking essential truths on this question, because Congress is to-day nearer to passing a civil employees' pension bill than ever before. The measure has been formally reported by a House Committee. Every head of a department in Washington finds in the aged and superannuated clerks his greatest stumbling-blocks to administrative efficiency. They have spent their lives in the Government service, not under fire, it is true, but mostly on small pay, and with little or no incentive to save. At first the government will indubitably have to carry many of these; but the principle ought to be one of contributory payments from the employees. We believe that is clearly understood in Washington. Though the military pensioners have never been asked to contribute towards any provision for their old age, they yet demand it as of right—regardless of the burdens which the $160,000,000 budget for their benefit places upon the country. The older they grow, the keener the hunger for more government aid to everybody without distinctions of any kind. The country ought not to start its civil pensions on any such principle of a vested right, nor admit that principle in the case of the soldiers.

THE CONTENTED FRENCH.

About half of the new French Chamber is still to be filled by reballotings, but of the general outcome of the elections there is no longer any doubt. It is only a question of how much the *bloc* of Radicals, Socialist Radicals, and Independent Socialists that has ruled France for more than a decade will add to its numerical strength. The result was foreseen by the Government and the Opposition, and the latter has been occupied in supplying explanations in advance. One of the most ingenious, and all the more ingenious because true, has been brought forward by a writer of reactionary tinge. The present régime owes its long life, he argues, to the indifference of the electorate, and the electorate is indifferent because it is too busy with more important things. Why look for profound political upheavals, asks M. Marcel Prévost, among a people that has increased its foreign commerce by almost one-half in the last ten years? This is not what we should regard as a deadly argument in our own country, where political parties are accustomed to take the credit not only for our increased commerce and manufactures, but for the rains and the sunlight that produce bumper crops, and for the foreign famines that raise the farmer's prices. A 50 per cent. increase in foreign trade is something that would keep a thousand orators busily engaged.

For the present, however, the interest is not in the merit of the argument brought forward by M. Prévost, but in the statistical fact it cites. It would be unfair to expect a popular novelist and psychologist to be absolutely exact in the use of figures, but that respectable authority, the "Statesman's Year Book," does show that, in a comparison of the years 1907, 1908, and 1909, with the years 1897, 1898, and 1899, there has been an increase of nearly 44 per cent. in the total value of goods the French people have exported of their own production and imported for their own consumption. This will come as a surprise to most people. The habit of looking upon France as a stagnant nation has extended to its industry, as well as its population. Of France, the banker nation, we are accustomed to think; and as the event shows, we have thought too much of France as a nation content to live on the interest of its foreign investments, averse to en-

terprise, and content to putter along in the matter of manufactures and trade. On the contrary it turns out that the French have added to their trade more rapidly than Great Britain, and almost as rapidly as Germany, that type of bouncing commercial prosperity. "Are Frenchmen in this April, 1910, either insane or totally degenerate," asks M. Prévost, "that so grave a national event as the regular Parliamentary plebiscite leaves them absolutely torpid? No, many symptoms indicate quite clearly that since the beginning of the century there has been a revival of national energy and of the spirit of initiative among us."

And still turning to this surprising growth of French commerce and industry, we are impressed by the fact that the gain has been made by an absolutely stationary population. It is natural enough that the United States or Germany or Great Britain, with their annual additional half-million or million of population, should annually produce more goods and consume more goods. But that the same number of Frenchmen should, in their foreign trade, do half again as much business in 1910 as in 1900, suggests a marked increase in individual and national efficiency and in the individual and national well-being. If the outside world has been brought to look upon France as a nation sick with discontent and seething with the forces of dissolution, the responsibility attaches to the Frenchman's own traditional habit or policy of painting himself darker than he is. So steadily do the cables bring news of labor wars in France—dock and shipping strikes, miners' strikes, strikes among electric-workers, postal-employees, government employees in the arsenals, and the small vine-growers of the Midi—that the average man's conception of French industry has been one of progressive chaos. If, at the same time, French money has been pouring out abroad in increasing quantities and the average man has never stopped to ask himself where this surplus wealth for foreign investment comes from, it only shows the average man's reluctance to put two and two together.

This combination of economic prosperity and political tranquillity cannot fail to induce a feeling of skepticism when one reads of the sense of anxiety with which the leaders of French thought are looking towards the future, of the feeling of *malaise* which possesses the entire social body, of the growing bitterness of class-conflict, of popular dissatisfaction with parliamentary government, and many other portentous symptoms of grave national danger. We are even assured that France longs for, and must have, and will have, an Emperor who shall lay the iron to the wound, and, having performed his healing mission, proceed to put France once more at the head of Europe. These, of course, are only the desperately pious hopes of a steadily decreasing band of reactionaries. The Third Republic is to-day among the most stable of the world's governments. When Germany stands torn by popular discontent with autocratic government, when Great Britain shivers on the edge of new trade policies, new governmental policies, and new party tactics, there is little ground for worrying over the immediate future of a nation that has kept the same party in power for a full decade, and seems bent on doing it indefinitely; that has passed through a tremendous conflict between Church and State and a very serious crisis in foreign affairs without losing its self-control, and that stands to-day manifestly contented with the policy of honorable peace abroad and social progress at home which its rulers have given it.

COLLEGE DEBATING AND WRITING.

A volume of 170 closely printed pages devoted to the single topic of municipal government by commission, for the use of debaters in the colleges and literary societies, would seem to be conclusive evidence of a growing popular delight in forensic oratory. The volume is only one in a Debaters' Hand-book Series. Presumably, the series has accorded equally complete treatment to the question of local option versus prohibition, woman suffrage, and the corporation tax, to say nothing of such veterans of the debating platform as the income tax and popular election of United States Senators. Debaters' handbooks, fitted out with elaborate lists, references, and model briefs, constitute an increasingly important part of text-book literature. In all such books the tendency is strongly towards the extremely sober problem in politics and economics, the kind of topic that ninety-five newspaper readers out of a hundred regularly pass over. Even questions like woman suffrage or the income tax are falling into disfavor because of the large element of inexact sociological and sentimental reasoning that enters into their discussion. The very dry and the very statistical is what our text-book writers consciously strive for, in panic reaction, doubtless, against the times when the academic youth debated whether Greece had done more for civilization than Rome, or whether the pen was indeed mightier than the sword.

Repeated contact with such handbooks of argumentation impel one strongly to the belief that the thing is greatly overdone. It is open to question, in the first place, whether the purpose of clear reasoning is really subserved by these elaborate briefs for affirmative and negative, with their half-dozen main points marked A to F, each subdivided into a half-dozen headings marked (a) to (f), and so on through the numbers 1 to 6 and a goodly sprinkling of letters from the Greek alphabet. This is almost as bad as the old formal logic, with its ineffectual rules and mechanical patent devices. There is little stimulus here to the faculty of true ratiocination, which is something more than a compilation of sub-head under main head and infra-sub-head under that, with the appropriate authority for each. It is a method of arguing that scarcely has place outside of a Court of Appeals. It is certainly not a method that greets us very frequently on the floor of parliaments or on the political platform. Great debates have been won by one or two points driven home with facts or pleaded with passion. Burke's orations analyzed for the use of high-school students have their drawbacks. For, in the first place, Burke spoke all day, where the ordinary school or college debater speaks eight minutes. And, in the second place, when Burke began on his closely reasoned chains of argumentation, the members of the House of Commons used to go home for dinner. Perhaps the only person who can steer his way through one of our complicated model briefs is the debater himself; and with him it is most often a question of parrot assimilation.

There is no denying, of course, that the text-book method of debating is implied in the text-book matter set up for debate. If one is to argue on the mer-

lts of the corporation tax or a Central Bank, the need for a certain amount of classification and sub-classification with much statistical underpinning is apparent. But why, after all, should the high-school student or the college student debate corporation taxes or central banks? As we have said, the text-book writers have gone in passionately for such topics in their desire to escape Rome and Greece, the sword and the pen, or the respective merits of Dickens and Thackeray. For such deadly academic topics, the desire has been to substitute the "live" topics of the day, first, because where there is life there is interest, and, second, because the topic of the day is usually susceptible of exact treatment; one cannot rant or vapor very long about a corporation tax. But in practice it is seriously open to question whether to the average high-school pupil the corporation tax or the Central Bank is in any way more real than Greece, Rome, Dickens, or Thackeray. It is really no more convincing to have the average undergraduate juggle a few hundred million dollars' worth of Treasury bonds than to have him analyze the part played by Roman law in the historical development of Europe. There can be little doubt that the average high-school student is better qualified to say why he prefers "Pickwick Papers" to "Vanity Fair" than to show why the physical valuation of railroad property is an essential element in rate regulation.

In college debating, as in college writing, it is possible that too much stress has been laid on the principle that if a man has something to say, he will find a satisfactory way of saying it; though, to be sure, it does not quite follow from this principle that the way to make an effective debater is to fill him up with information on the corporation tax running all the way from A, through a, (a), and 1 to alpha, beta, and gamma. It is well to remember that often in the beginning is the word, and that thought as often follows upon the power of expression as fit expression upon thought. The world is full of uncommonly good writers and speakers who are always looking for something to say; and it is full of scientists and warriors who are unable to state clearly what they know. And so it may not in all cases be out of the question that a goodly amount of spouting about Greece and Rome, with a goodly amount of turgid composition work of the kind that perishes under the rhetoric teacher's blue pencil, is necessary to set the young stylistic siphon flowing.

RECENT GERMAN FICTION.

So absorbed in problems of their own time are the writers of Young Germany that one experiences something like surprise when any member of that group turns back to the past. Almost simultaneously with the latest work of the veteran Julius Wolff has appeared an historical novel by a member of the modern school, Bruno Wille's "Die Abendburg" (Eugen Diederichs, Jena). Centring about a mountain near Schreiberhau, the home of the Hauptmanns and the site of a literary summer colony, the story has for its background and foundation incidents of the Thirty Years' War; but the folk-lore of the Riesengebirge has lent it an atmosphere of romance. With the all-embracing sympathy of the genuine lover of nature and the people, the author has grasped the very spirit of the period when belief in alchemy and astrology had, in the minds of the cultured, replaced the simpler superstitions of the uncultured. The old herbalist, brooding in his mountain hut over the problem of obtaining the fabulous treasure of the Abendburg, is one of those characters that seem part of the soil out of which they have grown; rugged and austere of manner, but of sterling honesty and sincerity. The incidents of the plot interwoven in the events of the war are narrated with admirable vitality, and the author's philosophy has infused new life even into such well-worn themes as the religious fermentation of the period. The moral of the story reminds one of the Ring of the Nibelung; for not until the gold found in the Abendburg is returned to the bowels of the earth is peace restored in that section of the country.

Julius Wolff has in his new book, "Der Sachsenspiegel" (imported by G. E. Stechert & Co.), remained true to his pseudo-romanticism. It is a story of the Hohenstauffen period, and of the famous code of laws. Armed with the science of law, which he had studied in Bologna, and encouraged by the Emperor himself, Eike Repgow accepts the invitation of his old friend, Count Hoyer, to be his guest, while engaged upon his task. The count is old and the countess is young; but Eike remains loyal to his host. This love episode has its counterpart in the less innocent flirtation between Eike's secretary and the maid of the countess, which supplies the book with an element of humor. The story is told with the author's usual charm, though with no great strength in the delineation of the characters.

A third work with an historical background is "Der getreue Kleist," by Paul Schreckenbach (imported by G. E. Stechert & Co.). The hero is Ewald von Kleist. Schreckenbach traces the development of his hero from a dreamy boy who longs for the simple life of a forester to a student, poet, courtier, and soldier, under the reign of Frederick the Great. The youth's integrity and independence give rise to collisions with those about him whose conscience is less scrupulous and more inclined to compromise than his. The pathetic interest in the hero's unhappy love is balanced by incidents forcibly reflecting the spiritual unrest of the period.

A remarkable female character holds the centre of attention in the story by Ernst Zahn, "Einsamkeit" (imported by G. E. Stechert & Co.). Frau Jacobäa is one of those unusual women who restrain their emotions until they appear devoid of any feeling; a joyless youth and a joyless marriage have made her a pessimist, who points out the fallacies in the philanthropic fancies and pours cold water upon the ardent dreams of her son, the optimistic parson. Even when the futility of his parish work dawns upon him, and renunciation of his love for a girl of a different creed crushes his spirit, the mother, proud of being able to do without the society of her fellow-beings, offers no consolation but solitude. The quiet tenor of the narrative is admirably sustained by an undernote of great intensity and fervor.

Rudolf Hans Bartsch has, in his "Elisabeth Kött" (imported by G. E. Stechert & Co.), also created a rare type of womanhood. There is no lack of stories dealing with the seamy side of stage life. Bartsch treats the dramatic undercurrents of a life predestined by inherent gifts, physical and temperamental, to seek expression of its own individuality in the impersonation of the great and strong women of the drama. Elisabeth Kött is not of ordinary clay; she is not content, after her triumphs before the footlights, to bask in the sunshine of a quiet love. All her emotional energy, all her passion, she devotes to her art. There is an extraordinary variety of minor characters, limned with a sure and strong touch.

The story by Maria Seelhorst, entitled "Das Schicksal der Tänzerin Ermina Hautaine" (S. Fischer, Berlin), is a noteworthy first book. For the author has not only drawn a heroine of extraordinary personality, but has also succeeded in inventing a new plot. This Ermina, a sculptor and dancer, works out her career as her salvation, but always stops short of the final triumph, and it seems a logical end to her life that she should at the last isolate herself to take care of the mother who had deserted her in her childhood.

Another book by a new writer is distinguished by the fine portrayal of the

heroine—"Oriol Heinrichs Frau," by Anna Deming (S. Fischer's Bibliothek zeitgenössischer Romane). Two worlds are presented in striking contrast at the outset of the story: the opulent carefree owners of the "gray house," lords among the vintners of the region, drifting with the tide of pleasure, as though the spirit of wine in the making had fired their very blood; and their poorer neighbors, the careworn widow and her daughter, women of a more delicate nervous fibre, of a more religious bent, and of an intense imagination. The marriage of the girl to the young master of the "gray house" is typical of the tragedy of a love from which the spiritual element is absent.

In the same collection of fiction, commendable for its moderate price, has appeared a second book by Norbert Jacques. It is entitled "Der Hafen," and tells the story of a shiftless youth, chafing under the exacting severity of his wealthy father and the narrow-minded pettiness of the townspeople, until he runs away with some itinerant musicians. Adventurous experiences give this book an absorbing interest for the average reader, while the delineation of the characters raises it far above the standard of average fiction. Robert Michel, too, justifies the interest in his earlier stories by his novel "Der steinerne Mann" (S. Fischer). The book has a curious psychic element and vibrates with a haunting atmosphere of mystery. Apparently uneventful, the life of the hero holds unusual emotional experiences, and the catastrophe which follows his writing the gruesome chronicle of the stone image in the castle is a fit ending to this record of an abnormal development.

The preface of Georg von Ompteda's "Excelsior" (Egon Fleischel & Co., Berlin) is a plea for the simple life and the outdor sports culminating in Alpinism. But on reading a few pages of the story itself one is profoundly impressed with its psychology. For the author traces with sympathetic insight the life of his hero from the boy's first vague longing for the heights to the young man's fatal end on the Matterhorn, and he suggests the emotional experiences so strongly that the very atmosphere of the book is tense with the spirit of vague dangers and with the ever-present lure symbolically summed up in the title.

Max Geissler, whose native sense and human sympathy lent a rare charm to his pictures of mountain life, has in his story of a Frisian fishing village, "Die Glocken von Robbensiel" (imported by Lemcke & Buechner), written a book of intense dramatic interest. It seems rather venturesome for a writer nowadays to choose for the setting of his story a country so thoroughly exploited by Frenssen as to have become identified with his works. But Geissler has caught the spirit of the soil and the people, and tells his story with a distinct individual charm.

Quite out of the ordinary is the book by Alexander Ular, "Die Zwergenschlacht" (Literarische Anstalt Rütten & Loening, Frankfurt, aM.). The author's familiarity with the economic and other problems of the day gives weight to his books, and this somewhat Utopian story of an American millionaire who organizes a giant Trust to establish international peace rests upon a foundation of solid practical knowledge.

The quality of the books of short stories recently published in Germany is rather high. In two of these books the individual stories are set as in a frame. Diedrich Speckmann's "Herzensheilige" (imported by G. E. Stechert & Co.) is founded upon a passage in Ludwig Richter's "Lebenserinnerungen eines deutschen Malers," in which he speaks of the household saints enshrined in every heart. A group of congenial people that meet in a summer hotel and discuss that book agree to tell of the men and women whose memory they cherish, and the several narratives are a series of clever character sketches receiving their individual color from the narrators themselves. In the other book, "Murwellen," by Wilhelm Fischer-Graz (Imported by G. E. Stechert & Co.), the connection is not so close. These stories have only the scene in common, the beautiful valley of the Mur, and they ripple on in a sort of intangible way, charmingly woven out of poetic reality and fanciful romance, as remote from the every-day world as it they belonged to the realm of fairy-lore, though they deal with men and women of our own day, and children of that particular soil.

Detlev von Liliencron's posthumous volume of stories, "Letzte Ernte" (Schuster & Loeffler, Berlin) is a fair example of the author's strong and wholesome individuality. The story of the North Sea flood in which the storm of the elements raging without is supplemented by the storm of elemental passions raging within; the war-time reminiscence; the story of the misercoupie, are of a haunting vitality. They make one realize poignantly what a great loss to German letters was the death of this man, who in his modest way was a true philosopher and a consummate artist.

Gabriele Reuter's "Sanfte Herzen" (S. Fiseher) is a book with an amazing diversity of feminine types. There are girls devoting themselves to an artistic career or to the care for some helpless member of their family; there are widowed mothers burdened with financial cares or worried about the future of their offspring; there are women so pampered that they are nothing but *articles de luxe;* and all of these women are charmingly old-fashioned, timid, and sensitive creatures. There is not one strong and self-assertive personality among them. It is a distinctly feminine book with a message and a manner of its own.

But the strongest of these volumes of short stories is that which bears on its title-page the name of Clara Viebig—"Die heilige Einfalt" (Imported by Lemcke & Buechner). Clara Viebig writes with the understanding born of sympathy with all that is human, and her style is distinguished by a wholesome realism and intense vitality. The description of the incendiary fire in the initial story; the sorrow of the mother who has waited seven years for her son's return from Rome, and, on his coming to preach his first sermon in his native village, realizes that he has become estranged from the love going out towards him; the story of the old maid who, after numerous efforts at trying her fortune in the lottery, draws a big prize, plans to enter upon a new life, and dies from a long postponed operation—all these pictures from every-day life, told with an admirable blending of humor and pathos, are wonderfully simple and convincing.

A. von Ende.

NEWS FOR BIBLIOPHILES.

The Library of Harvard University has recently, by the liberality of an anonymous donor, acquired the collection of first and later editions of the works of Alexander Pope, which was made by Marshall C. Lefferts, and which has been referred to in these columns. Mr. Lefferts's intention was to prepare a bibliography of Pope's writings including descriptions of all contemporary editions, and it is to be regretted that he has definitely given up the plan. His collations and notes, together with electrotypes and other material, went with his books, and it is to be hoped that the work will be carried to completion by some one of the University staff.

Pope died on May 30, 1744, and in his will he left to Warburton "the property of all such of his works already printed as he had written or should write commentaries upon, and all the profits which should arrive after his death from such editions as he should publish without future alterations." Warburton's first collected edition appeared in 1751, and no books issued after this date were considered by Mr. Lefferts as necessary for his purpose, unless they contained matter actually printed for the first time. The series of editions of "An Essay on Man," "The Dunciad," "The Rape of the Lock," and other pieces is without much doubt the most extensive ever brought together. With the "Miscellanies" and other works containing contributions by Pope, and with its large collection of "Popeana," the collection comprises upwards of five hundred volumes. A descriptive catalogue, octavo, fifty pages, with collations of many of the books making up the collection, was prepared by Luther S. Livingston, and may be had gratis from the publishers, Dodd, Mead

& Co. Fifty copies printed on hand-made paper with several facsimiles are for sale.

The sale of the first part of Wilberforce Eames's collection of books on the American Indians, at the Anderson Auction Company's rooms, April 26, showed that the interest in historical Americana is keener than ever—at least, if the prices paid are a criterion of such interest. New record prices at auction were made on many books. The following are a few of the more important items: Columbus's first letter in Latin, Plannck's second edition (1493), $1,350; Alsop's "Character of Maryland" (1666), with the larger part of the inscription in verse below the very rare portrait in facsimile, $500; Hamor's "Present State of Virginia" (1615), a fine copy, $625; Boucher's "Historie des mœurs et productions du pays de la Nouvelle France" (1664), a fine copy, $150 (this copy cost Mr. Eames $81 in the Bourinot sale only four years ago); the "Memoirs of William Augustus Bowles, Ambassador from the United Nations of Creeks and Cherokees to the Court of London" (1769), $81 (this little volume cost Mr. Eames $18 a few years ago); Hopkins's "Memoirs relating to the Housatunnuk Indians" (1753), $180 (the $155 paid for the Hollingsworth copy a few weeks ago far surpassed any previous record of sale). A long series of the original Jesuit "Relations," twenty-nine numbers, brought in the aggregate $1,722.50; and a set (of course far from perfect) of the Voyages, published in German by Hulsius, brought $250.

At the sale of the collection of the late Edwin B. Holden, at the American Art Galleries, extending from April 21 to May 5, very high prices were obtained for the more notable portraits and views, although many of the lots of lesser importance sold at moderate sums. Following are a few of the prices: "An Impartial History of the War in America" (Boston, 1781), with portraits by Norman, $400; Ethan Allen's "Narrative of Captivity, written by himself," first edition (1779), $350; first edition of the "Trial of Major André" (1780), $85; Clarke's "Narrative of the Battle fought on Bunkers' Hill" (1775), $122.50; Washington's copy of Winthrop's "Journal" (1790), with his autograph signature and book-plate, $500.

A "Bibliography of the Travels of John Carver" has been prepared by John Thomas Lee and published in the Proceedings of the State Historical Society of Wisconsin and also as a separate. Carver returned to Boston from his Western journey in August, 1768, and in the *Boston Chronicle* for September 12 of that year announced his proposal to publish, "as soon as a proper number of subscribers encourage him in the design, An Extract Journal of His Travels in the Years 1766 and 1767." The book, however, did not see the light for ten years, the first edition appearing in London in 1778. Mr. Lee describes no less than thirty editions of the "Travels," besides the "New Universal Traveller" (1779), which bears Carver's name on the title-page, and two editions of his "Treatise on the Culture of the Tobacco Plant." The title-pages of three volumes are reproduced in facsimile.

The first American edition of Shakespeare's Works, 8 vols. (Philadelphia, 1795-96); first editions of White's "Natural History of Selborne" (1789), Thackeray's "Vanity Fair" (1848), and Shelley's "Alastor" (1816); and several manuscripts by Bret Harte are included in the Merwin-Clayton Company's sale of May 10, 11, and 12.

Correspondence.

LEWIS CARROLL ON LETTER-WRITING.

To the Editor of The Nation:

Sir: There is a little work by Lewis Carroll which is unknown to many of his admirers. The British Museum does not possess a copy, or did not when its printed catalogue was issued. It is one of those trifles that may easily escape notice, and unlike some trifles it contains good sense as well as good humor. From a bibliographical point of view it is somewhat difficult to catalogue, and in place of a mere title which would be misleading, I will set down a description of my own copy which I bought when it was new—some twenty years ago.

In the first place, we have an envelope of red paper; on the front of this is printed:

The "Wonderland" Postage Stamp Case.
Invented by Lewis Carroll, Oct. 29, 1888.
This case contains 12 separate packets for Stamps of different values and 2 Coloured Pictorial Surprises taken from "Alice in Wonderland." It is accompanied with 8 or 9 Wise Words about Letter-Writing.
1s. post-free 13d.

On the flap of the envelope is:

Published by Emberlin & Son.
4 Magdalen Street, Oxford.

The stamp case consists of a stiff paper folded with two pockets on the inner leaves and a picture on each outer leaf. This case is enclosed in a sliding cover, and in this way the pictorial surprise becomes possible. A picture of Alice holding the baby is on the front cover, and when this is drawn off there is underneath a picture of Alice nursing a pig. On the back cover is the famous cat which vanishes to a shadowy grin on the pictures beneath. These designs the author says are not used elsewhere in the illustration of "Alice."

But the envelope contains also a booklet 9.5 cm long by 7.3 cm wide. This has its own title page:

Eight or nine wise words about Letter-[Writing.
By Lewis Carroll. Emberlin & Son. 4, Magdalen Street, Oxford, 1890. pp. 40.

The text is divided into five sections, the first of which is devoted to a description of the stamp case. In the second we are told how to begin a letter. Lewis Carroll advises that we should first read over again the letter to which we are about to reply:

Next address and stamp the envelope. "What! Before writing the letter?" Most certainly. And I'll tell you what will happen if you don't. You will go on writing till the last moment and just in the middle of the last sentence you will become aware that "time's up!" Then comes the hurried wind-up—the wildly-scrawled signature—the hastily-fastened envelope, which comes open in the post—the address, a mere hieroglyphic—the horrible discovery that you've forgotten to replenish your stamp-case—the frantic appeal to everyone in the house, to lend you a stamp—the headlong rush to the Post-Office, arriving, hot and gasping just after the box has closed—and finally, a week afterwards, the return of the letter from the dead letter office marked "address illegible."

He urges that dates and addresses should be given in full. As to "how to go on with a letter," he lays down the golden rule: "*Write legibly.*" The bad writing is often due to haste. "Of course, you reply, 'I do it to save *time*.' A very good object, no doubt: but what right have you to do it at your friend's expense? Isn't *his* time as valuable as yours?" Again he has a wholesome warning against filling "*more* than a page and a half with apologies for not having written sooner." Letters controversial, or that may lead to irritation, should be kept till the next day and then read over again with a view to pacific modification. Of all such letters, he says: "*Keep a copy.*" Another counsel of perfection is "Don't try to have the last word." Of one absurd custom which is unhappily not yet quite extinct in England, he says, "Cross-writing makes cross-reading." He calls it an "old proverb," and then, in a moment of compunction, confesses himself to be the inventor of this "ancient" saw. On "how to end a letter," he says: "Refer to your correspondent's last letter and make your winding-up *at least as friendly as his:* in fact, even if a shade more friendly, it will do no harm." There are other rules laid down by Lewis Carroll, but I will only mention the last of them:

When you take your letters to the post, *carry them in your hand.* If you put them in your pocket, you will take a long country walk (I speak from experience) passing the post office twice, going and returning, and when you get home, you will find them still in your pocket!

The last section is devoted to a plan of registering the dispatch and receipt of all letters with the briefest possible summary of the contents of each. The specimen entries which Lewis Carroll gives are not, he warns us, autobiographical. How a joke may miscarry is shown by the entry of a letter which tells the alarmed recipient that a "white elephant—very savage" is on the way to him as a present. He promptly writes to the Zoölogical Gardens transferring his interests in the package to that institution. The Directors write to say that they have received the case of wine sent by him and that it has been gratefully consumed at the dinner!

At the end of the booklet are some bibliographical notes, from one of which we learn that the "Law of Idleness," published in *Aunt Judy's Magazine*, as the work of Lewis Carroll, was really written by Fräulein Ida Lackowitz.

Apart from its interest as a literary curiosity, this effort of C. L. Dodgson is full of good sense and good advice. To be legible is the first duty of a letter-writer. There are some men who have reached the evil ingenuity of being illegible, even when using a typewriter. One great English scholar uses a battered machine, and corrects freely with an overworked quill pen. The result is picturesque—but disastrous!

William E. A. Axon.

Southport, England, April 20.

WEST POINT IN 1824.

To the Editor of The Nation:

Sir: In view of the recent discussion regarding affairs at West Point, your readers may be interested in this letter from Theodore Sedgwick, jr., to the well-known Harmanus Bleecker of Albany. The first half of the letter is dated Norwich, Vermont, July 9, 1824; the second half is in a dif-

ferent ink and was probably written July 13, which is the date of posting.

MARY PARKINSON.

Albany, N. Y., April 26.

Norwich Vermont July 9th, 1824

My dear Sir

I received your very kind letter the day we returned from the march. I now set down to express my Obligations to you for it & to answer your enquiries. You desire me to give you an account of the school which I will do as correctly as I can—the academy is under the sole direction of Captain Partridge who has under him 3 professors & 1 french master. There is one particular concerning these professors which is not at all favourable, The Captain pretends in his Catalogue to have 9 professors, but when you come here they are all gone—The branches which are taught here are Mathematics, Philosophy, Military Science, Ethicks, Belles lettres, Praetical Geometry, Topography, Greek, Latin, French, & Music—Fencing is likewise taught; also Geography & history—The exercises of each day at this time of the year are as follows—at half past 4 *A. M.* the reveille drum beats, when we all attend roll call soon after which, the officer of the day (whom Captain appoints every evening for the ensuing day) inspects all the rooms sees that all the beds are made, rooms swept, & none on bed & reports all those whose beds are not made, whose rooms are not swept or who are on bed—at six o'clock, we go to breakfast at our boarding houses at 7 o'clock we attend prayers in the building after which the studies and recitations commence and continue till 1 o'clock when we go to dinner; at 2 o'clock we have another roll call, when the studies commence again—during the afternoon as well as in the morning the officer of the day inspects twice—at 6 o'clock we have a drill & at 7 we sup at half past 8 we have a roll call in the lecture room at 9 the inspector sees that all are in their rooms, & reports all who are out—At 10 he inspects again when all are required to be in bed—There are some things which do not appear well at all; such as the Captain's taking students who have been dismissed from other seminaries also tho' he has one regulation that all the Cadets shall attend Church he pretty well fills up the remainder of the time with duty which is not of a religious kind—As I suppose you would desire to know something about our march, I will give you a short description of it. We left this place June 9th & in two days reached Rutland distant 44 miles Sunday night marched to Castleton 10 miles Monday morning marched to Whitehall 14 miles Tuesday left Whitehall in steamboat & reached Burlington 80 miles Wednesday afternoon left Burlington & reached Plattsburgh in steamboat Monday afternoon left Plattsburgh & reached Vergennes 20 miles below Burlington left Vergennes reached Middlebury 11 miles Wednesday Friday left Middlebury & reached this Sunday morning 10 o'clock having marched 65 miles in 20 hours—I marched all the way, the distance of the whole route was 300 mile of which we marched 170 & of which I carried my musket 60.—I must not forget however that I asked twice to ride on the baggage waggons though I was not permitted to—Give my kind remembrance to all my friends in Albany

And believe me
Your very affecte friend
Theodore Sedgwick Jun

Harmanus Bleecker, Esqr

P.S. Please let no person see this

THE PENSIONS FOR VOLUNTEER OFFICERS.

TO THE EDITOR OF THE NATION:

SIR: I never open the *Nation* without a feeling of regret at the tone of its attack upon those who are laboring for increased appropriations for those old soldiers who are, like myself, drawing very near the end of life. I belong both to the Loyal Legion and the Grand Army, and the more I look into it, the more I learn how large a proportion of the survivors need help increasingly in their old age. This has been shown over and over again by printed figures, and, although it may be sometimes overrated, it much oftener is understated. So long a time has passed since the war that, out of the 131 major-generals of the volunteers, only two are living, and of the 446 brigadier-generals, only 19 are living; and of the more than 3,000 surviving colonels of regiments, there are less than 200 to be affected by this legislation. Of these I am one.

Younger men can hardly realize how many of these were driven out of the field by wounds or their consequences, as I myself was, in a way for which my pension of $240 a year gives no adequate compensation. My richer relatives, who also served, were no better off after the war was ended, and business successes alone saved them. You also do not, perhaps, realize that the officers sacrificed much more in proportion than the privates did; for the officers must pay their own bills as they went along, while the privates were publicly rationed. Even this did not save them from impoverishment. I will not bore you with further particulars, but I belong to the relief committee of my own branch of the G. A. R., and it has just been necessary to issue a new appeal to the public to keep the old soldiers out of the poor-house.

COLONEL OF INFANTRY.

Boston, May 1.

HOUDON'S DIANA.

TO THE EDITOR OF THE NATION:

SIR: In your issue of April 14, giving a list of the prices obtained for paintings and art objects at the Yerkes sale, you made no mention of Houdon's Diana in bronze, purchased by Duveen Bros. for $51,000.

The history of this statue is full of interest, and, being by Houdon, the celebrated sculptor of Washington, should enlist the sympathies of your American readers.

The marble original dates from 1780, and went to the Empress Catharine of Russia. It is in the Hermitage at St. Petersburg to-day, and, tested by the value of the bronze, would command an enormous figure. Of the bronze statues there are but three: (1) the one, dated 1782, just sold in New York, which until 1902 was in Paris, having been disposed of at the sale of "Bagatelle" after the death of Sir Richard Wallace; (2) that in the Louvre, dated 1790, this was purchased by the French government at the sale of Houdon's effects in 1828, and was obtained for the modest sum of 4,000 francs; (3) that in the Museum of Tours, thought to have been cast in 1839 by Corbonneau from a terracotta or plaster figure executed by Houdon in 1776.

A curious fact is that exhibition was denied the statue at the Salon from motives of academic modesty. We are apt to think of Frenchmen and French art from a different standpoint. It was, therefore, exhibited at Houdon's studio and attracted universal notice and admiration.

Houdon's world-famous seated statue of Voltaire was executed in 1778, so that his Diana is the work of his genius at its fullest power. He was then thirty-seven years of age, and came to this country about seven years later (1785) to model his statue of Washington, and to create the marvellous bust pronounced by contemporaries to be the best resemblance of that great man. Gilbert Stuart, it may be recalled, considered Houdon's bust the best likeness of Washington and his own celebrated portrait next to it in resemblance.

EDWARD BIDDLE.

Philadelphia, April 27.

A CORRECTED TITLE.

TO THE EDITOR OF THE NATION:

SIR: The Japanese printers of my "Buddhist and Christian Gospels now first compared from the Originals" (Tokio, 1905), reversed the second clause and put it after the subsidiary title, viz., "Gospel Parallels from Pāli Texts," by which my translations were already known to readers of the *Open Court* of Chicago. This blunder has been perpetuated on the government catalogue cards and in numerous reviews, though it is pointed out in my list of errata.

If librarians and readers will apply to me I can supply them with a correct printed slip to paste immediately under the words "Buddhist and Christian Gospels."

Of course this only applies to the Tokio edition.

As a life-long librarian, I consider it right to catalogue the title of a book as the author wrote it, at least when, as in the present case, it is made clear in the list of errata. ALBERT J. EDMUNDS.

Philadelphia, April 26.

Literature.

A DISPUTED WORK OF DANTE.

Dante: Quæstio de Aqua et Terra. Edited and translated by Charles Lancelot Shadwell, D.C.L., Provost of Oriel College. New York: Henry Frowde.

The "Quæstio de Aqua et Terra," a short physical treatise on the relative levels of earth and water on the surface of the globe, which claims to be the work of Dante, was first published at Venice* in 1508, by one Benedetto Moncetti, a friar of the Augustinian Order of some note, who a few years later published a treatise (admittedly genuine) of Egidio Colonna, a contemporary of Dante, which he dedicated to Henry VIII of England. The claim of the "Quæstio" to be from the hand of Dante was almost universally admitted until about five and twenty years ago, when the late Professor Bartoli devoted several pages of the fifth volume of his "Storia della Letteratura Italiana" to an attempt to prove that it was a clumsy and impudent forgery of the sixteenth century. Bartoli's lead was followed by Dr. Scartazzini. In his volume on Dante's life and works, publish-

*The book is exceedingly rare, only seven copies being known, one of which is in the Fiske Collection in the Cornell University Library.

ed in 1869, Scartazzini had had no doubts as to the genuineness of "this little tractate of the supreme poet"; he described it as worthy of a place in the annals of natural philosophy, and pleased himself with the picture of Dante busied with arid and prosaic scholastic disputations in the midst of his poetical labors. But writing in 1890 (in his "Prolegomeni della Divina Commedia") a few years after the publication of Bartoli's opinion, he roundly declared that to admit the "Quæstio" to be a work of Dante would be tantamount to admitting a miracle; while in his "Enciclopedia Dantesca" (1898) he was even more emphatic:

> Bartoli gave the *coup de grâce* to the treatise by proving to demonstration that it was the work of a forger. Nobody at this time of day with the smallest smattering of science believes for a moment in its authenticity. The question may now be regarded as settled once and for all.

A like skeptical attitude was adopted by other Italian critics. In 1892 an elaborate article was published in the *Giornale Storico della Letteratura Italiana* by Professors Luzio and Renier, in which the theory of a forgery was fully accepted, and it was further sought to show that the probable forger was Moncetti himself, the original editor and publisher of the treatise. Professor Gaspary, on the other hand, maintained that for a sixteenth-century forger to produce a composition so essentially Dantesque both in thought and diction, would be "miracolo troppo grande." The first to make a serious attempt to stem the tide of skepticism was Prof. Filippo Angelitti of Palermo, who in a work, "Sulla Data del Viaggio dantesco," published in 1897, declared himself convinced, mainly for scientific reasons, that the ground-work at any rate of the treatise was genuine, and that Moncetti was quite incapable of forging it.

Meanwhile the attention of the Oxford Dante Society had been drawn to the subject by a remarkable paper on the "Quæstio" by Dr. Shadwell, the present Provost of Oriel. Dr. Shadwell pointed out that the text is in many places obviously corrupt (in itself a strong argument against its being a forgery), and he proposed a number of emendations which were subsequently introduced into the text in the third edition of the Oxford Dante. Dr. Shadwell also established the most important point, that the *editio princeps* was undoubtedly printed from an early manuscript. He showed that certain of the errors in the text were manifestly due to the ignorance of the printers, who wrongly expanded the contractions in the "copy" from which they worked. Only on this supposition could such blunders as *ecentrica* for *concentrica*, *sed* for *secundum*, and the like—blunders easily intelligible to any one who has had experience of manuscripts—be satisfactorily accounted for. Dr. Shadwell's arguments led Dr. Moore, the editor of the Oxford Dante (whose previous skepticism, as evidenced in the preface to the first edition of that work, had already been shaken), to reëxamine the whole question, with the result that in 1899 he published (in the second series of his "Studies in Dante") a weighty article in which he dealt effectively with the principal objections urged against the genuineness of the treatise, and succeeded in shifting the balance of opinion once more in favor of Dante's authorship. This article called forth a reply from Giuseppe Boffito of Turin, who in two papers, published in the transactions of the Accademia Reale delle Scienze di Torino in 1902 and 1903, sketched the history of the whole question, and restated the objections to the treatise at great length and with great learning, without, however, carrying conviction to the minds of those he set out to persuade. The case for the defence has been taken up again within the last two or three years by an able advocate in the person of Dr. Vincenzo Biagi, who in an exhaustive volume on the "Quæstio," published at Modena in 1907, has developed the lines of inquiry initiated by Dr. Shadwell and Dr. Moore. Dr. Biagi shows conclusively, what had already been maintained by Angelitti, that, if the work be a forgery, Moncetti at any rate could not possibly have been the forger; and he proves, almost beyond a doubt, that the treatise must have been printed, not from a transcript by Moncetti, but directly from a manuscript of the fourteenth century.

In the present unpretending little volume (consisting of less than eighty pages), Dr. Shadwell has embodied the essential results of his labors on the text and contents of the treatise, which, together with those of Dr. Moore, had the effect, as already stated, of reawakening the interest both of Dantists and of men of science in the subject. Dr. Shadwell reprints his revised text (which in default of any manuscript is necessarily based on the *editio princeps*), with an *apparatus criticus*, in which are recorded the readings of the original text wherever he has departed from it. This text is a conservative one; in fact in several instances he has been able to dispense with emendations previously proposed by himself and others, and to adhere to the reading of the *princeps*. Some of the apparently corrupt passages have been rendered intelligible by the simple expedient of altering the punctuation.

Dr. Shadwell's text is accompanied by a translation which we have no hesitation in describing as a masterpiece of its kind. The harsh scholastic Latin of the original is rendered in terse and vigorous English, which brings out the author's meaning with admirable precision, while for the first time the logical terms are represented by their correct equivalents, a point in respect of which previous translators had lamentably failed. The sequence of the arguments, which at times, is somewhat difficult to follow, is indicated by notes on the margin, which enable the reader to distinguish clearly whether Dante is speaking *in propria persona* or by the mouth of his opponent. In the footnotes, which are all too scanty, attention is drawn to sundry interesting correspondences of thought and expression between the "Quæstio" and certain of the undisputed works of Dante. Comparisons of this kind have proved of the highest value. Not only have they furnished the critic with many strong arguments in favor of Dante's authorship of the treatise, but they sometimes also have supplied the clue to the correct meaning of the writer's phraseology. To give a single instance—the phrase "ad apparentiam magis quam ad veritatem" (section i, ll. 4-5) is usually rendered "according to appearance rather than truth." Dr. Shadwell, whose intimacy, as a translator of the "Commedia," with Dante's vocabulary here stands him in good stead, translates "rather for display than for the discovery of the truth," a rendering which he justifies by references to "l'amor dell' apparenza" in "Paradiso" xxix, 87, and "per apparer ciascun s'ingegna" in line 94 of the same canto.

We much regret that Dr. Shadwell has not thought it necessary to provide an introduction. Presumably, though we are not told so, he held himself absolved by the fact that recent writers on the subject, notably Boffito and Biagi, who, with several others, are mentioned in the brief preface, have dealt with it so exhaustively from every point of view as to render any further discussion superfluous. Nevertheless, a statement of the case from Dr. Shadwell himself would have been welcome, especially in view of the fact that he was the pioneer who first opened at least one important line of inquiry. It is generally admitted that if, to quote the words of the preface, "the claim of the 'Quæstio de Aqua et Terra' to be reckoned a genuine work of Dante may now be considered established," it is in a large measure to his patient investigations and scholarly labors that this result is due.

CURRENT FICTION.

The Magada. By W. M. Ardagh. New York: John Lane Co.

The Canary Isands in the days of the Spanish conquest, just before the discovery of America, form the background of this story. Perhaps they might be said to form its subject, for at times, it is not certain whether Mr. Ardagh intended an historical romance

or a bit of romantic history. For the latter, we have the melancholy plight of the Canarios, who are being civilized, converted, and incidentally exterminated by the Spaniards. For the romance, we have the adventures of a youth, named Juan de Betancour. Even the author admits that Juan is conceited and something of a braggart, but his bravery is conspicuous. We are inclined to think Mr. Ardagh shares the feeling of the Canario boy, in whose eyes, as he looked at Juan, "there was no amusement, only faithful admiration." Juan is wounded in a skirmish with the natives and recovers consciousness to find himself a prisoner, guarded by two young princesses, Tessineboia and Tenaguana. The latter soon enters the service of the Magada, or chief priestess of the Canarios. Tessineboia is betrothed to a native prince, but, in spite of this detail, Juan succeeds in persuading her to elope with him by the simple process of taking her by the arms and shaking her rudely. Her betrothed arrives in the nick of time, recovers his penitent bride, and chases Juan up the mountains in the dark of the night. Henceforward Juan's interest lies in Tenaguana, the handmaiden of the priestess. Fleeing from the prince, he kills one of his pursuers and then claims sanctuary at the feet of the Magada in her cave on the Mountain of the Four Doors. Saved from death, he is kept prisoner by the Magada until the Spaniards raid the place. Then the priestess and all her maidens leap over a cliff to escape capture. Juan in his efforts to save Tenaguana falls over too. Parenthetically it might be remarked that the number of people in the story who, for one reason or another, go over cliffs, is something appalling. Most of them die of it, but not so Juan and Tenaguana; they land unhurt on a convenient ledge and wander off to further adventures.

The book is written pleasantly enough, though there is little pretence to characterization or plot and a good deal of conversation on the order of "How, now, boy, wilt come to Gran Canaria?" The author is obviously conscious of his story all the while, with the result that the scratch of his pen—or the clack of his typewriter—is too frequently audible. In the last few pages, however, when he drops the burden of his tale and speaks directly to the reader, his manner is distinctly simpler and more attractive.

My Heart and Stephanie. By R. W. Kauffman. Boston: L. C. Page & Co.

"It seems impossible . . . . that the commonplace death of a poverty-stricken stranger in a little Pennsylvania village should contain the seeds of a mystery which imperilled the succession to a crown, sent the spy systems of two great empires buzzing over half the world, and at one time threatened to plunge Europe into the greatest war of modern history."—With this tempting sentence, Mr. Kauffman introduces a most aristocratic detective-story, bristling with nobilities, and even royalties, a countess with a scarlet mouth and "carefully chiselled" temples, a superb Austrian ambassador of six feet six, and spies of every variety, including a half-witted specimen who certainly seems an odd choice for a great government engaged in extremely delicate business. The maze is threaded by Frances Baird, the female detective, whose ability the author has celebrated in an earlier work, and by a young American newspaper correspondent, who alternates, rather than combines, the wiles of the serpent with the guilelessness of the dove, but chiefly depends after all upon his rather unusual muscular resources. As an example of its class, this story shows decided cleverness in working the trick of ending every chapter with a dramatic surprise, but has a serious fault. It is not merely complicated, but confused; the reader, instead of being led on by the constant temptation to solve for himself one definite central problem, is soon reduced to a state of bewilderment, in which he waits passively for the author's explanation.

A Hind Let Loose. By C. E. Montague. London: Methuen & Co.

"Naphtali is a hind let loose; he giveth goodly words." So runs the motto which stands upon the title-page by way of gloss upon the title. The story, or elaborated sketch, that follows is a clever and telling satire upon modern journalism. Naphtali is the journalist whose goodly words flow from an adroit pen rather than from a mind or heart. More particularly he is a leader-writer named Fay, pursuing his trade in an English provincial city, "Halland, like some others, the second city in the Empire." Fay is an Irishman, still young, of brilliant mind and warm natural impulses. He has served his apprenticeship at political journalism, and has discovered that neither a brilliant mind nor honest impulse is necessary, or tolerable, in that game as practised at Halland. He has mastered the formula of the successful leader, and is able to turn it out with little effort. If he writes always with his tongue in his cheek, it is not because he is a cynic or a sly dog by nature. Such trouble as his conscience gives him is pretty well offset by the amusement he finds in the game. Halland has its two daily journals, the *Warder*, Conservative, and the *Stalwart*, Liberal; each with its long-established policy and "its own dynasty of editors, . . . for eighty years a reigning Brumby and a reigning Pinn." Fay has made himself indispensable to both papers, and has gained for them both a wider audience than they have hitherto commanded. Fay's secret is that he has brought nothing new to either paper, but has been content, in turn, to out-Brumby Brumby and to out-Pinn Pinn. He has "raised each of them to the n^{th} power"; and since they represent merely variant types of an average dulness and an average prejudice, at their best they are precisely what the public wants. The action begins at the moment when Brumby and Pinn discover that Fay has been common property. They turn him off with high words. But they cannot get on without him: the public will have none of mere Brumby and mere Pinn. They have to take him back on his own terms; and the crowning jest is his agreement to provide the leaders for a third and independent organ, which purposes to put the *Warder* and the *Stalwart* out of business. All this seems to make Fay something of a rascal: the author's triumph is in his successful enlistment of sympathy with the performer. Brumby and Pinn are the contemptible persons.

We are not familiar with Mr. Montague's name. The story reads like the first book of a practised writer, and it is undoubtedly written out of experience. Its manner is elaborate, conscious, rather distinctly Meredithian; its matter is fresh and alive.

The Voice in the Rice. By Gouverneur Morris. New York: Dodd, Mead & Co.

Here is a romance as original, as chivalrous, as plausibly impossible as "The Prisoner of Zenda." One advantage it has over Anthony Hope's delightful tale: it is less easy of imitation. The Ruritanian vein has been sadly worked out in the last ten years, but who will be bold enough to hide another self-sufficing, world-defying, aristocratic, slave-holding community in the rice-swamps of the Santee? Mr. Morris's story is as fantastic as its pretty binding and decorated margins, and much more masculine and adventurous than these would lead one to expect. There are certain echoes, no doubt, and slightly discordant ones. The Herculean hero would be very much at home in any of R. H. Davis's stories; the atmosphere of "Lady Baltimore" hangs about the innocent, flirtatious young ladies and their gracious elders; and the villain's hold upon the heroine through her father's indebtedness to him is an old, old device. Nevertheless, the tale is full of surprises from beginning to end; it is written in fresh, vigorous language, and moves with refreshing rapidity and economy of detail; and in the main task which the author has set himself, that of keeping alive the reader's as well as the hero's belief in the surpassing loveliness of a persistently invisible heroine—a voice in the rice—he has succeeded to admiration.

PALESTINIANA.

Rambles in Bible Lands. Edited by C. Lang Neil. New York: D. Appleton & Co. $1.75 net.

Life and Adventure Beyond Jordan. By the Rev. G. Robinson Lees. New York: D. Appleton & Co. $1.75 net.

Going Down from Jerusalem. By Norman Duncan. New York: Harper & Bros. $1.50 net.

Studies in Galilee. By Ernest W. G. Masterman. With a preface by George Adam Smith. University of Chicago Press. $1 net.

The supposition of a decreasing interest in religion does not seem to be borne out by the records of the book trade; and specifically the religion which interests the reading public is still the religion of the Bible. So in looking over the record of sales of the "American Lectures on the History of Religion" we have observed, with some surprise, it must be confessed, that no less than three of either of the volumes dealing with the religion of the Bible are sold to one of any of the volumes dealing with the religions of India, Egypt, Japan, etc. What is true of the Bible is true also to a considerable extent of whatever may be accounted lands of the Bible, ancient or modern. A generation since, the English reader seeking information about Palestine, its geography, antiquities, people, and customs, was almost limited to Thomson's "The Land and the Book" and Robinson's "Biblical Researches." Now, the books on Palestine available, not only to the student but also to the general public, constitute a library of very fair size; and, with the increasing stream of travel to the East, the number of these books, some of them most beautifully illustrated by brush and camera, increases apace. Of them some are purely artistic: others, however, and these are the majority, are written primarily to illustrate the Bible, the pictures being secondary to this purpose.

To the latter class belongs Neil's "Rambles in Bible Lands." This is the sort of book which a pious mother, desirous of bringing her children up in a knowledge of the Bible, may well put in their hands. Abundantly illustrated, it seeks especially to elucidate and illustrate the Bible. An index of the passages connoted, a couple of hundred in number, is provided at the back of the volume. The work is fairly abreast of modern scholarship and may be honestly commended for its purpose. The illustrations, of which several are colored, are well chosen and add much to the interest of the book for the class of readers for whom it is intended. These would be more valuable, however, if the plates were better executed.

Lees's "Life and Adventure Beyond Jordan" is in part a reprint of articles published in a boys' magazine, and, like the preceding, is intended particularly to attract the attention and interest of the young. The author's long acquaintance with the country and the people, among whom he has been a missionary (his volume on village life in Palestine is recommended as a text-book in the last number of the *Journal of Religious Education*) stood him in good stead as a traveller, and the journeys here recorded include a trip through a then unknown region in southern Bashan, full of ancient and well-preserved ruins. In general, Mr. Lees describes parts of Palestine comparatively unknown and little visited by the ordinary traveller. He writes, however, rather from the point of view of the adventurer than of the explorer. He also has in mind the Bible student, for whose benefit a list of Scripture passages, illustrated by his observations, is provided at the commencement of the volume. The book is beautifully illustrated, and both the colored plates and the photogravures are full of interest and instruction. This volume may be heartily commended to those who are interested in the picturesque as well as the Biblical aspects of Palestinian life and travel.

"Going Down from Jerusalem" is of a different type. The author, Norman Duncan, and the illustrator, Mr. L. Harris, made a journey from Jerusalem to Egypt in company. The sole object of both appears to have been to find and reproduce the picturesque. In a vague way the book reminds one of Kinglake's "Eothen," except that here one has a sense of a certain straining after effect. The ordinary reader probably would say that the effect is very Oriental; but the "Orientalism" really lies in the fancy of the writer himself. He has conceived an idea of the East, and all that he sees is colored by that conception. It is not the work of a careful observer, but of a bookmaker seeking to make an attractive, readable book, in which he has certainly succeeded. If the scenes and the people are not real, being somewhat too much shaped and colored by the writer's fancy, nevertheless the book is well worth reading by one who wishes to idle away a couple of pleasant hours and who enjoys literature as such. Some of the stories, Oriental and other, are delightful and the illustrations harmonize admirably with the text.

Dr. Masterman's book is a scholarly and valuable series of papers on Galilee, which are, at the same time, eminently readable. This is a work to be commended to Bible scholars. Stationed at various times as a missionary physician at Jerusalem, Safed, and Damascus, Dr. Masterman has utilized his opportunities to study the people and the land to the fullest extent. He has informed himself with regard to the archæology and the history of the country. He has been in contact with the leading scholars who have conducted researches and explorations in Palestine in recent years, several of whom he has accompanied and assisted in parts of their work. Already well known to scholars from numerous articles in the publications of the University of Chicago and of the English Palestine Exploration Fund, the papers contained in this volume will add much to his reputation as a careful and intelligent observer. The central part of the volume is taken up with a discussion of the sites at the northern end of the Sea of Galilee—Gennesaret, Chorazin, Capernaum, and Bethsaida; and Dr. Masterman seems to have come pretty close to saying the final word, or at least the final word which can be said without systematic excavation, in regard to the disputed location of the last two towns. The first paper in this volume, on the physical features, boundaries, and chief towns of Galilee, gives the most intelligible view of Galilee as a whole yet published. Inland Fisheries, Ancient Synagogues, and Galilee in the Time of Christ, the remaining papers in this volume, if not quite of the same importance as the first named, are of much interest and contain matter of great value to the Bible student.

A Treatise on the Federal Corporation Tax Law of 1909. By Arthur W. Machen, jr. Boston: Little, Brown & Co. $1.50 net.

The passage of an act so wide-reaching in effect as that of August 5, 1909, was ample incentive to the preparation of a book such as Mr. Machen's, which is impartially self-styled a "treatise" and a "commentary." It can hardly be dignified by the former description, while as a commentary the second edition will doubtless be more useful than the first. However, the author may be right in the usual modest admission that the book "needs no apology," especially as it was intended to be "of assistance at this juncture," while the returns were being prepared for filing under the new tax law. The terms of the statute, the regulations and forms of return laid down by the Treasury Department (all of which are printed in the appendices) make the process of compliance with the statute quite simple for the lawyer acting for a corporation in ordinary circumstances, while a return by a corporation in exceptional circumstances could not have been made much easier by the use of this volume.

Mr. Machen has striven well to build up a volume where a pamphlet would suffice. If the act is upheld, his book may secure the distinction of being the earliest "second edition" on the subject. If the act is overthrown, his effort will result in an additional title in the overloaded law catalogues. Not content merely with annotating the statute, Mr.

Machen has enlarged his comments on the statute by the introduction of much material of a purely argumentative character.

He admits (sec. 12) that "it may be said that the tax is upon the privilege of having a capital stock represented by shares." This theory he promptly destroys, though later (sec. 19) he hastily says that "no corporations except such as have a capital stock represented by shares are subject to the act." This leads to the discovery that by adopting the English system of stock, "which is not divided into indivisible shares, but is infinitely subdivisible," there might evolve a corporation which "would not be subject to this Federal tax, or be bound to make any returns under the act." "The device is as simple as it is efficacious"; but we have not heard of its adoption. A similar offering is that, in securing the deduction for interest paid on indebtedness of an amount not exceeding the paid-up capital stock, it is desirable to show as large capital stock as possible, and the author concludes: "Thus an additional inducement is added to the practice of stock-watering—rather a curious result of a statute most of whose advocates profess to regard that practice with abhorrence." Instead of imagining what may happen, the author might well have given adequate attention to an analysis of the actual effect of this exemption, comparing, for instance, a company which for years may have raised new funds by stock issues and a company which may have raised such funds by debentures or bonds. Thus two companies for years past might have pursued these different financial methods, each correct in every particular, with the result that the company which has habitually given security for such new money is now in a worse position than the company which has merely floated additional stock.

The author remarks (sec. 132) that "the absence of some provision for a review by an impartial tribunal is certainly a blemish in the law," but a very prompt review has been secured in spite of this "blemish." The portion relating to payment under protest might well have been enlarged, as that part of the procedure was the most vital for many at the "juncture" in which the volume was designed to appear. All such details may well be explained by the desire to produce quickly a serious lawbook. The work should be regarded only as a critical study of the text of the statute, and as such it may be suggestive to Congressmen and of such interest and value to lawyers as comes from very close analysis of a statute and from discussion or citation of more than three hundred cases bearing upon the various points of statutory interpretation.

The Inspiration of Poetry. By George Edward Woodberry. New York: The Macmillan Co. $1.25 net.

These eight lectures were delivered before the Lowell Institute, Boston. The first and the last are of general import, treating Poetic Madness and Inspiration. Between are appreciations of six typical poets: Marlowe, Camoens, Byron, Gray, Tasso, and Lucretius. The whole constitutes an informal poetic, and, by implication, an æsthetic.

The poet is the man of passion. His temperament, in Nietzsche's phrase, is Dionysiac; he illustrates "the power and the passion to live":

> It is a widespread error, and due only to the academic second-hand practice of poetry, to oppose the poet to the man of action, or assign to him a merely contemplative rôle in life, or in other ways deny reality to the poet's experience; intensity of living is preliminary to all great expression.

Some element of excess, rebellion, anarchy, we must expect to find in the poet. This insurgency, however, is dominated by the Apollonian faculty, which impels him to lend to his passion form. He is thus, as artist, the self-disciplined man *par excellence.* He qualifies the feeling of the throng as the philosopher qualifies its thinking.

Into his speculations on the origin and social utility of poetry, we cannot follow Mr. Woodberry. He imagines an emotional crisis in the history of the race, akin to that which we find in the individual poet, which may have concurrently urged men towards the invention of emotional and intellectual forms. Our best thinking may be grounded in some such emotional stress. With this suggestive view may be compared Benedetto Croce's doctrine that every idea perforce passes through an æsthetic (emotional) stage. If this be true, the crises imagined by Mr. Woodberry would become simply collective intensifications of a universal experience.

Admirably clear and telling are the illustrative studies of six poets. The most novel and stimulating, perhaps, is the essay on Byron, who is regarded as an un-British, nay, as a "Mediterranean" poet; the most eloquent that on Lucretius. In his sympathetic treatment of Gray it seems to us that Mr. Woodberry evades the problem of the poet at low pressure. How square with the theory of "poetic madness" those poets whose inspiration seems compact of reason? or at least whose Dionysiac periods are so rare? A full elucidation of this paradox might have taken a confessional form. As it is, we are left in some doubt as to how we must regard the Grays, Arnolds, Heredias, shall we say Woodberrys? Is the difference between them and a Byron or a Camoens merely quantitative, or is it, in some instances, of kind as well? How shall we discriminate between the unrobust but true poetry of a Gray and that practice which we have been told is "academic and second hand"?

In the matter of Tasso, Mr. Woodberry follows the legend in making the imprisonment at Ferrara romantically mysterious. To us it seems, with all its tragedy one of the painfully commonsense episodes of history. Suppose a half-mad poet to fall in love with a princess, what should the prince, her brother, do? Plainly, seclude the unfortunate until he recovered his balance. Nor is it strange that Alphonso of Ferrara would not give Tasso up. There was no telling what he would have said in another court, whereas sane or mad, free or in prison, he was the brightest ornament of the house of Este. To credit Tasso's account of what may have been imagined distresses, to impute to Alphonso any but the obvious prudential and benevolent motives, seems to us gratuitous. But the legend is too enthralling to die readily.

Mr. Woodberry's book should do good. Quite in the ardent spirit of the defences of poetry of the Renaissance, it vindicates the character of poetry as a universal and necessary ingredient of right living. There is possibly some exaggeration of the Dionysiac view, but surely such over-emphasis is salutary at a moment when poetry is pretty generally regarded as a rather futile accomplishment.

The Return of Louis XVIII. From the French of Gilbert Stenger by Mrs. Rodolph Stawell. Illustrated. New York: Charles Scribner's Sons. $3 net.

The Bourbon Restoration. By Major John R. Hall. Boston: Houghton Mifflin Co. $4 net.

To judge from the large number of memoirs and histories which have lately appeared on the post-Napoleonic period, there seems to be an increasing interest in the Bourbon Restoration. It was an age of intrigue. The returned *émigrés* were intriguers by nature and by circumstances. Fouché and Talleyrand were pulling hidden wires of several different policies at once. It is characteristic of the age that Louis XVIII continued to keep a minute police supervision over Fouché, even after he had accepted him as his Minister of Police. A *dossier*, which has recently been brought to light, shows that a detailed record was kept of Fouché's daily doings. The names and, so far as possible, the business of all his visitors were recorded. If he seemed to be in a good humor, or if he seemed to be depressed, the fact was duly noted. The vigilance was not relaxed even on his wedding day. And the amusing side of the situation was that this elaborate system of espionage on the Minister of Police was carried out by one of Fouché's own police agents.

The two recent volumes on the Bour-

bons by Stenzel and by Major Hall resemble each other in giving much of this flavor of intrigue; but otherwise, in character and subject-matter, they are quite different. The first chapters of Stenzel's interesting volume are devoted to the wanderings and vicissitudes of Louis XVIII and his friends at Verona, Blankenburg, Mittau, and finally at Hartwell; the remaining chapters describe their mistakes and follies during the first restoration, their ignominious flight from Paris at the beginning of the Hundred Days, and their final return from Ghent after Waterloo. "I have dealt," says the author in his preface, "with that court, with its princes and its dignitaries, faithfully but ruthlessly; without injustice, but at the same time without the flattery that is too common among royalist writers." Unfortunately, however, he has exercised too little discrimination in the use of the memoirs of the period from which he largely quotes. He is too prone to follow the characterizations of such a cynical misanthrope as the Abbé Montgaillard. The restored Bourbons were, to be sure, a foolish, narrow-minded, and altogether sorry lot, after Napoleon and the heroes of the Revolution, but they were not quite so bad as Stenzel represents.

Major Hall disposes briefly of the Bourbons during the period of their exile; he does not allow himself to be led astray by the charm of the Waterloo campaign; he comes quickly to his main theme—the history of the whole Bourbon Restoration from Louis XVIII's entry into Paris in 1814 to Charles X's overthrow in 1830. He addresses himself conscientiously to the confused electoral laws, the complex political parties, and the elusive intrigues. He has chosen his chapter headings extremely well, but, once in the midst of a chapter, he is apt to obscure the significant facts by too much tedious detail. His work is painstaking, accurate, and unbiassed; it is perhaps the best account of this period in English, which, however, is no great praise. But, being based on memoirs and on the works of Ernest Daudet, Houssaye, Castel-Viel, and other well-known secondary authorities, it cannot have the freshness nor the permanency of a first-hand investigation in archives.

Theism and the Christian Faith. By Charles Carroll Everett. New York: The Macmillan Co. $2.50.

Until the publication of the present volume and its logical predecessor, "The Psychological Elements of Religious Faith" (Macmillan, 1902), Dr. Everett was generally known only as the author of a book of profound thought and charming style, entitled "Poetry, Comedy, and Duty" (Houghton Mifflin, 1888), and of certain literary and theological essays which appeared in various periodicals, especially in the *New World*, of which he was one of the editors during the whole of its brief and brilliant career. Scholars, indeed, knew of a book on "Fichte's Science of Knowledge," which, however, was mainly expository, and of an earlier book, "The Science of Thought," built on Hegelian lines and almost severely technical in character. In the volume now published we have a record, edited from students' notes, of his most important course of theological lectures delivered annually to students in the Harvard Divinity School. The editor, the Rev. Edward Hale, deserves high credit for the skill and self-effacing loyalty with which he has accomplished a most difficult task, for he has succeeded not only in accurately reproducing Dr. Everett's thought, but also in suggesting the charm of delivery corresponding to the limpid style of the published essays. The style is so clear that sometimes one hardly realizes how deep the thought is, just as in the lectures Dr. Everett's gentle flow, "too full for sound or foam," often carried the student placidly over depths unsuspected at the time.

Dr. Everett's two great masters were Schleiermacher and Hegel, and it may be said that the former affected the substance and general tenor of his thought, while the latter had greater influence upon the form which it assumed in his own mind and in which it was presented. Fundamental is his sense of the wholeness of things and his demand that this unity shall be manifested in thought. In this sense of unity his sympathy is revealed with what he calls the mystical type of theology in contrast with the "common-sense" type to which his Unitarian affiliations would seem to have inclined him. This craving for unity is seen not only in thought, but also in social relations, where it appears as the ideal of goodness, and in æsthetic experience, where it underlies the ideal of beauty. Now, in faith, which is but the philosopher's consciously adopted "good faith" of an unsophisticated mind, Dr. Everett interprets reality as answering to these three ideals of the reason. The world exists for us in space and time, but, so existing, it is not a world of unity: unity in space is possible only in spirit which finds itself in its opposite, and unity in time also can be fulfilled only in spirit which makes of the past a moment of the present and so preserves identity. If, therefore, reality fulfils the demand for unity, it must be conceived in terms of spirit. Moreover, the ideal of goodness finds its fulfilment only in love wherein the interests of another actually become one's own, and self-realization includes the realization of that which is loved. If, therefore, reality fulfils this idea, the Spirit must be conceived in terms of love. Similarly, beauty is realized only when the unity of the ideal is manifest in the diversity of the actual, and so beauty is witness to the glory of God shining through the order of the world.

Dr. Everett's theological system has points of contact with current theory which make it an interesting study; but scattered through the book are sentences of insight, literary and religious, touches of quiet and delicious humor, appreciations of the masters of thought and poetry, which make the book worth reading altogether apart from philosophical or theological doctrine. Many readers, as well as students of theology, will be grateful to the editor, and to the *Harvard Theological Review*, which issues this as a supplementary volume.

The History of French Literature from the Oath of Strasburg to Chanticler. By Annie Lemp Konta. New York: D. Appleton & Co. $2.50 net.

There is distinctly need of a good history of French literature in English. Van Laun's work, which formerly had some vogue, has become archaic, and that of Professor Saintsbury, although based on the "personal acquaintance" of which he constantly boasts, is quite unsatisfactory as an interpretation. The other English works are scanty outlines or dull compendiums. On the other hand, a history such as M. Lanson's book, excellent as it is, presupposes too much knowledge, and is correspondingly vague to the student viewing France from a foreign standpoint.

As a candidate for the vacant place on the book shelf the "History of French Literature from the Oath of Strasburg to Chanticler (*sic*)," by Annie Lemp Konta, is a disappointment. At first glance it promises well: the volume is not disfigured by the erratic orthography and accentuation which disgrace so many American books on France, and it is clearly the work of one who has read a great deal in French literature and has made a conscientious attempt. Not only has the author unexpectedly tried to account for many of the less famous though significant authors, but occasionally an interesting and suggestive anecdote appears in the text or notes.

Unfortunately, praise stops here. Not to mention many peculiar phrases, such as "Godfrey of Monmouth," "Angelo, Poliziana," the education of Loyola at the "College of Montaigne," the attribution of Malherbe's reform to the middle of the sixteenth century, the reader is forced to conclude that the author herself has never grasped, or has not expressed, the important tendencies of French literature, nor has she even thoroughly assimilated what other critics have said. We do not expect a writer nowadays to be original about the seventeenth century, but a treatment of Corneille in which we are told in the space of two pages that "Faguet

says," "said La Bruyère," "says Demogeot," "Brunetière writes," "but writes Lanson," and "adds Lanson," produces a scrappy effect. One feels also in many places, that Mrs. Konta's authorities are not altogether the most recent or the most judicious; and that perhaps too much confidence has been placed in the statements of Aubertin and Paul Albert or of Bernard Shaw and Mr. Henry Wellington Wack.

The treatment of authors, as to relative importance or literary significance, is puzzling. To dismiss Regnier with the statement that his "only claim to celebrity are his satires," as though that were not merit enough, tantalizes the seeker for information; to put Rollin between Quinault and Malebranche on the same page is not a *mélange*, but a *potpourri des genres;* to treat Marivaux after Beaumarchais, and to give almost as much space to Henri Rochefort as to Descartes or Pascal is the *monde renversé*. The bibliography is beneath contempt.

Notes.

The Oxford University Press has published an illustrated booklet giving a history of its career of more than three centuries.

"Scotch Irish Pioneers in Ulster and America," by Charles K. Bolton, librarian of the Boston Athenæum, will soon appear from the press of Bacon & Brown, Boston.

Four more volumes of Scribner's excellent Memorial Edition of Meredith bring us through "Sandra Belloni" (III and IV), "Rhoda Fleming" (V), and "Evan Harrington" (VI). As in the earlier volumes there are a few illustrations from photographs of places connected with Meredith's life at the time of writing the particular book.

"In Praise of Gardens" (Baker & Taylor Co.) is an anthology of garden verse, selected by Temple Scott. The pleasure of reading the poems is marred by extraordinary slovenliness of printing.

J. Logie Robertson's complete text of Scott's Poems and Thomas Hutchinson's carefully prepared text of Wordsworth are now issued in the low-priced Oxford Edition by Henry Frowde. Byron is added to the same edition. The prefatorial note to this reads as follows:

> We are indebted to the courtesy of Mr. John Murray, publisher of the Edition of 1867, for permission to use any copyright matter contained in that issue. The following is prefixed to Mr. Murray's Edition: "Although various editions are circulated purporting to be 'Byron's Works,' none are complete except those bearing the imprint, etc."

This statement is perfectly correct for Murray's edition of 1867, which the present Oxford text reproduces; but since that date Mr. Murray has himself published the great thirteen-volume Byron, including, besides other new matter, the beginning to a seventeenth canto of "Don Juan"; and the verse of this edition has been issued also in a single volume (imported by Scribner). Furthermore, the Cambridge Byron of Houghton Mifflin Co. is even more complete, if we may use the phrase, than the new Murray. It is right to add, however, that the matter brought into print since 1867 is virtually all of it worthless.

The new edition of Professor Hoffmann's "Hoyle's Games Modernized" (Dutton) contains a chapter on Auction Bridge, by Ernest Berghoit, and new chapters on Roulette and Trente et Quarante by Capt. Browning. Another card-book worthy of mention is Capt. S. H. Hingley's "Hints on Advanced Bridge" (Macmillan).

A book of pleasant entertainment is Ada M. Ingpen's "Women as Letter-Writers," which contains a selection of letters from Margaret Paston down to Christina Rossetti. On glancing through the list of correspondents, fair or witty or wise, we miss only one favorite, the famous Molly Lepell, Lady Hervey. We could pick out several letters written by that charming lady from the weary confinement of Lord Bristol's country place, which would bear comparison with most that the volume before us contains. However, the writer of this note is probably the only man now living who is enamoured of the beautiful Molly Lepell, and otherwise, at any rate, the collection is admirable. (Baker & Taylor Co.)

"The Students' Standard Dictionary" (Funk & Wagnalls Company) is a convenient condensation which, the publishers say, contains about 61,000 of the 317,000 words and phrases of the complete work. The volume has 900 odd pages, with the defined words in clear black-face type, while the definitions are presented in type large enough to be easily read by ordinarily good eyes. The text seems at times rather too condensed, and perhaps the book would have been quite as useful on the whole if there had been fewer words and more complete definitions of them. On the other hand, the dubiously valuable feature in the complete work of quoting current, rather than standard and original uses of the words, has been omitted, certainly with no great loss to the book. The volume is of convenient size for desk use.

The special feature of a delightful new edition of the "Pickwick Papers," imported by Charles Scribner's Sons, is the great number of topical pictures scattered through the two volumes. In these pictures nothing in the way of imaginative interpretation of the characters is attempted; that is wisely left to the matchless "Phiz"—happiest of illustrators. What the present editor has done is to reconstruct, so far as possible, by means of old prints and sketches, the scenes which formed for contemporary readers the background of the book. As might be expected, the most casual allusion, tucked away in the most unimportant passage, is regarded as a good enough peg to hang a picture on; we have Guy's Hospital, for instance, merely because it was near Bob Sawyer's lodgings; we even have presentments of Plato, Zeno, Epicurus, and Pythagoras, merely because it was suggested to Mr. Pickwick that he should impersonate one of them at Mrs. Leo Hunter's fancy dress ball. It is fair to add immediately, however, that most of the two hundred and twenty-three pictures are of more than general interest. It is amusing to compare The Bull, where the Pickwickians stopped at Rochester, with Wright's, against which they were warned ("dear—very dear—half-a-crown in the bill if you look at the waiter—charge you more if you dine at friend's than they would if you dined in the coffee-room—rum fellows—very"). Some of the prints, too, are so quaint and interesting in themselves that one is glad to come across them, even though they illustrate the text only in a Pickwickian sense. Such are the figure of the two-penny postman, the sketches of the Fleet Market, and the charming scenes of the shipping at Bristol. One of the most amusing reprints is that of the ingenious poetical advertisements of Warren's Paste Blacking, scornfully referred to by Tony Weller when Sam is in danger of "letting himself down to talk poetry." Copies of the original cover, the title page, and the first advertisement of the book bring back to one with a thrill that happy time when, as Chesterton says, real life was merely an interlude between one issue of "Pickwick" and the next. Certainly to any lover of Dickens this alluring edition—beautifully illustrated, handsomely printed, light and easy to hold in spite of its size—would be a precious possession. We only fear that among those who are by way of spending $7 for a book there are not many true lovers of Dickens. People of an antiquarian, or bookish, temperament, who flatter themselves that their minds have grown so that they cannot read Dickens, will enjoy buying the book and enjoy showing it to their friends; but they will be going back, oddly enough, to the original scheme of Chapman & Hall, according to which the text was to be merely accessory to the illustrations.

The "Copa" is the most charming of all the pseudo Virgilian short poems—an exquisite bit of genre painting, depicting a wayside *osteria,* on a summer day, with an embowered garden, threaded by a tinkling rivulet, and the dark-skinned Syrian *padrona* dancing and singing in the cool shadows to the lively tune of the clicking castanets. It would be a most excellent thing to have this bit of Augustan verse adequately translated and discussed by non-professional hands. But its treatment by Charles L. and John Cotton Dana ("Copa: The Hostess of the Sun," etc., etc.; Elm Tree Press) is about as far as possible from being adequate. The writers take as their text a recent essay by Dr. Fritz Keppler, who ascribes the authorship of the "Copa" to the Cynthia of Propertius. They give a vague, but encomiastic, account of Dr. Keppler's work (nowhere mentioning the actual title of his essay), and subjoin an English prose translation of the "Copa" itself, and a transcript of the original text, concluding with some rambling talk about Cynthia and Propertius. The Latin text contains some evident misprints, and if other readings are accurately reprinted, the case is clear that Dr. Keppler (a physician, by the way) had lamentably poor acquaintance with the literature of his subject. The proffered translation of these thirty-eight verses is very unfortunate. There is hardly a line which does not contain blunders that the use of a common dictionary might have prevented, and the English is without distinction, and in several places meaningless, where the Latin is simple. It is a pity that the writers did not let a Latinist inspect their work before enshrining it in such excellent form.

The sea-law falsely attributed to the Rhodians, which was really the sea-law of the Mediterranean between the eighth and

twelfth centuries A. D., and which is a striking testimonial to Byzantine enterprise and influence, has been accessible hitherto in the most authoritative form in a text and translation first published by Dareste in the *Revue de Philologie* for January, 1905. Dareste's work, however, was based upon a relatively late and inferior MS. so that Walter Ashburner, in his "The Rhodian Sea-Law" (Frowde), has done a timely and valuable service in determining scientifically the relation of the extant mediæval copies of the code and in preparing for the first time a critical edition of it. To this he has prefixed a substantial historical and legal introduction in which the origin and sanction of the law, as well as its character and business setting, are discussed with great independence of thinking, clarity, and simplicity of style, and mastery of the subject and its literature. Its most weighty section "deals with the relation of the sea-law to the other monuments of maritime jurisprudence which relate to the Mediterranean basin during the middle ages, and gives a sketch, so far as it can be gathered from these materials, of that jurisprudence as it existed between the fall of the Roman Empire and the commercial renascence of the thirteenth century." The book is thus one which no real student of the Middle Ages, or, for that matter, of Antiquity—upon which survivals of maritime usages reflect much light—can afford to ignore. It has all the sterling qualities of the best English scholarship.

With the exception of some Indian forays of colonial times, the annals of American warfare chronicle no act of such devilish barbarity, perpetrated by men nominally under the flag of a belligerent power, as the famous Quantrill raid of August, 1863, which in a few hours reduced a large part of the town of Lawrence, Kansas, to ashes and left some hundred and fifty of its citizens butchered in cold blood in its streets. The story has been many times told, with varying degrees of elaboration or embellishment, by survivors of the raid; but the inevitable variations in detail, joined to imperfect knowledge on the one hand and undying hatred of Quantrill and his band on the other, have so far surrounded the affair with mystery, and even romance, as to lead more than one later historian to dismiss the raid as a sporadic outrage of slight importance. It has been reserved for W. E. Connelley, in his "Quantrill and the Border Wars" (Cedar Rapids, Ia.: The Torch Press), to give us the final authoritative word in the matter so far as the facts of the case are concerned. The book is not, indeed, well written; its style, though readable, is diffuse and digressive; and the abundant footnotes often contain statements quite as important for the general course of the narrative as those of the text. But in spite of these shortcomings, Mr. Connelley has investigated exhaustively every incident of Quantrill's life from the cradle to the grave, followed to its source every story and tradition, set down the recollections of scores of persons who knew Quantrill and his followers, and embodied the whole in a bulky volume which constitutes a contribution of prime importance to the history of the Kansas struggle and the civil war. Of the points which the book helps chiefly to make clear, we note here only four: first, the extraordinary depravity of Quantrill's life, crowded from youth with a succession of murders and outrages unparalleled, we believe, in American history, and rivalling in some of its features that of the famous Jukes family; secondly, the gradual rise of Quantrill to the leadership of a gang of ruffians, who for years played fast and loose with proslavery and free-State men on both sides of the border, killing, burning, and ravaging without let or hindrance; thirdly, the connection, little known, between Quantrill and the Confederate government, in whose service he was after August 15, 1862; and lastly, the circumstances, here for the first time fully set forth, of his capture and death. Incidentally, the book does good service in exposing the inaccuracy and bias of Major John N. Edwards's "Noted Guerrillas," which has often been quoted as an authority on this period of the border struggle.

Considering the superabundance of good Mediterranean literature it is hard to see a crying need for Bruce Millard's "The Mediterranean Cruise." Kodakers will relish his adventures in the quest of unveiled Arab beauties for the camera. In fact, the average snapshotting man and woman is plainly the destined reader for this book. It is written with a certain spirit but has nothing new or valuable to say. The description of the Greek Theatre at Taormina is misleading. There is no indication that most of the visible structure, especially the stage, is of Roman date. Mr. Millard writes for those who have no time for such particularities. (Putnam.)

"Tales of Travel All Around the World," by Horace A. Taylor (The Neale Publishing Co.), will be a disappointing book to those who know the author. For many years assistant secretary of the treasury, Mr. Taylor has had an extraordinary acquaintance with American politicians and statesmen. His reminiscences of the Middle West when it still was the frontier would be invaluable. What he has to say about the nations of the earth as observed in a two years' trip is just about what any intelligent American would note. Occasionally, the trained man appears. When he says that Japan is taxed to the limit and cannot afford to fight, he speaks with authority. His impressions of half-baked missionaries are also of value. He is a veteran administrator and knows what efficiency means. In the main we think Mr. Taylor was ill-advised to reprint his letters of travel. His reminiscences of the Northwest when Illinois was Indian country, would be quite another matter.

The series of brief biographical sketches of early American Methodists now includes the story of the interesting career of "Peter Cartwright," one of the most original and remarkable personages of American religious history (Eaton & Mains). Cartwright's apostleship to the frontier for half a century, his dominating personality, and his captivating humor are well described in this little book, which is by Philip M. Watters. Lincoln once had Cartwright for an opponent in a campaign for Representative in the Illinois Legislature, and it is a misfortune that the hustings speeches of the two have not been preserved. In the same series of biographies is a sketch of "Thomas Coke," the founder of American Methodist missions, by Francis Bourne Upham.

With the ninth part of the "Assyrian and Babylonian Letters, belonging to the Kouyunjik Collection of the British Museum" (University of Chicago Press), containing 98 tablets, Prof. Robert F. Harper has published in all the text of 974 letters, and we are informed that a tenth part is in preparation. The collection of texts is a valuable contribution, bearing alike on the political, religious, and social conditions of Assyria in the period of her greatest glory. The letters form part of the great royal library discovered in the ruins of Nineveh by Layard about fifty years ago, and indicate that the palace within which the library was housed was also the official depository of the historical archives of the country. The ninety-eight letters in this volume deal largely with political events, and among them are some which illustrate the relations existing between Babylonia and Assyria in the reign of Ashurbanabal (668-626 B. C.). The king had placed his brother Shamash-shum-ukin in control of Babylonia and the letters give the king information in regard to movements in the South, leading to the revolt of Shamash-shum-ukin against his brother. Other letters again furnish the results of astrological observations, while a number, as in previous volumes, deal with matters connected with the cult. Indeed, there is scarcely a phase of public life that is not illustrated by the collection, which forms an important adjunct to the historical annals of the Assyrian kings and to the religious texts of the period. The language of these letters is exceedingly difficult. They contain a large number of obscure terms, and the exact meaning of the phrases, even where every word is clear, is often difficult to seize. A number of special investigations of the material contained in the previous letters have already appeared, but much work is still to be done before these letters will be fully understood. It is to be hoped that Professor Harper, after his next volume has appeared, will interrupt the publication for a while and set himself to the task of translating at least the historical letters in the collection, for which, by his long experience with this epistolary branch of cuneiform literature, he is especially fitted. The clear type used to reproduce the cuneiform characters is a noteworthy feature, and, while the autotype in the case of the scripts of less known periods is essential for palæographic purposes, in the case of the Assyrian script now thoroughly known, the method of reproduction adopted by Professor Harper serves all purposes. He has carefully studied his texts before copying them, so that there are few corrections to be suggested by those who make a special study of any particular text.

Memorial volumes and *Festschriften* have as a rule but little scientific interest. They are of value chiefly to those whom they are intended to honor, to whom it is gratifying to receive such a testimonial from their colleagues, which they can place upon their library shelves, show to their friends, and hand down to their children. This general rule is true of the "Hilprecht Anniversary Volume," a stately book of some 500 pages, illustrated with numerous half-tone reproductions and fac-

simile plates, printed in Germany, by W. Drugulin, and "dedicated to Hermann V. Hilprecht, upon the twenty-fifth anniversary of his doctorate and his fiftieth birthday by his colleagues, friends, and admirers." While there are not a few distinguished scholars among the contributors to this volume, we should suppose that Professor Hilprecht's gratification in its publication would be considerably modified by the fact that not a single American scholar has contributed an article (unless indeed Radau be counted as such), including Hilprecht's former pupils, and that the more distinguished German Assyriologists, including Hilprecht's former teacher, Delitzsch, are chiefly conspicuous by their absence. The papers in this volume are almost exclusively Assyriological and technical, and one-quarter of the entire space is occupied by Radau's contribution on "Miscellaneous Sumerian texts from the Temple Library of Nippur." (Open Court Pub. Co.)

The third annual meeting of the Mississippi Valley Historical Association is to be held at Iowa City, Ia., on May 26 and 27, preceded on May 25 by a programme presented under the auspices of the State Historical Society of Iowa. The programme for the three days includes the following papers and addresses: May 25, "On the Way to Indiana," by Laenas G. Weld of the State University of Iowa; "Abraham Lincoln," by Joseph Newton of Cedar Rapids, Ia. May 26, "Professional Ideals," by Prof. Orin G. Libbey, president of the Association; "The Evolution of Nebraska," by Albert Watkins, historian of the State Historical Society of Nebraska; "The Pioneer and the Forest," by Prof. Bohumil Shimek of the State University of Iowa: "The State Historical Museum," by Charles E. Brown, chief of the Wisconsin State Historical Museum; "Chief Features of the Report of the Committee of Five of the American Historical Association," by Prof. Andrew C. McLaughlin of the University of Chicago; discussion, "To what extent can an effective use of the sources be made in secondary teaching?" by Prof. Guernsey Jones of the University of Nebraska, Prof. Edward C. Page of the Northern Illinois State Normal School, and Jay T. Colegrove of the Cedar Rapids High School; discussion, "To what extent may the teaching of history and civics be correlated and how best accomplished?" by Prof. Thomas F. Moran of Purdue University, Prof. O. M. Dickerson of the Western Illinois State Normal School, L. A. Fulwider, principal of the Freeport (Ill.) High School, and H. C. Wright of the Morton High School at Berwyn, Ill. "The Significance of the Mississippi Valley in American History," by Prof. Frederick J. Turner of the State University of Wisconsin; "The Duty of the State in Relation to Its History," by John Lee Webster of Omaha, Neb. May 27, "The Significance of the Louisiana-Texas Frontier," by Prof. Isaac J. Cox of the University of Cincinnati; "The Bid of the West for the National Capital," by Prof. Olynthus B. Clark of Drake University; "Detroit and George Rogers Clark, 1780-1781," by Prof. James A. James of the Northwestern University; "The Need of the Comprehensive Finding List of Western Manuscripts," by Prof. Clarence W. Alvord of the University of Illinois, "Effigy Mounds and Mosaics in the Valley of the Mississippi," by Arlow B. Stout of the State University of Wisconsin; "Past and Present Sticking Points in Taxation," by Frank L. McVey, president of the State University of North Dakota.

The American Philosophical Society of Philadelphia announces that an award of the Henry M. Phillips prize will be made during the year 1912. Essays must be in the possession of the society before the first day of January, 1912. The subject upon which essays are to be furnished by competitors is: "The Treaty-making Power of the United States, and the Methods of its Enforcement as Affecting the Police Powers of the States." The essay must contain not more than 100,000 words, excluding notes. Such notes, if any, should be kept separate, as an appendix. The prize for the crowned essay will be $2,000. The essays must be sent to W. W. Keen, the president of the American Philosophical Society, No. 104 South Fifth Street, Philadelphia.

A sad and disquieting record is that of the recent increase of suicides in Munich, Bavaria. According to official statistics there were 95 in 1907, 116 in 1908, and 125 in 1909. In addition to these actual suicides there were 94 unsuccessful attempts to commit suicide in 1907, 102 in 1908, and 130 in 1909. Of the 255 successful and unsuccessful suicides in 1909, 86 were by deadly weapons (49 successful), 27 by hanging, 55 by drowning (17 successful), 28 by opening the veins, 40 by poison (14 successful), and 19 (16 successful) in ways not precisely known. Of the 125 successful suicides in 1909, 88 were by males and 37 by females; 16 were under twenty years of age, 75 between twenty and fifty, and 31 over fifty years. Ninety-one were Catholics, 21 Protestants, 4 Jews, and 6 of religion unknown; 66 unmarried, 14 widows or widowers, and 45 married (30 happily and 15 unhappily). In 61 cases the pecuniary conditions were favorable, in 39 unfavorable, and in 25 unknown. Twenty were healthy, 41 diseased, 39 mentally morbid, and 25 of health unknown. In 9 cases the ancestors were of unsound mind or suicides. As regards causes, 21 were due to material cares, 38 to mental debility, 33 to physical suffering, 8 to anxiety in love, 9 to fear of punishment, and 2 to dread of the loss of honor.

Louise Forsslund, author of "The Ship of Dreams," "The Story of Sarah," and various sketches of Long Island, died on Monday, at Brentwood, L. I., at the age of thirty-seven.

Eduard Duboc, the German poet and novelist, better known by his pseudonym, Robert Waldmüller, died recently at Dresden, at the age of eighty-seven. He was a native of Hamburg. His novels and poems include "Dorfidyllen," "Der Sekundant," "Auf dem Glatteis," "Leid und Lust," and "Das Geheimnis," and he had translated "Enoch Arden" and other poems of Tennyson.

Science.

The "Physiology and Hygiene for Secondary Schools," by F. M. Walters (Heath), runs mostly along conventional lines, with an occasional excursion into fields which are not altogether familiar to the author. Taken as a whole, the text is pretty good, but the effort to simplify matters is sometimes rather overdone, and the laboratory directions leave much to be desired. The numerous illustrations are mostly good and from approved sources; a few are almost ridiculously diagrammatic. Refreshing is the moderate and rational statement of the case against alcohol and tobacco, instead of the gross exaggerations often found in books of this class.

In "How We Think" (Heath), Prof. John Dewey returns to the central problem of his variety of Pragmatism from a new point of view, with a fresh motive and in a vein agreeably out of the ordinary. The problem is that of the natural reasoning process. His point of a view is that of an observant teacher, not the metaphysician or psychologist. And his motive is "the conviction that the needed steadying and centralizing factor (in school teaching) is found in adopting as the end of endeavor that attitude of mind, that habit of thought, which we call scientific." The volume, written in a style much more fluent and pictorial than that of the author's philosophical essays, is one unbroken demonstration, by an appeal to the most obvious workings of human nature, "that the native and unspoiled attitude of childhood, marked by ardent curiosity, fertile imagination, and the love of experimental inquiry, is near, very near, to the attitude of the scientific mind." That just such inquiry should be moulded into a mature habit appears supremely important, because through it, and through it alone, do we learn in a large way the consequences of natural events and of human acts. To many persons Pragmatism means a sort of evaporated utilitarianism; but this opinion finds no warrant in Professor Dewey's educational doctrine. Here we read that the idea which works is the one which moves us to action, and that the acquiring of a set of such ideas is the aim of all education. Mere technical skill, the knack of gathering dollars, piety that does not know why, classical culture that is blind to its own bearings in the day's work, and the glittering generalities of pseudo-science are all equally unworthy of encouragement in the author's ideal school room. "A true conception," he tells us, "is a *moving* idea, and it seeks outlet, or application, to the interpretation of particulars and the guidance of action, as naturally as water runs down hill." Hence his Pragmatism: the child should be trained to read, and, so far as is possible, to act out consequences. Hence, too, the theory which few look for in the pragmatist's writing; the intellectual ideal is a fine balance of free mental play with seriousness. This is the true artist's attitude, and his conduct; and "the teacher's own claim to rank as an artist is measured by his ability to foster the attitude of the artist in those who study with him, whether they be youth or little children." It is not enough to arouse enthusiasm, nor to communicate large ideas, nor to release energy. Still less will memory or familiarity or deftness serve. "To nurture inspiring aim and executive means into harmony with each other is at once the difficulty and the reward of the teacher." Coming from one whose name has been linked with the convenient consolation that the Truth is As You Like It, this only goes to show how many different ways of thinking may be covered by the word Pragmatism.

"In the multitude of counsellors there is wisdom" is exemplified by "First Principles of Chemistry" (Allyn & Bacon). Five high-school teachers of chemistry in New York city have coöperated in the production of this eminently serviceable introductory text-book. It contains just the amount of material which experience has shown that the beginner is able to digest, the explanations are lucid, and each chapter closes with a summary and questions. The illustrations are especially good, whether diagrammatic or photographic. Many of our chemistries, when they condescend to refer to industrial processes at all, are apt to give antiquated methods. The authors have taken pains to avoid this fault and to describe the methods actually in use. The most conspicuous illustration of this is the omission of that familiar old landmark, the chamber process for the manufacture of sulphuric acid. The platinum catalytic process is the only one described. A laboratory guide containing seventy-one exercises is published as a separate volume.

The large treatise of T. C. Chamberlin and R. D. Salisbury has naturally been followed by a shorter work, "A College Textbook of Geology" (Holt), designed especially for class use. Much the same characteristics mark the later as appeared in the earlier work. Relatively greater emphasis is laid, perhaps, upon the historical side of geology, but processes and their results and physiography are prominent features as before. The work presents an excellent picture of the course of nature as exhibited by the earth, and is written in a fluent and attractive style. The illustrations are abundant and significant. The one serious lack is the disproportionately short treatment accorded structural geology. Folds, for instance, receive the briefest possible mention, and the large forms of igneous rocks are passed over in a few lines. The book is, therefore, not so well adapted to be a preparation for field workers and engineers as are some other manuals.

"Hydro-electric Developments and Engineering," by Frank Koester (Van Nostrand), contains a complete account of all the engineering problems connected with the development, design, construction, equipment, and operation of such plants. Serious attention is now directed to this form of power, which has until recently gone to waste in this country. Undoubtedly the economic loss involved in our destruction of forest and water power will be checked by the growth of this industry. The problems taken up in the present volume have considerable interest for the general public, as well as for the engineer.

Dr. John Smith, the distinguished Scotch dentist, who founded the Dental Dispensary (now the Dental Hospital) at Edinburgh in 1858, died recently in that city at the age of eighty-six.

Dr. Salvatore Lo Bianco of the Zoölogical Station at Naples died on April 10, at the age of fifty. He had greatly improved the methods of preserving marine animals for exhibition and examination.

Dr. Julius Kühn, professor of agriculture at the University of Halle, from 1862 until his retirement in 1905, died recently at the age of eighty-four. He was a practical farmer, but had organized the study of agriculture on a scientific basis at Halle, and was largely responsible for the increase of the number of students in that department from three, when he went to the university, to the present enrolment of more than three hundred. He also founded the Agricultural Institute at Halle. He had published "Die Krankheiten der Kulturgewächse, ihre Ursachen und Verbreitung," "Mitteilungen aus dem physiologischen Laboratorium und der Versuchstation der landwirtschaftlichen Lehranstalt zu Halle," and other works.

Drama.

The Passion Play of Oberammergau. Translated from the German text, with an Historical Introduction by Montrose J. Moses. New York: Duffield & Co. $1.25 net.

The Passion Play of Oberammergau is not a drama. It is a spectacle consisting of a series of scenes, the representation of decisive moments in a long succession of events, and it has rather the effect of tableaux connected by actions than of actions culminating in tableaux. The meaning of the scenes is interpreted in songs and choruses; the actions are accompanied by words; but the text, whether sung or spoken, is the least significant element in the performance. This text, furthermore, has been much modified, but not on the whole improved, in the course of time. The version of 1662, essentially a combination of two different plays of the two preceding centuries, possesses not only the charm of quaintness, but also the vigor of simplicity, and a certain laconic matter-of-factness. The "official" text of 1900, based upon Father Daisenberger's revision, is somewhat lacking in these specific qualities. It sets forth matters of fact with tiresome fulness in prose, and the most we can say of its lyrical and choral passages is that they make no pretension to metrical elegance and breathe an unaffected spirit of sincerity and piety. Even this modernization has, indeed, its homely virtues.

He who translates such a text for its own sake undertakes a thankless task. He must present as a self-sufficient piece of literature what is, after all, but a subsidiary element in a religious spectacle, and the substance for which he seeks an English form is in itself not worth translating. At best, a translation may serve merely the practical purpose of enabling spectators unfamiliar with German to understand more perfectly what is taking place on the stage before them. It appears, therefore, that the method adopted by W. T. Stead in his book, "The Passion Play at Oberammergau" (London, 1900), is more commendable than that of Mr. Moses. Besides copious illustrations and specimens of music, Mr. Stead gives descriptions of the tableaux and a narrative of the action into which translations of the speeches are inserted. But Mr. Moses's translation presents itself as a drama and challenges criticism as such. It gives the entire dramatic content of the Passion Play with sufficient accuracy. Its language, however, makes the drama seem more modern than it is even in the version of Daisenberger. We should certainly expect Biblical phrases to be rendered in the form of the King James version; but Mr. Moses does not always so render them. Occasionally he misses the sense of the German, and sometimes we get the impression that he has consciously varied the phraseology used by Stead, to the decided detriment of his translation. Daisenberger's honestly prosaic verses, which Miss Werner in her contributions to Mr. Stead's volume was content to render as literally as possible and often without rhyme, are transformed by the facile hand of Mr. Moses into melodramatic jingles in a variety of metres—the form not suggested by the originals, and the substance in many cases not the same.

The Historical Introduction calls attention to the connection of the Passion Play of Oberammergau with the *genre* in general and has something to say about the circumstances past and present of this play. The exposition is not altogether clear, nor is it free from errors of fact. But it properly emphasizes the character of the institution as a survival, and echoes the pious wish of thousands that the tradition may not become commercialized and desecrated.

A rather fragmentary bibliography mentions the more important titles belonging to the literature of the subject. Readers interested in the origins of the Passion Play in mediæval Europe may be referred to an article by Prof. Karl Young that is forthcoming in the June number of the Publications of the Modern Language Association.

Music.

EXIT HAMMERSTEIN.

Consolidated opera, as planned by Andreas Dippel, has become a reality. New York, Boston, Philadelphia, and Chicago are to have companies of their own, but affiliated through the exchange of important singers; and there will be no rival. One of the objects of the engagement of a double company at the Metropolitan for the season just ended was to flood the metropolis and other cities with such a tidal wave of operas that all opposition would be swept away. That has been accomplished; Oscar Hammerstein retires from the field, vanquished and yet triumphant. Like Col. Mapleson, he found he could not "fight Wall Street" any longer; but he has obtained a great deal of notoriety, fame, and glory out of his four seasons of opera; and even if the sum of $2,000,000, which he is said to have received from the Metropolitan Company

for selling out, is beyond the truth, he has doubtless also made a handsome profit out of his bold venture.

Unquestionably, if other American cities besides New York were to have first-class opera, the consolidation plan was the only one that promised success. It is all very well to talk about "ensemble versus stars." The public refuses to attend operatic performances unless there are two or more great "stars" in the cast. This was shown, as often before, during the past season in Boston, and it is the lesson of the present tour of the Metropolitan Company in various cities. That ensembles of mediocrities have not paid in Boston is proved by the announcement that prices will be raised next season and more singers of the first rank engaged; and the performances of the Metropolitan Company in Chicago and other cities have, as always, prospered in proportion to the number of great singers in the cast. By taking over from the Manhattan Mr. Hammerstein's leading singers—notably Mme. Tetrazzini, MM. Renaud, Dalmores, Sammarco, and Gilibert—the Metropolitan Company will gain strength, particularly in French opera, which is now its weakest side, and will at the same time be enabled to lend its other leading singers occasionally to the branch companies in Boston, Philadelphia, and Chicago, without having to give the metropolis ensembles of mediocrities for the time being.

Inasmuch as the great singers are thus seen to be the chief pillars of opera, it seems hardly fair that they should be held responsible for all the troubles of the past. Had it not been for Mmes. Tetrazzini, Garden, Melba, Calvé, MM. Renaud, Sammarco, Gilibert, and Dalmores, Mr. Hammerstein's venture would have collapsed long ago; yet it is intimated that one of the first objects of the new opera syndicate will be to reduce the salaries of singers. There are some, no doubt, who are overpaid. Box-office receipts are not an invariable index of an artist's pecuniary value; some prima donnas nearly always sing to large audiences, simply because they are nearly always put in the same cast with Caruso. New York has the best singers in the world simply because it pays them larger emoluments than they can get elsewhere. Reduce these to the European level, and they will remain in Europe, all the more since the new plan will compel them to do a good deal of travelling, which they dislike intensely and which is injurious to their voices.

Whatever may happen at the Metropolitan, thousands of local opera-goers will greatly regret the discontinuance of Mr. Hammerstein's performances at the Manhattan. They constitute a unique chapter in the annals of music in this city. The size of the house made it possible to produce effectively some operas that were inevitably lost in the vast spaces of the Metropolitan; and even some of the real grand operas, like "Carmen" and "Aïda," gained fresh interest from the hearer's greater proximity to the singers and players. It was this acoustic factor, quite as much as the cast and the magnetic conducting of Cleofonte Campanini, that made it possible, during the first season to give "Carmen" nineteen times. One remembers these performances with the same thrill of pleasure as those at the Metropolitan in which the cast included Jean and Edouard de Reszke, Emma Calvé, and Emma Eames.

Mr. Hammerstein's greatest achievement was in disproving the notion that the American public does not care for new operas, and in producing, for the first time in this country, a number of operas which, for one reason or another, were worth hearing. Among these were two in particular, "Thaïs" and "The Tales of Hoffmann," which, thanks especially to Mary Garden, and still more to the wondrous art of M. Renaud, proved box-office magnets of the first order, and which, one may take for granted, will be added to the Metropolitan repertory. Others were "Louise," "Pelléas et Mélisande," "Le Jongleur de Notre Dame," "Grisélidis," and one or two more operas by Massenet; nor was it to this manager's discredit that he provided an opportunity to hear Strauss's "Elektra." In this case, however, the exacting composer reaped the chief benefit.

The value of competition was demonstrated in many ways by the Hammerstein episode in our operatic annals. At the very outset he thrilled his patrons by having choral music sung by young, fresh American voices that put to shame the old Metropolitan's chorus. To this innovation we can trace directly the superb choral performance at the Metropolitan during the last two seasons. The Broadway house also had to follow the Manhattan in the policy of producing new operas. The enormous success and influence of Mr. Campanini doubtless suggested the engagement by the rival company of his only rival among Italians, Mr. Toscanini. A new stimulus was also given to careful stage management. Now that this competition has been crushed, will there be a relapse into the old slovenly conditions? Not for a year or two, at any rate, it is safe to predict; and we may face the immediate future cheerfully, though with a sigh for the past pleasures provided by the Manhattan Opera House.

The Organ and Its Position in Musical Art. By H. Heathcote Statham. New York: Charles Scribner's Sons. $2 net.

"The organ is in the present day an unfashionable instrument; in the eyes (or ears) of the general concert-going public, the orchestra has killed it." Such is the frank confession of Mr. Statham, who holds a brief for that instrument. He qualifies his statement by remarking that organ-playing is in general more thought of and better understood in the English provincial towns than in London. In the metropolis there are so many orchestral concerts that there seems no room left for organ performances, whereas in the smaller cities the organist has to fill up gaps, and the public thus becomes to some extent critical about organ-playing. "In London no one seems to take it seriously."

Why is it that organ recitals are almost always free, whereas money has to be paid to hear pianists? Was Beethoven mistaken in calling the organ the greatest of all instruments (though, to be sure, he never wrote anything for it)? Does it mean nothing that the greatest of all composers, John Sebastian Bach, wrote his greatest works for this instrument? There is a problem here to be solved, and the tens of thousands of organists in this country will be interested in Mr. Statham's remarks on it. His object is "to explain what the organ really is, what it can do and cannot do (the latter quite as important as the former)." Its greatest defect is the absence of the power to emphasize individual notes and to color the tones by differences in the touch. Whereas the pianist's instrument is in close touch with his own nervous organization, the organist before the keyboard can only set in action a complicated mechanism which produces the effects desired by a process which may be called one remove from his own nervous organization. Hence it is that an accomplished organist seldom arouses the same excitement in an audience as a pianist. In organ music the intellectual element prevails, and audiences desire a direct appeal to the emotions, such as the piano, and still more the orchestra, give.

This peculiarity of the organ, however (Chorley called organ music "the music of meditation"), is what makes it particularly suited to the church; and there, in its proper sphere, it rules, and always will rule; its lack of capacity for sentimental or passionate expression by means of accent and gradual increase and decrease of sound, is not fatal to it in the church, as it is in the concert hall; while, on the other hand, it has far greater range of power, from the faintest pianissimo to Tennyson's "thunder-music," beside the ability of sustaining harmonies in a way that makes it preëminently suitable for the expression of religious exaltation.

It took the composers many decades to discover the proper style, or idiom, for the organ. Mr. Statham gives some amusing examples of the pianistic organ music of Bach's predecessors. It

was Bach who created the true organ style, yet even he arrived at this result only gradually; in his mature works there are no piano-like passages or concert-room effects. The strange fact is noted that, although there is a special Bach cult in London and Bach is admittedly the greatest composer for the organ, it was seriously proposed, at a festival held in his honor, to omit his music for this instrument. Evidently there is need of a champion like Mr. Statham. He has many suggestive things to say about Bach's organ music, and why Handel's is so inferior to it. In speaking of other composers who have written great works for the organ, he unmistakably reveals his insularity by omitting the name of Liszt. He has heard of Max Reger, however, and he devotes several pages to curt remarks on the peculiarities of the German, French, and English school of organ composers.

To the architectural treatment of the organ a special chapter is given, while other chapters deal with the organ in oratorio and in church. Mr. Statham does not agree with those who hold that church organs are of abnormal and unnecessary size. Where the whole congregation sings the melody, the four-part harmony is entirely drowned, unless there is a large organ to reinforce the choir. He allows organists the privilege of arranging for their use pieces composed for other instruments, but is amusingly indignant at Liszt and other pianists who have transcribed for their use the fugues of Bach. The last chapter is a glorification of W. T. Best, whom the author pronounces to be as remarkable in his own line as Liszt.

Art.

WARD AND AMERICAN SCULPTURE.

Fifty years ago the late J. Q. A. Ward was already a famous and popular sculptor, and it is doubtful if in the intervening years he ever greatly surpassed his first success, The Indian Hunter. This means that his talent was solid, self-centred, and not readily diverted by current tendencies. He worked out and stood by his individual style quite as imperturbably as his great contemporary in painting, Winslow Homer. It is Ward's distinction to have been simple, to have kept his indigenous quality, while American sculptors generally were feverishly associating themselves with this or that foreign ideal. What he lost in technical flexibility, in the grace that from the beginning of American art till today has ever been over-prized, he gained in dignity and genuine monumental effect.

It is this larger quality that has generally been lacking in our sculpture. That art was born amid the prettiness of Canova, the insipidity of Gibson, and the somewhat anæmic grace of Flaxman. These were the models that imposed themselves on Powers, Story, Crawford, and their associates. At the outset our sculpture was infected with littleness. At all times since, it has turned towards artists and schools which cultivate the exquisite and flinch from masculine ideals of sculpture. We have even to-day a number of men of some prominence who are really the ultimate expression of the Canovesque. Better models were soon in vogue, but always the smaller models. The generation whose most accomplished figure was Augustus Saint-Gaudens turned from the ruling sickly Hellenism to the strenuous examples of the early Renaissance in Italy. The change meant a long advance in elegance—in all the minor attributes of style. Our sculpture became precious. The eye is too dull to perceive all the refinements of a Saint-Gaudens relief. One needs as well the actual touch of sensitive fingers. But note again that this kind of perfection is not compatible with monumental scale and effect. Being a quite extraordinary genius, Saint-Gaudens created one or two statues that at least simulate the heroic. Yet these would invariably gain if reduced to statuettes. Ward's statues, on the other hand, are almost without exception unaffectedly monumental. They look bigger than they are. One has no desire to diminish them and put them under the lens; they have the bulk that befits open-air and great spaces.

Mr. Ward was to live to see a third generation of sculptors give themselves eagerly to a style which was even less monumental than that of the Italian Renaissance or its French derivatives. Our younger men are almost without exception disciples of Auguste Rodin. The drastic subtlety of his modelling, the penumbra that he casts about the bronze and marble, the morbid intensity of his imagination—these are the qualities that our ablest young sculptors emulate. These are valuable qualities. Rodin's procedures have enlarged the scope of sculpture. But it should also be noted that these novel perfections are incompatible with large and simple effect. Such impressiveness as the Egyptians and Greeks infallibly attained rules out that torturing of the surface which is the essence of Rodin's method. It is significant that his masterpieces are all of small scale, while his monumental creations are either failures or most disputable and relative successes.

From what has been written it will be apparent that the stalwart old man who has just gone, quietly cherished ideals alien to those of his time, and in most respects superior. He saw three generations of his most gifted fellow-countrymen run after various sorts of unsculpturesque perfections. Meanwhile, he held his placid course, thought much, consulted reality faithfully, but his vision more, and produced work after work which, often technically inferior to that of his juniors, rarely failed to be superior in the essentials of scale and breadth. The phenomenon will interest and perhaps baffle the future historian of our art. Here was a man largely self-trained, and until his maturity untravelled, beginning when the Canovesque prettiness was still dominant, who had an instinctive sense of those main things which were established once for all in the severe period of Greek sculpture. We suppose that Mr. Ward did this surprising thing in the simplest manner by consulting the master of the Greeks, Nature herself. In an age variously sophisticated he kept the simplicity of his vision. His development is akin to that of Winslow Homer, but more precocious. Both managed to attain the epic view of nature in an age almost exclusively lyrical and elegiac. About both there is an antique severity, a primordial art quality, which makes their lack of the smaller graces comparatively unimportant.

Had Mr. Ward been of a more expansive and compelling nature, he might have been the leader of a reaction against certain disintegrating tendencies in our sculpture. He might have taught us not to imitate finished products, but tentative and archaic works, or, better yet, nature. In an age that chiefly desired charm, neither his work nor his forthright personality fitted him for such leadership. Some stronger man must yet take up and impose upon our plastic art those fundamental principles which Mr. Ward was content quite modestly to practise alone. If the part of leader and prophet was denied him, he must retain the distinction of having maintained against the spirit of his time an ideal of his art personally achieved, simple, clear, and essentially sound.

The principal interest in the annual exhibition of the American Water Color Society at the Fine Arts building, on West Fifty-seventh Street, is to be found in the central gallery, which is hung with sketches, drawings, etchings, monotypes, etc. Here are to be seen drawings of men of the past, of William Morris Hunt (a landscape and a portrait of himself); of John Leech (satirical hits at duelling) and of Charles Keene, both of *Punch* fame; of Aubrey Beardsley (an illustration for "The Rape of the Lock"); of Frederic Remington, and a large collection of the etchings of James D. Smillie, who was a member of the Water Color Society; and here, among the living, are represented Arthur B. Davies by sketches and drawings of nudes; John S. Sargent, by a portrait of William Butler Yeats, the poet; William Glackens, by his ever delightful illustration of the Fourth of July in a tenement district, and other sketches; Robert Henri, by the drawing

of an old man, which recalls the work of Daumier; and Everett Shinn, by clever colored monotypes. Charles W. Mielatz sends many of his etchings, tinted and untinted, the beautiful Winter Night among them; Charles Warren Eaton shows several monotypes; Alexander Schilling, Joseph Pennell, and John Marvin send etchings, and John La Farge some of his Samoan drawings. But probably the man whose work will attract most attention, because he is new to us, is Augustus E. John, the English painter, who has gained a high reputation in Europe and among artists all over the world. Several of his sketches are lent to the exhibition by John Quinn, the lawyer.

In the other sections we find Charles Warren Eaton with half a dozen pastels and water-colors, Charles P. Gruppe's Banks of the Genesee, and A. T. Van Laer's The Old Model, and two landscapes, A Summer Day and The Evening Hour. Childhood Hours, by A. E. Albright, is a charming picture of three bare-legged children playing on a beach. Colin Campbell Cooper exhibits a large water-color of The Liberty Street Crevasse, with the Singer building in the distance; E. M. Bicknell two Dordrecht pieces and a finely painted marine, Heavy Surf—Bermuda. There is no particularly striking picture in the collection, but the average is good.

Mr. Svoronos, while investigating the topography of the hill of Hippius Colonus, has discovered the "chasm" in the sanctuary of the Erinyes in which the scene of Sophocles's "Œdipus Coloneus" is laid. The chasm, which is fifteen metres in depth, was situated below the foundations of a small modern house on the ancient road from Thebes. The chief landmark of Colonus having once been identified, the other precincts mentioned by ancient writers were discovered without difficulty. It appears that Sophocles was topographically correct in all his descriptions of places in the Œdipus. "Thus the altar of Poseidon and the Plutoneum" were found to answer exactly to the descriptions given in the drama. Moreover, it was possible to establish the location of the celebrated Academy, which contained the gymnasium, and the schools and gardens of the philosophers. This led to the discovery of the boundary of the road leading from Athens to the Academy, on which were situated the tombs of distinguished historical personages of Athens.

The Berlin Archæological Society, engaged in excavations on the site of Pergamon, in Asia Minor, has succeeded in unearthing the remains of a great sanctuary and a temple of Demeter. Many inscriptions, deciphered by Dr. W. Dörpfeld, have definitely established the origin of the temple. It was built about 262 B. C., in honor of Boa, the mother of the Attalid dynasty. A vestibule was added in Roman times. Inside the sanctuary were altars dedicated to Hermes, Asklepios, Helios, Zeus, and others, as well as a number of inscriptions. A marble altar was dedicated "To the Unknown Gods," a confirmation of the famous passage in St. Paul's Areopagus speech. There were also found fragments of a statue dedicated to Demeter, a relief representing the goddess standing near an altar holding a torch in her left hand, of a statue of Æsculapius, heads of Hermes and Eros, and four Roman portrait heads—of Augustus, of the elder Agrippina, of a lady of the time of the Emperor Trajan, and one which may represent Tiberius.

"John Foster, the Earliest American Engraver and the First Boston Printer," by Samuel Abbott Green, is a painstaking bit of antiquarian research, which well merits the pressmark of the Massachusetts Historical Society and the support of the Waterston Fund. Mr. Green has found in the Harvard College Library the woodcut portrait of Richard Mather, with an attribution to Foster in a contemporary hand. This neatly confirms the view which Mr. Green hazarded some years ago. This rude woodcut of about 1670 is pretty surely the first engraving executed in America. Only six copies of it are known. Some form of Indian reading book, which Foster projected, was either not achieved or has not come down to us. His map of New England, of which there are two States, was engraved for Hubbard's well-known "Narrative of the Troubles with the Indians" (Boston, 1677). Collectors should beware of receiving as an insert the commoner map of the English edition. The great seal of the colony and some cuts in a broadside against Sabbath-breaking complete Foster's very modest *œuvre* as an engraver. As a printer he was active. His first pamphlet, formerly a disputed question, is now shown to be "The Wicked Man's Portion," by Increase Mather. Its date is March, 1675. Foster was a Harvard graduate, compiled his own almanacs, was supposed to have uncommon astronomical and mathematical lore, besides being a dab at medicine. He was in close relations with the Mathers, and may be said to have been official printer for the great Dr. Increase. Before Foster's thirty-third year the fatal malady of consumption must have pronounced itself clearly, for in anticipation of an ineluctable event, Increase Mather penned four very tolerable Latin hexameters, which later were cut on Foster's tombstone in Dorchester burying ground. The bachelor printer and scientist died not without enlisting the Christian Muse, of whom, perhaps, the most apt mouthpiece was Joseph Capen. The concluding lines of his elegy we are glad to quote:

> Thy Body which no activeness did lack
> Now's laid aside like an old Almanack
> But for the present only's out of date;
> Twil have at length a far more active State.
> Yea, though with dust thy body Soiled be,
> Yet at the Resurrection we Shall See
> A fair Edition & of matchless worth,
> Free from Errata, new in Heav'n Set forth:
> Tis but a word from God the great Creatour,
> It Shall be Done when he Saith IMPRIMATUR.

This conceit, apparently, found an echo in Franklin's famous epitaph, which is included in the "Autobiography." Or were these quips traditional? Possibly some student of printers' epitaphs can tell us.

John Quincy Adams Ward, the sculptor, died Sunday morning in this city, at the age of seventy-nine. He had been seriously ill for a long time, but up to a few weeks before his death was engaged in modelling a statuette of the late August Belmont. Mr. Ward was born in Urbana, O., which was not much more than a village in 1830. He does not appear to have inherited an artistic taste, but from his earliest childhood he modelled horses and other animals, and men on horseback in clay, and, this being foreign to the inhabitants of Urbana, he was known among them as "Ward's queer boy." It was not until he was fifteen years old that he saw a piece of sculpture at Cincinnati—a statue by Hiram Powers. This increased his desire to become a sculptor, but his parents, strict Presbyterians, discouraged this ambition.

But the enthusiastic boy had a sympathetic sister living in Brooklyn. She paid a visit to her old home and, finding him depressed in spirits, took him to her home, and introduced him to Henry Kirke Brown, a well-known New York sculptor. Mr. Brown asked him for a specimen of his work. Young Ward modelled a copy of the Venus de' Medici, and was accepted as a pupil. He remained in Brown's studio from 1850 to 1857, and then turned out The Indian Hunter, now in Central Park, New York. This was his first important work, and after he had made the first sketch of it he visited the army posts in the West in order to study the Indian on his native heath. The man on whose statuette Mr. Ward was engaged at the time of his death had been one of the first to recognize the young sculptor's talent. Ward had built a studio for himself in West Forty-ninth Street. His Indian was being exhibited on lower Broadway. August Belmont appeared at the studio, told the sculptor how interested he was in the work, and gave him an order for a statue of Commodore Perry. After that Mr. Ward was never without a commission. In 1867 he presented his model of Shakespeare to Central Park, and in the same year The Indian Hunter and The Freedman, now on the steps of the Capitol at Washington, were exhibited in the Paris Salon.

Among his other idealistic works are The Pilgrim and The Seventh Regiment Citizen Soldier, and the Good Samaritan in Boston. Many of his noted statues represented chapters in the history of his country, such as the noble Washington, in front of the Sub-Treasury in Wall Street; the Gen. Israel Putnam at Hartford, the Commodore Perry at Newport, the Gen. Hancock in Philadelphia, the Horace Greeley in front of the Tribune building, the Henry Ward Beecher in front of the Borough Hall in Brooklyn, the Gen. Morgan at Spartanburg, and the Garfield in Washington. The equestrian statue of Hancock attracted much attention at the time, for the sculptor made the horse a living animal, and in 1892, Mr. Ward was commissioned by the Society of the Army of the Cumberland to make a statue of Gen. Sheridan. The first model did not please him, although the members of the society were satisfied with it, and he destroyed it. Later models did not satisfy the widow of Gen. Sheridan. When she rejected the sixth, notwithstanding its acceptance by the society, Mr. Ward said that his contract was with the Army of the Cumberland and not with Mrs. Sheridan, who was allowed to see the model out of courtesy. He therefore brought suit against the society to recover $32,000. He lost his suit. The model is in the Metropolitan Museum. Mr. Ward, with Daniel C. French, executed the pediments on the New York Stock Exchange. Mr. Ward was made an academician in 1863, was vice-president of the National Academy of Design 1870-71, and its president 1872-73. He was president of the National Sculpture Society from its inception in 1896.

Finance.

THE STEEL CORPORATION'S DIVIDEND.

That the increase in dividend on the $500,000,000 common stock of the United States Steel Corporation, announced by the directors on Tuesday of last week, has been received with mixed feelings in the financial community, and with a very considerable measure of disapproval, probably no one in touch with financial opinion will deny. The existence of such a feeling calls for explanation; because increase in dividends of industrial corporations is usually accepted as reflecting industrial prosperity, and therefore as an agreeable sign of the times.

Such unfavorable judgment as may have been evoked by this third increase in the "Steel dividend" within twelve months is based, it may safely be asserted, on three well-known facts—that a similar policy, at the outset of the company's career, had results which confirmed the criticisms then passed upon it; that the company's recent earnings, though very large, are less than they were in such a year, for example, as 1906, when a very different dividend policy was pursued; and, finally, that while dividend payments are now larger than in those other years of prosperity, very much less is being put back from earnings into the property. It would not be possible, furthermore, to ignore the effect produced on conservative opinion by the wild and prolonged speculation in the stock which has accompanied these successive advances in the dividend.

In his public statement, submitted with last week's announcement of the dividend, the chairman of the directors' board explained that earnings in excess of interest charges, during the nine years of the company's history, have averaged 8½ per cent. per annum on the common stock, whereas dividends actually paid have averaged only 2.3 per cent. To people unfamiliar with company finance, this would appear to be a conclusive argument. But the statement omitted to mention that there were occasions, during those nine years, when no dividend whatever was earned on the common stock, and that the large appropriation of earnings to improvement and construction, during subsequent years when profits were again at a maximum, was plain recognition that a mistaken policy had been pursued in the previous scrimping of such appropriations.

Judge Gary did not say that the need for expenditure of this sort, on the old-time scale, is definitely past, and we have the very high authority of the *Iron Age* for the fact that such requirements, this year, will normally be as heavy as ever before in the corporation's history. Yet an appropriation on the scale of 1906 would have put quite out of the question the payment of last week's increased dividend. These criticisms are made regretfully; but they are necessary, because the interests of the investing public are involved more closely than usual in ultra-conservative industrial company finance, and because the example of so great a corporation as the United States Steel is bound to affect the policy of other companies.

The quarterly dividend is not increased, to the highest rate in the company's history, in response to earnings for the quarter which also surpassed all precedent. On the contrary, there were two quarterly periods in 1909 when the net receipts of the three months ending with last March were exceeded, and there were also three quarterly periods in 1907, three in 1906, and one in 1902, which made a better showing. Indeed, results for the opening three months of 1910 did not come up to expectations of a few weeks ago; the net earnings fell short by two to four millions of the estimates then prevalent.

It was believed on Wall Street, when well-informed people, three or four weeks ago, changed suddenly from predictions of a 5 per cent. rate to hints of an unchanged 4 per cent. level, that the smaller showing of the quarter's earnings had convinced them that this was not the time to increase the dividend. If so, they were overruled. It is true that the quarter's earnings, after meeting interest and depreciation charges, and appropriating $5,000,000 for construction expenditure, left $6,532,000 for the surplus. But in the corresponding quarter of 1907, $14,500,000 was appropriated for construction; in 1906, $10,000,000. For the twelve months, outlay on that account was $50,000,000 in 1906 and $54,000,000 in 1907.

The difficulty which besets very many people, in studying the Steel Corporation's finances, arises from the magnitude of the figures in the company's reports. Fifty million dollars seems so prodigious a sum to expend in a year for construction and improvement, that the average mind is ready to accept the idea that, this vast expenditure having once been made, no more ought to be needed for a good many years to come. This was why the total omission of such expenditures in 1908 attracted little comment. But if an improvement appropriation of $50,000,000 is a large figure, so is a billion-dollar capitalization. If a steel manufacturing company with $10,000,000 capital were to appropriate in one year $500,000 for such purposes out of earnings, nobody would express any great astonishment. Yet the ratio of such expenditure to capitalization would be the same in that case as with the Steel Corporation's $50,000,000. Exactly what is required in any given year is a matter to be determined by the condition of the steel trade, by the existing state of the company's plants, and by the policy pursued by competitors. But all traditions of the steel trade are to the effect that the safe course is to err, if error there must be, on the side of generous appropriations. Least of all has experience warranted the intimation, in an industry whose fortunes even nowadays are apt to make it alternately "prince and pauper," that a high dividend, fixed under such conditions as have lately prevailed in the trade, should be considered as permanent except so far as "extra dividends" may enhance it.

Every one interested in the prosperity of American trade and American financial markets will hope that the 5 per cent. Steel dividend will be maintained to the end of time, and that no trade reaction will ever come again, such as, in 1904, forced suspension of all payments on the common stock, simply because the earnings were not large enough to pay them. But the Steel Corporation is still young, and it remains to be seen to what extent the American steel and iron industry is destined to be subject to the same vicissitudes as in the past half-century.

JUST ISSUED
IN THE LEADING AMERICAN SERIES
Edited by Prof. W. P. Trent.

John Erskine's
Leading American Novelists

Critical biographies of Charles Brockden Brown, Cooper, William Gilmore Simms, Hawthorne, Harriet Beecher Stowe, and Bret Harte. **$1.75** net.

William M. Payne's
Leading American Essayists

The rather lengthy introduction gives a historical survey of the minor American essayists, covering some 40-odd writers, such as N. P. Willis, H. T. Tuckerman, A. B. Olcott, Sarah Margaret Fuller, T. W. Higginson, C. D. Warner, Henry Van Dyke, etc.

Irving, Emerson, Thoreau, and Curtis received separate and extended biographical and critical treatment. **$1.75** net.

B. E. Fernow's
The Care of Trees
In Lawn, Street and Park

By the Professor of Forestry in the University of Toronto. Illustrated. **$2.00** net.

Written for amateurs by a forester, this volume furnishes such information as the owner of trees may need. It is the only collective and comprehensive manual on the subject. With convenient lists of trees and shrubs, telling when, where, and how to plant them.

Mr. and Mrs. C. W. Beebe's
Our Search for a Wilderness

Mr. Beebe is author of "The Bird: Its Form and Function," and is Curator of Birds in the N. Y. Zoölogical Park. With 160 illustrations from photographs. **$2.75** net.

An account of two trips into tropical wildernesses. The first was undertaken on a small Venezuelan sloop with which the authors penetrated far into the unknown Mangrove jungles, north of the Orinoco Delta. The second Search was in the Wilderness of British Guiana.

Henry Holt & Company 34 W. 33d New York

Ruskin and His Circle
By ADA EARLAND
16 illustrations. $1.75 net

A graphic account of the development of Ruskin's life, as well as intimate sketches of the artists and men of letters with whom he was on terms of intimacy.

WANTED—Some recent unbound vols. of *The Nation*. A. S. CLARK, Peekskill, N. Y.

The Nation

VOL. XC.—NO. 2341. THURSDAY, MAY 12, 1910 PRICE TEN CENTS.

THE NEW MACMILLAN NOVELS

BY THE AUTHOR OF "RICHARD CARVEL," "THE CRISIS," "CONISTON."

Mr. WINSTON CHURCHILL'S *new novel*

"A Modern Chronicle"

"Intensely modern." N. Y. Tribune.

"Intensely interesting." Phila. Ledger.

The critics are saying that Mr. Churchill's new novel is "by far the most interesting," "quite the strongest, truest and best work" he has yet done; "much more than merely interesting, it is a performance emotionally strong . . . undoubtedly powerful." They declare that his picture of rich and smart New York society is doubly effective for not being exaggerated, adding: "No one has approached it in vigor or in truth."

Cloth, illustrated, $1.50

A NOVEL "WHOSE GREATNESS NO ONE CAN FOR A MOMENT DOUBT."

"Nathan Burke" By Mary S. Watts

"A great novel." "Great, notable, readable."

"Nathan Burke" is an exquisitely delightful piece of literature of a sort that is not common nowadays; "infinitely interesting"; "a book that has charm and fineness of spirit"; "The character of Mrs. Ducey alone would make the success of any novel." "The story is a masterpiece likely to be appreciated more rather than less as time passes."

Cloth, $1.50

A POWERFUL NEW NOVEL BY THE AUTHOR OF "THE CONQUEROR."

Gertrude Atherton's "Tower of Ivory"

Notably powerful, brilliantly interesting.

The critics write in praise of this remarkable book, agreeing that rarely has any author presented with such extraordinary clearness and power so unreserved a portrayal of impulses and inspirations as is unfolded in this brilliant record of "the love of a real man and a great woman told as no other Anglo-Saxon living could tell it" (*New York Evening Mail*).

Cloth, $1.50

A NEW NOVEL BY THE AUTHOR OF "SARACINESCA," "PAUL PATOFF," ETC.

F. Marion Crawford's "The Undesirable Governess"

His last unpublished fiction.

Almost unexpectedly full of rippling humor; a book to make his friends regret that he did not more often drop into such light, keen, irresistibly amusing social sketches.

Cloth, $1.50

AN UNUSUALLY IMPORTANT NOVEL TO BE READY VERY SHORTLY.

Robert Herrick's "A Life for a Life"

By the Author of "The Common Lot," etc.

Ever since *"The Common Lot"* appeared, Mr. Herrick has held the rank of being the most authoritative analyst of modern social conditions in the United States. In a totally different field from his last book, *"Together,"* his new novel is equally forcible, equally interesting.

Ready about May 25. Cloth, $1.50

Published by **THE MACMILLAN COMPANY** 64-66 Fifth Ave. N. Y.

IMPORTANT NEW PUBLICATIONS OF

D. APPLETON & COMPANY

29-35 West 32nd Street, New York City.

Ready This Week

THE SOUTHERN SOUTH

By ALBERT BUSHNELL HART, Ph.D., LL.D.

Professor of History at Harvard University.

Professor Hart spent nearly a year in the cities, towns and country districts of the Carolinas, Georgia, Alabama, Florida, Mississippi, and Louisiana; and in the mountains of Virginia, Tennessee, and Kentucky, gathering material for this book. It is a careful, accurate consideration of the condition of our Southern States four decades after the close of the war between the States, with philosophical conclusions which the author has arrived at as to the outlook for the future in commerce, agriculture, and sociological conditions.

12mo, cloth, $1.50 net.

THE PSYCHOLOGY OF REASONING

By Professor W. B. PILLSBURY

University of Michigan.

An effort to determine the ways in which reasoning has grown and to discuss the uses that have been made of the materials in reasoning. This, however, has been done in a popular manner, and no attempt has been made to study the psychological interpretation or to go deeply into logic or psychology, or, in fact, to discuss, or even to mention, many phases of the reasoning process.

Large 12mo, gilt top, rough-cut edges, $1.50 net.

UP THE ORINOCO AND DOWN THE MAGDALENA

By H. J. MOZANS

In this book the author relates his travels to South American countries and across the Andes under unusual conditions. Most of the time he was alone, except for a guide or two. The writer is an experienced traveller, was a long time on this journey, and had an opportunity to study the people, the country, and the fauna in an unusually intimate way. He travelled largely by foot or by pack mule, frequenting unknown and little-visited places and following the trails and unbeaten paths rather than familiar roads.

16 half-tones, 8vo, gilt top, rough-cut edges, $3.00 net.

The Reconstruction of the English Church

By R. G. USHER, Ph.D., Instructor in History, Washington University. These volumes describe in great detail the administration and legal history of the later English Reformation, and bring Archbishop Bancroft into prominence for the first time..

Ready Soon. 8vo, cloth, gilt top, rough-cut edges, 2 vols. in a box, $6.00 net.

Travel and Sport in Turkestan

By Captain J. N. PRICE WOOD. 100 Illustrations from original photographs and an itemized expense-account of the journey. 8vo, cloth, handsomely bound and printed. $3.50 special net.

Queen Christina of Sweden

By I. A. TAYLOR. Author of "Lady Jane Grey and her Times." Photogravure frontispiece and 16 other beautiful portraits. 8vo, cloth, gilt top, rough-cut edges. $4.00 special net.

The American Hope *Ready May 20.*

By WILLIAM MORSE COLE, Harvard University. This book is an attempt to look below and beyond the unfavorable symptoms of American life, and to see whether in the chaos anything is at work that may be utilized to improve the situation. It does not suggest specific remedies, but applies a general philosophy to the problem of twentieth century living.

8vo, cloth, gilt top, rough-cut edges, $1.50 net.

The Drama of St. Helena

By PAUL FREMEAUX. The story of the last days of Napoleon has never been more graphically told than in this book. 12mo, cloth, handsomely bound and printed. $3.00 special net.

The Real Francis Joseph

THE PRIVATE LIFE OF THE EMPEROR OF AUSTRIA.

By HENRI DE WEINDEL. English version by *PHILIP W. SERGEANT.* Photogravure frontispiece and 40 other portraits and illustrations.

China and the Far East

Edited by Professor GEORGE H. BLAKESLEE
OF CLARK UNIVERSITY

8vo, cloth, xxii+455 pages. $2.00 net; postage 20 cents

CONTENTS: "China in World Politics," by Archibald Cary Coolidge, of Harvard University; "China and the Western World," by Hon. Chester Holcombe; "The United States and China," by Dr. F. W. Williams, of Yale University; "Monetary Conditions in China," by Dr. J. W. Jenks, of Cornell; "The Chinese Army," by Major Eben Swift, U.S.A.; "Christian Missions in China," by Professor Harlan P. Beach; "The Awakening of Korea," by Hon. Horace N. Allen; "The Japanese Administration in Korea," by Professor George Trumbull Ladd; and twelve other lectures by authorities of equal repute.

PRESS COMMENTS

" . . . Such a symposium as this cannot fail to touch every vital point in the questions at issue to-day on the trans-Pacific Coast, and either for general reading or for special research, this volume will appeal to many."—*Boston Evening Transcript.*

" . . . The authoritative character of the book may be inferred from such authorship as that of Dr. Wright on the history and present condition of the opium question. He was the representative of the United States at the recent International Opium Conference at Shanghai. . . . His lecture has the reliability of an official report."—*Hartford Courant.*

"There is scarcely a matter of importance which has not been touched upon. The fact that the lecturers were men who are recognized authorities in their separate fields makes the work a noteworthy contribution to our literature upon the Far East."—*San Francisco Evening Bulletin.*

"A volume of special timeliness and importance, giving a group of expert opinions, separately expressed, but forming as a whole a remarkable consensus upon this 'kingdom of mysteries.' "—*Montreal Daily Star.*

"No one who has followed with attention the movements toward constitutional government in progress in China, in India, and in Korea can read without interest, or indeed without emotion, the volume entitled 'China and the Far East.' . . . This is a book of first-rate importance upon a subject of urgent and growing interest."—*The Living Age.*

THOMAS Y. CROWELL & CO., Publishers, New York

LONGMANS, GREEN, & CO.'S LIST

The History of the Irish Parliamentary Party from 1870 to 1890

By F. HUGH O'DONNELL, M.A., Q.U.I. Formerly M.P. for Galway and Dungarvan; ex-member of Council of Home Rule League of Ireland, etc., etc. With Portraits and other Illustrations. 2 vols., 8vo. Cloth, $5.00 net.

The book relates the origins of the Home Rule movement; the rise and authorship of the Active Policy commonly known as Obstruction; the intervention of the American Irish, which produced the Land League; the rise, progress and fall of Mr. Parnell, and his relations both with English parties and with American organizations. New and strange light, illustrated by much documentary evidence, is thrown upon the Land League and the invincible Conspiracy.

East London Visions

By O'DERMID W. LAWLER. Crown 8vo. pp. x+305. $1.75 net.

The early life of an "East Ender" born and bred. In many parts founded on fact, the book aims at showing the gradual revelation of the high and essential things of Life to a poetic youth, by experience of want, by excellent humble teachers, and by vision. It contains description, incident, and original symbolism; passages of romance and humor, criticisms of Life and of contemporary religious and social forms.

French Secondary Schools

An Account of the Origin, Development and Present Organization of Secondary Education in France. By FREDERIC ERNEST FARRINGTON, Ph.D., Associate Professor of Education, University of Texas. Author of "The Public Primary School System of France," etc. Crown 8vo. pp. viii+450. Price, $2.50.

Landmarks of British History

By LUCY DALE, Author of "The Principles of English Constitutional History." With 8 Plates in Color and 72 other Illustrations. Crown 8vo. pp. x+256, price, $0.90 net.

This book contains a general survey of British History from the earliest times to the accession of Edward VII. Broad outlines only are given, and no attempt is made to furnish a detailed account of the reigns. The history of Britain is therefore treated rather from the social, industrial, and commercial standpoint than in its political aspect.

A History of Malta During the Period of the French and British Occupations, 1798 to 1815

By the late WILLIAM HARDMAN, of Valetta. Edited, with Introduction and Notes, by J. HOLLAND ROSE, Litt.D. (Cantab.). Illustrated by Documents, with an Epitome of Subsequent Events. 8vo. Net, $6.50.

The Letters of John Stuart Mill

Edited, with Introduction, by HUGH ELLIOTT, and a Note on Mill's private life by Miss MARY TAYLOR. With Portraits and other Illustrations. 2 vols. 8vo. $6.50 net.

On his death, in 1873, Mill left behind him a record of his correspondence which is almost unique in biographical literature. During the greater part of his life he was in the habit of taking copies of every letter he wrote; and the copies have been carefully preserved. The letters extend from 1829 to 1873, and are of wide general interest, political, literary, and philosophical.

LONGMANS, GREEN, & CO., 4th Avenue & 30th St., New York

The Nation.

NEW YORK, THURSDAY, MAY 12, 1910.

The Week.

It is not often that the prospects of a legislative proposal are involved in such confusion as seems at present to surround the Administration's Railway Bill. The matter is especially complicated by the difficulty of discovering what is the definite purpose either of advocates or opponents. In a general way, it appears to be true that the regulars in Congress are supporting the bill because it is an Administration measure, and because they are pledged to do so. This is strongly indicated by the appearance of Senator Elkins as the negotiator in behalf of certain clauses for which he can hardly be supposed to entertain great personal enthusiasm. The position of the insurgents is less clear. That their hostility to the bill is partly inspired by the fact that it is an Administration measure, and that the Administration has provoked a general spirit of hostility on their side, is not improbable. But, on the other hand, it has been manifest from the outset that the provisions enlarging the powers of railways, in regard to rate-making and purchase of interest in other railways, were unpopular in the constituencies whence most of the insurgents come. The clause, for instance, providing that, notwithstanding other prohibitions, a railway holding 50 per cent. of another company's stock might be permitted to acquire the rest, was disliked in the West, and by no means understood even in the East.

Political experience suggested the necessity of tact and maintenance of good feeling, if Congressmen from such districts were to be held in line for all provisions of the bill. When, therefore, relations between the doubtful Congressmen and the Administration became so seriously strained, it was not surprising that the clauses in question should have failed of enactment. The more perplexing aspect of the matter is the insurgent hostility to clauses restraining the power of railways to consolidate. In the minority report of the Senate Committee on Interstate Commerce, signed by two insurgent leaders, it was declared in March:

> Section 12 of the bill, as reported by the committee, begins with the laudable attempt to prevent the consolidation or combination of railway lines which "directly and substantially" compete with each other. But before it reaches its end, it not only nullifies the prohibition with which it started out, but actually takes the back track, and if it were to become a part of the law, it is our opinion that consolidations and combinations could be lawfully effected that are now forbidden.

But instead of the "laudable attempt" being now facilitated, through an insurgent amendment striking out the 50 per cent. stock ownership proviso and retaining the general restriction on ownership in other lines, the section as a whole seems to be going by the board. Not only so, but we have just seen the curious spectacle of Senator Elkins laboring to save the prohibitory clauses of Section 12 without the exceptions to which the above-cited report objects, while Senator Nelson of Minnesota opposes the section, root and branch. This is at least an illogical situation, and unless both sides have made up their minds for the complete failure of the Railway Bill, it should seem that some more definite realignment of opinion is inevitable.

When Congress appropriated seventy-five thousand dollars last year for the President's Tariff Board, it builded better than it knew. The Tariff Board at the time was not meant to be taken very seriously; its powers were not defined; the renewal of the appropriation was not guaranteed; the thing was sporadic, extra-legal, and a sop. But within a year a change has come over the spirit of the dream. The tariff, instead of an issue put to sleep, is an issue more alive than ever, and the leaders in Congress, sobered and instructed by the experiences of the last few months, have learned that the time has come to bend before the storm or go down. It was a case of bending before the storm when the House last week appropriated $250,000 for the expenses of the President's Tariff Board, conferring upon it at the same time extensive powers of study and investigation, at home and abroad. We are thus brought measurably nearer to that essential factor in any real revision of the tariff—a tariff commission to supply the groundwork of knowledge and fact upon which Congress may base its action. It means a terrible wrench with the past, a momentous departure from the time-honored system of tariff-making by coöperative plunder. Yet in that direction point the signs of the times.

In his strictures on Mr. Bryan's criticism of the appointment of Gov. Hughes to the Supreme Court, Mr. Taft spoke with emphasis, and yet with the kindliness and candid simplicity characteristic of him. The fact is that Mr. Bryan's attack has fallen particularly flat. It was not only discredited at its source, in view of the hard knocks the candidate of the Denver platform received in 1908 at the hands of Mr. Hughes, but still more because it carried its refutation on its face. Both in the matter of insurance legislation and in the creation of the Public Service Commissions, Mr. Hughes has shown himself to be as far removed as possible from the type of the corporation standpatter against which alone any such criticism as that of Mr. Bryan has force. The accusation of partiality to corporations based on his veto of the two-cent fare bill is merely evidence of shallowness on the part of the accuser; and, what is more, is recognized as such by intelligent persons generally, however radical their political or economic views. The very idea of the public-service commissions is that these questions must be settled by a thoroughgoing inquiry and by a truly competent authority, not by the caprice of the Legislature. Mr. Hughes is preëminently the kind of man whose judgments, in the highest court of the nation, will carry weight with all classes of people, whether rendered in favor of or against the interests of corporations and men of wealth.

In his address before the Nobel Prize Committee at Christiania, Mr. Roosevelt spoke for a world federation, limited at present to the maintenance of peace and with the ability to enforce the decrees of its Arbitration Court by some form of international police action. That is also the proposal now pending in the

form of specific resolutions before our Senate Committee on Foreign Affairs. These call upon the President to appoint a commission of five members to report to Congress a draft of such a federation, and to urge upon other governments this method of relief from military burdens. By the terms of the resolutions the federation draft is to provide that the decrees of its international court shall be executed, if necessary, by the "arms of the federation." Here at least is a practical step forward with infinite possibilities—even of war; but behind the international decree would be the almost irresistible moral power of international opinion. That the peace movement in this country is gathering important impetus is shown by largely increased membership and the number of peace conferences and meetings announced for the next few months. In Europe far-reaching political and social agencies are slowly doing their work. Colossal powers of destruction may, after all, be neutralized by a colossal international will that they shall not be brought into play.

Senator Lorimer, so the reports read, "*may* resign." The news is alarming, when everybody is wondering why he did not resign a week ago. Five members of the Illinois Legislature, including the minority leader of the House, Representative Lee O'Neil Browne, have now been indicted for bribery or perjury, or have confessed their guilt, and Mr. Lorimer has had nothing to say since he denounced as a crazy sensationalist the first who turned State's evidence. When an associate of Senator Lorimer's, the new Senator from Misssissippi, Mr. Percy, found himself in a similar position, he hastened back to his State to confront the legislator who asserted that he had taken a bribe, and announced to everybody that he would not hold his office a minute if there was the slightest taint upon his commission. The Mississippi Legislature confirmed his right to that document, but, not content with this, Senator Percy asked that the matter might be submitted to the voters of the State at a primary, in order that everybody might say whether he should or should not continue to represent Mississippi in Washington. And Senator Lorimer *may* resign! Yet three men have sworn that they took money to elect him.

"Grossly unbusinesslike conduct" is the charge made by the Indian Commissioner against one of Gifford Pinchot's subordinates in the Bureau of Forestry, and if the facts are as stated most people will wish that some dramatic punishment could overtake him even though no criminality attaches to his actions. For eighteen years, the Menominee Indians worked hard at lumbering on their reservation, making a profit of $2,500,000, which, with other revenue, gave them a tribal fund of $3,000,000. Then came a decision to place these lumber-making Indians under the control of the Bureau of Forestry. Edward A. Braniff, a recent graduate of the Yale Forestry School, soon made the money fly. An injurious act passed by Congress cost the Indians about $700,000 of their profits, and then Mr. Braniff helped on the good work. For unnecessary roads, $40,000 was expended; for improving a stream, $50,000. The stream was to have floated logs down to the sawmill erected by Mr. Braniff, but after the $50,000 was expended, 65 per cent. of the logs carelessly declined to float, or lost a large part of their value while in the water—such are the advantages of science when given to Lo! Mr. Braniff's lumber-mill cost $254,700, with a capacity of 48,000,000 feet of lumber, although the law permitted the cutting of only 20,000,000 feet; unnecessary expense here, $129,000. The sawmill being carefully erected alongside of a marsh, $56,000 was spent in piling to make it a good lumber-yard, and $32,000 worth of lumber used in piling will soon have to be replaced.

Now it would be unfair to the Forestry Bureau to condemn it generally for one such ghastly mistake—particularly scandalous because the Government abused a sacred trust when it forced such a loss upon its own wards—but it is just this sort of blundering that is, we believe, responsible for much of the feeling in the West against the Forestry Bureau. With all due regard for Mr. Pinchot's eminent service, which we have always fully appreciated, we believe that abler executives can be found for his office. They may not appeal similarly to the imaginations of the people, nor inaugurate such far-reaching plans of national beneficence, but the opportunity is there, we are convinced, to better the actual working of the service and render it more truly helpful. Mr. Pinchot seems to have relied on Braniff and accepted misinformation precisely as he did in the Ballinger case.

The statement that in the past year five hundred thousand workmen have been injured in this country while performing their daily tasks is appalling, and it is eminently right that the prevention of these accidents should form a chief topic of discussion when the Manufacturers' Convention meets in this city next week. In our rush for material progress the claims of humanity have too often gone unheeded, and it is only when statistics of this startling nature are brought before us that the necessity for radical reform strikes home. The picture of death and suffering which is made plain when we learn that half a million laborers were broken on the wheel of manufacture in one year should arouse a country-wide support of any earnest effort to ameliorate the conditions of work. In the words of one of those who will attend the convention, the "fact that half a million workmen are injured annually in this country is an insult to our intelligence."

The text of the decision of the Illinois Supreme Court upholding the law limiting to ten hours the working day for women "in any mechanical establishment, factory, or laundry," shows that it is far-reaching. The court reversed not only the Circuit Court, but also its own decision of fifteen years ago, when it took the ground that an eight-hour law for women workers was unconstitutional. Now it restricts the freedom of contract in the interest of health, morals, and general welfare. It justifies this regulation of property rights squarely on the ground that the State may exercise its police power with regard to the health, morals, and general welfare of the public. The difference between the law of 1893 and the present law, in the court's eyes, is that the former did not state that its purpose was to promote the health of women, whereas the motive of the act in 1909 was distinctly stated to be to safeguard the health of women employees. If this seems to the layman a fine splitting of hairs, there can be no doubt that the decision is in line with the movement of the day. The court itself, as an additional justification, quotes the saying of

the Supreme Court, that "law is, or ought to be, a progressive science," based upon "changing conditions of society and the evolution of employment." Naturally, labor circles are delighted, and with reason. It is a special triumph for Mr. Louis D. Brandeis of Boston, who argued the case with unusual skill.

An increase of 20 per cent. in fares for the New York commuter is only another illustration of the way that mysterious force called the increased cost of living impinges upon a class which does not usually come in for the sympathy bestowed upon the "submerged tenth." The commuter as a class goes far towards substantiating the theory held by many psychologists and students of human nature, that humor is a sense of exaltation aroused by the misfortunes of others. That is why the commuter is one of the favorite subjects for the paragrapher and the comic artist. His horticultural misadventures, his hurried breakfasts and late dinners, his sprinting after trains, his paper packages, and his shopping expeditions—all these make up a vast contemporary literature, which, however, only serves to withdraw attention from the sober reality. Actually, the commuter is a man who, between sacrificing the welfare of his children and sacrificing much of his own comfort and convenience, has chosen the latter. To that purpose he travels long hours, denies himself the company of his family, pays more than city prices for food, for service, and, of course, for travel—and gets in return only ridicule. He does not organize into unions and go out on strike, and he does not send lobbyists to Washington to "see" somebody. When the railway company raises commutation rates, he protests, and submits. He has more than his share of troubles and bears them with more than average dignity, even in the presence of hilarious acquaintances who slap him on the back and ask how the rubber-plant is getting on.

A new organization is the Naval History Society. Its object is to collect and make available the vast amount of material bearing on the history of the American merchant marine and the creation and development of the American navy, which is now scattered all over the country in the form of letters, journals, log-books, etc. The headquarters of this organization are to be in New York, with branches in the principal cities. It will not, however, be limited to the experiences of American seamen, but will devote itself to a "wider theme, that of the sailor in all times." The Society ought to have a large membership—the secretary is Robert W. Neeser, No. 1076 Chapel Street, New Haven, Conn.—for its field is inviting. The story of the merchant marine is yet to be told with fulness and authority. In view of the present disappearance both of our sea-going ships and of the desire of Americans to take to the sea, the more that we can learn about the men who actually carried the flag into all the harbors of the world, the ships they sailed, and the conditions under which they operated, the better it will be for us. In Congress there is, for instance, entirely too strong a feeling that you can legislate about the merchant marine as you could about a railway, and some one ought to bring home to the country the paralyzing effect upon our shipping of the present antiquated navigation laws. We do not say that this should be the function of the Naval History Society; if it merely collects information upon which scientific studies may be based, or with which they may be reinforced, it will more than justify its existence.

If all comets were like this of Halley, a suspicion would arise that the terror of the comet which, we learn, periodically seized upon the mediæval world may have been largely the invention of the monkish chroniclers and wood-engravers of the time; those quaint cuts of people huddled together on the hilltops under a sky ablaze with the path of the awful visitor would be classed as imaginative. For if it is necessary to get up at 3 A. M. and stare hard at the eastern sky and call eagerly upon one's fancy before a comet can be sighted, how did the mediæval peasant ever manage to break his slumber, after a day of dreadful toil, to go staring at the sky, and how did he ever get himself sufficiently awake to be in any measure impressed? Is it Anatole France who proved that the midnight highwayman is really a great force for morality, since his victims are as a rule men who make their way home in the small hours befuddled with drink and debauchery? The only persons subject to the terror of this comet are men like the hero of Bronson Howard's play, who says, "I remember the prayers my mother taught me, and I say them every morning before I go to bed."

The earthquake at Cartago will serve to recall the part played by the consideration of danger from that source, in determining the location of the Isthmian canal. The Nicaragua route had been all but definitely chosen, when at the eleventh hour a reconsideration was effected; and among the arguments that brought about the final conclusion perhaps none played so decisive a part as that of the great liability of the Nicaraguan region to earthquake. This consideration was presented to the committee with great force by the late Prof. Angelo Heilprin, an authority on the phenomena of volcanoes and earthquakes, and very probably turned the scale in favor of Panama. The present site of the canal is far from what is known as the earthquake belt, and the upheaval of last Thursday, near the region which experience had shown to be extremely subject to these disturbances, should remind us of the wisdom of taking thought in matters of such moment.

The Kaiser's recent warning against excessive beer-drinking is surprising both for its form—a letter to a young student at Freiburg University, who is not even of the nobility—and its contents. True, the Kaiser some years ago made it good form for officers to drink his health in water at official banquets, and he has in his own private life set an admirable example, not of abstinence, but of moderate indulgence in beer and wines. This preachment is of enormous importance, however, in that it is aimed at those corps students to whom life at a university means chiefly all-day beer-drinking. The temperance movement in Germany is making rapid strides, as it was bound to do. The most efficient of industrial nations, Germany is sure to find out not only that excessive beer-drinking dulls the intellect and injures the physique, but that even what many Germans have regarded as moderate regular drinking has that effect. Employers of labor who have utilized the services of North German and South German workers do not hesitate to say that the wits of the former are quicker and clearer, and to lay the difference to the greater beer-drinking in the South.

THE DEATH OF EDWARD VII.

The death of King Edward has come with startling suddenness, and at a moment when it constitutes a political event of unmistakable importance. At no other time in the course of his nine years' reign would his departure from the scene have aroused speculation at all comparable in keenness and interest with that which is to-day filling the minds not only of his own people, but of all who are interested in the affairs of England. Yet his activities since he ascended the throne have been of far from insignificant importance. Although the expectations have not been realized of those who looked forward to the exercise on his part of great influence upon the conduct of home affairs, his influence has been a leading factor in the external relations of the Empire. The *entente cordiale* with France is acknowledged to have been chiefly his work, and to his activities the improved relation between England and Russia is largely due. Indeed, in the case of every country except Germany with which England has important contact, King Edward's tact, his skill as a man of the world, his knowledge of men and familiarity with the world's affairs have been instrumental in bringing about or consolidating good relations. And it is probably with justice that he is credited with a most important share in promoting the establishment of that excellent condition of feeling in South Africa which, at the end of so short a period after a desperate war, has become one of the finest monuments of British statesmanship. If the words attributed to him in the dispatches—"It is all over, but I think I have done my duty"—were uttered by him as he felt the end approaching, it is upon this record of true and high service to his country and to the world that his thoughts may have been dwelling.

And if in the domain of home politics King Edward failed to make a significant impression, the criticisms that in these last weeks have been passed upon him on that account may serve quite as well to remind us of the enlarged estimate now placed upon the possibilities of the throne as to point to any deficiency on the part of its recent occupant. Thirty or forty years ago the customary view of British royalty—in this country at all events—was that the sovereign served as a figure-head, or at most as a symbol in which the sentiment of loyalty and patriotism might find a centre. In the later portion of Queen Victoria's reign this notion underwent a marked change. It came to be recognized more and more that while all power was ostensibly in the hands of the Ministry, there were many ways in which the personal influence of the sovereign might make itself substantially felt, and that the extent of this influence was largely a question of the personal force of the King or Queen. King Edward quite fulfilled this idea of the power of the crown so far as regards foreign relations; and if he fell short of its possibilities in the domain of home statesmanship, that is hardly more than saying he was not a man of commanding qualities. Of such qualities no one ever supposed him to be the possessor. He was an all-round man of the world, a gentleman of tact and shrewdness, of kindliness and courtesy—such a type of man as to command the good will and esteem of the English people, in spite of any faults or weaknesses which during his life as Prince of Wales he may have displayed. This combination of qualities might go far in many matters; but it is not surprising that it was unequal to the task of making the King a decisive factor in the Constitutional crisis which his departure leaves approaching its climax.

With the passing away of King Edward, there disappears almost the last of the conspicuous figures associated with that great epoch in the story of England which will go down to history as the Victorian age. Whether his death will be pointed to hereafter as marking the beginning of an era departing profoundly in character from that covered by the three-quarters of a century over which his mother's reign and his own extended, is a question on which conjecture may take a wide range. In the opinion of the most earnest and serious-minded of those who are opposing the contemplated reduction of the powers of the House of Lords, the question to be decided in the coming Parliamentary elections is in essence that of conferring upon the House of Commons virtually unlimited power. But, whether or not it is expressed in the words, or even consciously entertained in the minds, of these objectors, what is really at the bottom of their fears is a knowledge of the kind of legislation which an unrestricted single-chamber government might, in these times, at any moment make possible. The working of the Socialist leaven has wrought a great change. There is no doubt that the essential conservatism of the English people still persists; but it cannot be reckoned on as of old to withstand firmly, in all situations, the onset of any sudden and powerful wave of radical innovation. "Where Freedom slowly broadens down from precedent to precedent" does not reflect the ideal of the typical English mind by any means as accurately as it did when Tennyson wrote the line. And so it is easy to understand that men who have been brought up in the Victorian traditions of conservative progress feel profound misgivings at the possibility of radical innovation brought about by a House of Commons acting on a single real or supposed mandate of the people, unchecked by any body specifically representing the forces of conservatism or the ancient traditions of the country.

What influence the death of King Edward will have upon the Constitutional question soon to come before the people for decision cannot be foretold. Though the new King is in his forty-fifth year, he has been little in the public eye; and, furthermore, the effect of the change from heir-apparent to King is proverbially uncertain. In the present instance, no such transformation as that which turned Prince Hal into Henry V is called for; the Prince of Wales is known as a man of serious mind and sober character. He assumes the crown at a time when, if he possesses the right qualities, it may be permitted to the monarch to play a memorable part in the settlement of a great Constitutional question. Certain it is that the affectionate reverence in which Englishmen hold the memory of Victoria, and the popularity and good will which have been enjoyed by Edward, will insure to King George, as he ascends the throne, the sincere and loyal good wishes of the nation.

PROGRESS IN CHINA.

The recent presence among us of the brother of a Prince and the uncle of an Emperor who rules over 400,000,000 souls has naturally renewed the ancient talk of what will happen to civilization and the Western world when these 400,000,000 souls set to doing whatever it is that they are just about to do. The

most obvious duty of a nation of 400,000,000 people, according to our enlightened Occidental standards, is to build up an army bigger than all of Christendom's combined, and to lose no time in making use of it. It is China's future army, rather than her future Constitution or her future administrative and financial reforms, that has been declared to be the destined instrument of China's regeneration.

As the head of China's armed forces, Prince Tsai-Tao is now circling the world for the purpose of studying its military systems; and his journey is quite in the Chinese tradition. The dispatching of gorgeous and highly expensive missions for purposes of foreign study is one of the principal occupations of the Peking Government. It is the complement to the frequent publication of elaborate reform edicts at home, both ceremonials in conjunction serving to create an impression of progress which the facts hardly justify. All that Prince Tsai-Tao and his suite will learn of Western military methods, the Chinese Government might have learned by calling into requisition the services of a few Japanese and German officers, just as a few years ago it might have purchased a copy of the Constitutions of the different nations of the West, with a few authoritative commentaries on each, instead of sending a very distinguished and large mission to study governmental problems abroad. But of course the object of such missions is much less to learn than to make friends for China by showing her willingness to learn. In that there is nothing reprehensible. China needs friends, and if she can win them by elaborate use of the press-agent's art, she is welcome to do so.

And the outside world, if public opinion in this country can be taken as an index, has duly succumbed to the press-agent's arts. It is not that we have been unwilling to be impressed. Unselfish and selfish reasons have combined to make many people hope that all that has been said of China's awakening might be true. In the first place, it appeals to the dramatic sense to have a nation of 400,000,000 people leap out of the sleep of several thousand years into the full blaze of modern life. And in the second place, perhaps there is something in this talk of the unlimited quantities of cotton goods and railway ties, and possibly Dreadnoughts and machine guns, which the Chinese are sure to clamor for when they wake up. The average man does not deal in subtleties. His reasoning, for instance, in matters of international politics is largely geographical. If Japan has modernized itself in fifty years and won a great war, why cannot China, which is only a few hundred miles away, do the same? The argument is not far different from saying that if everybody in France speaks French, why cannot the English, who live only forty miles away, do the same. It does not matter that in race psychology and in the entire nature of their civilization and their social organism, the Japanese and Chinese stand almost at opposite poles. Japan has become modern and China is unmistakably breathing in the modern spirit; but to speak of the new China, with her Parliaments and her armed tens of millions, as a matter of next year or even the next ten years is absurd.

There are half-a-dozen things which the facile orator on the magnificent horizons that are opening up in China might do well to remember. He might start by recalling that Rome was not built in a day. He might pass on to the much broader principle that no nation was ever modernized and constitutionalized into something alien to its own nature, and that a constitutionalized and modernized China would still be a laborious, peace-loving, heavily-progressive China. But it would be of most use, perhaps, to take to heart a specific caution or two: and first, the fact so frequently insisted upon by the writers on China and so frequently overlooked by nearly everybody else—the fact that China is not, in practice, a single government, but a fairly lax confederation of provinces, none of which would probably think of cutting loose from Peking, and none of which would dream of obeying orders from Peking unless it suited its own purpose to do so. Such manifestations of strength as China has shown since its defeat by Japan fifteen years ago have been local manifestations. In Shan-tung, the viceroy Yuan-shi-kai built up a fairly efficient army. In the Hoang-ho provinces, a viceroy has developed mines and arsenals. In Canton, a viceroy has cast a favorable eye on the reformers. Before the new China can threaten the peace of the world, she must solve the problem of making eighteen semi-independent provinces, each as large as a kingdom, march in something like common step.

Progress in China there undeniably is. The long succession of reform edicts means something. The rush of the Chinese youth to the foreign universities means a good deal. The growth of a native press has been rapid indeed. South China especially has caught more than the echoes of Western revolutionary traditions. The Marseillaise has been translated and adapted to local needs. John Stuart Mill and Herbert Spencer are eagerly read. Washington and Napoleon, "the two sons of Liberty," are frequently invoked. Among the more sober classes, the gentry and magistrates, the spirit of nationalism has also made progress. Nevertheless, these are but faint beginnings. We are still far away from the China that will threaten the peace of the world with its ten million armed men, or sweep clean the markets of the world by its vast purchases of cotton goods.

AN INSPIRING CAREER.

The celebration of Dr. Abraham Jacobi's eightieth birthday by the New York State Medical Society was only one of many extraordinary tributes to the man and the physician. His half-century of service in Mount Sinai Hospital is in itself quite unparalleled, if one considers in connection with its length the devotion, the skill, and the science that have accompanied it. But as was shown ten years ago, at the public demonstrations upon his seventieth birthday, it is impossible to laud the physician or man of science alone. Inevitably, there has been celebrated as well Abraham Jacobi, the broad-minded, far-seeing, patriotic citizen, always a sturdy force for good government, always a leader in philanthropic and humanitarian enterprises, albeit so modestly that too few have realized the extent of this man's usefulness to the community, or the value of the example he has set to his profession and to the lay world.

To say that Dr. Jacobi, like his closest personal friend, Carl Schurz, was a product of the German revolution of 1848 is to explain fully both his idealism and his breadth of view. Never was there a popular uprising inspired by higher or more unselfish aims, or conceived in a purer spirit of humanity.

It was the fine flower of that wave of liberalism and democracy that swept over Europe in the forties, the effects of which are not yet spent. The failure to upset the German monarchies was America's gain, since it sent to this country as exiles a host of men like Schurz, Jacobi, Blenker, and Sigel, who brought to their new allegiance all that passionate devotion and loyalty which they had lavished so freely on their lost cause. Dr. Jacobi paid dearly for his devotion to liberty; he spent his nineteenth and twentieth years in prison —a part of the time in darkness and in chains. Of this he has often complained, but only on the ground that it interrupted his medical studies! Certain it is that this hard and trying experience of early manhood, so far from crushing him, only fortified his character. It taught him, perhaps, the measure of his own soul, and discovered to him that his reliance was not upon the praise of men, but upon the praise of his own conscience. Imprisoning people for their opinions has almost gone out of fashion, except in Russia. If the lonely self-communion of the cell forges out such characters as Dr. Jacobi's, it would almost make one wish to turn back the hands of time.

But, after all, the elements of Dr. Jacobi's character were developed before the introspection of those lonely prison hours, with their nearby possibility of ignoble death. Love of truth, devotion to science, self-dedication to the general welfare, led him to that place, as they led many another; and in Dr. Jacobi they have never been shaken. With this broad foundation a narrow outlook, particularly in professional matters, was never possible. None of the many lessons of his life is more valuable for the younger generation of physicians than his refusal to lose himself in his profession, his unwillingness to look upon humanity as only so much surgical material. At the dinner given in his honor on his seventieth birthday, soon after the war with Spain, he declared that he had no "enthusiasm for the doctor who is occasionally puffed for leaving his humane work to participate in the killing, nor for the injustice of history, that mentions a thousand generals to one physician." And from the physician who is in practice to make money Dr. Jacobi is as far removed as are the poles from one another.

To appraise fully his services to medicine, particularly in the noble field of children's diseases, is not for laymen. But we may venture to dwell upon his great work as a teacher. There has been lecturing in this city of late a teacher from Balliol to whom some of England's greatest men go for advice and counsel before shaping the destinies of the nation. He is puffed by no newspapers; he has denied himself by his teaching the time to write the great historical works of which all scholars know him capable. He finds in his teaching complete satisfaction; the opportunity of moulding men who mould the world is all he asks. In his sphere Dr. Jacobi has been much the same. The number of his students is legion; who can estimate the effect upon them of the character of their teacher, of what Carl Schurz called his "personification of scientific conscience and personification of civic conscience"? When he landed fifty-seven years ago, American medical literature was at its beginning; if there were notable teachers, the students were ordinarily immature and but half prepared. Against the tendency to become a specialist without first being a physician, Dr. Jacobi's voice has ever been raised, and he has likewise opposed the separation of research laboratories from hospitals and of researchers from students. A great teacher, he knew long ago that men learn best through teaching; that he who would press forward into realms of undiscovered science advances best in company with young, fresh minds thirsting for knowledge of every kind.

So New York, we think, honors itself by honoring Dr. Jacobi. Had he accepted the professorship in Berlin once offered him by that same Government that had loaded him with chains, the Kaiser would now be the first to honor him, and the world of science and letters would be donning its dress-suit and driving down *Unter den Linden* to pay its respect, while the students would be planning a torch-light procession. We have not yet reached the point where we properly gauge or reward the services of scholars. We still listen too readily to the politician's sneer at the "closet philosopher," but a different time is coming. Dr. Jacobi, at least, has seen, during his long public service, a great change for the better, but others than he will know just how much he has himself contributed to it by professional faith, loyalty, and unselfishness.

THE RHODES SCHOLARSHIPS.

A former Rhodes scholar, now a Fellow at Oxford, attempts in the last number of the *Oxford and Cambridge Review* an estimate of what has been accomplished in the first six years of the Rhodes Foundation. The trustees of the Fund have refrained from passing judgment on the merits of the scheme. Their annual reports deal with bald statements of fact. Evidently, they feel that "the time is not yet ripe for telling how far the scheme is carrying out the objects which Mr. Rhodes had in view." The unofficial world, however, is more impatient; the silence of the trustees has been interpreted by some people to mean dissatisfaction or the acknowledgment of failure. The present article tries to show that there has been neither striking failure nor striking success. In other words, the trustees are justified in believing that the time has not yet come for casting a balance. It is a somewhat disillusioning account, and one would be tempted to ascribe it in large measure to the disintegrating influence of the English climate upon an ardent Colonial temperament. But the tone is fair and sober and the story carries the impression of truth.

The influence of the Rhodes scholars upon Oxford has been exaggerated. We are reminded that the Rhodes scholars in residence at any given time cannot exceed 180 men in a college community of three thousand. In addition, these 180 men are distributed among the various colleges and meet as a body only once a year at the Rhodes scholars' banquet. Our writer is rather tempted into hair-splitting when he argues that "as Rhodes scholars their influence can be practically *nil*, whatever may be their influence as *individuals* upon the small circle of undergraduates with which they come into contact." The fact remains that the individual is a Rhodes scholar with all the qualities of foreign birth, training, and outlook that fact connotes. It is even open to question whether the lodging of all the Rhodes scholars in a single college would ultimately affect conditions at Oxford as the present method of casting the seed wide is likely to do. Of effects already visible, the first is a tendency to accel-

erate, "however slightly," the movement towards a democratization of the University at large. The movement originated before the advent of the Rhodes scholars, "but the fact that they do come up to the University filled with the new ideal, enables them to press forward the general movement of their age and generation." And utilitarianism runs parallel with democracy. The scope of University teaching will be widened to meet the needs of the new men from across the seas. A School of Rural Economy has been established and Rhodes scholars have taken courses in Forestry there. A School of Domestic Economy is under discussion.

What does Oxford do for the Rhodes scholar? Well, in the first place, let the patriot's hot heart be at rest; the Rhodes scholar "is not really anglicised to any serious extent or taught to despise the country of his origin." Of 82 Americans, 81 have returned home, and one has accepted a university appointment in England. Those Americans who have returned have taken back with them chiefly "a higher conception of sport." Not that this implies any "inherent moral superiority in the English undergraduate." It is simply a difference between playing for exercise and playing to win. And while this makes British sport truer to its name, the fact is by no means a cause of unmitigated satisfaction to the Englishman. "The primary cause is that absence of enthusiasm for any ideal, be it great or small, which is settling like a blight upon the whole of English life." Here, evidently, our Colonial has caught just the tone in which it is fashionable for Englishmen nowadays to speak of themselves.

But however indifferent in the matter of winning games, a good many Englishmen still go in for hard work at their books; whereas the Rhodes men, our present writer insists, do not. A vast majority of them come up with the fixed intention of making the most of their opportunities and fail to do so. It is not enough that they should do as well as the average undergraduate. Being picked men, they should do better. If they do not, it is for various reasons. Compulsory Greek is one. The Oxford climate is another. But perhaps the most serious is the failure of the average Rhodes scholar to make use of his vacations. To do well at Oxford, one must read between terms, whereas the American Rhodes men in particular have gone in for Continental travel. "Many of them appear to look upon the Rhodes scholarship primarily in the light of an endowment for selected tourists from the United States." A bitter touch this, but in place; and the point is driven in again: "One may affirm without much fear of contradiction that the Rhodes scholars would do well to refrain from regarding themselves quite so prominently as students of mankind at large."

Evidently, then, we are still in the experimental stage; and particularly so when we recall what was the main object of the bequest. Cecil Rhodes was not interested primarily in what the Rhodes scholars would do for Oxford or Oxford for the Rhodes scholars, but what the two in combination could do to promote the cause of Imperial and English-speaking fellowship. To judge of the success or failure of a Rhodes scholar from this point of view, we must look for him not in the examination schools or in the Oxford boat, but fifteen or twenty years later, on his native soil and in the life's work he has chosen for himself. The results may show only in the second generation. And even then it may be very hard to distinguish between the effects of the Rhodes scholarship and the general movement towards a closer knowledge and understanding among the nations.

MARK TWAIN.

I.

No American writer has ever enjoyed a more purely democratic reputation than Mark Twain. From village celebrity to international renown, he has been advanced stage after stage by popular suffrage. The plain, unbookish burgess holding both his sides at a public lecture has helped roar him into eminence. The freckled, brown-legged pirate who finds Tom Sawyer nearer to his business and his bosom than Robinson Crusoe has played no negligible part in the campaign. The vote of the retired merchant reading "A Tramp Abroad" in preparation for a European holiday told decisively in his favor before the tardy voice of the professional critic assented. When an overwhelming majority of his fellow countrymen had established his position, the universities recognized the fact, so that one day not long ago, he strolled into the Sheldonian Theatre, clad in scarlet, and, after a "very satisfactory hurrah" from the audience, was created doctor of letters by the University of Oxford.

During the last few years of his life, he attained a still higher honor. It is to be hoped that no one will attempt to distinguish the customary "three periods" of his development, because, contrary to custom, he was essentially the same in all parts of his career. One may distinguish, however, three aspects of his reputation. Like a political orator making his maiden speech or invading hostile territory, he broke through the reserve of his audience with a string of irresistible stories. Handicapped by uproarious laughter, he produced two or three pieces of fiction which demanded serious attention; but his leonine head had grown gray before he lived down his record as a "platform humorist." At his seventieth birthday, he obtained a reconsideration of his case, and the highest tribunals decided that he indubitably belonged in the history of literature, if, indeed, he was not the "foremost American man of letters." After that, national feeling about him crystallized rapidly. He appeared in white flannels in midwinter, declaring that white was the only wear for a man with seventy clean years behind him; we were significantly pleased. After our newspapers had made one of their little breaks, he sent word to us that the reports of his death were "greatly exaggerated." It was a phrase that we all envied, from the President down; we saw that he was no mere literary man—he was a public man. When he died, we abandoned the last reservation. We said with one voice: He was an American.

To the foreign critic this ultimate tribute may seem perplexingly cheap and anticlimactic. That is, of course, due to the mistaken notion that we number some four score millions of Americans. As a matter of fact, we number our Americans on our ten fingers; the rest of us are merely citizens of the United States. Any one who will take a little pains with the alphabet may become a citizen; to become an American demands other talents. We are more than doubtful about Washington. Lowell said that Lincoln was the first American, but he forgot Franklin. There have been one or two since Lincoln's time. From certain indications, it looks as if Mr. Roosevelt might turn out to be an American. Only the other day, he sent us a message to this effect: "I know that the American people will agree that I could have acted in no other way than I did act." The American is a man of destiny. His word and deed flow inevitably out of the American character. On the one hand, he does a thing because it is right; on the other hand, the thing is right because he does it. Revising the thought of Henry V, we may say, Nice customs curtsy to great Americans.

II.

The point is strikingly illustrated by a story which Mark Twain tells on himself in one of the chapters of his auto-

biography. It was in 1877, before a company including all the leading geniuses of New England, banqueting in honor of Whittier's birthday. When Mark Twain's turn came, he rose and entered upon a fictitious "reminiscence." Out in southern California he had knocked at a miner's cabin, and announced himself as a literary man. The miner replied with marked ill-humor that he had just got rid of three of them, "Mr. Longfellow, Mr. Emerson, Mr. Oliver Wendell Holmes—consound the lot. . . . Mr. Emerson was a seedy little bit of a chap, red headed; Mr. Holmes was as fat as a balloon; he weighed as much as three hundred, and had double chins all the way down to his stomach. Mr. Longfellow was built like a prizefighter. . . . They had been drinking, I could see that." And so on.

At the words "consound the lot," Twain had expected a peal of laughter, but to his amazement "the expression of interest in the faces turned to a sort of black frost." The whole story was a dismal failure; it was years before the author recovered from the shame of it. Speaking as a mere reader of Lamb, Jane Austen, Thackeray, O. W. Holmes, I am not in the least surprised at the New England frost. I know very well that Congreve or Addison or George Meredith would have agreed with the New England geniuses that Mark Twain's reminiscence was a piece of crude, heavy, intellectual horse-play—an impudent affront offered to Puritan aristocracy by a rough-handed plebeian jester from Missouri. But hear Mark Twain thirty years later:

> I have read it twice, and unless I am an idiot, it hasn't a single defect in it from the first word to the last. It is just as good as can be. It is smart; it is saturated with humor. There isn't a suggestion of coarseness or vulgarity in it anywhere. What could have been the matter with that house? . . . If I had those beloved and revered old literary immortals back here . . . I would melt them till they'd run all over that stage!

In his mellow Indian summer Mark Twain himself grew conscious that he had become an American. He knew, therefore, that the speech was right, *because he had made it.* I confess to a doubt whether those "old literary immortals" would laugh at it even now; if they would not, as a countryman of Lincoln I should be ashamed of them. The man who cannot laugh with Twain must be either better or worse than the "overwhelming majority" of his fellow-citizens. To accept him is almost equivalent to accepting the American flag. When once you have sworn allegiance, you may find fault with both for the rest of your life without impeachment of your patriotism. "I paint myriads of heads," cried Walt Whitman, "but I paint no head without its nimbus of gold-colored light." He was prophesying the golden mean, which he called the "divine average," and which he knew was actually rarer than either extreme. He was prophesying Mark Twain. "Who are you, indeed," he exclaims, "who would talk or sing in America?" The antiphonal voice replies:

> I swear I will have each quality of my race in myself,
> Talk as you like, he only suits These States whose manners favor the audacity and sublime turbulence of The States.

III.

Humor, it is agreed, consists in contrasts and incongruities, and the essence of Mark Twain's most characteristic humor consists in contrasting this typical, nimbused American, compacted of golden mediocrities, against the world—consists in showing the incongruity of the rest of the world with this nimbused American. It necessarily follows that the heights and depths of humor are beyond the reaches of Mark Twain's soul. It necessarily follows that his laughter is burly, not fine; broad, not profound; national, not universal. When he that sitteth in the heavens laughs, he is not contrasting the year 1910 with the year 1300, nor the President of the United States with Louis XVI, nor the uncrowned sovereigns of Missouri with the serfs of Russia, Germany, or England. The comparison is intolerable—let us mark a lowlier difference. When Puck in the "Midsummer Night's Dream," looking out upon the bewildered lovers exclaims, "Lord, what fools these mortals be"; when Titania, waking from magical sleep, murmurs drowsily, "Methought I was enamoured of an ass"—the mirth of these subtle creatures is kindled by the contrast between sentimental and bottom humanity, respectively, and the exquisite manners and passions of elfland. If Twain had written the play, he would have put Puck into overalls and Titania into a hoop-skirt. For he ignored the ethereal hunger which troubled the creator of Falstaff, and never entered into the secret laughter of the idealist. Let us descend once more. It is said that the last book Mark Twain read was Carlyle's "French Revolution." I suppose he loved it incidentally for its picturesque and savage energy, but mainly because it proclaims that a man's a man for all that. He shows traces both of its style and of its central thought in his own work. But so far as I know, he never shows a trace of its heart-searching irony, of that universal world-humor which arises when the upstart, red-blooded pageant of time's latest hour is confronted with the grim, dim phantasms of eternity—

> Charlemagne sleeps at Salzburg, with truncheon grounded, only fable expecting that he will waken. Charles the Hammer, Pepin Bow-legged, where now is their eye of menace, their voice of command? Rollo and his shaggy Northmen cover not the Seine with ships, but have sailed off on a longer voyage. The hair of Tow-head (Tête d'étoupes) now needs no combing; Iron-cutter (Taillefer) cannot cut a cob-web; shrill Fredegonda, shrill Brunhilda, have had out their hot life-scold, and lie silent, their hot life-frenzy cooled. . . . They are all gone; sunk—down, down with the tumult they made; and the rolling and trampling of ever new generations passes over them; and they hear it not any more forever.

Carlyle makes ducks and drakes of Charlemagne and shrill Fredegonda, but he laughs with a by-gone eternity. When Whitman asks that stupendous question, "Whom have you slaughtered lately, European headsman?" millions of strange shadows tend on him. He, too, is a humorist, and a grave one. He makes ducks and drakes of the "old literary immortals," for he laughs with an eternity to come. Mark Twain cannot be persuaded that we are such stuff as dreams are made of; looking neither before nor after, he laughs with the present hour; and he cannot stand the comparison.

IV.

Not by his subtlety, then, nor his depth, nor his elevation, but by his understanding and his unflinching assertion of the ordinary self of the ordinary American did Mark Twain become our "foremost man of letters."

He was geographically an American; he knew his land and its idioms at first hand—Missouri, the Mississippi River and its banks, Nevada, California, New England, New York, the great cities. It is insufficiently recognized that to love one's country intelligently one must know its body, as well as its mind. He had the good fortune to be born in the West; so that, of course, he had to go East—otherwise he might, instead of becoming an American, have remained a mere Bostonian or New Yorker all his life, and never have learned to love Chicago and San Francisco at all. At various times and places, he was pilot, printer, editor, reporter, miner, lecturer, author, and publisher. But during the first half of his life, he went most freely with "powerful uneducated persons, and with the young, and with the mothers of families." The books in which he embodies his early experiences—"Tom Sawyer," "Roughing It," "Huckleberry Finn"—are almost entirely delightful. They breathe the spirit of eternal boyhood, they are richly provincial, they spring out of the fresh earth. There is a touch of melodrama in the first and more than a touch of farce in the last, but in the main, they are as native as a bluff to the Mississippi or a pine tree to a red spur of the Rockies.

It is when an American carries his virtues abroad that the lines of his character become salient. Mark Twain was a self-made man, of small Latin and

less Greek, indifferent to abstractions, deficient in historical sympathy and imagination, insensitive to delicate social differences, content and at home in modern workaday realities. I confess with great apprehension that I do not much care for his books of foreign travel. Like the story told on Whittier's birthday, they are "smart and saturated with humor"; but for some almost indefinable reason my emotions fail to enter into the spirit of the occasion. An uneasy doubt about the point of view binds my mirth as with a "black frost." I find myself concerned for my fellow-citizen, the author behind the books; beneath the surface gayety the whole affair seems to be of appalling seriousness for us both. Ostensibly light-hearted burlesques of the poetical and sentimental volumes of travel, these books are in reality an amazingly faithful record of the way Europe and the Orient strike the "divine average"—the typical American—the man for whom the world was created in 1776. Wandering through exhumed Pompeii, he peoples its solemn ruins with the American proletariat, and fancies that he sees upon the walls of its theatre the placard, "Positively No Free List, Except Members of the Press." He digresses from an account of the ascent of Vesuvius to compare the prices of gloves, linen shirts, and dress suits in Paris and in Italy. At length arrived at the summit of the mountain, he describes its crater as a "circular ditch"; some of the party light their cigars in the fissures; he descends, observing that the volcano is a poor affair when compared with Kilauea, in the Sandwich Islands. He visits the Parthenon in the night; obviously, the memorable feature of the expedition was robbing the vineyards on the way back to the ship. The most famous picture galleries of Europe are hung with "celebrated rubbish"; the immemorial Mosque of St. Sophia is the "mustiest barn in heathendom"; the Sea of Gallilee is nothing to Lake Tahoe. The Mississippi pilot, homely, naïve, arrogantly candid, refuses to sink his identity in the object contemplated—that, as Corporal Nym would have said, is the humor of it. He is the kind of travelling companion that makes you wonder why you went abroad. He turns the Old World into a laughing-stock by shearing it of its storied humanity—simply because there is nothing in him to respond to the glory that was Greece, to the grandeur that was Rome—simply because nothing is holier to him than a joke. He does not throw the comic light upon counterfeit enthusiasm; he laughs at art, history, and antiquity from the point of view of one who is ignorant of them and mightily well satisfied with his ignorance. And, unless I am very much mistaken, the "overwhelming majority" of his fellow-citizens—those who made the success of "Innocents Abroad" and "A Tramp Abroad"—have laughed with him, not at him. So, too, unquestionably, in the nearly parallel case of that bludgeoning burlesque, "A Connecticut Yankee at King Arthur's Court."

V.

What endears a public man to us is what he has in common with us—not his occasional supereminences. It does not damage Franklin to say that he was not so graceful as Lord Chesterfield; nor Lincoln to say that he was not so handsome as Count D'Orsay; nor Mr. Roosevelt to say that one misses in his literary style I know not what that one finds in the style of Walter Savage Landor. Writing from Khartum, the hunter tells us that, in consequence of hard service in camp, his pigskin books were "stained with blood, sweat, gun oil, dust, and ashes." We have a mystical feeling that this is very appropriate and beautiful—that a good American's books ought to be stained with gun oil and ashes. "Fear grace—fear delicatesse," cries the author of "Chants Democratic." It does not damage Mark Twain to say that there was not a drop of the aristocrat in his veins.

In politics he was an intelligent but unspeculative democrat, committed to the principles of the preamble to the Constitution, preserving a tang of Tom Paine's contempt for kings, and not without a suggestion of the republican insolence caricatured by Dickens in "Martin Chuzzlewit." I do not think that he gave a "square deal" either to Europe or to the Arthurian realm; but within his own territory he had a very genuine sense of the brotherhood of man. He was not, like some more exquisite men of letters, a democrat in his study and a snob in his drawing-room; he was of the people and for the people at all times. His tender regard for the social contract permeated his humor. It will be remembered that Pudd'nhead Wilson earned his nickname and ruined his chances as a lawyer for twenty years by an incomprehensible remark about a howling dog. "I wish I owned half of that dog," said Wilson. "Why?" somebody asked. "Because I would kill my half." No one understood him—the sensitive, symbolic democracy of the expression was too compact for their intelligence, and they fell into a delicious discussion of how one-half could be killed without injury to the other half. That, to be sure, is also one of the problems of democracy; but Wilson's implications were, I believe, both simpler and deeper than that. In not molesting another man's dog he showed the American reverence for property. The American desire to be moderately well-to-do (Mr. Roosevelt's "neither rich nor poor") he indicated by desiring to own only half the dog. In saying that he would kill his half he expressed his sacred and inalienable right to dispose of his own property as he chose, while at the same time he recognized his neighbor's sacred and inalienable right to let his half of the property howl. Indeed, I am not sure that he did not recognize that the dog itself had a certain property right in howling.

With almost every qualification for a successful political career, Mark Twain could never have aspired to the Presidency, for he was not a regular attendant at church—a shortcoming, by the way, which interfered seriously with Mr. Taft's campaign till his former pastor testified in the public prints that the candidate had once at a church social taken the part of a fairy. In religion, Twain appeared to be a mugwump, or, more classically speaking, an agnostic over whom had fallen the shadow of Robert Ingersoll of pious memory. The irreligion of that generation is touched with a raw, philistine rationalism, but is thoroughly honest. Like all Americans, the author of "Tom Sawyer" received his religious culture in the Sunday-school, but stumbled over the book of Genesis and kindred difficulties, and was "emancipated." The loss of faith which, in proper conditions, is a terrible bereavement, was to him a blessed relief; when the God of the Sunday-school and the camp meeting ceases to terrify, he ordinarily becomes a deadly bore. Having never known the magnificent poetry of faith, he never felt the magnificent melancholy of unbelief. His experience was typical, however, and his very unspirituality was social. In his examination of Christian Science, he admitted that every man is entitled to his own favorite brand of insanity, and insisted that he himself was as insane as anybody. That was enough to assure most of us that he was sound on "all essentials."

"Be good and you will be lonesome" is, I suppose, one of Mark Twain's most widely quoted utterances on moral topics. At first thought, one may wonder why this apparently Bohemian apothegm should have taken such hold upon the heart of a nation which above all things else adores virtue. But the difficulty disappears the instant one reflects that these seven words express as in a nutshell precisely the kind and temper of virtue that the nation adores. Like Wilson's observation on the dog, the saying is cryptic and requires explication. Twain tells us in his autobiography that when he was a boy his mother always allowed about thirty per cent. on what he said for "embroidery" and so "struck his average." The saying means, as I take it, first of all, Don't lose your sense of humor as those do who become intatuated with their own particular hobbies in goodness. Calculate to keep about in the middle of the road, but make allowance for all rea-

sonable shades of difference in taste and opinion. Don't be too good or you will find yourself in a barren and uninfluential minority of one. In America, whatever is not social is not virtue. When he put his shoulder under the debts of his bankrupt publishing house, the author of the apothegm himself explained its meaning. Natively fond of strong language, careless of peccadilloes, tolerant of all human frailties though he was—kin-making touches of nature—his feet were "mortised and tenoned" in domestic rectitude and common morality.

"We cannot live always on the cold heights of the sublime—the thin air stifles"—I have forgotten who said it. We cannot flush always with the high ardor of the signers of the Declaration, nor remain at the level of the address at Gettysburg, nor cry continually, "O Beautiful! My country!" Yet, in the long dull interspaces between these sacred moments we need some one to remind us that we are a nation. For in the dead vast and middle of the years insidious foes are stirring—anæmic refinements, cosmopolitan decadencies, the egotistic and usurping pride of great cities, the cold sickening of the heart at the reiterated exposures of giant fraud and corruption. When our countrymen migrate because we have no kings or castles, we are thankful to any one who will tell us what we can count on. When they complain that our soil lacks the humanity essential to great literature, we are grateful even for the firing of a national joke heard round the world. And when Mark Twain, robust, big-hearted, gifted with the divine power to use words, makes us all laugh together, builds true romances with prairie fire and Western clay, and shows us that we are at one on all the main points, we feel that he has been appointed by Providence to see to it that the precious ordinary self of the Republic shall suffer no harm.

STUART P. SHERMAN.

Correspondence.

THE DIARY OF GIDEON WELLES.

TO THE EDITOR OF THE NATION:

SIR: Among the most famous Cabinet meetings of which there are records is the meeting of September 22, 1862, at which the preliminary Proclamation of Emancipation was read and discussed before its issuance—a meeting which Mr. Rhodes characterizes as "a point in the history of civilization." The amount of printed evidence upon it is small. Chase's Diary affords illuminating details, and the Diary of Gideon Welles (*Atlantic Monthly*, March, 1909, p. 369) corroborates Chase's longer and more vivid record. Having had occasion recently to read Mr. Welles's Diary with care, I have been puzzled over some features of the text which records the doings of the well-known meeting. Students of the war period are well aware that Nicolay and Hay had access to the original manuscript of the Welles Diary, at least in places; and these authors print the passage giving the account of this meeting. If record of Nicolay and Hay may be taken as correct, the text in the *Atlantic Monthly* would indicate rather a ruthless editorial hand. The two accounts follow:

A special Cabinet meeting. The subject was the proclamation for emancipating the slaves, after a certain date, in States that shall then be in rebellion. For several weeks the subject has been suspended, but the President says never lost sight of. When it was submitted, and now in taking up the proclamation, the President stated that the question was finally decided,—the act and the consequences were his,—but that he felt it due to us to make us acquainted with the fact and to invite criticisms on the paper which he had prepared. There were, he had found, not unexpectedly, some differences in the Cabinet; but he had, after ascertaining in his own way the views of each and all, individually and collectively, formed his own conclusions and made his own decisions. In the course of the discussion on this paper, which was long, earnest, and, on the general principle involved, harmonious, he remarked that he had made a vow—a coveuant—that if God gave us the victory in the approaching battle, he would consider it an indication of Divine will, and that it was duty to move forward in the cause of emancipation. It might be thought strange, he said, that he had in this way submitted the disposal of matters when the way was not clear to his mind what he should do. God had decided this question in favor of the slaves. . . .

Nicolay and Hay text.
Abraham Lincoln: A History, VI:160.

a special Cabinet meeting. The subject was the Proclamation concerning emancipating slaves after a certain date, in States that should then be in rebellion. For several weeks the subject has been suspended, but, the President says, never lost sight of. When the subject was submitted in August, and indeed in taking it up, the President stated that the question was finally decided, but that he felt it to be due to us to make us acquainted with the fact and to invite criticism on the Proclamation. There were some differences in the Cabinet, but he had formed his own conclusions and made his own decisions. He had, he said, made a vow, a covenant, that if God gave us the victory in the approaching battle (which had just been fought), he would consider it his duty to move forward in the cause of emancipation. We might think it strange, he said, but there were times when he felt uncertain how to act; that he had in this way submitted the disposal of matters when the way was not clear to his mind what he should do. God had decided this question in favor of the slave. . . .

Atlantic Monthly text. March, 1909, p. 369.

The reader who examines these parallel records carefully, will, besides alterations in punctuation, discover changes in numerous words and phrases, additions, and conspicuous omissions. The phrase "in August," given in the latest text of the Diary, would seem to be original. At any rate it is in accord with the fact that Secretary Welles (like Lincoln) did not clearly remember just when the original draft of an emancipation proclamation was first read to the Cabinet (See the *Galaxy*, December, 1872, pp. 844, 851. Lincoln's "Complete Works," II, 479). The date has been long since established as July 22 (Nicolay and Hay's "Abraham Lincoln," VI, 126). The omissions in the latest text amount to six passages, some of which are really important. The absence of these passages should certainly have been indicated. As the record now appears, it is unreliable, and, from the standpoint of the seeker after historical truth, unsatisfactory. It may be reasonable to assume that space must be considered in the publication of any long diary in a monthly magazine where only portions of the record are likely to interest any large number of readers. I fail, however, to find any sound principle for the alterations or omissions here indicated. Every scrap of good evidence on Lincoln's emancipation policy should be preserved. The secretary of the navy tried hard to be accurate. It is certain that he would never have sanctioned this ruthless editing of his illuminating commentary. One wonders what proportion of the original manuscript has been subjected to this high-handed process of alteration and excision.

HENRY BARRETT LEARNED.

New Haven, Conn., April 25.

TO THE EDITOR OF THE NATION:

SIR: The version of the Welles Diary, now appearing in the *Atlantic Monthly*, consists of excerpts taken from the MS. and makes no pretense whatever to completeness. The original Diary consists of some 650,000 words, of which perhaps one-fifth can appear in the *Atlantic*. Any one with the smallest knowledge of magazine conditions will realize that the publication of much more material of this description in a periodical of general interest than the generous portion published by the *Atlantic* is impracticable, and in its various announcements the *Atlantic* has repeatedly laid stress upon the fact that the articles have been cut from the Diary.

The use of asterisks to indicate omissions would have greatly burdened the text and has therefore not been employed.

It seems unnecessary to add that in making selections for this series care has been exercised to avoid any distortion of the views of the diarist, and to retain passages of marked historical importance. Regarding possible verbal discrepancies between the *Atlantic* version and the original Diary, I may add that the present series of articles has been set up from a typewritten copy of the Diary, made a number of years ago, compared with the original, and supplied by Mr. Welles, who was unwilling to allow the manuscript itself to leave his possession. Such examination as I have been able to make in person leads me to believe that there are no variations of importance.

The *Atlantic* is published for the general reader. In the forthcoming publication of the Diary in book form every effort will be made to present a faithful text of the Diary in its entirety.

ELLERY SEDGWICK.
Editor the *Atlantic Monthly*.

Boston, May 5.

THE PHILIPPINE LAND SCHEME.

TO THE EDITOR OF THE NATION:

SIR: Permit me to protest against your editorial on The Philippine Land Scheme, which appears in the *Nation* for April 28. You say:

Whether the Sugar Trust is or is not the purchaser, whether the Henry W. Taft law firm is or is not involved, the sale of the 55,000 acres is indefensible morally, a shocking violation of trust, incredible from Mr.

Taft's Administration, in view of his attitude when Governor-General.

This is a serious charge to bring against the Administration. It begins with an innuendo which is unworthy of the *Nation*, and it ends with an implication that is not true. You imply that Mr. Taft, when Governor-General, favored the insertion of that clause in the organic act which forbids the sale of more than 2,500 acres of land to a corporation. As a matter of fact, he vigorously opposed it as being contrary to the best interests of the Filipinos. You admit in this very editorial that Mr. Taft was "the man whom, of all the Americans sent to them, the Filipinos loved best, because of his freedom from race prejudice and his insistence upon the doctrine of 'the Philippines for the Filipinos.'" You imply that he has changed his attitude towards the Islands in a disgraceful manner. Let us look at the facts.

In May, 1902, while still Governor-General, and while still devoted, as you admit, to the best interests of the Filipinos, Mr Taft published an article in the *Outlook* in which he took occasion to criticise the two versions of the organic act then under consideration in Congress. Allow me to quote his words:

Both bills limit the power of acquisition of land by a corporation, foreign or domestic, to five thousand acres. *It seems to me that this limitation is too low, and that it ought to be raised to twenty thousand acres*, for the reason that, in order to attract capital and to induce agricultural development on the best lines, especially in the production of sugar and tobacco, the cultivation must be of estates at least as large as fifteen or twenty thousand acres. [The italics are mine.]

In view, then, of his attitude when Governor-General, and of his well-known desire to see the Filipinos prosper and advance, it is not strange that he should have tried to find a way to eliminate the obstacles to progress which Senator Hoar, albeit with the best intentions in the world, placed in their path. It is not necessary here for me to enlarge on the large cost of modern sugar plants, and the many difficulties in the way of making progress in the tropics. They are well known and appreciated by those like Mr. Taft, who have lived and worked in the tropics, but they seem to be absolutely incomprehensible to people who live in a land where cold and hunger drive otherwise indolent drones to do their work in the world.

Your slurs on those who wish to help the Filipinos forward by making possible the entry of American capital are thoroughly characteristic of that point of view. In fairness let us hear the other side. Gov. Taft went on to say:

The investment of American capital in the islands is necessary to their proper development, and is necessary to the material, and therefore the spiritual, uplifting of the Filipino people. It means the construction of railroads, the needed intercommunication between the people and the provinces, and a change from a comparatively poor and ignorant people to one of comparative intelligence and wealth.

You reply: "They make a livelihood, bare at times, and why must they do otherwise at the behest of outsiders?" Why, indeed? That was what the Spanish government said for over three hundred years. The same spirit is not absolutely unknown in New York; but it has been more commonly found in Tammany Hall than in the columns of the *Nation*.

HIRAM BINGHAM.

Yale University, April 30.

[Our correspondent is mistaken in thinking there was a slur upon Mr. Taft or the Taft law firm in the sentence he quotes. The matter was mentioned merely to be brushed aside. We know Mr. Taft well enough to be sure that if his brother's law firm were connected with this matter it would prejudice him against its side of the case. We had overlooked the *Outlook's* article, to which our attention is called, but see no reason to change our opinion. Twenty thousand acres are not 55,000 acres, for one thing, and if the Taft Administration approves the sale of the latter lot of land to any corporation, we say again it is a morally indefensible breach of the trust imposed upon us in the Philippines by the Hoar act and the repeated assurances of our unselfish intentions. The capitalistic development of our conquered over-sea lands will make impossible the carrying out of those intentions.—ED. NATION.]

THOREAU AND CONFUCIUS.

TO THE EDITOR OF THE NATION:

SIR: Mr. Charles Franc's Adams, whose letter on Thoreau and Confucius was printed in the *Nation* of April 21, was perhaps unaware (not having been an early reader of the *Dial*) that Thoreau, early in 1843, when editing that quarterly in Emerson's absence, began to print in its pages what he called "Ethnical Scriptures," in which many of the quoted passages from Confucius and Mencius were first made known to most New England readers. Among his selections was the passage which, a dozen years later, appeared in his "Walden," and made such an impression on Mr. Adams. No author was named by Thoreau in citing it; but to those familiar with his *Dial* chapters, the turn of the phrases disclosed it as attributed to Confucius. The Concord group of authors and the American missionaries were the first in this country to read and quote the sayings of the Orientals; and Emerson was for years one of the very few Americans who owned a copy of the Bhagavad Ghita. He lent his copy freely, and it was more read than the contemporary copy in the Harvard College Library.

The mention of "Walden" leads me to say that a long and minute examination of the manuscripts of that book left by Thoreau and now owned by Mr. W. K. Bixby of St. Louis—printed last year by the Bibliophile Society of Boston, with many additions to the author's published work—showed me that early and late journal-entries were used by Thoreau in compiling it. Passages occur which were written as early as 1838, and others as late as the spring of 1854, the year of its publication. This special passage from Confucius stands at the close of the eighth chapter, and there are five other quotations from Confucius in the whole book. The Bibliophile edition is likely to become the accepted standard for the text of the book, when the copyrights of the earlier editions have expired. Its two volumes are now inaccessible to the general public, the number of copies being less than 500, and those only in the hands of subscribers. It lacks a full index, but is copiously annotated, and contains many explications and *variorum* readings of the passages. A popular reprint of it would be valuable; for "Walden" continues to be the "best seller" among the books of Thoreau.

F. B. SANBORN.

Concord, Mass., April 25.

A MEMORIAL TO PROFESSOR MAU.

TO THE EDITOR OF THE NATION:

SIR: Shortly after the death of Professor August Mau the suggestion was made that a bust of him should be erected as a memorial in the Forum of Pompeii. This suggestion has now taken definite form; and a committee representing the Italian archæological interests, as well as the German, English and American schools in Rome, has been appointed to carry it into effect. The committee issues the following address to those who knew Professor Mau or were interested in his work:

Rome, March 30, 1910.

On March 6, 1909, August Mau died after a life of ceaseless activity. We do not need to emphasize the value of his life-work. Suffice it to mention one thing alone, which assures him for all time a place in the foremost rank of scholarship: his discovery of the evolution of Pompeian painting, with its valuable deductions for the history of human culture. Remarkable as were the results of his scholarship, the effect of his personality on those who were privileged to know him was still more so. His manly straightforwardness, his simplicity, his purity of motive, but above all his delight in his work, never failed to impress themselves upon those who came into contact with him. In his work he lived. This love of his work kept him always young and joyous. His joy was contagious and communicated itself to those who met him, so that they left him full of gratitude.

All those who knew him will rejoice in an opportunity to give to their feeling of gratitude a lasting expression. In this spirit, in the desire to establish some lasting token of personal friendship and devotion, and with no wish for a merely formal and official recognition (which would be quite contrary to his desire), it has been proposed to erect a bust of Professor Mau in the place where generations of scholars of all nations have learned how under the magic of his word the ruins became eloquent witnesses to the history of man.

The undersigned have reason to hope that the Ministry of Public Instruction of His Majesty the King of Italy will not refuse consent to the erection of the proposed bust. Otherwise the money will be expended for a worthy publication of the Pompeian wall paintings which were copied under Mau's direction.

We appeal to all of Professor Mau's friends and admirers for support in the carrying out of this undertaking.

WALTER AMELUNG, Rome.
THOMAS ASHBY, Rome.
JESSE BENEDICT CARTER, Rome.
WOLFGANG HELBIG, Rome.
ANTONIO SOGLIANO, Naples.

Contributions to the amount of $91 are already on deposit with the treasurer of the Archæological Institute of America for this worthy purpose. They were received from the classical staffs of the University of Wisconsin; Johns Hopkins and Yale Universities; the Universities of

Pennsylvania Chicago, Michigan; and Harvard, Cornell, Princeton and Columbia Universities. Professor Mau lectured each year to the students of the American School of Classical Studies in Rome from its founding to his death; and if these should contribute on the average a dollar apiece, the sum, in addition to that already on hand, would be ample as the share of America. I shall be glad to receive and forward contributions.

FRANCIS W. KELSEY.

Ann Arbor, Mich., April 25.

SLAVERY IN VIRGINIA.

TO THE EDITOR OF THE NATION:

SIR: In your notice of Mr. B. B. Munford's book, "Virginia's Attitude Towards Slavery and Secession" (*Nation*, February 17), is seen this sentence:

If, as Mr. Munford insists, Virginia seceded simply because the Federal government resorted to coercion, the conclusion is unavoidable that the State preferred to continue on a low social plane under its own guidance, rather than to attain an admittedly higher one by Federal aid.

Permit me to say that President Lincoln gives a final answer to this charge of neglect of duty by Virginia and the South in his speech, delivered at Peoria, Ill., October 16, 1854: "When the Southern people tell us that they are no more responsible for the origin of slavery than we are, I acknowledge the fact." "When it is said that the institution exists, and that it is very difficult to get rid of it in any satisfactory way, I can understand and appreciate the saying. "I *surely will not blame them for not doing* what I would not know how to do myself." *"If all earthly power were given me, I should not know what to do as to the existing institution."*

The results of the emancipation proclamation confirmed Mr. Lincoln's statements. Mr. Munford calls attention to many instances of deep concern and perplexity of the best hearts and heads of whites at the South in regard to the disposition of their personal slave property, and of that of the South at large.

In all charity, we are compelled to state that Mr. Lincoln's enforced "Federal aid" unfortunately left the negroes still among the vanishing races, while the country was deluged in blood. Northern intelligence and devotion have failed to solve the problem, since Mr. Lincoln's day. Far removed from the "black belt" the North, especially in its cities, finds the race problem the most vexing and persistent demand upon the whites. The differences in the two races were distinctly recognized and stated by President Lincoln in strong, unmistakable terms. Had the war President foreseen the appalling suffering and deaths by tens of thousands among negro infants, children, their mothers, and the weak and aged who flocked to the "freedman's settlements" and "camps of refuge" under the Stars and Stripes, Mr. Lincoln would have insisted that these unhappy, deluded folk should remain on the plantations until the war was over. The able blacks he needed to fill his armies, while the unproductive class, left at home, would have helped on the cause of freedom by "eating old master out of house and plantation."

ST. GEORGE T. C. BRYAN.

Petersburg, Va., May 3.

QUESTIONS ANSWERED.

TO THE EDITOR OF THE NATION:

SIR: Permit me to reply in the greatest possible candor to the questions asked in the review (*Nation*, April 28) of my book, "Die neue Form": (1) No, I do not think it advisable in an American teacher to set up any new literary standards. However, I do think it advisable in a critic to interpret objectively the ever new literary standards which are continually set up by creative artists; (2) No, I do not advocate the production of "Sonnenfinsternis" by (or for) American college students; nor do I advocate the production of Sophocles's "Œdipus," Schiller's "Braut von Messina," Shelley's "Cenci," Wagner's "Ring des Nibelungen," Ibsen's "Rosmersholm" and "Ghosts." But I do advocate the production of such masterpieces, by first-class artists, for mature men and women, *i. e.*, for that unprejudiced, intelligent, and æsthetically appreciative public for which alone my book is intended. "Sonnenfinsternis" as a play stands on as lofty an ethical height as "The Scarlet Letter," the novel. It is a story of guilt and atonement through unselfish sacrifice. It is a story of the purification of a soul. O. E. LESSING.

Urbana, Ill., April 30.

PHOTOGRAPHING MARS.

TO THE EDITOR OF THE NATION:

SIR: In reference to the account of the annual session of the National Academy of Sciences in your issue of April 28, it seems but fair to call attention to the fact that Dr. Hale's failure to photograph the fine lines on Mars was made with a *reflecting* telescope.

That such a telescope is not suited to planetary photography was shown at Flagstaff last autumn. Dr. Lowell had installed a reflector by Clark & Sons to be used at the last opposition of Mars. It proved so unsuited either for the visual or photographic study of that planet, that no serious attempts were made to use it for such purposes. G. R. AGASSIZ.

Boston, April 29.

Literature.

TRAVEL IN FOREIGN LANDS.

South African Memories: Social, Warlike, and Sporting. From diaries written at the time. By Lady Sarah Wilson. With illustrations. London: Edward Arnold.

Wanderings Among South Sea Savages and in Borneo and the Philippines. By H. Wilfrid Walker, F.R.G.S. With 48 plates from photographs. New York: Imported by Charles Scribner's Sons. $2.50 net.

Through Persia from the Gulf to the Caspian. By F. B. Bradley-Birt, I.C.S. With 31 illustrations and a map. New York: E. P. Dutton & Co. $3.50 net.

The Confessions of a Beachcomber. Scenes and incidents in the career of an unprofessional beachcomber in tropical Queensland. By E. J. Banfield. With a map and 53 illustrations. New York: D. Appleton & Co.

Scenes and incidents connected with the Boer war form the larger part of Lady Sarah Wilson's interesting "South African Memories." The daughter of the Duke of Marlborough and sister of Lord Randolph Churchill, she had every opportunity given her during her four visits to South Africa to meet the most notable people and to see that which was most worth seeing. At her first visit in 1895 she was the guest of Cecil Rhodes, then Prime Minister of Cape Colony, and she gives a delightful description of his home on the slope of Table Mountain; a low rambling house with a thatched roof, filled with choice art treasures and surrounded by plateaus bright with flowers, while antelopes of many kinds roamed through his woods. It was "a meeting-place for all the men of the colony." He was always in favor of doing things on a large scale. "Sometimes a gardener or bailiff would ask for two or three dozen rose or fruit trees. 'There is no use,' he would exclaim impatiently, 'in two dozen of anything. My good man, you should count in hundreds and thousands, not dozens.'"

During her stay of six weeks she was detained for some time at Kimberley by the Jameson raid, but succeeded in reaching Johannesburg and Pretoria, where she saw President Kruger, who "with a venerable white beard, in a somewhat worn frock-coat and a rusty old black silk hat, did not look the stern dictator of his little kingdom, which in truth he was. Our Dutch friend told us Oom Paul was in the habit of commencing work at 5 A. M., and that he transacted business, either at his house or in the government offices, with short intermissions, until 5 P. M." Her second visit was three years later and lasted for fifteen months, two of which were spent in Rhodesia. At the outbreak of the war she attempted to join her husband, the aid-de-camp of Col. Baden-Powell, the heroic defender of Mafeking, but was taken prisoner by the Boers, and after tedious negotiations was exchanged for a horse-thief. Her account of her experiences in the Boer laager, and particularly of her life in the beleaguered town, is especially interesting. The most formidable weapon of the Boers was a big siege gun every motion of which was watched through a telescope, notice being given by a bell to the townspeople that it was about to be fired. Often her telephone would ring up with the message: "The gun is loaded and pointed at the town. . . . A monkey belonging to the post-office, who generally spent the day on the top of a pole to which he was chained, would, on hearing the alarm-bell, rapidly descend from his perch, and, in imitation of the human beings whom he saw tak-

ing shelter, quickly pop under a large empty biscuit-tin." But on Sundays, "thanks to the religious proclivities of the Boers," there was an absolute cessation of hostilities on both sides, "and from early dawn to late at night the whole population thoroughly enjoyed themselves."

On the relief of Mafeking, she went to Pretoria, where she met her nephew, Winston Churchill, and the "hero of a thousand fights," Lord Roberts, of whom she says: "I shall never forget how kindly he spoke, nor the inexpressible sadness of his face." On her return home the Red Cross was awarded her, and the medal for service in South Africa. The third visit was in 1902, when she was the guest of Lord Milner at Johannesburg. The next year she went to Rhodesia, camping for a short time at Livingstone, Victoria Falls, which she describes as "one of the fairest landscapes to be seen on God's earth." The attractiveness and value of the book are increased by the twenty illustrations, which inelude portraits of most of the noted persons mentioned in her narrative and a humorous sketch by Col. Baden-Powell.

The author of "Wanderings Among South Sea Savages and in Borneo and the Philippines" has been a collector of birds and butterflies, and gives in this book a readable account of some of his collecting trips. Our only criticism is that he dwells too frequently and in too much detail on the revolting customs of the people among whom he travelled. It does not add to the interest of his narrative to be constantly reminded of the cannibalistic practices of the Papuans, nor to have one's attention continually directed to the ghastly trophies to be found in the house of the Borneo head-hunter. Life in the home of a Fijian prince and adventures in company with him are described in the first chapters. Then follows an account of a visit to the Philippines, evidently at the time of the Taft administration, for in his preface he acknowledges his obligations to him. The Negritos, among whom he passed most of his time, are set down as "certainly the merriest and yet the dirtiest people I have ever met." While with them he heard rumors of an extraordinary mountain tribe, named Buquils, "whose women were reported to have beards," but his journey in search of them failed because of the intertribal enmities, and he was unable to prove whether or not the story was a myth. While in North Borneo, in whose forests he spent seven months, he visited some edible birds'-nest caves, and his description of them is by far the most entertaining part of his book. After a somewhat hazardous exploration of one which was more than 500 feet in height, with an opening in the top which from below looked like a distant star, he returned to his hut. About dusk he "heard a noise like the whistling of the wind, and, going outside, I saw a truly wonderful sight. The millions of small bats which share these caves with the birds [swallows] were issuing forth from the small hole in the very top of the rock. As far as the eye could see they stretched in one even, unbroken column across the sky. They issued from the cave in a compact mass and preserved the same even formation till they disappeared in the far distance. They resembled a thick line of smoke coming out of the tunnel of a steamer, . . . and the thick line twisted and wriggled across the sky for all the world like a giant snake. They were still coming forth in the same manner till darkness set in, and then I could only hear the beating of myriads of wings, like the sighing of the wind in the tree-tops." They return in early morning in much the same fashion. The swallows, he was told, usually did the same thing; when the bats came out, the swallows entered the caves, and when the bats went in, the swallows came out. But he was there at their nesting season, when they went in and out of the caves irregularly all day. The book is attractively made up, and the 48 plates from photographs, some of rare beauty, give vividness to the narrative.

The most interesting part of F. B. Bradley-Birt's "Through Persia" is that descriptive of the southwestern region in which lie Shiraz and the ruins of Persepolis. It gives a vivid impression of the ancient empire of the Sassanians. His admiration for the "most fascinating city in the East" with its blue domes and golden minarets, its many gardens of cypresses and roses, is partly due to the approach through monotonous desert and over barren heights and also to the influence of its great poets, Sadi and Hafiz, whose memory is cherished at the present day, thousands of pilgrims coming to their tombs. In the garden in which Sadi lies he found the keeper holding school with half a dozen tiny scholars, from four to seven years old. They were "writing with their quaint wooden pens on square-cut plaintain leaves that serve for paper. They are copying laboriously a famous line of Sadi's, a copy of whose poems, beautifully illuminated, lies open on the old man's knees, and no line could well be more appropriate to this restful spot beside the beautiful city that Sadi loved—'If there is a Paradise on earth, it is this, it is this.'"

The first impression of Persepolis, with which, according to the ancient writers, "no city could be compared either in beauty or in wealth" and which was called the "Glory of the East," was its vast loneliness. "Man and every living creature seem to have deserted the fallen city." But this feeling was soon overcome by the fascination of its marvellous remains. In striking contrast to these relics of a glorious past is a village hanging on the top of an enormous rock island, tier on tier of houses rising to a height of a hundred and thirty feet above the river-bed. The only approach is by a narrow footbridge to a small doorway cut in the face of the rock. So accustomed are the villagers to their exalted quarters "that they pursue their daily avocations with uneoneern, while the children play in the hanging verandahs regardless of the yawning drop below." His account of the remainder of his journey through Ispahan and Teheran to the Caspian is lacking in interest. When he passed through the capital, the Mejliss, the new parliament, was holding its first sittings, and he calls attention to the part which the Indian agitator played in the revolution. A weekly paper printed in Calcutta was on sale in the streets, and "no one who saw the eagerness with which it was bought and read by the crowd, which always gathered round the palace in which the Mejliss sat, could doubt its influence. It was from its columns that the Teheranis first acquired the word 'constitution.'" Illustrations of some of the most interesting scenes described and an excellent map add to the value of the book.

E. J. Banfield, in the "Confessions of a Beachcomber," tells of his search for the "simple life" in a tropical island off the coast of Queensland. Though but three and a half square miles in area, it contains a wealth of fauna and flora, which is described with all the enthusiasm of a true lover of nature. Especial attention is paid to the birds, the number of which may be imagined from the fact that he gives a "census" of 131 different species, "all permanent residents familiar to him as well as casual visitors." He also gives a glowing description of his garden of coral. Interesting, too, is his account of the different trees, one of which, the umbrella tree, is a "distillery of nectar of crystal purity and inviting flavor." The chapters devoted to the natives, "stone-age folks," are somewhat disappointing; the persons particularly portrayed are uninteresting, and the numerous anecdotes of them are told in almost unintelligible pidgin-English. The 53 illustrations are reproductions of photographs, some of them, especially that of the coral garden, being of great beauty. The lack of an index in a book treating of so many different subjects is to be regretted.

CURRENT FICTION.

The Undesirable Governess. By F. Marion Crawford. New York: The Macmillan Co.

For the last time, by admission of the publishers, we are called upon to com-

ment upon a new work by the most natural story-teller of his generation. When Crawford's life comes to be written, we shall no doubt find out in what order the three posthumous novels were composed. "The Undesirable Governess" belongs to Crawford's lightest mood. It is a bit of comedy well on toward the edge of farce. The setting and atmosphere are ultra-English. The Lady Jane who is at such pains to protect her susceptible husband and sons from attractive housemates is the stern, virtuous, and snobbish lady Briton of long tradition. The mainspring of the story is that indispensable consideration in English fiction—the duty of getting your money's worth when you marry. From Richardson to Trollope, and from Trollope to (though strangely not including) De Morgan, the absurdity in marrying an inferior in rank or fortune is the natural key to the romantic action. How magnanimous of Algernon to waive, though of course not ignore, the fact that Alice's grandfather was a tradesman, or that her income is a paltry thousand a year! How wonderful of Lady Edith to give herself to the younger son—with only blood, health, brains, and a heart to recommend him: she might have had the Duke! We must guess that Crawford took a sly satisfaction in playing once more upon this well-worn string. The "undesirable governess" makes herself desirable, even to the fastidious Lady Jane—as a governess. As a prospective daughter-in-law, being supposedly poor and of no social standing, she is, of course, an object of execration, a thing to be insulted and cast into outer darkness with all dispatch. The machinery by which the poor and nameless girl is shown to be a rich girl and a well-born girl need not be described. No novelty of design is striven for in its construction. Nor is subtlety employed in the framing of Lady Jane's recantation. The story is only a trifle, but a perfect trifle in its Crawfordian kind.

Cavanagh, Forest Ranger: A Romance of the Mountain West. By Hamlin Garland. New York: Harper & Bros.

"Author of 'The Gray-Horse Troop,' 'Main-Travelled Roads,' etc.," reads the title-page. How little of the "and so forth" has come up to the promise, or even the achievement, of those early tales! In "Main-Travelled Roads" Mr. Garland, now nearly twenty years ago, sounded a note of which his later work has given, for the most part, a series of diminishing echoes. That volume will stand, we believe, as one of the classics of American fiction. And it is because we believe this that each new book of Mr. Garland's continues to arouse in us a now rather forlorn hope. The present book is earnestly and painstakingly written. It sets forth with much detail the life and the problems of the forest ranger in those parts of the West where the old lawless traditions still linger, and sheep and cattlemen alike are on the offensive against the national protector of the forests. "Roaring Fork," the scene of most of the narrative, is a little town sixty miles from a railway, where "the air of the reckless old-time range still clung rancidly about in the low groggeries, as a deadly gas hangs about the lower levels of a mine." To this community has come one Cavanagh, a naturalized Englishman and forest ranger. Though a subordinate even in the local forest service, he has ward over a large stretch of country, and as representative of the law, is at once unpopular among the worthies of Roaring Fork. The narrative recounts his struggles to uphold his authority almost single-handed. In the end he escapes defeat, and is recognized as harbinger of a new day and new methods. This is a good and natural plot for a novel about the new West. Unluckily, Mr. Garland has not been able to get away from his text. As fiction, the book belongs to a mediocre sort. The girl who is duly supplied for Cavanagh—the refined Eastern-bred daughter of a Roaring Fork mother—has little reality or desirability. The other persons in the tale—except perhaps the older woman—are but pale figures. The fact is, the writer has had a speech to make, not a story to tell. He has wished to express his indignation at the dismissal of the recent chief of the forestry service, and his belief in the system originated by that officer. The dismissal has its part in the story; and Mr. Pinchot himself supplies a discreet introduction.

The Adventures of an A.D.C. By Shelland Bradley. New York: John Lane Co.

This book is delightfully light in the literal sense, and not unpleasantly so in the figurative. "Adventures" is a misnomer; the aide-de-camp has no more than the Needy Knifegrinder. As a scrap-book, however, the volume presents good entertainment, the gems of the collection being unquestionably the native letters—vouched for in a prefatory note as substantially genuine—received at Government House. What magnate could resist an appeal which closes with the benediction, "And may the Almighty (whom Your Honor much resembles) grant you long life, etc."? Many of us have at some time the trying experience of finding that we have included the dead in our invitations, but seldom is the fact so unequivocally brought home to us as by the polite reply: "I regret to inform you that my late father is now resident at Heaven." One letter we make no apology for quoting in full; it should have been addressed to Mr. Roosevelt:

Honored Protector of the Poor: Having heard of your almighty mercy and loving-kindness to us worms, I make bold to tell you my circumstances.

By the grace of God, your Lordship, I have seven children, all babes and sucklings.

Besides this abominable litter, I have many relations, male and female, all dependent upon me. What have I done that I should be blessed with such cursed trials?

As your Lordship is my father and my mother, I would require that you take this worm and wife and suckles and relations, both male and female, and provide for us from your bounty at a remuneration of rupees twenty per month.

I cannot read or write, and have only the suckle qualifications and male relations and feminine, but, by the grace of God and your Lordship, I look forward to years of prosperity and happiness.

We all sing loudly of your praises, your justice, and your mercy; therefore, call us all that we may fatten on your love and gentleness. Call quickly. Your faithful worm and beast, Pindari Das (despicable brute and unwilling father of babies).

Predestined: A Novel of New York Life. By Stephen French Whitman. New York: Chas. Scribner's Sons.

Mr. Whitman has treated a dangerous theme with delicacy and strength. A rich widower, who has worshipped his wife's memory, discovers that the young man he has regarded as his only son is really the child of another father; he converts his wealth into bills which he burns; the son, brought up in luxury and with wealthy associates, is left in poverty and sets out to earn a living by his wits; from newspaper work he turns to authorship; failing in this he takes to drink, becomes entangled with women whose homes are near the Great White Way, and sinks through various stages of degradation to an ignominious death. It is a sordid subject, relieved by little humor, but in Mr. Whitman's treatment is not repulsive. The vice of the streets and of the flashy underworld is exposed with all its tragic lessons, yet the reader is neither offended by preaching and moralizing nor disgusted by nauseous details. It is realism with restraint and human sympathy, and on the whole gives a juster and more vivid picture of certain aspects of life in New York's "tenderloin" than does any other novel we can recall.

One minor point deserves mention—the psychological skill with which the degeneration is noted from the hero's father, who is a Parisian poet of a few exquisite but sterile works in his youth, to the hero himself who has all the velleity of artistic production without the effective will.

The Green Cloak. By Yorke Davis. New York: Sturgis & Walton.

Nothing is more amusing to the habitual reader of detective stories than the eagerness of the writers to seize on some method of varying the old themes. When Professor Münsterberg's articles on the detection of crime by the new instruments of the psychological laboratory were printed, it was perfectly safe to predict that we should have a flood of detective stories on the method. The

other day we noticed "Luther Trant"; to-day we have such another, in this case, however, the Sherlock Holmes of the laboratory being an ancient professor who has lived in Australia, whereas Luther Trant was a newcomer in the field. The sleuth-minded professor's life in the East is essential to the story, for the plot is compounded of Oriental pirates, the Maori speech, and other exotic flavors, though the scene is a very modern American suburb. The story is interesting, and the psychological apparatus is worked in cleverly.

NAPOLEON III.

The Rise of Louis Napoleon. By F. A. Simpson. Illustrated. New York: G. P. Putnam's Sons. $3.50 net.

Kinglake and Carlyle and the great throng of English and American writers who, half a century ago, denounced Louis Napoleon would rub their eyes if they could read this book. For, when Mr. Simpson closes his chronicle with the election of Louis Napoleon to the Presidency in 1848, he leaves upon the reader the impression that the spurious Bonaparte was rather a commendable person. The crime of the *coup d'état* had not been committed; and Mr. Simpson does not arrange his material with reference to that event, on which most historians have based their verdict. He simply tells the story of the first forty years of the Prince, untinged by what occurred afterward. This treatment is, we believe, both honest and correct.

The result is that we see in the Prince a youth of unusual sensibility, and a man of extraordinary tenacity of purpose. His two attempted "invasions" of France appear no longer as ridiculous fizzles, but as carefully laid schemes which, in that epoch when every proposed revolution seemed possible, had some chance of success. Mr. Simpson's account of these affairs is well done, the best we have seen in English. He puts before you the situation as the Prince saw it, not as everybody can see, and judge it, in retrospect.

Most interesting is the description of the rise of the Napoleonic legend. The main feature of the imprisonment of the great Napoleon at Saint Helena was not, as has been generally supposed, his eclipse and end; it was the opportunity it offered him—an opportunity he improved to the full—of creating the legend which was destined to produce the Second Empire, and to dazzle Frenchmen unto the third and fourth generation of those who had fought and died for the First. It was Louis Napoleon, after the death of his brother raised him to the dignity of pretender, who earliest saw the immense possibilities latent in the legend. It was he who exploited those possibilities in all directions; he whom neither failure, nor indifference, nor calumny, nor ridicule could cause to waver. It is startling to reflect that he, Mazzini, and Garrison, who were only three years apart in age, but as remote in ideals as one pole is from the other, showed during the thirties and forties equal inflexibility of purpose, equal readiness to stake everything to promote their respective causes. But the parallel ceases when we examine the character of the three.

After making what allowance we will, Louis Napoleon's aim was selfish; for nobody suggests that a mere philanthropical ambition to give France the best possible government sustained him during his years of ill-fortune. Garrison and Mazzini had the zeal of Jewish prophets or of Cromwellian Puritans; like Luther, they "could not otherwise"; but we cannot believe that the Bonapartist pretender would have borne and labored as he did unless he had hoped that he—and not some other member of the family—should enjoy the prize. Perhaps Mr. Simpson would have done well to epitomize his chief work, "Les Idées Napoléoniennes," which bears witness to his skill as a writer, to his visionary intellect, and to his remarkable ability to coin concrete phrases which soon passed current, although they had only abstractions behind them. His *L'Empire, c'est la paix*—to cite a single example—was a stroke of genius and won him more supporters than a thousand political orations could have done. As a fashioner of ringing manifestoes, both before and after he came to power, Louis Napoleon had, in our opinion, no superior, although among his contemporaries were scores of brilliant rhetoricians.

Mr. Simpson's study makes it clear that the Prince had the happy knack of seeming to be a specialist in many fields—in the science of war, in modern history, in comparative government—and of being hospitable to new ideas. But this happy knack denoted, as it often does, superficiality, and left him helpless when he was brought face to face with inexorable facts. Cobden found him ignorant of even the A B C of political economy; the battles of Magenta and Solferino showed him a tyro in generalship; Cavour and after him Bismarck made a plaything of his statecraft. But all this came later. Mr. Simpson has the pleasanter and easier task of describing the prospective despot's formative years, in which he devoted himself with might and main to self-culture in everything except character. Only a rabid anti-Bonapartist could fail to do justice to the Prince's self-reliance, which urged him to perpetual efforts. Amateurs of political dexterity must admire the way in which he worked up what we Americans would call his "boom," and glided as deftly as an eel among the complications of 1848 until he landed in the Presidency.

This part of the story Mr. Simpson treats with commendable clarity. He falls short in not sufficiently impressing on readers who have no other source of information that the Prince's habits and companions during his exile were for the most part such as to justify the popular opinion that he would not make a reputable sovereign. A libertine, a spendthrift, a borrower with nothing except his "prospects" to offer as collateral, a liker of vulgar or tainted associates, Louis Napoleon had no magnetic qualities to offset these in the eyes of his sober critics. Do what he would, he could not win the support of any respectable, much less dominant, class before 1848.

Mr. Simpson hints at this, but, as we have said, he lays hardly enough stress on it. His chief merit, and it is a high one, consists in presenting Louis Napoleon's positive side more sympathetically and more accurately than it has hitherto been presented: and yet it would have been possible at least to outline the negative side more distinctly. There are but few minor points on which we should challenge his statements. His idea that Napoleon's membership in the Carbonaria may be doubted because there is no documentary evidence to prove it, leads us to infer that he thinks the Carbonari signed their oaths at initiation—which is wholly incorrect. Nor do we agree with him that the question of the Prince's paternity is now "purely academic": we have yet to see strong presumptive evidence (much less conclusive proof) that he was the son of the King of Holland. But these, and other similar matters, are too slight to be debated here. Even if Mr. Simpson be wrong, the worth of his book cannot be doubted.

History of the Great American Fortunes. By Gustavus Myers. Vols. I and II; three parts. Chicago: Charles H. Kerr & Co. $1.50 each.

The Economic Causes of Great Fortunes. By Anna Youngman. New York: The Bankers' Publishing Co. $1.50.

Although the first volume of Mr. Myers's work does not deal with the most recent phase of the process of American fortune-building, it is none the less full of that kind of bitter denunciation which we are in the habit of associating with the "muck-raking" literature of the present day. Part i deals with "Conditions in Settlement and Colonial Times," part ii with "The Great Land Fortunes"; the era of Vanderbilt and Gould, not to speak of Rockefeller and Morgan and Carnegie and Harriman, accordingly, is still in the distance. But from the first the accusing finger is pointed at the accumulators of wealth; and, indeed, the implication is plain throughout that, bad as

things are now, the standards and ideals and practices of older days were incomparably worse. No golden age is presented to our view in the days of the colonists; it is truly "old, unhappy, far-off things" that are the burden of the song. For it is not simply the history of the great fortunes with which our author is concerned; eager as he is to bring home to the great land-grabbers, and Indian traders, and shippers the burden of every sin of greed and fraud and inhumanity that the records can furnish, he insists constantly on the lesson that their rapacity and unscrupulousness were but an exhibition on a greater scale of what everybody else in the propertied and trading classes was doing according to his ability and his opportunity. Coming to a later period, Mr. Myers devotes the major part of his space to the Astor fortune, though other great fortunes receive more attention than can be comfortable for those who bear the names of their builders. After making all allowance for the evident animus of the writer—not only as against the great plutocrats, but as against the whole structure of individualist society—enough remains of unquestionable truth to make the array of abhorrent doings placed before us very depressing reading. That the picture of conditions as a whole is misleading, its unbroken darkness is sufficient to warn us; and if one is armed against the acceptance of it as anything more than a graphic presentation of one side of a case by an intense partisan, he may derive much profit from this account of ugly and often forgotten aspects of our history.

The second volume, comprising part iii of the work, opens with two chapters of general considerations, relating to "the Seizure of the Public Domain" and to the contrast between the activity of government in behalf of the great property interests and its inactivity in matters relating to the welfare of the masses. The remaining ten chapters tell of the Vanderbilt fortune and the Gould fortune in a way that leaves nothing to be desired in point of pungency or dramatic interest.

Though written in a wholly different spirit, and marked by intellectual balance in discussion and judicial care in the statement of facts, Professor Youngman's book produces in some respects impressions not unlike those created by the work of Mr. Myers. But this is due in no small measure to her selection of one of the representative figures taken to illustrate the three types of great American fortunes. Her purpose is primarily that of the economist, not that of the moralist or even the sociologist; her plan is to proceed from a detailed consideration of the development of certain typical great fortunes to an analysis of the underlying causes of their growth. Her first subject is the fortune of John Jacob Astor, "the typical American fortune of the pre-corporate régime"; the next is that of Jay Gould, belonging to the day of public-service corporations, but preceding the era of the great industrial corporations and combinations; and after this comes an account of the great "group fortunes," particularly those of the "Standard Oil" men and the "Morgan" men. It is in the account of the career of Jay Gould, naturally enough, that we are brought face to face with the blackest facts in these histories; and if there is a serious fault to be found with Professor Youngman's discussion, it is that she has not adequately distinguished Gould's unblushing robbery and corruption from practices which, whether justifiable or not, cannot rationally be placed in the same category. This, however, may be classed as a side matter. In orderly and compact array, the salient facts of these several cases are given; a task which, in the case of the "group fortunes," involved much able and painstaking research. In two closing chapters, the *rationale* of the whole matter is discussed with much ability. That the distinction between "unearned increment" and earned increment is not as simple as is so often assumed—that the enhanced value of land due to causes outside the agency of the owner is not inherently different from increases of fortune coming about in many other ways—is well pointed out. A much simpler thesis, which ought to require no demonstration, is that the actual gains accruing to those who make their fortunes in the operations of modern finance and industry do not correspond to the value of the social service they render. Still less, as the author says, can any absolute ethical justification be pleaded; it is only on the basis of social expediency that judgment can rationally be passed on the question of interference or non-interference with the workings of present-day distributive economics.

The Indian and His Problem. By Francis E. Leupp. New York: Charles Scribner's Sons. $2 net.

For many years a student of the Indian problem, and for seven, as commissioner, the personal representative of the Great Father at Washington in his dealings with the race, Mr. Leupp speaks with an authority which he nowhere imposes. The book is delightfully reasonable, full of excellent and significant anecdotes, humorous even in its attitude to scatterbrained humanitarians who obstruct administrative traffic. Against the self-accusing phrase, "a century of dishonor," Mr. Leupp protests, substituting "a century of misunderstanding." The difficulty with our Indian policy is that we have too long delayed to deal with the individual Indian. We have legislated instead for the race, or for the tribe. The result has been to prolong the term of tutelage and actually to hold back the Indians who were ready to become citizens. Again and again Mr. Leupp insists that the Indian problem is an individual and a human problem. Treat every Indian as you would a white of the same class and you will not go far wrong. Instead we have fed him, held his lands for him, sold them, and put the funds in trust—in every way made him a dependent.

With the support of President Roosevelt, to whom this book is dedicated, Commissioner Leupp was able to introduce the individualistic method. Formerly it required an act of Congress to make an Indian a citizen. Now this is done at the discretion of the commissioner. The humors and flexibility of the personal method are shown in the fact that the assignment of title to land is, as the case may be, a reward for a good or a punishment for a bad Indian. The thrifty Indian acquires with a vote the control of his own property and the responsibilities of citizenship, whereas the worthless Indian is read out of his favored condition as a ward and forced to take his chances with the law. In general, Mr. Leupp wants the individual Indian to be put on his own feet. Give him his lands and his share of trust funds whenever there is even a presumption that he can use them well. Encourage him to work, and give him an education suitable to his needs.

As commissioner, Mr. Leupp established an employment bureau which proved the capacity of the Indian for a great variety of trades. Too often in the past the nation has assumed that he can only be a farmer. Mr. Leupp was also able greatly to increase and improve those primary local schools on which he sets his faith. The wholesale attempt to provide secondary and higher education for the Indian has been pretty barren of results. There is profit for the boarding schools in the stipend which the government allots for each Indian pupil. The result has been an unseemly scramble for pupils, and their virtual purchase from venal parents. Many students have been alienated from their own people without learning to cope with the whites. Against making it easy for the Indian to acquire educational frills, therefore, Mr. Leupp sets himself firmly. The three R's and the elements of some mechanical trade will fit the Indian for holding his own in the community. More than this is usually superfluous. The exceptional Indian will always find the way to higher education open to talent. Within a few generations, as we make citizens of the Indians, the Indian problem will cease to be. The race will have been assimilated, and only an occasional name, the coppery

tinge of a fair cheek, the straight black hair of a few Americans, will tell of the race that was.

We would gladly dwell upon Mr. Leupp's analysis of the Indian character. The morose, phlegmatic, and suspicious brave of fiction is with difficulty found in real life. The Indian has the primitive, the Homeric, qualities and defects. His family affections are the strongest. To a friend he is singularly open-hearted and companionable. His sense of honor is keen, and he keeps faith under trying conditions. He is a lavish giver, though with a shrewd barbaric feeling that his bread is being cast on the waters and will return. He is humorous withal, and a good judge of the foibles of his white superiors. The grotesque ignorance that prevails about Indian matters may be illustrated by that Senator who threatened to introduce a bill abolishing Hampton Institute—a private corporation; or by that other statesman who by the shifting of a decimal point discovered that the secondary education of the Red Man cost $1,700 per capita. Had the commissioner not had the opportunity of privately eliminating a zero there might perhaps have been a motion for a Congressional investigation. The perplexities and humors of that benevolent despotism, the Indian bureau, are discreetly hinted at with abundant, and needed, charity for all. This book should be widely read, especially by amateur philanthropists, who at a safe remove of fifteen hundred miles and more are endeavoring to befriend the Indian. It will show them many things that they may do to help, and more that are inexpedient or quite useless.

The Life of Principal Rainy. By Patrick Carnegie Simpson, M.A. In two volumes. London: Hodder & Stoughton.

Robert Rainy was for forty years the leader of the General Assembly of the Free Church of Scotland. For thirty years of that time he was principal of New College, Edinburgh, the most famous theological school of his church, and for twelve years previous he had been a professor of church history in that institution. He was the author of several considerable volumes, notably a treatise on "The Ancient Catholic Church," and in earlier years he was pastor of an important church. But the chief occupation of his life was in the field of ecclesiastical politics, and his biographer has comparatively little to record concerning his administration of an educational institution or his work as a teacher and scholar, whereas discussion of his activities in ecclesiastical courts and controversies occupies nine-tenths of the volumes. In his forty years of church leadership Principal Rainy achieved at least one large and beneficent task: the union of the Free and United Presbyterian Churches of Scotland. In this long struggle he toiled with endless patience, consummate skill, unfailing tact and generalship, and with unquestioned devotion to the highest religious interests of his nation.

Such a record could not have been made without great intellectual force and large moral power. That Principal Rainy was a great man was the testimony of all who came in contact with him. Mr. Gladstone once declared him the greatest of living Scotchmen. Dr. George Adam Smith described him moving with quiet dignity in London amid affairs which brought together many of the foremost men of England, and was impressed with the feeling that "none was built bigger than he was." During his leadership the Scottish Free Church came to be one of the strongest and most progressive spiritual forces of Christendom. Certainly the difficult field of church union has known no greater master. The strong United Free Church of to-day is his monument.

In the religious thought and attitude of the Scotch people Principal Rainy's influence was not so pronounced. It would be hard to mention a single belief or doctrine which is the clearer or worthier because of his labors. The Scotland of to-day has a far nobler creed than the Scotland of fifty years ago, but little of the improvement can be attributed to the leader of the Free Church during that period. In the Robertson Smith controversy his influence on the whole was on the reactionary side. He tried to get rid of the prophetic and brilliant leader of the new critical movement "on respectful terms," *i. e.*, by casting him out uncondemned. He was more anxious to prevent a decision of the church on the critical issue than to establish justice for a great scholar.

His biographer has sought to justify his course, not altogether successfully. Doubtless the heretic was at times offensive—heretics usually are—but Rainy was large enough to discern beneath the personal limitations the great cause which Robertson Smith represented. It is clear enough that he did discern the real issue, but his temper was conservative, and with his great powers of leadership he preferred not to lead in the direction of wider freedom. He was an ecclesiastical, not a religious, leader, but in the field of ecclesiastical statesmanship the nineteenth century produced no superior.

Mr. Simpson has taken much pains in recounting the movements in Scottish Church affairs in which Principal Rainy was active. His volumes are really a history of church movements in Scotland for the last half century. He is evidently an intense sympathizer with the organization whose history he analyzes, as well as an ardent admirer of the chief actor in them. He has performed his task with thoroughness, and his volumes are a contribution to the ecclesiastical history of the nineteenth century.

Crete, the Forerunner of Greece. By C. H. and H. B. Hawes, with a preface by Arthur J. Evans. New York: Harper & Bros. 75 cents net.

Of the various handbooks which have appeared on the subject of recent excavations in Crete this is likely to prove the most useful. The authors have succeeded in furnishing what was much needed—a vivid picture of the great Cretan civilization. Anybody who is at all familiar with the mass of material brought to light in Crete during the last ten years will appreciate the difficulty of reconstructing from it a unified account which will bring out the essential features without neglecting the finer shades of the picture. As it is, "Crete, the Forerunner of Greece," will prove absorbing reading not only to the layman, but also to the trained archæologist; for, though the story runs on easily, bringing us into intimate contact with this wonderful Minoan world, there are also many original suggestions on points which are still awaiting final settlement—such as the race problem, the significance of certain symbols, and the system of chronology. This twofold value is due to the fact that, as Dr. Evans says in his preface to the book, the authors "have the great advantage of writing, 'not as scribes,' but as active workers in the field that they describe." Mrs. Hawes herself has excavated the Minoan town of Gournia in the eastern part of Greece, the results of which have been published in a large volume entitled "Gournia, Vasiliki, and Other Prehistoric Sites on the Isthmus of Hierapetra, Crete," from which she has freely quoted in her handbook; and Mr. Hawes has made important contributions to our knowledge of Cretan anthropology.

The divisions of the subject adopted by the writers show us the various aspects from which they have treated their material. The Introduction gives a short history of Cretan excavations. Then follow a survey of the various periods through which Cretan civilization passed and the system of chronology adopted for these periods. The descriptions of the sites—Knossos, Phæstos, Aghia Triadha, Gournia, Palaikastro, and others—give a good idea of the complicated plans of Minoan palaces and towns and will prove invaluable to the visitor in Crete; while the chapters on Physical Characteristics, Dress and Homes of the Minoans; Industries and Commerce; Minoan Art; Letters and Religion; Crete and Greece, give a good general survey of the manifold objects discovered on those sites.

Except for plans of Knossos, Phæstos,

and Gournia, and a map of Crete, the book has no illustrations. With the low price of the book this omission could probably not be avoided; but the text is so good that it is to be hoped that a more expensive edition, fully illustrated, will appear in the near future.

Notes.

Houghton Mifflin Company publishes this week "Notes on New England Birds," by Henry D. Thoreau, which have been arranged and edited by Francis H. Allen. These notes are taken from the volumes of Thoreau's Journal, and are arranged in some scientific order, according to species. Photographs of birds in their natural surroundings illustrate the text.

The survey of Björnsterne Björnson's life and work, by William Morton Payne, which appeared in the *International Quarterly* in March, 1903, is now reprinted in a small volume, with changes and additions, by A. C. McClurg & Co., at fifty cents. This work includes original translations of several of the lyrics and of passages from Björnson's prose-writings.

Publication of a complete history of the *Monthly Anthology and Boston Review*, one of the early American magazines which enjoyed a life for ten years, just one century ago, is announced by the trustees of the Boston Athenæum, to appear May 15. This volume, which will include an introduction by M. A. De Wolfe Howe, will contain much bibliographical matter concerning books reviewed in the magazine, a list of all contributors, and all weekly records of the club of young men who were editors.

The literary executors of Mark Twain, Mrs. Ossip Gabrilowitsch, his daughter, and Albert Bigelow Paine, are preparing biographical material of the humorist, and wish to get all letters of personal or literary interest. These should be sent to Redding, Conn. The publishers (Harper & Brothers) call attention to a recent decision of the courts concerning ownership of letters, in which it was held that right of publication was vested in the writer, when living, and, after death, in the heirs. Those to whom the letters were written are debarred from publishing, except by consent of the executors.

During a nine years' residence in Papua, Annie Ker diligently collected the folk tales which she now publishes under the not quite descriptive title "Papuan Fairy Tales" (Macmillan). Deluges, transformations of men, or their souls, into beasts, monstrous offspring of the loves of men and animals, are some of the features that take us back to the twilight of the mythologies. Cannibalism is a frequent motive. One man, longing for "fresh meat," eats in succession his five wives. His children would have followed but for their craft, and some aid of magic. It was more or less the fault of the wives, for they let themselves be wheedled into disregarding the plain warning of the wise wagtail. Generally speaking, the animals are closely allied to man and usually friendly. Some of the tales are simple fables, like that which explains how the turtle got his shell. The masterpiece in the collection is "How a Man Found His Wife in the Land of the Dead." It tells how, following a burrow, the man reached a place where the dead every night resume possession of their bones. His wife greeted him affectionately, and hid him from the malicious dead. Plighting his word to return, he unhappily plucked the fruit of the nether world on his way up, was thus delayed, attacked by the dead, and, losing the fruit, barely escaped with his life. The burrow which admitted him was then forever closed. We recommend the story to experts on underworld folklore. The mere layman can appreciate its *macabre* intensity. The author has induced the natives to pose for certain incidents of the stories. The resulting photographic cuts make very effective illustrations for a book in every way out of the common.

C. F. Tucker Brooke, who has already done valiant service in editing the "Shakespeare Apocrypha," has now prepared a similar volume for the Clarendon Press, containing "The Works of Christopher Marlowe." As this publication is preliminary to a more elaborate library edition already in preparation, we shall withhold our comments on Mr. Brooke's treatment of moot points of scholarship until we have before us his fuller discussion of them. Except in one matter there can be little but praise for the execution of the present volume. Mr. Brooke, following the custom of the day, has elected to reproduce the spelling of the originals, although he has allowed himself liberties with the punctuation and capitalization. For our part we can see no better reason for changing "unmeaning irregularities" in points and capitals than in spelling, and we wish to protest strongly—though, no doubt, uselessly—against the growing habit of reproducing the unsettled spelling of Elizabethan authors, except in cases where only the most special linguistic students can be concerned. What possible profit can there be in printing "towne" for town, or "quyuering" for quivering, and so on *ad infinitum?* The only result is to remove Marlowe a step further from the business and bosom of the ordinary intelligent reader, and to render him—as all our older authors are too likely to become without any such unnecessary propulsion—not a living factor in literature, but a bone for pedants to gnaw in the *seminar*. No sensible man wishes to think of the spelling while reading Faust's great apostrophe:

> Was this the face that launcht a thousand shippes?
> And burnt the toplesse Towres of *Ilium?*
> Sweete *Helen,* make me immortall with a kisse:
> Her lips suckes forth my soule, see where it flies:
> Come *Helen,* come giue mee my soule againe.
> Here wil I dwel, for heauen be in these lips, etc.

This, by calling attention to the unessential, is to reduce sublimity to quaintness. Such editing is serviceable in the case of a poet like Spenser, in whom quaintness is part of the legitimate attraction; to Marlowe it does a grievous injustice.

We have dwelt overlong on this matter of spelling, not because Mr. Brooke is a particular offender, but because the offence is so widespread. For the rest his work is commendable for accuracy and judgment. We note that he has given for the first time a reprint of the 1594 quarto of "Edward II," which offers a better reading than the text of 1598, hitherto reproduced. With the "Hero and Leander" he gives, in smaller type, the continuation by Chapman; and with the translation of "Ovid's Elegies" the "Epigrams" of John Davies. For his laborious care in collating the early and modern editions, and in noting in the *apparatus criticus* all the important variations and emendations, he must have the gratitude of all scholars. We have observed only one fault in the text; in line 430 of "Hero and Leander,"

> As he ought not performe, not yet the aske,

"she" should be substituted, or in some way indicated, for "the." Mr. Brooke's larger library edition of Marlowe will be awaited with interest.

"An Admiral's Log," by Robley D. Evans, Rear Admiral, U. S. N. (Appleton), necessarily lacks a little of the variety and spirit that made its predecessor, "A Sailor's Log," so engaging. The visit of Prince Henry of Prussia whose escort Admiral Evans was, takes up considerable space. Admiral Evans leaves no doubt that the royal guest is a good fellow. A pleasant sequel of this service were the courtesies that Admiral Evans subsequently received from German naval officers on many seas. On the eve of the Russo-Japanese war Admiral Evans was associated with the Pacific squadron which he later commanded. His account of the beginnings of scientific target practice, of fleet service, and recreations in the Far East, of the humors of manœuvres with absurdly assorted squadrons, is interesting, though its appeal is chiefly to those who have some knowledge of naval affairs. Of historical value is the testimony as to the amazing infatuation of Russian army and navy people about the resources of Japan. Very vividly noted is an audience with the Empress of China, who talked freely of the Boxer troubles and dismissed her guest with the words, "After all my country has suffered, I find she has but one friend in the world. That, Admiral, is the great country you represent." Worth noting also is the wonderment of German officers when they saw boatloads of American sailors returning from sports ashore without an officer in charge. Less than an officer to a boat seemed inconceivable to the Kaiser's captains. That American commander who near the close of the war between China and Japan was asked to hoist the American flag in a Formosa port resisted a temptation, opines our author, to which a German or French captain would have succumbed. It is further suggested that had Theodore Roosevelt been President at the time, the United States would have gained a coaling station. Since Admiral Evans elsewhere admits that all our Pacific islands are sources of military weakness to us, we may be resigned to the fact that the Formosa offer was made before the strenuous life became national policy. Towards the bluejackets this book is always generous. For certain "men in swivel chairs" it displays little charity. These sedentary experts fail to provide a decent enlistment system. Sometimes they idiotically urge squadrons that have barely learned the art of keeping line formation to indulge in battle tactics. We share the seaman's despair at the devious councils of the bureaucrats, but confess we see no remedy. Take ten gallant captains from their quarter decks and immure them in Washington offices, and what do they speedily become but so many "men in swivel chairs"? It was Admiral Evans's good fortune to lead the word-circling fleet as far as San Francisco, where illness forced his resigna-

tion of the command. Few naval men of our time have so completely and legitimately captured the imagination of the people. The reason is plain on every page of this book. It has the gentlemanly plainspokenness that we like to think prevails in the line. It can be pathetic, as when it touches the shadow that so unfairly dimmed the laurels of Admiral Sampson. It can bo drastic, and even scornful, but it is always fair, and the expression is moderated to the tone of good company. All who wish to see the navy from the inside should read 't.

The humanitarian trend of British Liberalism may be studied very satisfactorily in the twenty-one addresses collected by Winston Spencer Churchill, and called "Liberalism and the Social Problem" (Doran Co.). Of old-age pensions, unemployment and disability insurance, and readjustment of land tenure, Mr. Churchill is a convinced advocate. Of an Imperial tariff union, based on English protection, he is a formidable foe. Though a believer in an adequate army and navy, his aim is rather to build up the manhood of the nation for the purposes of peace. He reckons the moral weight of England an important adjunct to her battleships and guns in maintaining international peace. The more recent speeches looked forward to a clear-cut contest with the Lords on the budget. Events have denied the drastic verdict that was hoped for on the issue of financial prerogative. Unhappily, tho vote split upon a number of motives. Tho lure of protection and "taxing tho foreigner"—that "gospel of quacks and creed of gulls," as Mr. Churchill justly terms it—was strong upon the popular imagination. So the Lords got their lesson, to be sure, but with something less than exemplary emphasis. On the taxation of the land increment, Mr. Churchill is eloquent, but it is odd to see this tax proposed as a self-evident utility without the slightest mention of the erstwhile agitator, Henry George. One George in the recent campaign may have seemed sufficient. We recommend this earnest and ahle book to all who wish to see how old-style Liberalism has been impelled upon a new course of paternalism. The pressure, it should be noted, has come not from doctrine, but from hard facts. In the face of alarming social and industrial disintegration a party has had to reintegrate its principles and policy. Liberalism has been fortunate in such a weighty and moderate spokesman as Mr. Churchill. We copy a maxim which gives his temper as to that British shibboleth security of property: "A society in which property was insecure would speedily degenerate into barbarism; a society in which property was absolutely secure, irrespective of all conceptions of justice in regard to the manner of its acquisition, would degenerate, not to barbarism, hut to death."

Dr. Julius Richter has translated, with complete revision and much enlargement, his German work on Protestant missionary work in Mohammedan countries. The English title is "A History of Protestant Missions in the Near East" (Revell). The work is of much interest and value to friends of the missionary endeavors of the American and Presbyterian Boards in Turkey, Syria, Persia, and Egypt. In no part of the world are such efforts more difficult and discouraging, and in no mission stations have greater patience and resourcefulness been exhibited. All Americans, irrespective of creed, may take pride in the character of the men who have conducted Protestant missions in Turkey and Syria, especially the leaders of the educational institutions. Dr. Richter has high praise for the colleges in the near East, founded and supported by Americans, especially for the Syrian Protestant College, at Beirut, and Robert College at Constantinople. He is a competent historian, of careful regard for facts, although he nowhere conceals his sympathy with the work he describes, nor his admiration for the men who are responsible for its still expanding influence.

Woldemar von Biedermann's "Goethes Gespräche," published in 1889-1896 (Biedermann, Leipzig), has for some time been out of print, and the first two volumes of a new edition, revised and enlarged by his son, Flodoard von Biedermann, have recently appeared. The original edition was in ten volumes, the new one is to be in five, in spite of the fact that the amount of material is more than doubled. The new editor has changed the outward form of the work, including the substitution of Latin for German type, and has reduced the number of volumes in order to bring the price of the set within the reach of all who should own it. For this he deserves the special thanks of Goethe students. It was the original aim of the elder Biedermann to include in his collection, as nearly as possible at that date, all well authenticated conversations, and some of Goethe's sayings that had found a place among his posthumous writings. As Biedermann's volumes appeared, one after another, his intention was somewhat modified. His final plan is carried out by his son, and the new edition is to contain, in addition to conversations, a great deal of other material bearing on the poet's personality and work, and emanating from direct personal contact with him. This makes the new edition more comprehensive, and more valuable than the old, not only because the many omissions, intentional and unintentional, of the first collection have been supplied, but also because the enlarged scope of the work comprises an important body of subject-matter for which no more suitable place could he found. The editor has endeavored so to arrange his material, in the main chronologically, that it will show more or less consecutive unity. Certain items that would tend to disturh this impression, and are of interest only to specialists, have been reserved for the fifth volume, which is to contain further a list of sources, a brief commentary, and indexes. Volume I covers the period between 1754 and 1808, Volume II that from 1808 to 1823. In the collection of his material von Biedermann has received assistance from a large number of interested investigators. On the title page are mentioned the names of three scholars whose share in the work entitle them to recognition as associate editors, viz., Max Morris of Berlin, Hans Gerhard Gräf of Weimar, and Leonard L. Mackall, an American. Mr. Mackall's connection with the work is dye to his unrivalled familiarity with the literature on Goethe's relations to English-speaking foreigners.

Gleason L. Archer's "Law Office and Court Procedure" (Little, Brown & Co.) is designed to meet "one of the gravest reproaches of American law schools," "that their graduates know nothing of how to practise law upon admission to the bar," and to serve as a substantial basis for instruction in procedure and practice. Detail, which to some may seem trivial, is theretore properly included, even suggestions touching the lawyer's first interview with his client and the office preliminaries before any litigious move. The choice of courts and of processes is discussed briefly; the body of the work is devoted, first, to the various steps from the drawing of the writ and the various pleadings to the marking for trial, with the variety of incidental moves, and, secondly, to the conduct of a trial from the marshalling of evidence and the choice of a jury down to the summing up and to the appeal and bill of exceptions. Such incidental material as the brief formal descriptions of parties to actions (pp. 56-59), the form of the various "common counts" (p. 74), the forms of special counts (pp. 76-84), and even such a detail as a description of the "capias clause," will be welcome to every student of the history of pleading who does not care to be led through the case-books. More than one-third of the space is given up to extracts from stenographers' minutes of actual trials, illustrative of the proper method of examining jurors and witnesses. The conduct of a trial is worked out in a practical and clear manner, and much of this material is even very readable. Much use is made of the record in the recent case of Commonwealth vs. Tucker, but, oddly enough, it does not appear in the index of cases. The volume grows out of instruction in the new Suffolk School of Law, and is largely based upon the procedure of Massachusetts as a typical "common law" State, although nearly two-thirds of the cases cited are from jurisdictions ether than Massachusetts. The range of usefulness would be much widened if, where the Massachusetts statutes are cited, citations were made to the corresponding statute in similar jurisdictions, and also to the analogous material in the "code" States, in order to show to what extent the latter have, as regards pleading and procedure, followed or abandoned the path of the common law.

We are glad to see that the second edition of Señor Constantino Lendoyro's "The Tagalog Language" (Manila: Printed by Juan Fajardo) is so great an improvement over the first, of 1902, as to be really a new work. Tagalog is the vernacular, as every one knows, of probably 2,000,000 of the inhabitants of the Philippines, and Don Constantino's treatise must remain for years to come a standard. The first edition had already proved the unacknowledged source of inspiration of other writers. We note in comparison with the first that the present edition has 448 pages, as against 387, not counting an index lacking in the first; and an introduction of pp. cxvi, dealing with the origin of the language. Both editions contain a key to the exercises, these being different in the two editions. To scholars, the introduction will prove of chief interest. It cannot be fully noticed here, but we may say that it is of sufficient importance to justify the acquisition of the whole work by all considerable libraries.

The book may be got of E. C. McCullough & Co. of Manila.

"A Holiday with the Birds," by Jeannette Marks and Julia Moody (Harpers), is a fairly good children's book. The information about birds is conveyed by means of dialogue between a party of children and various adults who guide them in their picknicking, berrying, and other outdoor rambles. In the main this talk is natural enough on the part of the children, while the instruction of their elders is imparted in a manner which is simple without often being silly. The accompanying pictures of birds are rather stiffly and sometimes none too accurately drawn, but they serve to illustrate the text after a fashion.

The April number of the *American Journal of International Law* opens with a paper by Thomas Willing Balch on the Arctic and Antarctic Regions and the Law of Nations—discussing the question, recently raised, whether those regions are susceptible of national ownership and control. Within the limits of ten pages Mr. Balch presents his own views, and opinions of the best-known writers on public law bearing on this question—a question essentially different, he with good reason contends, whether applied to the Antarctic, the polar extremity of which those who have been farthest south think is terra firma, or to the North Pole, where, if Peary has correctly reported conditions, there is but a mass of ice, moving from west to east over several thousand fathoms' depth of water. He declares that where no permanent occupation can be maintained, no sovereignty or control can be acquired; hence, that the North Polar Sea at least is free, and that, inasmuch as at the other extremity there can be no permanent occupation, an assertion of dominion there would be untenable.

The next paper is Mr. Ion's, showing the uncertainty of the Cretan status; while the next three have direct reference to American affairs. The first of these, by Harry E. Hunt, discusses the status of our Great Lakes in the light of international law, especially whether the effort to extend the Federal jurisdiction beyond that in admiralty merely, in the process of which extension they have been denominated "high seas," is legally or constitutionally justifiable, or whether they do not, except in admiralty matters, properly come under State jurisdiction solely. If they are "high seas" in the ordinary sense, they should be open to world navigation—which admittedly they are not; for by treaty between the United States and Great Britain the latter Power has been accorded rights of navigation through the St. Clair Flats Canal and Lake Michigan, which are wholly within our national limits, in return for which she permits our vessels to pass through the Welland Canal and out through the St. Lawrence. The writer thinks the decisions of our courts and the acts of our government have been more far-reaching in their results than could have been foreseen, and that it is essential to modify or reverse certain of them, to compel conformity to earlier decisions and policy. The second paper, by H. S. Knapp, relates to the real status of the Panama Canal in relation to neutralization. It is a long paper, treating the subject historically, with reference to several treaties, including the Clayton-Bulwer and the Hay-Pauncefote; tracing the important changes of claim and achievement, that have emerged. The third paper, having an especial bearing on American policy, is that by Howard Thayer Kingsbury, on The Act of State doctrine, familiar on the Continent of Europe, but at variance with the generally understood doctrines of the common law and with English and American statutes.

S. Hastings Grant, who was for seventeen years librarian of the Mercantile Library, New York, and who, with Daniel C. Gilman, organized the first librarians' convention, died on Monday at Elizabeth, N. J., at the age of eighty-two. He compiled "New York City During the Revolution," and was a contributor to the *Historical Magazine* and one of the founders of the *Genealogical and Biographical Record*.

Dr. Horace B. Silliman, who gave Silliman Hall to his alma mater, Union College, and had contributed to other educational and missionary enterprises, died at his home in Cohoes last week, at the age of eighty-four. One of his most notable benefactions was his gift of about $100,000 to establish at Damaquete, on the Negros island of the Philippines, a school after the plan of Hampton Institute. This school was opened during the administration of Mr. Taft, who highly commended its work.

Science.

"Birds of the World, for Young People," by Charles R. Knight and Ella Hardcastle (Stokes), is certainly no more than its authors represent it to be—"a brief description of such birds of the world as are usually to be seen in zoölogical collections and in museums." In fact, almost any museum which really deserves the name will contain many specimens not described in this text. And though the expressed purpose "to give special attention to the birds of America, to corresponding species and allied forms found in Great Britain and on the Continent of Europe, and to certain of the more remarkable and interesting birds of other continents" is a pretty difficult undertaking, especially within the limits of the present volume (260 pages), it should seem that the selection might have been made more characteristic and representative, particularly with respect to American birds. Nor do we think the authors have always succeeded in making the best possible use of the limited space at their disposal in giving "some of the most significant and striking facts" of bird life-histories, or in supplying descriptions which will aid in identification. It is insufficient, and a bit misleading as well, to say that the sharp-shinned hawk and the cooper's hawk "are very destructive to poultry"; for the first named is a relatively small bird, and does not make a practice of attacking any but very small chickens, while the important fact about both of these hawks is that they are ruthless and persistent destroyers of the small and very valuable insectivorous birds, wherefore they themselves are entitled to nothing short of extermination. And the authors should have devoted at least a sentence or two to explaining that the red-shouldered and red-tailed hawks (loosely called "chicken hawks"), by their industrious destruction of harmful rodents and insects, repay the farmer many times over for the occasional chickens they pick up. A popular error is left uncorrected in the statement that the carrier pigeon "is also sometimes called the homing pigeon"; for the carrier and the homer are different birds. Again, in the description of the red-headed woodpecker there is no mention of the fact that he is an industrious and quite skilful fly-catcher, a very important characteristic; while the purple martin is by no means confined to the Southern States, as the text implies.

The incompleteness of the selection of birds treated in the text has already been referred to. According to the index, only seven warblers are mentioned, while there are about sixty distinct species native to North America alone, and nearly half of these are to be found in the Eastern United States. Again, the index names six sparrows, whereas Mr. Hoffman describes eighteen species in his "Guide to the Birds of New England and Eastern New York." Wilson's "Ornithology" enumerates eleven American plover, while the present book speaks of but three American species. There are about a dozen American sandpipers, but here we find only three mentioned. Some of the colored illustrations are good, but most of them are indifferent or bad; and none of them to be compared with the work of Mr. Fuertes and Mr. Horsfall, which, perhaps, has made American ornithologists a bit fastidious. In short, though the book may serve the purpose of a rough enumeration of native and foreign birds, its actual ornithological value is inconsiderable, even for "young people."

A systematic survey of the Mediterranean, its biology, hydrography, meteorology, its tides, and its chemical and physical characteristics, has been undertaken by the Italian Society for the Progress of Science as its initial field of scientific research. The first number of the *Bollettino del Comitato Talassografico* shows that this committee is made up of seventeen leading specialists, representing the most important Italian bodies interested in the study of the sea, such as the Instituto Idrografico of the Royal Navy, the Royal Geodetic Commission, the Central Meteorological Bureau, the Reale Magistrato alle acque per le province Venete e di Mantova (a new body reviving an efficient commission of the Venetian republic, which provides for the proper control of the river and coast waters of those provinces, and which has already established a thorough system of marine observations in the upper Adriatic, and is extending them as far as Brindisi), the Geodynamic and Mareographic Station, at Ischia the station of Pisciculture at Rome, the Royal Accademia dei Lincei, and the ministries of Marine, of Education, and of Agriculture, Industry, and Commerce, with the active coöperation of their respective bureaus. The president of this society is, ex-officio, chairman of the committee. In order to concentrate all available resources and so coöperate with similar work undertaken by the Austrian government, and by the Imperial zoölogical station of Trieste, the Adriatic has been chosen as the first field of research, which will be gradually extended to all parts of the Mediterranean. A suitably equipped boat will make four periodical cruises each year. Preliminary excursions of two and three weeks each, were made in August and in

November, 1909. The plan includes the rehabilitation of the zoological station at Messina (on account of the peculiar importance of its fauna), the publication of appropriate monographs, and the issue of the *Bollettino*, in which will be reported accounts of these cruises and other transactions of this committee. An exhaustive review of previous explorations of the Mediterranean, with a bibliography, will be printed in an early number.

Within the past twenty-five years the teaching of geography has experienced a revolution. From a purely descriptive branch of science, dealing chiefly with countries as depicted on a map, it has been galvanized into new life by a wholesome infusion of geology. Mountains, plains, rivers, oceans, all the familiar features of the earth are now regarded as the results of developmental processes, and, from this point of view, they are studied not alone for their own sakes, but also in their relations to man. Foremost among the Americans who have brought the change to pass is Prof. W. M. Davis, and his "Geographical Essays," edited by D. W. Johnson (Ginn), will forcibly bring home to every reader the large influence which he has exerted. The essays are divided into two groups, the first educational, the second physiographic. Together they constitute virtually an historical review of modern geography. The editing has been performed with excellent discrimination and judgment.

Dr. Eugene Hodenpyl, a New York bacteriologist, died at his home in this city last Thursday at the age of forty-six. He had made important investigations of the cause of cancer, the results of which he published last February.

Drama.

Chantecler: Pièce en quatre actes, en vers. Par Edmond Rostand. Imported by Lemcke & Buechner, New York.

It happens rarely in an age like the present that dramatic imagination becomes truly dynamic. The playwright, along with the artisan, hugs his fact, in a desire to present a life which shall seem real. More and more the stage has been usurped by literal studies of social and political problems; and the sporadic essays into thoughts and feelings of larger reach have issued usually from the authors themselves in the form of mere fantasies. Under such conditions to attempt seriously to regulate the present-day spirit by a drama in verse with the power of poetry as its central idea will strike the multitude as quixotic. Such nevertheless is the plan and purpose of "Chantecler."

For "Chantecler" is not just a minute study of poultry life, nor a mere fantasy derived from transitory likenesses between bird and man. It is a direct gaze at the possibilities of human nature when touched by imagination. From this the reader is never for a moment distracted, even by the great interest which the author has effected in the creatures themselves. Chantecler is a cock, a very life-like cock, who prefers a barley-corn to a pearl; but above all he is a poet. In his song lies the secret of the day-spring and of the changing beauty of the landscape. As the pigeon says of him:

C'est Celui dont le cri perce l'horizon bleu
Comme une aiguille d'or qui toujours enfilée
Coudrait au bord du ciel le bord de la vallée.
C'est le Coq!

To the sun he himself chants:

Tu prends un arbre obscur et tu l'apothéoses!

And later he confides to the hen-pheasant,

Quand on sait regarder et souffrir, on sait tout.

This is the language of a poet who believes in the omnipotence of imagination.

M. Rostand's choice of the cock to fulfil this union of realism and idealism was a happy one. Traditionally, the cock has been a homely companion of man, well planted on earth; and traditionally, too, he has been the poet's bird, with his eye much on heaven. This fitness of the cock as a literary device seems to have come to M. Rostand as a real vision. In the barnyard he observed a complete miniature world, containing manifold foibles, poses, and ambitions; and in the cock both a practical ruler and a transformer. We may now follow the play in some detail.

The curtain starts to rise when a voice cries out, "Pas encor!" and the director of the theatre rushes out to prepare the audience for the strange scene about to be presented. The author is evidently very much in earnest and does not wish the audience to be surprised into a guffaw. The sounds which issue from behind the curtain are interpreted by the director to mean that it is Sunday on a farm, and that the human members of the household are leaving for a fête.

A few more preparations, and finally the curtain rises. Meeting the eye is the clutter of a complete barnyard. Chickens, ducks, turkeys are chattering and taking attitudes. In addition, there is a blackbird in a cage among the vines, an old hen brooding in a market-basket, a cat asleep on the wall, and a watch-dog chained to his kennel. Chantecler for the moment is absent, but we are not long left in doubt as to his position in the play; for a pigeon soon lights on the roof of the adjoining stable to inquire about the cock's famous voice, and to add his own testimony. Amid all the distractions of the barnyard the pigeon returns again and again to the matter with his pretty, beckoning "Poule blanche, est-ce vrai que . . ." or glorifies the cock, as in the following words,

sa voix si rouge
Qu'à son cocorico le coquelicot bouge
Comme s'il s'entendait appeler par son nom.

After this excellent introduction Chantecler enters. He is full of the wonder of the sun, and manages in spite of interruptions to complete an ode, beginning,

Toi qui sèches les pleurs des moindres graminées,
Qui fais d'une fleur morte un vivant papillon,
Lorsqu'on voit, s'effeuillant comme des destinées,
Trembler au vent des Pyrénées
Les amandiers du Roussillon,
Je t'adore, Soleil!

It has already become evident that in Chantecler's crowing there lies a deep secret. The hens are piqued into fancying that it concerns his preference for one of them, but he puts them off with a "chut!" and keeps his own counsel.

As the act proceeds, we are plunged into a spirited discussion, of which the chief participants are the blackbird and Patou, the dog, Chantecler being for the moment but the moderator. Although the language is for the most part kept beautifully objective, it is clear that the discussion has to do with the power of poetic imagination. To Patou, it is given to enounce the elements of Chantecler's as yet unconscious creed. With the cock he shares fundamental traits, especially a fondness for the soil and for the sun. He is a declared guardian of faith; he believes in the established order of things, and possesses a humble but courageous optimism. As such, he is an enemy of the blackbird, the smart, cynical, up-to-date pretender, who is termed offensive, because "on ne sait pas ce qu'il est"; he is black, and that means a negative being, too timid to commit himself to colors. His black costume also provokes the charge that he is the agile undertaker of faith. The blackbird, lacking soul, sets up his rest on *esprit*, and is ever busy "with having the air of not being a fool." Thus far, it is from the dog, chiefly, that we learn of Chantecler's outlook, though, to be sure, this assumes perspective and certainty by the *vieille poule*, who fittingly speaks pithy folklore. Upon her is the wisdom of the ages; she approves of her brave son.

The development of the cock's creed begins with the entrance of the hen-pheasant, who, in great fear of a pursuing poacher, now flies over the wall to seek protection. She is the adventuress with the plumage of the Orient, just the creature to attract and give range to the dawn-loving Chantecler, who before long admits to Patou that "c'est une poule avec laquelle on cause!" Darkness falls, and Chantecler houses his hens in the coop, and the hen-pheasant in Patou's kennel. Both hero and heroine are obviously disturbed.

The second act is the most lyric and the most intense of the four. Here Chantecler confides to the pheasant his secret, which is that unless he crows the sun will not rise; that he, for some strange reason, in place of any other cock, has been chosen guardian of the day:

Je me trouve indigne de ma gloire.
Pourquoi m'a-t-on choisi pour chasser la nuit noire?

He now proceeds to exhibit his *méticr*. At each *cocorico* a glory is cast over some feature of the landscape, and the world becomes vibrant with light and love:

Chantecler. Tu me fais mieux chanter. Viens plus près. Collabore.
La Faisanc. (bondissant près de lui.) Je t'aime!
Chantecler. Oui! tous les mots que tu me dis tout bas
Deviennent aussitôt plus de soleil là-bas!
La Faisane. Je t'aime!
Chantecler. Et si tu dis seulement: "Je t'adore!"
Je vais dorer d'un coup la montagne!
La Faisanc. (hors d'elle.) Eh bien . . . dore!
Chantecler. (lançant son cri le plus éclatant.)
Cocorico! (La montagne s'est dorée.)
. . . . . .
La Faisane. Ah! sur une pente engourdie.
Glisse un premier rayon. . .
Chantecler. (joyeusement.) Tiens! je te le dédie!
. . . . . .
La Faisane. J'écoute se lever le jour dans ta poitrine!
J'aime avoir entendu d'abord dans tes poumons
Ce qui sera plus tard des pourpres sur les monts!
. . . . . .
Chantecler. Je fais mon devoir en te rendant plus belle:
Je redore à la fois mon vallon et ton aile!

To the pheasant he explains that the other cocks, who now begin to crow, get their cue from him; he is the first to crow. They believe in the light when they can see it, but

J'ai chanté dans du noir.
—Ma chanson s'éleva dans l'ombre, et la première.
C'est la nuit qu'il est beau de croire à la lumière!

Once the sun has risen and the noises of the day have begun, Chantecler is overcome by the thought of his great responsibility: shall he be able to repeat the miracle to-morrow? The beauty of the scene has for the moment convinced the worldly-wise pheasant of Chantecler's power.

Here, again, as in the first act, the allegory is transparent. It is a question of poetic imagination, and of the extent to which a poet can create the world in which he lives, if he believes himself to be truly inspired. The point is made still clearer by the concluding scene, in which the blackbird is scored for his prosaic outlook:

Chantecler. Tu n'as pas vu trembler les cimes écarlates?
Le Merle. Pendant que tu chantais je regardais tes pattes!

The third act requires but slight mention, though its cleverness is supreme. The guinea-fowl's five o'clock (A. M.) reception—a *lundi*—held in the kitchen-garden, under the sanction of the scarecrow who is supposed to keep away all but the very select, is, of course, a satire on modish patronage of empty titles and wanton display. Despite the harrowing features of the reception, chief among them being the duel to which Chantecler is provoked by the game-cock, the guinea-fowl exclaims to her young, after the others have gone:

C'est la plus belle fête encor qu'il y ait eue!

The fourth act is scarcely behind the second in beauty. Chantecler, disgusted by the treachery and prosiness of his kin, has gone to the forest with the pheasant. Now deeply in love with him, the pheasant is jealous of his love for the dawn. She urges him to go one day without crowing. The way is clearing rapidly for the great disillusion, which is well motived by the pheasant's profound jealousy and not by any mere whim on her part. She will wait until the nightingale sings, and Chantecler may be so absorbed that he will forget to crow; his belief in his control of the sun will be shattered, and his love will then be consecrated to her alone. The first part of the plan works well. Chantecler, a poet but no out-and-out egoist, is ravished by the nightingale's superior note, and hearkens while the East becomes dappled. He is further distracted by the sudden death of the nightingale, who is shot by the poacher. The sun has risen, and the pheasant turns triumphantly to the cock:

On est tout pour un cœur, rien pour un horizon!

But though crushed at first, he soon recovers and is inspired to a new and safer belief by the note of another nightingale, perhaps more beautiful than the first, and by a voice saying:

Il faut un rossignol, toujours, dans la forêt!

To which Chantecler adds, perhaps a bit too morally:

Et, dans l'âme, une foi si bien habituée
Qu' elle y revienne encore après qu'on l'a tuée!

But the pheasant persists:

Mais si tu ne fais pas se lever le matin?
Chantecler. C'est que je suis le Coq d'un soleil plus lointain!
Mes cris font à la Nuit qu'ils percent sous ses voiles
Ces blessures de jour qu'on prend pour des étoiles!
. . . . . .
Chaque ferme a son Coq qui chante dans sa cour.

No longer can he believe himself to be sole guardian of the day; his horizon has broadened, he is one of many who together have power to illumine and recreate.

On "Chantecler," M. Rostand has obviously bestowed infinite love and patience. His virtuosity is, of course, well known; but only inspiration and numberless revisions could in this case have effected such keen manipulation of detail. The reader is again and again thrilled by the natural way in which simple actions are swerved to a high purpose. The cock, believing that his crow expresses the cry of the earth for the light, takes pains to scratch the gravel away so as to come into close contact with the soil before he utters a sound. Even the welter of *divertissement*, such as the plot by the creatures of night against Chantecler, and the capers of the toads, rabbits, and others in the forest, is held to such strict account by the central theme that one readily forgives numerous examples of wilful wit in the form of puns, slang, and a too wide allusiveness. There is splendid variety in the midst of insistent purpose.

Mrs. Marie Walsh, a playwright and novelist who was widely known nearly a generation ago, died in Brooklyn on Sunday. She began her literary career as writer for a Boston weekly, and dramatized a number of novels, including "Three Times Dead," "Griffith Gaunt," "Archie Lovell," and the novel on Mormon life, "Wife of Two Husbands." She produced the two plays "Who is She?" and "Our City."

Music.

The Story of Opera. By E. Markham Lee. New York: Chas. Scribner's Sons. $1.25 net.

Musical Sketches. By Elise Polko. New York: Sturgis & Walton Co. $1.25 net.

Appendix A of Mr. Lee's book consists of thirty-two pages of brief paragraphs on operatic composers, singers, and conductors. The names are arranged chronologically, and Mascagni, who was born in 1864, is at the end of the list. In that same year, however, was born Eugen D'Albert, whose operas have been sung more frequently in Germany in recent years than those of any of the masters, excepting Wagner and Verdi; yet he is nowhere mentioned in this volume. The composers still living who are deemed worthy of notice in it are the Austrian Goldmark and two Germans: Humperdinck and Strauss; seven Italians: Boïto, Puccini, Mascagni, Leoncavallo, Cilea, Mancinelli, Franchetti; seven Frenchmen: Saint-Saëns, Massenet, Messager, Bruneau, d'Indy, Charpentier, and

Debussy; seven Englishmen: Mackenzie, Stanford, Cowen, Bunning, Corder, De Lara, McCunn; and one Englishwoman, Ethel Smyth. The author's comments on these are, on the whole, sane and unbiassed by patriotic or other prejudices. One reason, he thinks, why opera is not so successful in England as elsewhere is that "it is not the hobby and delight of the man in the street, as it is in many Continental countries." The worshippers of Strauss and Debussy will bear him a grudge for saying repeatedly that since the time of Wagner there has been nothing which can lay claim to having advanced the operatic art; but he is right.

Although the author is a "Mus. Doc., Cantab.," his volume is not a scholarly treatise like Apthorp's "The Opera, Past and Present," or Streatfeild's "The Opera." Its appeal is to a class of readers who desire a brief and lucid summary of operatic history, with chapters on the most notable schools. The three reformers, Monteverdi, Gluck, and Wagner, are discussed in one chapter, and Wagner has another by himself. The chief opera houses in the world are described, and hints are given on the art of listening to an opera in such a way as to get the most pleasure from it. In one appendix, information is imparted as to the pecuniary aid granted to operatic schemes in various countries, and another gives a bird's-eye view of the instruments used in the orchestras of composers of different periods of opera.

A surprising number of English writers harbor the delusion that the nominative plural of *Leitmotiv* is *Leitmotiven*. Mr. Lee is one of them; he also embellishes the first *e* in Delibes with a superfluous accent; he allows Humperdinck and Seidl to masquerade as Hamperdinck and Siedl, and takes the liberty of hyphenating César Cui. The erroneous statement is made that there is in Puccini's operas no definite characterization by means of leading motives; the story of "Hänsel and Gretel" is attributed to Andersen, instead of to Grimm; and the author forgot "Siegfried" when he asserted that "Die Meistersinger" is the one work of Wagner embodying humorous touches. Finally, why persist in writing Monteverde, in disregard of the fact that the 113 autograph letters of that Italian reformer which have come down to us are, without exception, signed Monteverdi? A "Mus. Doc., Cantab.," ought to know such things.

There are some things in musical history and biography which nobody knows, but which many would like to know—minute details regarding certain famous episodes in the lives of the great masters. Where facts fail, the imagination comes to the rescue. Elise Polko's "Musical Sketches" are made up of such episodes, historically correct for the most part, but embellished and vitalized by her fancy. Frau Polko was a sister of the well-known African explorer Eduard Vogel; she knew Mendelssohn, was for a time an opera singer, and then devoted herself to writing books, mostly musical stories. For such there is always a demand. Her "Musikalische Märchen" appeared in three volumes (1852-1903), and have passed through fifteen editions. The English version includes twenty-five of the best of them; Bach, Gluck, Mozart, Mendelssohn, Schubert, Paganini, Handel, Schumann, are among the masters one meets on intimate footing in these pages. Frau Polko has been decried as a sentimentalist, and undoubtedly there are oversentimental, "gushy" paragraphs in her books; yet this is just what many like, while those who do not, will frequently come across touches of genuine feeling which bring tears to the eyes. As a means of kindling enthusiasm in young folks for the great composers, nothing could be better than these "Sketches."

Luciano Conterno, the bandmaster, died last week at his home in this city, at the age of seventy. He was a native of Ferrante, France, enlisted in the United States navy at the age of nine, as a cabin boy and drummer, served in Commodore Perry's Japanese expedition, and enlisted in 1860 in the Seventh Regiment, with which he served during the civil war. After the war he became bandmaster of the Twenty-third Regiment, and from 1873 until 1894 he was bandmaster at the Brooklyn navy yard. He was bandmaster of the Old Guard in 1882 and of the Ninth Regiment from 1883 until about 1898, when he retired.

Art.

THE PITTSBURGH EXHIBITION.

By unanimous consent this season's display, which opened on Monday of last week with an appropriate show of Presidential pomp, is more discriminating in choice and more truly representative of international artistic activity than any of its predecessors. While there are on these walls no canvases of transcendent merit, such as Whistler's Sarasate, Ménard's Judgment of Paris, or Simon's Evening in the Studio, which were among the triumphs of former seasons, there is, in compensation, greater variety than ever before, and a higher general average of merit.

The distinguishing feature of these Pittsburgh exhibitions is their international character, their placing side by side the best current American and European painting, and it would be difficult to conceive of any plan more stimulating to native production. It is clearly impossible to cover the entire field every year, and if, on this occasion, certain countries, notably Scandinavia, Austria-Hungary, and Spain, are slighted, it is with particular pleasure that one notes the fine representation accorded England, France, Belgium, and Russia.

The display begins with a single room devoted to the shimmering, sun-flecked palette of Childe Hassam. The thirty-five subjects by America's most consistent exponent of impressionism show him in all his transitions, from the spirited and sensitive painter of street scenes in the vein of De Nittis or Raffaëlli, to the vibrant symphonist, who attains his climax in his views of turquoise sea and sun-bleached headland.

Considerable local interest, and, on account of their handsome monetary value, not a little general curiosity, is always manifested in the awards, which this year have fallen to William Orpen, Karl Anderson, and Edward F. Rooke. While it is the special privilege of the public to disagree with the official jury, there should be scant reason for objecting to the decision in the first two instances.

Mr. Orpen, who, though an Irishman, has lately permitted himself to be elected an associate of the Royal Academy, has here added to his prestige by capturing the first prize with his whimsical and cleverly handled Portrait of the Artist, seen at last summer's Venice International. The picture reveals a crispness of rendering, a truth of value, and a charm in its tonal modulations which readily justify its selection for initial honors. And, finally, Mr. Orpen has not failed to add a legitimate spice of humor to this version of his none too classic appearance, the immense pyramidal green hat not only constituting a fine color note, but also giving a welcome touch of character.

Equally satisfactory is the choice of Karl Anderson's Idlers: August, for second place. Exhibited earlier in the season at the Madison Gallery, and also at Knoedler's, New York, this sumptuous piece of outdoor painting easily places Mr. Anderson in the front rank of our younger artists. The surface is loose and broken, the coloring singularly fresh and vibrant, with lovely variations in green, yellow, purple, and lilac, and the flesh tints charmingly suggested.

As it is only a third prize winner, it is unnecessary to take Mr. Rooke's Laurel, which has already been seen at the Academy of Design, with particular solemnity. Frankly, however, it is hardly a prize picture. Though decorative in design, it lacks variety in its colors, and is also wanting in aerial perception. With those who receive honorable mention, including Joseph Oppenheimer of Berlin, Charles Morris Young, Louis Betts, and Daniel Garber, notably the last, there can be little quarrel. Mr. Garber's highly specialized vision and individual sense of tone are evinced in his two pictures, entitled respectively Horses and Hills of Byram. He is one of the most original of the newer men, and one who does not fail to assert himself with increasing precision at each appearance.

While there are certain notable portraits, it cannot be said that the exhibition is strong in this particular province. The seated likeness of President Taft, by Señor Sorolla, which claims immediate attention on entering the first large room, is more superficial than solid or masterful, more extensive than intensive. It is fluent, as is all the ready Valencian's work, but is fundamentally lacking in analysis.

Mr. Sargent, who is represented by portraits of Miss Brice and Charles J. Paine, is scarcely more successful than his Spanish colleague; the former work is totally lacking in beauty of coloration, and the latter, while restrained and thoughtful, is

by no means equal to the painter's best average.

As a matter of fact, aside from Carl Melchers's bust of Arthur T. Aldis and Frank Duveneck's early likeness of John W. Alexander in brown velvet jacket and billycock hat, it is not the older but the younger artists who show the most vitality in this category. Miss Beaux confines herself to two unconvincing costume studies. Mr. Chase's best efforts are expended on his interiors. Mr. Wiles's Girl and Horse is conspicuously ineffective. In compensation, however, Mr. MacCameron and Mr. Betts, among the Americans, and Charles Cottet, Augustus E. John, and the Russian, Nicholas Fechin, all display welcome power and individuality in their respective contributions.

Though it is dark in tone, there is a subdued richness in Monsieur Cottet's Girl with the Rose Hat, which only the most subtle and restrained talent could achieve within so restricted a compass. A similar severity is found in Mr. John's Portrait of William Nicholson, together with a touch of that turgid strength which is seldom absent from the work of one who to-day ranks as the most original force in contemporary British art. The Portrait of William Nicholson was among the successes of last summer's exhibition of the New English Art Club in Suffolk Street, and loses none of its interest after the lapse of nearly a year. Yet it is the Slav, Nicholas Fechin, with his Portrait of Mlle. Lapojnikov, who has attained the only distinctive triumph in this field, and seldom has the American public beheld a more individual and characteristic presentment.

Fechin, who was born in Kazan, is a veritable mujik in art, possessing all the crude strength, directness of vision, and poignant depth of feeling so typical of the native-born Russian. He is absolutely unspoiled by Occidental training, nor does he betray the sophisticated assurance of Alexander Benois, Constantin Somoff, and certain of the St. Petersburg school. Less brilliant and forceful than Maliavin, he is equally racial in his inspiration and more subtle and reserved in his chromatic scale. The likeness of this plain but appealing young peasant woman is supplemented by an even more free and searching Portrait of my Father, dressed in rough cap and coarse linen blouse. It is such canvases as these which give significance to the exhibition as a whole and emphasize that international note which is the proud watchword of the Carnegie Institute.

C. B.

We doubt if any living writer but Montgomery Carmichael could have made a tolerable book out of the material in "Francia's Masterpiece: An Essay on the Beginnings of the Immaculate Conception in Art" (Dutton). He has unriddled to the end the secret of Francia's famous altarpiece in S. Frediano, Lucca. Most writers have called this loosely a coronation or an assumption, and have seen in the predella compositions legends of the Augustinian order. Mr. Carmichael shows that it represents the Immaculate Conception as formulated by Franciscan lovers of the doctrine. Esther, the elect spouse, was regarded as the antitype of the queen of heaven. God the Father extends symbolically to Mary the rod of Ahasuerus, great doctors bear witness to the stainless origin of the Virgin, while a kneeling monk, whom our author identifies with Duns Scotus, the subtle doctor, sees the vision in the sky. The four predella panels recount legends brought about by prayer to the Immaculate. The picture was painted for Maddelena Stiatta to adorn a chapel of the Conception some time after 1512. Iconographically Francia followed a picture formerly in S. Francesco, now in the Gallery of Lucca, which Mr. Carmichael dates a matter of thirty years earlier. Opinions might differ as to the period of this which is regarded as the earliest pictorial representation of the theme. To the present writer it seems a belated Ghirlandaiocsque work, perhaps not much antedating the end of the century. Piero di Cosimo's picture of similar composition in S. Francesco, Fiesole, is dated 1480, but Mr. Carmichael justly doubts the antiquity of the inscribed date. It seems likely to us that there is an error for 1490, with which year the stylistic character of the Fiesole piece tallies very well. In any case we have in these three pictures types of the earliest form of the Immaculate Conception in art—a form far more mystical and admirable than that operatic version which the Spanish Jesuits of the seventeenth century have made stereotyped. Mr. Carmichael's researches are perhaps less novel than he imagines. Ten years ago, for example, Fritz Knapp saw through the blunder about the Fiesole picture and gave it its proper title. But Mr. Carmichael has studied the subject more deeply and lovingly than the other critics, and gives for the first time a popular account of the fate of this subject in early art. He hints at further studies, which we shall await eagerly. Leonardo's Madonna of the Rocks is for him an Immaculate Conception. This it can only be by an egregiously masked symbolism, but it would be hazardous to predict that the view is wrong. Readers of Mr. Carmichael do not need to be reminded of the mellowness of his manner and the fervor of his religious sentiment. The simplicity of his conviction wins those to whom his point of view is profoundly alien. He makes the whole past of a picture and a doctrine most appealing. One lives with the great doctors who held this magnificent bit of Quixotic reasoning before a reluctant church until the dogma attained toleration and acceptance. One sees with sympathy forgotten monks who wrote out the first offices for which pious souls were waiting. Such is the winning effect of Mr. Carmichael's artful artlessness. In vain you steel your heart against him. You disapprove his complacent orthodoxy and long for his next book.

Dr. George Fisk Comfort, founder and director of the Syracuse Museum of Fine Arts, died last Thursday at the age of seventy-six. He was graduated at Wesleyan University in 1857, studied art, philosophy, and history in Europe in 1860-65, and in 1868-72 was lecturer on Christian art and archæology at the Drew Theological Seminary. He was an organizer of the American Philological Association in 1869, and of the Central New York Society of Artists in 1901, and was one of the founders of the Metropolitan Museum of Art. In 1872 he became professor of æsthetics and modern languages at Syracuse University, and organized the College of Fine Arts there, of which he was dean in 1873-1893. He published "Art Museums in America" and "Modern Languages in Education.'

Julien Dupré, the French animal painter, died recently in Paris, at the age of fifty-eight. Medals were awarded him in the Salons of 1880, 1881, and 1889. In the Luxembourg are his Vache Blanche and Les Fauchers de Lucerne, which have frequently been engraved and lithographed.

Finance.

PLACING OUR BONDS ABROAD.

Under heavy and continuous selling, the New York stock market broke at the opening of last week, declines running to 3⅞ in Amalgamated Copper, 3⅛ in Reading, 2⅞ in Union Pacific, and 2 in St. Paul, all of these stocks touching on Tuesday their lowest prices for 1910. In the middle of the week came an upward turn of equal violence; Amalgamated Copper recovered 3¾ points, Reading 5½, Union Pacific 6⅛, and St. Paul 4¾, while Steel common, which had dropped off 1⅞ point in the two earlier days, advanced 4½. Interrupted by the reaction which, last Friday, occurred in every financial market of the world on the news from the King of England, strength was again displayed on our own Stock Exchange, in the present week.

This rather remarkable change from discouragement to optimism resulted immediately from last week's spectacular fall in foreign exchange. We had just completed the shipment of $30,000,000 gold to London; yet sight sterling rates, at 4.88⅛, or close to the normal gold export point, had been threatening further outflow. On Monday of last week, however, the rate dropped down to 4.87½; on Wednesday, a violent decline brought it to 4.86⅝, the international parity. This meant, either that capital had been transferred in quantity from Europe to our money market, or else that we had suddenly sold to Europe something whose value on exchange had offset the heavy adverse balance on merchandise account.

In response to the eager inquiry in Wall Street, as to the specific cause for the sharp movement of exchange in this country's favor, statements were at once put out that negotiations for placing new American securities at Paris had been so far successful as to insure the sale of $70,000,000 to $100,000,000 of our bonds to that European market. Three inferences were drawn immediately: one, that our own overburdened and congested bond market would be substantially relieved; another, that the gold outflow from New York would be checked, and, finally, that the enlisting of Paris capital in our market would make needless any recourse to the Lon-

don money market, which had troubles of its own. Rumors were rapidly disseminated as to the general unlocking of the French treasure-vaults for the benefit of New York; it was even alleged, in Wall Street and in the Paris cables, that the negotiations for listing Steel common on the Bourse had been resumed.

All this was far astray from the actual facts. Some of the loans included in the announcements of last week's Paris negotiations had been placed in that city weeks ago; for others, negotiations were not finally concluded until this week. Instead of half-a-dozen new issues footing up $70,000,000 or $100,000,000, two bond issues only—$10,000,000 of the "Big Four" Railway and $50,000,000 of the Chicago, Milwaukee and St. Paul—have at this writing been announced as newly placed with Paris. Both of these, when price and commissions are included in the reckoning, will probably be found to have been rather costly operations, and the same comment may be made, with greater emphasis, on the sale to London of part of a $40,000,000 issue of Baltimore and Ohio three-year notes.

The fact remains that the enlisting of foreign capital on such a scale occurs most opportunely, alike for the home money market, which is not in a position to spare the capital required; for the home bond market, which has found difficulty in disposing of such security issues as it has already subscribed for, and for the foreign exchange market, which has been driven repeatedly, by the abnormal excess of imported merchandise, to heights where gold exports of unusual proportions were necessitated. In all these respects, the successful completion of the Paris negotiations is a matter in which American finance had important stake.

While welcoming, however, this relief to an awkward situation, it is quite as well to point out also that it is not the relief which the permanent interests of the situation need. It is one thing for a young, poor, and undeveloped country to rely on foreign capital to sustain its industries, and to accept such foreign assistance in the shape of merchandise imports which far exceed the value of the exports which the country's struggling producers can contribute. That was the case of the United States during the fifties and the sixties, when our import trade always ran heavily beyond our export shipments, and when stocks and bonds of our government, States, cities, and railways were sold as a matter of course in Europe.

But it is a very different thing for a rich and powerful producing state, whose natural resources have made it one of the greatest of all contributors to the outside consuming world's supplies of grain, cotton, metals, minerals, and general merchandise, so to pervert the level of prices, and to hold so obstinately to the perverted level, that it arrests its own export trade, needlessly stimulates its imports, and then appeals to the foreign money markets to help it out of the consequent dilemma. Not only is this process, on the contemplated scale, an absurd anomaly for the America of to-day, but it is sure in the end to aggravate the very evils which it professes to avert. If there were no other reason for this conclusion, there would be the fact that dividends and interest on these foreign-held securities will be added to the sum total of our annual European obligations.

It may still be regarded as certain that the existing problems in our trade situation and our financial markets must work out their own solution. That such a solution will come, eventually, through the commodity markets themselves, there can be little doubt. In the meantime, all of us will be grateful if the immediately embarrassing aspects of the situation shall turn out to have been removed by the French negotiations.

LEADING AMERICANS

Edited by W. P. TRENT. Each $1.75 *net*.

John Erskine's Novelists
By the author of "The Elizabethan Lyric."

Charles Brockden Brown, Cooper, William Gilmore Simms, Hawthorne, Harriet Beecher Stowe, and Bret Harte.

Wm. Morton Payne's Essayists
By the author of "The Greater English Poets of the 19th Century."

The rather lengthy introduction presents a historical survey of the minor American Essayists. Irving, Emerson, Thoreau, and Curtis receive separate and extended biographical treatment.

R. M. Johnston's Soldiers
By the author of Napoleon, etc.

Treats of thirteen generals from Washington to Grant and Lee.

Mr. and Mrs. Beebe's Our Search for a Wilderness
Mr. Beebe is Curator of Birds in N. Y. Zoölogical Park, and author of "The Bird: Its Form and Function." With 165 illustrations. $2.75 *net*.

Trips into tropical wildernesses in Venezuela and British Guiana.

"Fascinating . . . it will be very difficult for any one to compete with Mr. and Mrs. Beebe in anything except the description of purely superficial conditions . . . for bird-lovers in particular . . . reveals people and customs and adventures in a thoroughly satisfying as well as delightfully clever manner."—*N. Y. Sun.*

John Dewey's Influence of Darwin on Philosophy
and Other Essays in Contemporary Thought. $1.40 *net*.

By a Columbia Professor and co-author of Dewey and Tuft's Ethics. $1.40 *net*.

The Essays also include: Naturo and Its Good.—Intelligence and Morals.—The Experimental Theory of Knowledge.—A Short Catechism Concerning Truth.—Beliefs and Existences.—Experience and Objective Idealism.—"Consciousness" and Experience.—The Significance of the Problem of Knowledge, etc.

FOR THE SUMMER LIBRARY

GWENDA. By Mabel Barnes-Grundy, author of "Dimbie and I," "Hilary on Her Own," "Hazel of Heatherland." An intimate, intense story, relieved by humor and a dash of worldly wisdom. 12mo. 350 pages. Frontispiece. $1.50.

THE TOP OF THE MORNING. By Juliet Wilbor Tompkins, author of "Dr. Ellen" and "Open House." A sparkling, wholesome story, full of humor, vivacity and charm. 12mo. Frontispiece in color. $1.50.

IN PRAISE OF GARDENS. Compiled by Temple Scott. Poems and verses about gardens from the whole range of English poetry. Charming in contents and in form. $1.25.

THE GARDEN IN THE WILDERNESS. By "A Hermit." A felicitous mingling of gardening and sentiment. Many illustrations, decorative end papers, etc. $1.50 net.

WOMEN AS LETTER WRITERS. Edited by Ada M. Ingpen. The best letters written by women from the 16th century until our own time. 12mo. 9 full-page portraits. $1.25 net.

THE BAKER & TAYLOR CO., NEW YORK

Ruskin and His Circle

AMERICANS: An Impression

By Alexander Francis.

Letters and Memorials

OF

Wendell Phillips Garrison

Editor of The Nation 1865–1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait. It likewise preserves the notable letter of appreciation addressed to Mr. Garrison by more than two hundred contributors to the *Nation* on the completion of his fortieth year of service, and his acknowledgment thereof.

CHICAGO, Ill., *May 4, 1910.*

Mr. ——— ———

The Nation,

New York City, N. Y.

My Dear Sir:

Your note regarding expiration of my subscription to THE NATION, just received, may not call for an acknowledgment, but I am going to bother you long enough to explain why I am discontinuing the paper for a year. Though I have been in the newspaper business for a number of years, so far as I know my reason for stopping THE NATION is unique.

My reason is because I like it so very much and read it so carefully that I find myself viewing everything through THE NATION'S eyes. I have occasion to write editorials for my paper in Iowa from time to time, and often realized that my views were following those of THE NATION closely on many matters; but not till a friend, who saw me with a copy of THE NATION the other day, remarked that he had many times thought, after reading what I had written, of notifying me that he too read THE NATION, did I realize that this tendency had become so noticeable. My friend convinced me that unconsciously I had for a long time been following the ideas and ideals of your paper very closely, and at times almost its style and manner of expression.

Now, if I could ever hope to attain to THE NATION'S clearness of thought and expression of my own accord, I would be delighted indeed; but I submit that it is not desirable for a young man to become so attached to any one magazine that he unconsciously borrows its ideas and phrases. My father began taking THE NATION with its very first number, I believe, and it has been in our family most of the time since.

All this sounds very labored and pedantic when set down in a letter. but it is my reason for discontinuing my subscription for one year, after which I hope to be again ready to read it regularly, and to do so without forming "The Nation habit," as my good father was often accused of doing when engaged in politics in Iowa thirty years ago.

With best wishes for THE NATION. and congratulations on its high standard, I am,

Cordially yours,

——— — ———.

The Nation.

NEW YORK, THURSDAY, MAY 19, 1910.

The Week.

Michigan Democrats, it is reported, are for Gov. Harmon for the Presidency, *if* he is successful in winning a reelection next autumn. This is a curious attitude. If he is fit to lead the Democracy, of sufficient stature for the Presidency, whether he is or is not successful ought surely not to count. We are frank to say, however, that if anything is certain in our political future, it should seem to be Gov. Harmon's qualifying according to the wishes of the Michigan Democrats. The situation in Ohio does not improve from the Republican point of view; the blundering at Washington—where Republicans have given up all hope of a Republican House and are already consoling themselves by picturing the future folly of the Democratic majority—does not help. The suggestion of James R. Garfield or of Nicholas Longworth as Republican candidate for Governor arouses no enthusiasm. Ohio, the President's State, is, in fact, in open insurgency, and promises surely to provide a Democratic Presidential candidate. Curiously enough, the second choice of the Michigan Democracy is Mayor Gaynor of New York. With all due respect to the city's Executive, we say that such a choice can only illustrate the dearth of Democratic candidates. No party ought to begin to talk of giving the Presidency to a man, however promising, who has served only a fraction of his term in his first executive office and has yet to demonstrate along a dozen lines whether he is really fit for the manifold responsibilities of high office.

Reports agree that the visit to Berlin was not a spectacular success. Even the devoted band of special correspondents is forced to admit that the phlegmatic German populace has been more than usually phlegmatic in the presence of the traveller from East Africa. There was only a handful of people at the railway station, and as for the learned audience that listened to the lecture on world movements, it was frankly bored. The reason is, of course, apparent. It has been forecast a score of times by the newspaper artists who let their fancy dwell on what would happen when Mr. Roosevelt and the Kaiser met. Like good Americans, we took it for granted that Mr. Roosevelt would blanket the Kaiser. What really happened was that, years ago, the Kaiser had brushed the bloom off Mr. Roosevelt's advent. What was there for the Berliners to get excited over? An advocate of the militant virtues? A champion of peace with honor? A reburnisher of the Decalogue? An exhorter upon women, children, kitchen, and clothes? All these and more William II has been to his subjects for so many years that his visitor could bring with him, at most, only the novelty that attaches to the foreign version of a familiar book. An ex-President of the intellectual range of Senator Jeff Davis and the silent tread of Senator Crane would probably have interested the people as much more of a novelty.

Conditions at the Bethlehem Steel Works, reports Commissioner of Labor Neill, are bad. Conditions at South Bethlehem, retorts Mr. Schwab, are no worse than they are elsewhere in the steel industry. If they are no worse than what the Pittsburgh Survey discovered them to be in that city, they are bad enough. As elsewhere, the burden falls heaviest on the unskilled laborer. The higher grade of workmen in Bethlehem have a ten-and-a-half-hour day, with a half-holiday on Saturday. But in the blast furnaces, the working day is twelve hours, seven days in the week, with a continuous stretch of twenty-four hours once every week or every two weeks, when the day and night shifts change. Mr. Schwab has apparently no reason to complain of unfair treatment by the Federal Labor Bureau. His case merely calls attention to the fact that it is the large cities in which reform, whether it is political, social, or industrial, comes first. Pittsburgh has long been before the public as an example of the terrible human cost that goes into the manufacture of steel. But Bethlehem, where conditions are "no worse" than they are in Pittsburgh, has hitherto escaped notice by virtue of being one-twentieth as large as Pittsburgh.

Much more attention than it has yet received should be devoted to so very grave a question as that raised by the Parole bill which passed the House of Representatives on Monday and which in similar form had already passed the Senate. The bill makes possible the parole of Federal prisoners who are sentenced for less than life or more than one year, after the expiration of one-third of their term of imprisonment, provided, of course, that this parole be recommended by the newly created Parole Board of the penitentiary where they may be confined. The plan is sure to receive sanction from those who believe in calling all criminality a form of insanity and thus shifting the burden of wrongdoing from the shoulders of the guilty one to his parents, his environment, or even his Maker; but it seems to us another step on the dangerous road which leads to immunity for the criminal and practical encouragement for crime. If we have no faith in our laws and think the punishments under them excessive, or if it be concluded that the whole system should be radically altered, by all means let us change the laws. All this is very different from a hasty act weakening the power of existing laws and contradicting the judgment of those we have appointed to judge, by cutting two-thirds of the time, besides the allowance for good behavior, from the sentences of prisoners.

The death of James W. Van Cleave removes a sturdy fighter against the excesses of union labor. Thanks to him, the question of the boycott against his company, the Buck's Stove and Range Company of St. Louis, was taken before the Supreme Court of the United States. When Samuel Gompers, John Mitchell, and Frank Morrison, the officials of the American Federation of Labor, announced that they were superior to any decrees of the Supreme Court of the United States and continued to violate its injunctions not to boycott the Buck's Stove and Range Company, they were promptly sentenced to jail for contempt of court. Through the agency of the National Manufacturers' Association, Mr. Van Cleave waged a vigorous battle against such evils as the closed shop, the restriction of apprentices, the put-

ting of needless men on a job, etc. He was not only against what he called "follies and vices of labor unions," but was also opposed to "tyrannical and unpatriotic practices of certain captains of industry," and fought the Trusts accordingly. He is entitled to a good deal of credit, even though he may have been an extremist in certain directions, for the progress we are making away from the boycott and the needless strike. No one can deny the force of his final statement that "policy can never replace principle; that the United States will never stand for the demagogue and the Socialist; that America is still America, and our Constitution and our judiciary are still our bulwark." It is right and just that labor should have earnest, enthusiastic, and able leaders; and it is equally proper that the employers of labor should have men like Mr. Van Cleave in their ranks, ready to test sound principles in the courts of law.

Forest fires have already opened the season in the West, and between now and November millions will thus be lost, as usual. Between these fires and the wood-pulp makers our forests are having a desperate struggle for existence. Germany is just now teaching an invaluable lesson. Her own forests no longer meet the home demand for wood pulp, and the trade depends largely on the supplies from Russia and Austria-Hungary. These, however, are far from inexhaustible, and the government, with its usual foresight, is making systematic efforts to find new fibres for the manufacture of paper. Careful investigation in the German African possessions has shown that they produce a large number of plants admirably adapted to serve as paper stock. A recent number of the *Consular and Trade Reports* describes some of these: among them sisal hemp, various wild grasses, rice straw, nettles, bamboo, papyrus, sedge reeds, palm leaves, Spanish broom. Banana stems yield an exceptionally good quality of fibre—67 per cent. of bleached pulp. A good grade of paper is also made of cotton bolls, every hundred pounds of cotton corresponding to about forty pounds of cellulose in the capsules. Of cotton bolls and banana fibre the supplies obtainable in this country are virtually inexhaustible. Why continue to exterminate our forests?

To those who have passed well into their second half-century, the name of Sir William Huggins in the obituary column of the newspapers will recall wistful memories of a shining time in the history of science. In the early seventies, when Darwinism was fighting for its place, when we were all reading Huxley's lay sermons and Tyndall's lectures, when the conservation of energy was a name to conjure with, and when the splendid discovery of Kirchhoff and Bunsen was still fresh enough for wonderment, the names of William Huggins and Norman Lockyer were the ones most familiar to English-speaking people in connection with the achievements of spectrum analysis in the domain of astronomy. Before the invention of that method, nothing could have seemed more hopelessly beyond the scope of man's possibilities than the discovery of the chemical constitution of the heavenly bodies; and to this marvel was added the power of the same instrument of research to give us a new means of determining the actual motion of what are called the fixed stars. In all this domain, so inspiringly opened up to the eye of science, Huggins did notable work, which received ample recognition from the Royal Society and other bodies. His death at the age of eighty-six cannot fail to suggest the thought that few lives can be happier than that of a man placed beyond the reach of money cares, who devotes himself to some large and worthy object of intellectual interest.

Among the finest traditions of our history are those which cluster about the names of the two Polish patriots who bore an heroic part in the American Revolution, to whom statues have just been erected and dedicated at Washington. Pulaski fell in battle, fighting for American independence; Kosciuszko, after serving with signal distinction through our war, lived to lead his own countrymen in their noble struggle for freedom, and died in exile. It happens that the names of both are preserved in English poems which were among those most familiar to the children and young people of a generation ago—Longfellow's "Pulaski's Banner" and the stirring lines on Poland in Campbell's "Pleasures of Hope." It is well that the memory of these men should be preserved at the national capital; and well, too, that we should be reminded, on the occasion of the dedication of their statues, of the extraordinary spectacle of patriotic loyalty and enthusiasm which the history of Poland has presented in the century and a quarter during which the Polish people have been without a place among the nations.

The Associated Press correspondent in Havana confirms what was clearly deducible from the telegraphic dispatches in regard to the so-called negro uprising in Cuba. It now appears that there was not the slightest shadow of an excuse for arresting Gen. Estenoz and his fellow agitators. The whole thing is due to a scare on the part of the small, very small, President of Cuba. Gomez feared that the new negro party would go over to the Conservatives and thus give them the balance of power in next autumn's election, since the Liberals are for the present hopelessly divided into two camps, the followers of Gomez and those of Zayas. Gomez, therefore, arrested Estenoz and forty of his followers, and obtained their indictment—a very easy thing to accomplish in Cuba—and informed all the world that he had actually nipped in the bud a plot against his government. As a matter of fact, no weapons, with the exception of one revolver and one machete, were captured. There has not been found anywhere the slightest proof of the existence of any conspiracy. Tranquillity, the dispatches read, now reigns everywhere; but not, we fear, for long, with such a President as Gomez at the head of the Administration. Trouble may be looked for at any time, particularly within the ranks of the Liberal party.

The pictured faces of the Kings who are attending Edward VII's funeral show a predominant air of youthfulness. Frederick VIII of Denmark and George I of Greece are the patriarchs, and they are not very old. With them is the still youthful William II, juvenile kings like Haakon of Norway and Albert of Belgium, and such comparative infants as Alfonso of Spain and Manuel of Portugal. The average age of European monarchs has steadily declined during the last ten years, although out of eighteen ruling sovereigns in the year 1900, eleven were above forty-five, and eleven is still the number in 1910. The present lower average is accounted for by the

smaller number of venerables in 1910 than in 1900. In that year Queen Victoria was not only more than forty-five years of age, but more than that by thirty-six years; Christian of Denmark was thirty-seven years beyond the mark; Oscar of Sweden was twenty-six years beyond; Leopold of Belgium was twenty years beyond. To-day the kings who are above forty-five exceed that line by only a few years, as in the case of Victor Emmanuel of Italy, Nicholas II, William II, and Gustav Adolph of Sweden. If the rule of the golden mean holds for kings, the destinies of Europe are at present well placed in the hands of men who are neither too young to be patient nor too old to be alert and resourceful.

It is the fashion in Tory circles to look upon Mr. John Redmond as being behind everything that now goes on in England. It has even been delicately hinted that Mr. Redmond, with Mr. Keir Hardie, was to an appreciable extent responsible for Edward VII's death by bringing on a difficult political situation over which it was known that the late King worried greatly. It is now asserted that Mr. Redmond is behind the movement for a revision of the British coronation oath. If the Irish Nationalists did not control the balance of power in Parliament, the assertion runs, the demand that the King's oath should be purged of all matter offensive to Roman Catholics and their spiritual head would never have arisen. In 1902 the Irish Nationalists were not in control of the House of Commons, and the same demand arose; but who nowadays looks back eight years? As a matter of fact, if the Irish Nationalists were really to force an alteration in the royal oath, it would be only proper that they should have been the ones to do so. It is conditions in Ireland that have shaped the attitude of the great majority of the British people towards Catholicism, just as they have influenced the course of British politics in general during the last one hundred years and more. There is no great fear of a Catholic revival in England. But the English people are very much concerned for the future of the Protestant minority in Ireland. Heal the ancient schism between Catholic and Orangeman, weld the two into one really united Ireland, and England's objections to a revised coronation oath and her objections even to Home Rule will disappear.

If it is true that Lord Kitchener is to receive the comparatively unimportant post at Malta because that is a good place to watch the Egyptian situation from, then the English army organization must be in as poor a state to-day as it was ten years ago when Roberts and Kitchener were hurled into South Africa to undo the results of unpreparedness and demoralization. If a Nationalist uprising in Egypt is as imminent a possibility as the Conservative press in England professes to think, why have not measures been taken accordingly? Why has not the English defence been put upon such a basis that whether England's best general was one day's distance from Alexandria or three days' distance would make no considerable difference? If we could imagine the German Government confronted with sudden oversea news that a revolt had broken out in one of her most important colonies, it would be a repetition of the traditional Moltke incident. The chief of the General Staff would say, "Pull out file number 53," and the plan for putting down the Egyptians would be found worked out to the minutest detail. But blundering, happy-go-lucky Britain must station her ablest general at Malta, like a watchful but unimaginative "bobby" on the lookout for infringers of the public peace. If one will go in for war and for ruling other peoples, one ought to play the game well.

The rapid development of northern Italian cities is one of the most interesting events of the time. Even romantic Venice is awakening to new activity. The rebuilding of the Campanile may be regarded as emblematic of the determination of the Venetians to renovate their city and recover some of their old glory. Venice will never again be the queen of the seas, the distributing point of the spices and treasures of the Orient. She lies outside the international ship lanes; it is from Genoa that the lines radiate East and West, to North and South America, to India and Australia. These vessels usually touch at Naples, often at Palermo, but not at Venice. And yet, as a redistribution point, the harbor of Venice now ranks second only to Genoa. The imports of coal are nearly seven times what they were three decades ago, and there is a similar increase in phosphates and other imports indicating agricultural and industrial progress. Tourists may not like the factory chimneys which, in the upper city, vie in height with the Campanile, and they are certainly right in objecting to the motor boats which are crowding out the gondolas; but they cannot help being impressed with other signs of new life and activity—the large new freight station at Mestre, the doubling in width of the railway bridge, the new quay at the Molo di Levante. Ruskin would have inveighed against all this; and yet, unless the Venetians amassed wealth in this way, would they be able to maintain their city as a mediæval museum?

Agrarian reform in Russia is making its painful way through the Duma and the Council of the Empire, scarcely noticed by the outside world, after the manner of all such profound changes. Yet the thing at stake is nothing less than a complete alteration in the social and economic status of Russia's vast peasant population. Specifically, it is a question of breaking up the *mir*, or village community, and putting in its place a system of individual land-ownership; communal ownership is to make way for the peasant proprietor. This change was ordained by Imperial decree in November, 1906, at the instance of M. Stolypin, who is now seeking to secure the approval of the Duma and the Council of the Empire. The opposition to the scheme comes from a combination of the extreme Right and the radical Left. The landlord party views with apprehension the economic and moral effects of a sudden transition from a condition of primitive communal life to a régime of individual responsibility. And there should seem to be little doubt that many millions of peasants, untrained to the responsibilities of modern life, will speedily be separated from their lands, and go to form what it has been the Russian patriot's boast that his country, unlike Western Europe, does not know: a landless proletariat. It was only a narrow majority that M. Stolypin won in the Council of the Empire. Only by 90 votes to 88 did that body sanction the abolition of the *mir* and the individual apportionment of the land in those villages where there has been no redistribution since the edict of peasant emancipation in March, 1861.

MR. TAFT'S EXPLANATION.

It is matter for sincere congratulation that President Taft has seen fit to make a formal statement of the facts concerning the preparation of his letter of September 13, exonerating Ballinger and authorizing him to discharge Glavis. Had he or his advisers had the good judgment to see the necessity of a frank statement of the facts when the question was first raised, or even within a reasonable time thereafter, nine-tenths of the pain and humiliation attending this disagreeable episode would have been avoided.

It is now two months since Mr. Brandeis began his persistent and untiring effort to get at the facts to which the President's statement relates. The object of that effort was perfectly simple and perfectly legitimate. Among the papers transmitted by the President to the Senate on January 6, in response to its request for "any reports, statements, papers, or documents upon which he acted in reaching his conclusions" in the matter of the Glavis charges, was included an elaborate summary and opinion upon the case drawn up by Attorney-General Wickersham, dated September 11—two days before the date of the President's letter to Secretary Ballinger. Mr. Brandeis worked long and patiently to bring out the fact that this document was not before the President at the time that he wrote his letter, and therefore was not one of the "reports, statements, papers, or documents upon which he acted in reaching his conclusions." It was not until last Thursday that this fact was admitted. On that day, Mr. Wickersham stated, in a letter to the chairman of the Judiciary Committee of the House, that his summary and opinion had not been written until long after the date which it bore, but that it had been dated September 11, to correspond to the date on which the substance of what was contained in it had been communicated to the President, partly in oral form, partly in the shape of "rough notes." Now, if this proceeding was justifiable in the premises, if there was no reason to conceal it, why in Heaven's name has it taken weeks and weeks of dogged persistence on the part of Mr. Brandeis, and finally the prospect of a demand by the House of Representatives, to extract a confession of the fact from the Attorney-General?

There is another point to which the efforts of Mr. Brandeis have likewise been directed. He has tried again and again and again to ascertain whether Mr. Lawler, Assistant Attorney-General for the Department of the Interior, had taken to the President at Beverly any document that he may have made use of in framing his letter to Ballinger, and if so what was the nature of the document. It now appears from Mr. Taft's statement of Monday morning, that he had himself directed Mr. Lawler to prepare a letter as coming from him, the President. This was, in itself, an entirely legitimate proceeding. Mr. Taft states that he had arrived at his conclusions before giving these instructions, and that he commissioned Mr. Lawler, who was conversant both with the case and with Mr. Taft's opinion on it, to draw up the letter simply as the best means of saving labor. Speaking broadly, this kind of thing is done continually by presidents, whether of a railway company or of the United States. But if it was a perfectly legitimate thing to do in this instance, why, in the name of common sense, was the production of the Lawler document—even the acknowledgment that there was such a thing—resisted inch by inch, and accomplished finally only at the instant when the secret of its preparation was being (or had been) betrayed by one of the stenographers who had prepared it?

So much for the monumental and almost incredible blundering of which the Administration has been guilty in this matter. It remains to say a few words as to the nature of the facts themselves, irrespectively of the aggravation of them by the lamentable policy of concealment and delay. It has been sought to excuse the ante-dating on the plea that it is customary to attach to formal documents a date earlier than that upon which they are put into their final form. But this plea is quite irrelevant. Nobody has objected to the ante-dating as a mere matter of form. The objection is to the use made of that ante-dating In relation to the Senate's request, the true date of the document was of the essence of the matter. What was explicitly desired from the President was "any reports, statements, papers, or documents upon which he acted in reaching his conclusions"; and the President stated that he had before him as one of those documents a detailed paper, covering 74 large printed pages, summarizing with care the whole case as submitted to him by the Attorney-General. It now appears that all he had got from the Attorney-General was an oral discussion and some "rough notes." Furthermore, all the time the Attorney-General had in which to examine the great mass of papers in the case (650 pages of print), digest it, and pass judgment, was at most ten or twelve hours; hence the idea that his conversation and "rough notes" could have been in any way equivalent to the 74 pages of elaborate summary and opinion is too preposterous to consider.

And, apart from this regrettable matter of the ante-dated summary, it is clear from the President's own statement that he himself could not have given to the matters in question the kind of investigation which their extent and complexity required. Ballinger and Lawler personally bring to him a mass of documentary matter prepared by themselves—all in typewriting, and forming, when printed in book form, 650 large pages—and talk it over with the President. His first impression of it, accordingly, is what these gentlemen, intensely desirous of a verdict in favor of Ballinger, give him. What happened next is this:

> I sat up until three o'clock that night reading the answers and exhibits; so that at my next conference I was advised of the contents of the entire record and had made up my mind that there was nothing in the charges upon which Mr. Ballinger or the others accused could be found guilty of either incompetency, inefficiency, disloyalty to the interests of the government or dishonesty.

It was therefore on the basis of this one night's work upon a great mass of intricate details that Mr. Taft substantially acted. It was upon that basis, and that of a talk with Lawler and Ballinger the following evening, that he directed Lawler to prepare "an opinion as if he were President." Whether he made much or little use of Lawler's draft is of small consequence; the damaging part of the Lawler matter is that it shows the President to have substantially decided the case on the basis of that one night's reading. He revolved it in his mind in the remaining days of that week, no doubt, and there can certainly be no doubt that he was glad to get Mr. Wickersham's judgment in the matter. But neither his own judgment nor Mr. Wickersham's was entitled to the weight

that it carried with the public, because neither was made on any such basis of inquiry as it was given to the public to suppose.

That Mr. Taft was actuated by a desire to dispose of an ugly business, and that he thought he was acting with entire justice in it, we are fully persuaded. But he did either too much or too little. He had before him charges affecting the conduct of a department of the government in matters of great complexity; and either of two courses was open to him. He might have refused serious standing to the charges, and asserted his entire confidence in Ballinger by dismissing them, on the general merits of the situation, as not worthy of detailed consideration. Or he might have ordered a full and thoroughgoing consideration of them by trained officers of the Department of Justice, and, after considering and reviewing their findings, have passed final judgment. Unfortunately he sought to combine the facility of the former process with the finality of the latter. The result has been the deplorable and mortifying mess in which he and the Attorney-General have been floundering.

DISCUSSING THE NEGRO PROBLEM.

The second annual National Negro Conference for the discussion of the negro problem, which met in New York last week, set itself high and worthy aims—to do for this race what the Lake Mohonk Conference has done for the Indian. Southerners as well as Northerners have spoken this year, as last, and colored men and women as well as white. All shades of opinion have found utterance, that out of the multitude of counsel some progress might be made in bringing the actual facts before the country and in demanding redress for undoubted grievances. This year the discussions were concerned with disfranchisement—how disfranchisement affects the negro in the courts, in the schools, at the ballot-box, and in his other relations to the communities in which he dwells. Eventually, it is hoped that out of this Conference will grow a bureau or scientific committee for investigations; a legal aid department for the race; a publicity department to lay before the country the actual facts as to the astounding progress of the negro in less than fifty years, and the law-abiding character of the colored people as a whole. Meanwhile, however, the Conference, in its resolutions of last year, demands of Congress and the Executive:

(1.) That the Constitution be strictly enforced and the civil rights guaranteed under the Fourteenth Amendment be secured impartially to all.

(2.) That there be equal educational opportunities for all and in all the States, and that public-school expenditure be the same for the negro and white child.

(3.) That in accordance with the Fifteenth Amendment the right of the negro to the ballot on the same terms as other citizens be recognized in every part of the country.

As to the wisdom of this course there is naturally a marked difference of opinion. One of our contemporaries has already described the Conference as "an unwise movement"; in other quarters the argument is made that any discussion of the debated points, particularly the political discriminations against the race, is "unwise," especially at this time, when so many high-minded Southerners are resolutely standing up for the negro's right to lift himself out of the slough of ignorance and ineffectiveness. From the argument that this is a close season for discussing the wrongs of ten millions of Americans, the *Nation* has repeatedly expressed its dissent. For the argument of expediency and compromise it has no sympathy. It has yet to learn that a demand that the Constitution of the United States be no longer nullified can be out of place or out of time. There is never an hour in this great democracy when it is not right and proper to plead for justice, for equality before the law and at the ballot-box, for the keeping of the national faith.

There need be no fear that frank, or even radical, utterances will retard seriously any movement in the South for the benefit of the negro. The truth has never hurt anybody who walks in the path of righteousness; it has never yet held back any unselfish humanitarian undertaking. Erroneous individual opinion, the mistaken zeal of the enthusiast—these may cause dissent and friction, may arouse bitter controversies. But agitation is precisely what is needed. The sound, sober thought of this democracy invariably distinguishes the chaff from the grain. It was a witty woman of the uncompromising band of ante-bellum Abolitionists, Maria Weston Chapman, we believe, who remarked that the Lord made use of tools in that cause which she herself would not touch with a forty-foot pole. Yet all of them, radical and conservative together, rendered a great service to their country. The real question is, after all, the *spirit* in which the matter is approached.

That this great negro problem, with all its complexities, its amazing contradictions, its delicate ramifications, is sadly in need of scientific approach, is all too evident. To the Northerner, the Southerner denies all right to pass upon the subject, because he has not lived South. But the very man who takes this position may himself know the negro problem only from the point of view of a narrow Alabama village and be quite ignorant of its varying phases in Mississippi, or Louisiana, or Virginia, or Texas, and he usually is grossly ignorant of the legal status of the black man all over the South. For the Northerner it is an easy retort that those who are face to face with a momentous social difficulty are often too close to it to have any perspective, or to be able to view it as a whole. And a trained observer like Prof. Albert Bushnell Hart of Harvard, who spoke to the Conference last Saturday evening, or Ray Stannard Baker, who read a paper last Thursday, may often acquire more knowledge of the issues in a year in the South than a resident of Montgomery in a life-time. All of this simply emphasizes the desirability of facts, facts, and facts; it is a question not to be decided by prejudice on either side. Any agency which will effect this ought to be acclaimed and welcomed, particularly if it be considered that, barring some work done under Prof. W. E. B. Du Bois's direction for Atlanta University and the United States Census, no scientific inquiry into the problem has gone on anywhere. There are persons of consequence who demand a national bureau in Washington for the study of the social and economic status of the child. If this is needed, surely a bureau for studying the negro race is even more in order.

And not merely because of the negro. As the Conference pointed out last year, his wrongs bear most heavily upon those whites nearest to him in the social and economic scale. His disfranchisement has been followed by the disfranchisement of thousands upon thousands of whites, so that less than half the white men of voting age in Ala-

bama passed upon the recent prohibition amendment to the Constitution of the State. Grievous as is the lot of the oppressed, that of the oppressor is the worse in the long run—so often is he compelled to commend to his own lips the poisoned chalice. Hence we have no hesitation in saying that the National Negro Conference's title is misleading; it ought to be known also as an undertaking on behalf of the millions of Poor Whites of the South. Disfranchised, often degraded, lacking in many communities the enterprise of the negro, pitifully ignorant, they are often the easy prey of demagogues whose whole stock in trade is the menace of the negro. But upon the welfare and efficiency of the negro depend the economic prosperity and progress of the entire South.

GROWTH IN SOUTH AMERICA.

The year 1910 is the centennial of national independence for the greater part of Spanish America. The richest and most powerful of Spain's former colonies in South America was also the first to unfurl the banner of revolt. On May 25, 1810, the provinces on the La Plata, under stress of French invasion in the mother country and English invasion at home, organized a junta of their own. That event is to be celebrated by an entire week of national holiday-making, opening on the twenty-second of this month and followed, in the beginning of June, by the opening of an international exposition at Buenos Ayres. Officially and predominantly, the exposition will be the International Exhibition of Railways and Land Transport; but annexed to it will be international exhibitions of agriculture, arts, and hygiene, and a national exhibition of industry. The recent growth of Argentina has been such as to disprove many facile generalizations about the decadence of the Latin race. Given equally favorable conditions of climate and natural resources, the Latin peoples who make up the population of Argentina have demonstrated their ability to keep pace with the self-complacent Anglo-Saxon. If the people of Argentina have given way of late to the intoxication of their own achievements, excuse for their exuberance is not wanting.

Argentina and Canada are the two "booming" pioneer nations of the American continent. A short statistical parallel between the two will establish the point just made regarding the rate of Latin-American progress. In 1901 Canada had a population of 5,371,000; today, reckoning on the basis of the same percentage of increase as obtained between 1891 and 1901, the Canadian population must be between six and a quarter and six and a half millions. Argentina in 1895 had a population of 3,955,000. On the first of January, 1910, the officially estimated population was 6,805,000. The two nations, therefore, are, in numerical strength, almost equal. Both are fed by huge streams of immigration, but though Canada within the last two or three years has been drawing the heavier numbers, Argentina still has a higher proportion of foreign-born among her population. Of Canada's 5,370,000 in the year 1901, just 700,000 were born abroad. Of Argentina's 6,800,000 in the present year, one and three-quarter millions were foreign-born. Of these the Italians numbered 844,000, Spaniards 424,000, French 105,000, English 26,300, Austrians 24,700, Germans 23,700. In point of numbers, the non-Latin element is proportionately not much more important in Argentina than the Latin element is in the United States.

With fairly equal populations, how do Argentina and Canada compare in economic growth? Only a few general figures can be cited. In the five years between 1902 and 1907 the mileage of Canadian railways increased from 18,868 to 22,452; in the five years from 1905 to 1910 the mileage of the Argentine railways increased from 13,000 to 17,000. In the latter year the invested capital was estimated at $900,000,000. Federal revenue in Canada within the years 1902-06 rose from $58,000,000 to $80,000,000, or about 38 per cent. Federal revenue in Argentina during the years 1903-07 rose from $75,000,000 to $107,000,000, or about 43 per cent. In 1900 the total of imports and exports for Canada and Argentina were, respectively, $320,000,000 and $259,000,000; in 1905, the figures were $453,000,000 and $509,000,000; Argentina had made an increase of 96 per cent. in five years and taken the lead. In 1908, the figures were: Canada, $604,000,000, and Argentina, $638,000,000. The record of the last decade shows, therefore, the South American republic moving forward in population, transportation, and foreign trade at a faster rate than the nation we have fallen into the habit of looking upon as the infant phenomenon among English-speaking peoples.

But there is one important factor that must be taken into account. It may be true that numerically the non-Latin element in Argentina is of about the same importance as the Latin element in our own country. In their respective influence on the national life, however, there can be no comparison. British and German capital and British and German industrial and commercial leadership have played a most important part in the economic development of Argentina. And to that very important extent the remarkable growth of that republic is not as exclusively a product of Latin energy as the ethnic make-up of the population might tend to indicate. There is tacit recognition of this fact in the very circumstance that the centennial of Argentine independence is to be commemorated primarily by an International Railway Exhibition. Why a railway exhibition? Because it is in Argentine railways more than in any other form of national enterprise that foreign capital, and, in particular, English and German capital, is closely interested. European railway investments in Argentina run into the hundreds of millions, and the fifty thousand Britons and Germans in Argentina are there as the representatives of so much invested wealth.

Yet with all allowance for the English and Teuton influence, Argentina remains a Latin country. She is as much so in the spirit of her civilization as in the character of her people. Argentina takes pride in speaking of herself as the most promising of the young-born of the Latin race on this side of the Atlantic, destined to demonstrate the vitality and capacities of that race as our own country has done for the North European stocks, and destined to work out the spirit of the Latin civilization under the favorable auspices of a new world. Argentina looks to France and Italy for her literature, her art, her music, and receives their great men with high distinction. Buenos Ayres models herself closely upon Paris, and in more than one way succeeds. Take her all in all, Argentina presents quite a different picture from the Spanish-American republic of current tradition.

PAST AND FUTURE OF JOHNS HOPKINS.

When the Johns Hopkins University opened its doors, thirty-four years ago, its endowment of three and a half million dollars was looked upon as a wonderful start for a new institution. Not as great as the then existing endowment of one or two of the old universities, it was far greater than any sum that had ever, up to that time, been placed at the disposal of an institution of learning, by private munificence, at a single stroke. With freedom to utilize their resources in whatever way they thought best, the trustees were at once confronted with the question whether they should take a local or a national view of their great opportunity. The path of least resistance would have been to build up another big American college, attracting large numbers of undergraduates, and doing at Baltimore what Harvard and Yale and Princeton were doing further North. Had they followed this course, they would doubtless have met with ample success, and especially with that kind of success which is measured by large figures in the college register. There would have been at Baltimore a fine college, with a large and rapidly growing body of prosperous alumni scattered over the country, and with true university work represented only in that fragmentary way in which it was to be found in our other institutions of learning.

But the trustees of Johns Hopkins rose to a higher view of their opportunity. They determined to make the new university an instrument for rendering to the whole nation a signal service. They undertook to introduce in our country the methods and standards of the great universities of Europe. To this conclusion they came after an earnest consultation with Mr. Gilman, before his acceptance of the presidency; and to it they loyally adhered when the university was put into operation. Bold as the project seemed to many at the time, it was attended with immediate and brilliant success. American science and scholarship were placed on a new plane; in the course of fewer years than any one would have supposed possible, the standards of the leading American universities were brought up to the European level. Systematic research in every department of human knowledge gradually became a fully recognized function of our universities. Before the advent of Johns Hopkins, it had seemed part of the order of nature that these things belonged to Germany or France, but that America must be content to take the results which European investigators had obtained. The time, indeed, was ripe for a change; but it might have been twenty years longer in coming, had not Johns Hopkins University taken the honorable and clear-cut stand that it did.

What seemed a remote possibility before it was accomplished has often a way of seeming a matter of course after it has become a familiar possession. If anybody is inclined to take that view of the advance in university work brought about by Johns Hopkins, let him consider what happened seventeen years later, when the Johns Hopkins Medical School was opened. The subject of medical education was a matter of intimate concern to everybody, and everybody knew that medical education in America was in an extremely backward condition. The habit of giving great sums of money to universities, too, had grown wonderfully in the interval; had there been a genuine realization of what was needed, and a genuine and sharply-defined desire to accomplish it, the money would easily have been forthcoming. And yet it remained for Johns Hopkins—which had to wait for the modest sum of $500,000 necessary for the purpose—to do in the field of medical education what it had already done in the general field. How signal was the service thus again rendered to the nation may be judged from the way in which President Eliot has referred to it. "The prodigious advancement of medical teaching which has resulted from the labors of the Johns Hopkins faculty of medicine" is an achievement, said the president of Harvard, which must "be counted as one of superb beneficence." And no one who knows the way in which the work of the Johns Hopkins medical school has been elevating medical teaching throughout the country during the past seventeen years can doubt the justice of this tribute.

To continue its beneficent career in full vigor, to maintain the quality of its work, and to expand in the directions indicated by the needs of the time, the Johns Hopkins University needs a liberal addition to its endowment. By its very merit, it has, in a great measure, cut itself off from the source of supply that is most prolific in the case of other universities. It has turned out no large number of rich alumni; its graduates are engaged chiefly in scientific and professional work, a large proportion of them in the work of teaching. Neither has it made that kind of appeal to local patriotism which the big college naturally makes. Its work has been truly national; and yet the contributions it has received thus far have come, virtually entirely, from its home city. There have been a number of handsome individual gifts and bequests, and there was, several years ago, a generous subscription of a million dollars, to which hundreds of Baltimoreans contributed, to make good losses sustained through the original investment in Baltimore and Ohio stock. It is eminently right, therefore, that the friends of the university should now make an appeal for support from the country at large. They propose to raise two million dollars, and there should be no doubt of their early success in doing so. To give to Johns Hopkins is to give not to Baltimore, but to the nation. Its work has redounded signally to the honor and the benefit of the country; and the spirit in which that work has been carried on in the past is the spirit that rules the present of the institution.

MALICIOUS ANIMAL MAGNETISM.

Nature usually asserts herself sharply against all perfectionist theory. It is not surprising, therefore, that the sect whose chief tenet is the non-existence of evil should be greatly troubled by evil in the aggressive form of "malicious animal magnetism." This pseudo-scientific term means nothing more than that enemies, generally of the same faith, may, though at a distance, injure the mind of the sufferer. It is the reverse of the beneficent "absent treatment" by which disease may be cured by a remote "mental healer." Under the terror of such projected maleficence, several unhappy persons have committed suicide. The orthodox might be tempted to hail these tragedies as evidence that the human mind and the visible order of things require a devil. And it is impossible not to mark the significance of a monistic creed which asserts the sole existence of God and

good, beginning to assume the familiar dualistic form. The devil's work which is believed to be in progress should before long produce a robust credence in a diabolical first cause. But before malicious animal magnetism be accepted as an uncovenanted ally of Christian dualism its nature should be narrowly scrutinized. Is it a new thing or is it merely one of those new names which human nature interposes between itself and past experience, in order that life may be kept fresh and unguided by the accumulated wisdom of the race?

To the sufferers, doubtless, malicious animal magnetism looks like a new and mysterious hazard of the soul. But if a case had been presented to a seventeenth-century magistrate of the Colony of Massachusetts or of Lancashire, he would have known all about it, would have pronounced it a common case of witchcraft, and, had any respectable evidence been produced against the offender, would unhesitatingly have condemned the witch to the gallows. A Neapolitan sorceress of to-day would probably refine upon this diagnosis. The trouble might be a simple case of evil eye. If the affliction were what is called the "death thought," it would rather be caused by specific charms, piercing some effigy or symbol of the victim with nails, or the like. Safeguards and antidotes would be forthcoming for a fee, and in this respect latter-day magic seems more humane and efficacious than some of our newer transcendental religions. If this apparently new phenomenon were referred to an alienist, he would promptly class it as a symptom of incipient insanity, being merely a form of the classic delusion of persecution. In some common-sense way he would urge the sufferer to clear his mind of such dangerous nonsense, and if the patient responded to that good advice, undoubtedly the malicious animal magnetism would cease to operate.

The spectacle of an ideal and highly benevolent faith spontaneously developing some of the ugliest superstitions of the past, and in the name of mental health actually undermining the intellects of certain of the faithful, is to the historical student of religions both pathetic and instructive. Here he will see, as under the lens, the inevitable contamination of creeds by the fears and prejudices of weaker humanity. Here is a cult beginning to stultify itself within a generation of its foundation and within the lifetime of the founder. The great religions, those that rest on some ultimately sound ethical idea, have remarkable powers of reaction and recuperation, but even they almost never recover their pure estate, and it may be doubted if Christian Science has the force to extirpate evils that are palpably of its own breeding.

Not only in the newest religion, but in all wholly optimistic or perfectionist creeds, there lurks the danger that the mind, as it is calmed and reassured, may be also relaxed. Such deliberate waiver of the conscious and logical processes is, indeed, usually regarded as a virtue. Thus the believer may be possessed by the infinite thought, attain to divine frenzy, receive the Holy Ghost, as the case may be. But what the mystic takes for the working of higher powers will too commonly be the turbid undulations of his own spirit, the disorderly and appalling operations of a mind that has voluntarily renounced all principle of control. History has seen the phenomenon many times repeated. Throughout the thirteenth century maniacal bands infested France and Italy, either in search of or in actual communication with the Holy Ghost. Such fanatics had to be dealt with not merely as heretics, but as enemies of the common peace. We see to-day on a much attenuated scale the morbid and unregulated emotionalism that in an age of universal superstition expressed itself collectively. In fact, the notion of a projected malign influence is an evident step towards moral and mental suicide. It may be said that all creeds, when perverted, lend themselves to such self-destroying idolatry of the cave. But this is not true. The more mystical faiths, those that reject the customary rational processes and contemn the verdicts of common sense, are especially liable to such perversion. Sow an ecstasy that borders on hysteria or a complacency that grazes imbecility, and you have a seed that will sprout rankly into derangements of which the belief in malicious animal magnetism is merely one of many varieties.

There is happily a defensive and prophylactic principle in the mind by which most persons who profess the preposterous will, after all, generally rule their living, contrary to their standards, in accordance with common experience and usage. But the burden and the peril of such religions upon weak and ill-balanced souls are evidently excessive, and such religions will and must intensify and even produce precisely those maladies of the spirit which it is their appointed mission to heal.

THE COMET.

Outside of newspaper circles we doubt whether there is much fear of the deadly cyanogen in the gases of the tail of the comet to which Halley first gave a local habitation and a name. People are scanning the midnight heavens at present, not in terror, but in curiosity. Nor is it idle curiosity at that. Consider what it means to our shrieking, red-lettered, yellow-journalized civilization to be confronted with a phenomenon that really comes only once in a life-time. Birth alone comes as infrequently, and death does; but at neither of these rare events in his life is the average man in a position to speculate on its meaning. The comet stirs in him something of that sacred awe which is not even approximated in the shop-girl's "awful." It is awe at vast distances, and at the infinities of time in which Halley's comet ticks off the seconds at intervals of three-quarters of a century. There are very few other things within one's consciousness or knowledge that beat with so slow a pulse. Kings die every little while, Presidents and Governors come and go, fashions in women's hats come every year, religious cults in Boston come every two or three years, political panaceas spring from the oven piping hot with the months, literary reputations flash up and subside with the weeks. To the vast majority of us the comet has something of that terribly overworked quality, the awful, because it is really that other terribly overworked thing, unique.

The sense of awe is with us to-day, even though Paris is planning comet parties, at which men are requested to appear in evening dress of pale blue, and ladies in gowns of the color of the firmament. That is but our light-hearted modern way of concealing sentiment. Were it known for a certainty that the comet was bringing the world's end with it, the Rue de la Paix might be advertising the latest thing in ascension robes, and hostesses might be arranging cotillions at which the favors would be miniatures of Gabriel's horn in gold. For

even the frivolity of life to-day is permeated with a sense of the reign of law. It is impossible to discern the wrath of an offended Power in an instrument whose periodical recurrence is foretold by the mind of man. If Halley's comet is ever to hurl sinful humanity into destruction, it must have been destined for that service from the moment that the clockwork of its orbit was first set into motion. But that again is law, and to strive against it is to strive against the inevitable. There is no greater cruelty involved in man's being blotted out by the noxious gases of Halley's comet than by the ultimate exhaustion of the sun's heat which astronomers have described as inevitable. If anything, the slower method will probably be the harder to bear.

But even those persons who confess to a certain degree of superstition need not quake overmuch at the sight of the comet. The list of notable events in mundane history of which Halley's comet was a witness is not a very convincing one. The fall of Quebec, the defeat of Harold by William the Conqueror, at Hastings, and the invasion of Gaul by Attila are not proof positive of the malignity of Halley's comet. It is to be noted that if Quebec fell and Hastings was lost and Gaul was invaded, there was somebody who captured Quebec, and won Hastings, and led the invading Huns. From the point of view of Gen. Wolfe and William the Norman and Attila the Hun, Halley's comet made a very comfortable neighbor. In any case, it is not difficult to start from any date and go back or forward by seventy-five-year intervals to find sufficiently important occurrences to serve the needs of superstition. If Halley's comet had appeared to Frenchmen the year when the States-General met at Versailles, it would also have appeared to them about the year of the battle of Sadowa, which meant much to them, and about the year of the death of Louis XIV, and of the appointment of Richelieu as first minister to Louis XIII. Or we might take any portentous date in our own history, such as 1896, when William Jennings Bryan delivered his first great speech, and, going back by Halley periods, encounter the Missouri Compromise and the fall of Louisburg.

And the year 1910 may well supply more than one dramatic coincidence with the appearance of our distinguished celestial visitor. The future historian may have an opportunity to date the beginning of the fall of the British Empire from the death of Edward VII. Or he may point out that Halley's comet and the Ultimate Consumer in the United States came into public notice at about the same time. The comet's appearance has been coincident with the obscuration, permanent or temporary, of Uncle Joe Cannon, Gen. Estrada of Nicaragua, and Mme. Palladino; and it missed Dr. Cook by only a few months. If, therefore, it has brought evil, it has also brought good. Halley's comet may be an omen, but, in the light of the facts just stated, it is undeniably a relief as well.

NEWS FOR BIBLIOPHILES.

The following notes referring to several privately printed books and publications of book clubs issued within the past three or four months, may be of interest to collectors.

J. M. Andreini has prepared and printed privately a descriptive catalogue of the book-plates engraved by the late J. Winifred Spenceley. There is a preface by Mrs. Spenceley, also a short bibliography by Mr. Andreini, with remarks on plates engraved for E. D. French, and with extracts from Mr. French's letters. The catalogue is the fullest thus far prepared, and supersedes the three earlier lists. The plates are described, and all "states" known to exist are enumerated. The volume has been printed in an edition of one hundred copies.

Adrian H. Joline of this city has printed, as a pamphlet of 109 pages, for private distribution, an interesting study of Francis Jeffrey, under the title of "A Famous Reviewer."

George A. Stephen, assistant librarian of the St. Pancras Public Library of London, has collected a series of articles which he contributed in 1909 to the *British and Colonial Printer and Stationer*, on the subject of Commercial Bookbinding, with the processes and the machines used. Seventy illustrations and diagrams are included.

F. D. Phinney, superintendent of the American Baptist Mission Press, Rangoon, has printed a little pamphlet of 100 pages descriptive of that press and its work, and showing a specimen of the Burmese types recently cut for the use of the press.

The thirty-first annual Year Book of the Société des Amis des Livres contains, besides reports, by-laws, and the other usual information, a list of the twenty-five volumes published by the society since its incorporation in 1876. Nothing seems to have been issued since 1908. The edition is always very limited—generally about 115 copies are printed—and the society's publications very seldom appear in American auction rooms.

The Bibliophile Society has recently issued a volume containing three unpublished orations by John Fiske. These comprise "The Discovery of the Columbia River," delivered at Astoria, Ore., 1892; "Crispus Attucks," delivered in Boston in 1888, and the "Columbus Memorial," delivered in Boston in 1892. Four hundred and eighty-nine copies were printed. Another publication of the society, a little book printed on vellum, 489 copies, has the title "John Keats. Unpublished Poem to His Sister Fanny, April, 1818." The manuscript of this poem was purchased by the society for $1,100, and presented to Mr. Bixby. Fanny Keats was born in 1803, when John Keats was eight years old. Another work, described as "printed privately and offered for subscription only to members of the Bibliophile Society," is the "Travels of John Davis in the United States of America, 1798 to 1802," and is in two volumes, octavo, finely printed on Van Gelder paper. A bibliography is spoken of in the preface as "printed in the appendix," but there is no appendix.

Vol. X of the "Transactions of the Bibliographical Society," published in March, includes the proceedings from October, 1908, to March, 1909, and contains, among other articles, a bibliography of the "Thoughts of Marcus Aurelius Antonius," by J. Wickham Legg; a bibliography of Petronius, by Steven Gaselee, and a classified list of bibliographical books published since the foundation of the Bibliographical Society in 1893, compiled by R. A. Peddie.

The Club of Odd Volumes of Boston has recently issued to members a book printed at the Essex House Press, with title, "The Private Press: A Study in Idealism, to Which Is Added a Bibliography of the Essex House Press, by C. R. Ashbee." The volume contains eighty-six pages quarto, and is bound in Kelmscott boards. One hundred and twenty-seven copies were printed, of which fifty were reserved for subscribers to the publications of the Essex House Press. The essay as printed is, in substance, an address delivered by Ashbee before the Club of Odd Volumes, in February, 1909. A private press, as defined by Mr. Ashbee, is "a press whose objective is, first of all, an æsthetic one, a press that, if it is to have real worth, challenges support on a basis of standard, caters for a limited market, and is not concerned with the question of the commercial development of printing by machinery."

Mr. Ashbee and his associates in the organization of the Essex House Press secured from the estate of William Morris all the plant of the Kelmscott Press, excepting only the types and wood blocks. The principal compositors and pressmen of the Kelmscott Press have been employed, the same manufacturer has made the paper, and the same artists have cut the blocks. Such wood-cuts as have appeared in the Essex House Press books, and could be used in the present volume, are here printed. These include work by Walter Crane, Laurence Housman, William Strang, Reginald Savage, and others. One of the initials used in the Supplement to the Edward VII Prayer Book contains a vignette portrait of Theodore Roosevelt, but the name is mispelled "Rooseveldt" in the legend and in the bibliography.

The Doves Press, conducted by Mr. Cobden-Sanderson, announces for publication in June the second part of Goethe's "Faust." Two hundred and fifty copies are to be printed on paper, and twenty-five on vellum. All of the latter are already subscribed for.

Mr. De Vinne's work on "Fifteenth Cen-

tury Printers of Italy," just published by the Grolier Club of this city, will be noticed next week.

Correspondence.

THE DRIFT IN AMERICAN FOREIGN POLICY.

To the Editor of The Nation:

Sir: President Taft's recent speech at Pittsburgh, in praise of Mr. Knox's foreign policy, ought to stir every one to careful thought. Does it not threaten, doubtless with fair intentions, to be an arrogant and meddlesome policy?

In the first place, observe what we are undertaking in Central and South America. The President thinks it a matter of pride to use the vast power and influence of the national government to help get shipbuilding contracts for the men in the steel business. Is it not possible that this may be a cause of shame? We send a fleet around the world on exhibition for the weaker nations, and then follow it by persuading Argentina to set up a little fleet, quite possibly on borrowed money. Will the money be loaned by New York bankers? I submit that it is immensely perilous business, when the United States uses governmental influence to saddle other and poorer peoples with the burden of building battleships. Is it not somewhat like the old-fashioned business of selling muskets and gunpowder to the Indians?

Moreover, we seem to be fairly launched upon the enterprise of using the government for the collection of debts in the countries south of us. Naturally the big interests which seek to exploit new countries are pleased to look to Uncle Sam benevolently to guarantee their ventures. Are we not doing enough for these interests at home with high tariffs and other favors, without going into business for them abroad? We ought to be able to see where the precedent already established in Santo Domingo, of running other nations' custom houses, inevitably leads. It means a kind of protectorate, with a responsibility over the conduct of another people, leading the easy way toward some kind of annexation, at our convenience. All this is for the money power, and not because we love the people whose taxes we benevolently collect.

I heard a high official of the United States, when asked whether our present policy, for instance, in the Philippines, did not logically carry us to the control of South and Central America, reply: "I should not mind it a bit." No wonder, when such ideas are in the air, that South American states think it necessary to order Dreadnoughts!

I am aware how patriotic it sounds to promise to protect American citizens and guard their property wherever they go on the planet. It would not be difficult to raise a war cry over some injustice in the treatment of Americans abroad, while we quietly tolerate exactly such injustices when perpetrated at home. Where have Americans abroad suffered greater indignity than Italians and Chinese have borne in our own country, often without redress? If any Latin-American State had treated a citizen of ours with as cruel wrong as our authorities meted out to the *bona fide* American citizen, Mr. Ju Toy, I fear where our resentment might have carried us.

No nation is as yet civilized enough, and free of blood on its own skirts, to venture to set itself over other states, as the lordly elder brother to keep the others in order. But this is just the trend of our foreign policy in South and Central America. Why should not people who go into half-civilized parts of the world, or embark their business ventures under feeble governments, take their own risks? They are sure to behave better so, than when they put on the arrogant airs of men who can summon ships to their defence. Are we sorry that Livingstone and Stanley had to make their own way in the heart of Africa? Has it ever been well for missionaries to the most degraded peoples to be followed up by bombarding gunboats? The fact is, among the more civilized nations, the American traveller or merchant is as safe to-day as he is at home, and, if honorable himself, needs no police protection from Washington. Whereas, everywhere on the fringes of civilization, including plenty of places in the territory of the United States, it is impossible completely to guard heedless, hot-tempered, venturesome, and especially greedy and unscrupulous individuals. Our present policy threatens the rise of serious and embarrassing complications over some drunken brawl in Callao, or the failure of a Latin-American court to satisfy one of our exploiting syndicates.

Mr. Taft is warm in praise of Secretary Knox's attitude on the question of the "open door" in the East. We all like the open door—for ourselves. Does President Taft really mean to hint, as his words imply, that this nation stands ready to impose its doctrine of an "open door" in Manchuria or China, and even to go to the length of breaking the peace of the world, over a matter of a few petty millions of dollars of trade? Is there any conceivable difference, that could arise between our government and that of Japan, or Russia, or Germany, touching privileges of commerce, to warrant the intervention or even the threat of war? Will the United States remain the greatest dog-in-the-manger in the world at keeping its trade to itself, and have no bowels of mercy for the other animals who like their little mangers?

In speaking of our foreign policy, I used the word "drift" advisedly. No mere private citizen should be inhospitable to any light which may alter his views upon the colossal subjects with which modern statecraft has to deal. Grant that those of us, who now look upon our present foreign policy with grave apprehension, may be mistaken; grant that we do wisely to let our national government arrange loans at Peking for syndicates of bankers, and go touting in Montevideo for battleships in behalf of the ship-building industry; grant that we might well take over the custom houses of half a dozen states, and meet the further consequences of responsibility for millions more of people; grant that we ought to set up Gibraltars in the Pacific and be ready to fight for the entrance of oil and sundries into Manchuria; grant even that we might need to dispatch battleships to Constantinople, or march an army to Damascus to rescue a missionary, or one of our newly naturalized Syrian citizens; grant all you please in favor of an active and aggressive foreign policy, my point is, that we are at present merely drifting into it, without due and deliberate consideration. Under the forms of a democratic government, we have the extraordinary spectacle of two or three men in the executive department, quietly, and, perhaps, unconsciously, shaping the foreign policy of a great nation, without apparently having taken pains to think out the real significance of their course, much less to weigh the possibility of a wiser and more patriotic, and, perhaps, more "Christian" alternative. Meanwhile, the deliberative body in our government merely looks on and is silent. Hardly any warning or questioning views are raised. The Senate, notoriously sensitive to its treaty-making rights, allows, without protest, the establishing of precedents in international matters even more vital than most treaties deal with. The nation, which can scarcely let a draw-bridge be interfered with without action by Congress, throws into the lap of a single man the power to send a costly fleet around the world, to let words go out from the State Department which might kindle irremediable war, or to moor ships with a menace in the port of a friendly state. Is it not time for the American people to wake up, and at least take notice where we are moving? If the motion is right, ought it not to be deliberate, so that we may know that we are right?

Charles F. Dole.

Jamaica Plain, Mass., May 9.

PENSIONS.

To the Editor of The Nation:

Sir: Thank you for your editorial on pensions in your issue of May 5. Remembering well and having somewhat participated in that fine enthusiasm which, in the earlier calls of 1861, brought volunteers in excess of the requisition; recalling the ardent love of country and unreserved devotion to it then expressed, I can think of no contrast meaner and more degrading than the perpetual whine and holding out of the hat, especially during the past thirty years, ostensibly in behalf of such soldiers and patriots. I am fain to believe that the chief backers to the pension agents and other middlemen in such applications come from "volunteers" of 1864, not to speak of the "bounty-jumpers," men who enlisted upon receiving a sum of money with the intention of deserting at the earliest opportunity and of repeating the process—I have known of cases when they were in the ranks less than six hours, and then, under another name, became candidates for another "bounty." Such men then made a trade of patriotism, and possibly have resumed it in more peaceful times. In those early days true men did not stand upon their "rights," but threw themselves to the fore unreservedly, with all their hearts. Yet they knew what we have apparently forgotten, that their country had a *right* to call them to arms—as clear and as full a right as to take their property by taxation—and that they had no greater right to claim largess from their country because they had served her under arms than had those who paid war taxes, because they thus impoverished themselves in contributing to the same desired result. Not one of us begrudges a pension bestowed upon any crippled by wounds or by a disease certainly ascribable

to the service. This, indeed, might be considered as implicitly a part of the contract for their support made at the time of enlistment; further than this they have no right or claim. Neither has Congress or a majority party a moral right to be generous with the nation's funds. They stand as trustees; and a trustee for a minor or a widow has as clear a right to use his ward's money in doles to beggars as has Congress to bestow largess from money wrung from poor and rich through taxation. Our countrymen are not niggardly or ungenerous, and had voluntary subscriptions been asked for exceptional cases beyond the legitimate powers of the nation's trustee, undoubtedly such call would have been liberally responded to by others and by the millionaires who survive among the veterans. T. E. C.

Baltimore, Md., May 7.

To the Editor of The Nation:

Sir: It seems to me that military pensions and other allowances after retirement to civil life should be based upon the public benefit reasonably to be expected therefrom. Grateful recognition of past service is not properly transmuted into coin unless there is a fair chance of profit to the whole community in the transaction. As bearing upon my theory of the matter, I quote from Sir Henry Maine's "Popular Government" (Essy ii) a few sentences expressing what looks to me like truth, and what will be conceded to be at least the honest judgment of a careful and able investigator. He says:

> The first necessity of a State is that it should be durable. . . . Next perhaps to the paramount duty of maintaining national existence comes the obligation incumbent on democracies, as on all governments, of securing the national greatness and dignity, . . . and the government which fails to provide a sufficient supply of generals and statesmen, of soldiers and administrators . . . is a government which has miscarried. . . . If the choice has to be made, and if there is any real connection between democracy and liberty, it is better to remain a nation capable of displaying the virtues of a nation than even to be free.

Perhaps this country may never again need to call upon the most vigorous of its citizens to become soldiers in its service. It does not appear unwise, however, to take such obvious measures as will be likely to facilitate the making of armies, in the case of armies being some time needed. Men do not (as a general rule) get themselves "stormed at with shot and shell" or exposed to the vicissitudes of heat, frost, and fatigue because they like it. Patriotism is often a sufficient inducement, but pecuniary inducements have always been offered, in addition, to the persons chosen by the government as the most desirable for such bounties (usually commanders rather than actual fighters), *pour encourager les autres*.

In America such prizes have been given to the rank and file for the apparent reason that the award would tend to insure the existence of a rank and file in time of need. The details of the distribution may not commend themselves to many of us, but the intention is good. Some think that a modification of the present methods so as to make them tend to induce enlisted men to remain in the service more than ninety days, and to comport themselves in such wise as to obtain commissions as officers, might also be worth while. Out of this feeling, as I understand, has grown the bill to create a volunteer officers' retired list, similar to that enacted for revolutionary officers eighty years ago.

Perhaps I am biased in its favor. I was a civil war soldier who, after serving a year and a half as an enlisted man, was commissioned lieutenant as a mark of approval of my conduct in battle. I continued in the regiment (Twenty-fourth New York) until the expiration of its term, having meantime been advanced one grade. If the bill just mentioned should become a law, I should be a beneficiary, if surviving, to the extent of about $50 a month. Like all partieipants in the war now living, I have entered the domain of old age, and it did not occur to me that the bill was a "scandalous raid upon the treasury by the pension grabbers" until I noted the characterization at the head of your editorial comments last week, along with the observation that its passage would call loudly for a Presidential veto.

If I believed that characterization to be deserved, I would not apply for a place on the lists, although the allowance would mean a substantial addition to my comfort. I have not asked any member of Congress to support the bill, because such a request might savor of solicitation of charity, and I think I could get on without it. But even after carefully reading your editorial of this week, I am unable to view the matter in the light there indicated. I may be wrong, and if so, or if the Congress concludes it best not to act favorably on the bill, I shall try to content myself with the outcome. Theron Wilber Haight.

Waukeska, Wis., May 6.

To the Editor of The Nation:

Sir: In holding up in its true light the measure now before Congress, for placing the volunteer officers who went out of the national service forty-five or more years ago, upon virtually an equal footing with the professional military men, you do an important service not only to the country but to those survivors of the volunteers who beg for protection against the evil ways of their associates.

The project is the latest, but it is to be feared not the last, development of the startling principle which has been emphasized at soldiers' meetings, especially at those of the Grand Army, for many years. The substance of this doctrine is that the so'dier, not only of the civil war but of all national wars, has placed the government under a permanent money obligation, even though he has returned unharmed to the activities of the plain citizen; and that, in its delay to meet this debt promptly and gencrously, the government has shamelessly shirked its moral obligation.

One of the earliest expressions of this view, against which at the time of its publication I had occasion to make a public protest, was the insistence of a national encampment of the Grand Army that Congress should at once pass a service pension law, because "the Grand Army, in national encampment, had twice voted for it; because the Grand Army posts of every loyal State had petitioned the present Congress for it; because the payment of such pensions will awaken a patriotism such as no other means can bring forth; because only by the passage of such a measure can justice be done the saviors of the republic." The most recent repetition of this claim appears in the pamphlet circulated by a committee for securing means to lobby in Congress for the present measure, in the form of a telegram from sympathizers in California: "The volunteer officers ask what is justly due them. Let us fight for our rights as from sixty-one to sixty-five!" Reduced to its legitimate meaning this is an assertion that, once a soldier under any national emergency, always a soldier, for the pay, but not for duty. Some of us of a simple mind have always assumed that a republic, like any other system of government, has in a critical time absolute command of the property and lives of its subjects; and that such a crisis occurred at the outbreak of secession, when the republic, instead of resorting to conscription as it might have done with entire justice and wisdom, trusted its needs to the spontaneous public spirit and devotion of the people and received such a response of self-forgetting enthusiasm as marks the high tide of American patriotism. Thus a volunteer soldier is simply a special policeman with the peculiar honors that attach in romance to military service. It is his own fireside, his own life that he is defending; and, while his neighbors for whom he acts as a substitute may be grateful to him, it is not for them alone but for himself that his service is performed. And when his special duty is done, he returns to the ranks of plain, civil life. Under this new teaching of political morality a republic, far from being the strongest, is the weakest possible scheme of government. It may beg its citizens piteously to save it from peril; but, if they are indifferent to its calls, whether because they are in a profitable occupation or because they are afraid, it has no recourse; like Dogberry, with his unwilling thief, it must let them go the way of their preference. This is individual liberty carried out to anarchy. It seems a strange doctrine to be labelled patriotism. Yet all the claimants for pensions resent any imputation against their disinterested love of country.

The pending measure goes a step further than the claims of the Grand Army in proposing the creation of an aristocratic class of beneficiaries of pension; for creation it certainly is. No man of us for these forty odd years has ever dreamed that he was still in government service. We dropped our commissions and our uniforms with relief when we were discharged, and have been diligent ever since in earning our livelihood like other civilians, not setting ourselves above our old companions in arms, the former private soldiers, who incurred the same dangers as ourselves and are entitled to fully as great appreciation from their country.

If six hundred or twelve hundred dollars a year is the right amount to soothe our neglected honor, why shall not an equal sum be given to these, once of lower rank, but now our equals before the law and in the eyes of an affectionate country?

A Volunteer Captain.

Cincinnati, O., May 7.

CORRECTIONS.

To the Editor of The Nation:

Sir: Perhaps some of your readers who consulted your review of Professor Hart's "Slavery and Abolition" in the issue for September 13, 1906, may be interested in the following notes.

On page 184 we read of Whittier: "During the three years, 1835 to 1837, he was a member of the Massachusetts Legislature." Pickard's "Life of Whittier" makes it clear that Whittier, elected in 1835, served in the Legislature, but, though reëlected, was unable, on account of poor health, to take his place, and that he was not again chosen. As pertinent to Professor Hart's purpose as the influence Whittier exercised over Cushing, p. 185, is the circumstance narrated by Pickard, Life, I, 285: Whittier allowed himself to be a Liberty candidate for Congress, so long as there was no danger of election, and in 1842-43 was successful in preventing the election of any other man, his opponents not being acceptable to the anti-slavery forces. But in December, 1843, Webster having recommended that the Whigs should nominate Whittier, Whittier, in alarm lest he should be elected, declined the candidacy.

Professor Hart, on page 186, says that Lowell's first anti-slavery utterance was called out in 1845 by the capture of some fugitive slaves. According to Scudder's list in his Life, Lowell had published, as early as August, 1843, his "Stanzas on Freedom," and between that time and his lines on the capture of fugitive slaves had appeared two anti-Texas poems.

On page 189 Professor Hart writes a sentence implying that Channing died in 1839. The correct date is 1842.

Professor Hart, probably, was less painstakingly accurate in those portions of his book that had to do with men of letters.

UNIVERSITY ADVERTISING.

To the Editor of The Nation:

Sir: In the report of the recent meeting of the American Oriental Society, in your issue of April 14, mention was made of a paper by Prof. George A. Barton, "deprecating the sensational manner in which the discovery" of Dr. Hilprecht's "Deluge fragment" was exploited. The matter is of interest not only in connection with the quarrels of the Orientalists, but in its relation to the subject of university advertising, lately discussed in the annual report of President Pritchett of the Carnegie Foundation. It is to be feared that the University of Pennsylvania, while by no means alone, is not least among the sinners in this direction; and Professor Hilprecht may be a victim more than a party to the fault. His University maintains a "Bureau of Publicity," which perhaps exercises many wholesome and legitimate functions—though one wonders that a society of scholars need court publicity in these well-reported days—but which incidentally does things calculated to make the judicious grieve. Its weekly organ heralded the "Deluge tablet" under the head-line "The Biblical Flood Story Confirmed," and followed up the "story" with an editorial in which it was affirmed that the discovery "completely vindicates the Old Testament text and is a check to super-critical ideas and skepticism with regard to the accuracy of our sacred writings"; Dr. Hilprecht's "Temple Library" having become "a very bulwark and defence for all that is holy and sacred to us." Clearly it could not have occurred to the writer either that there might be doubt as to the date of the fragment, or, supposing that it paralleled the Biblical account of the flood, that there might be various explanations of the fact, or (finally) that, for such intelligent persons as university publications are supposed to represent, "all that is holy and sacred to us" has long ceased to depend upon the historical accuracy of the early chapters of Genesis. The effect of the article was therefore to awaken ridicule even among those totally unversed in the subject-matter involved. There should seem to be a query here for university authorities, namely, since one can hardly hope to find advertising agents of the requisite culture and judgment to represent matters of scholarship with due credit to those concerned, whether it may not be better to abandon the effort altogether. Whatever is of real public concern will surely be heralded quite as soon as scholars of good taste can possibly wish it to be.

I have only to add that the writer, far from being a willing critic of the University of Pennsylvania, is an alumnus thereof, and a loyal one, if he knows what loyalty means; one who believes that the university is too great to adopt or tolerate questionable methods through a yielding to the principle of competition, and who, like many others of its alumni, covets for it such a policy as shall give no occasion for either apology or defence. X.

Literature.

ANCIENT AND MODERN CHINA.

My Life in China and America. By Yung Wing. New York: Holt & Co. $2 net.

Court Life in China. By Isaac Taylor Headland. New York: The Revell Co. $1.50 net.

In the Land of the Blue Gown. By Mrs. Archibald Little. New York: D. Appleton & Co. $2.50 net.

The Chinese. By John Stuart Thomson. Indianapolis, Ind.: Bobbs-Merrill Co. $2.50 net.

Changing China. By the Rev. Lord William Gascoyne-Cecil. New York: D. Appleton & Co. $3 net.

China: Its Marvel and Mystery. By T. Hodgson Liddell. New York: The John Lane Co. $6.50 net.

The Great Wall of China. By William Edgar Geil, F.R.G.S. New York: Sturgis & Walton. $5 net.

China and the Far East. Edited by George H. Blakeslee. New York: T. Y. Crowell & Co. $2 net.

For a venerable Chinese gentleman, eighty-two years of age, to be able to write his autobiography in faultless English, is in itself a wonder. Dr. Yung Wing is a doctor of laws of Yale University, and writes, after a life of strenuous work, from his quiet home in Hartford, Conn. A perusal of this remarkable and scholarly publication fills one with a pleasant astonishment. It naturally suggests a question: What, if one poor lad taken from a country village in China is capable of such high intellectual and social attainments, will be the outcome when the whole nation has similar opportunities afforded under the great educational reform now going on throughout the empire? Dr. Yung Wing begins at the very opening of his career and tells in a simple and fascinating manner of the hardships of his child-life in southern China. The poor boy who hawked candy about the streets of his native village from daylight to dark to gain a mere pittance, who was greatly frightened at the first sight of a foreign missionary lady, and who ran away from her boarding-school to which he had been taken by his parents to learn English, can hardly be recognized in the person who in a few years was to become the first Chinese graduate of Yale, a successful merchant, an educational commissioner, a Chinese official, a doctor of laws, the son-in-law of his college president, and a retired gentleman. His history is to a large extent mixed up with that of China, especially with those educational reforms that are connected with Western studies. As an example of his style and subject we may quote what he says of his great patron the Duke Tsang Kwo-fan:

> To crush and end a rebellion of such dimensions as that of the Taipings was no small task. Tsang-Kwo-fan was made the generalissimo of the Imperialists To enable him to cope successfully with the Taipings, Tsang was invested with almost regal power. The revenue of seven or eight provinces was laid at his feet for disposal, also official ranks and territorial appointments were at his command. So Tsang Kwo-fan was literally and practically the supreme power of China at the time. But true to his innate greatness, he was never known to abuse the almost unlimited power that was placed in his hands, nor did he take advantage of the vast resources that were at his disposal to enrich himself or his family, relatives or friends. Unlike Li Hung-Chang, his protégé and successor, who bequeathed Tls. 40,000,000 to his descendants after his death, Tsang died comparatively poor, kept the escutcheon of his official career untarnished, and left a name and character honored and revered for probity, patriotism, and purity. He had great talents, but he was modest. He had a liberal mind, but he was conservative. He was a perfect gentleman and nobleman of the highest type. It was such a man that I had the great fortune to come in contact with in the fall of 1863.

"Court Life in China" could not have

been written before the Boxer trouble in 1900; for, as one of the outcomes of that serious uprising, the gates of the "Forbidden City" were forced open and the hitherto secluded life of the Imperial family was forever robbed of its privacy. The book is written by one who was intimately acquainted with several members of the Imperial household, and who had a close knowledge of many of the Imperial princes and highest officials. This special privilege—the author acknowledges—came about largely from the fact that his wife was for more than twenty years "physician in charge" to the female members of the families of the Empress Dowager's mother, the Empress's sister, and many of the princesses, as well as other ladies of the highest official families in Peking. Because of Dr. Headland's social as well as professional relations with these women, she was frequently invited with them to the Imperial palace, and was thus enabled to furnish her husband at first hand with much of the material relating to this household. There we see the Empress Dowager as a woman, as an artist of some repute, as a reformer in recent years, as well as a ruler over more than 400,000,000 subjects, and as the only woman who ever held sceptre over more than one-third of the human race. Perhaps the most touching picture the author paints of the Dowager is when, as a bereft mother, under cover of night, she emerges from one of the secluded gates of the "Forbidden City," and, in company with the senior Empress, crosses the great Imperial City to the Tartar City, until they finally enter the door of the Seventh Prince, the younger brother of their husband. From here, with her nephew in her arms, she returns to her secluded home, and on the following day sends out the pathetic yet comforting announcement to the whole people that, although her own son, the Emperor Tung Chih, had "ascended upon the dragon to be a guest on high," yet little Kwang-Hsü had already been made heir to the Imperial throne. The author discredits the story that the Dowager was, when a child, sold as a slave and taken to south China. It seems that her immediate family were old residents of Peking, her father having held a small military office there for many years. It was, however, entirely through her influence that her brothers and sisters have long been known as dukes, duchesses, princesses, and ladies-in-waiting in the palace. The Empress Dowager, in our author's eyes, was one of the most gifted and far-seeing women of history; and one of her remarkable characteristics was "ability to choose the greatest statesmen, the wisest advisers, the safest leaders, and the best guides from the great mass of Chinese officials, whether progressive or conservative." Though he acknowledges her participation in the Boxer movement as her most serious mistake, yet he justifies, under the circumstances, her alliance with those "superstitious Boxers," since this was her only hope of saving the country from the grasping nations which, during the Emperor's reign, had been wresting portions of territory from the empire. The book is written in a clear, easy style, and is thoroughly readable.

The first thing noticeable in "The Land of the Blue Gown" is the quaintness of the title. Furthermore, blue is not now the universal or even typical color of dress in China. It appears to have grown somewhat out of fashion. Nowadays we find that the Chinese of the middle or better class, who wears a "gown," prefers for ordinary occasions some other more attractive color. The introduction on a large scale of aniline dyes makes a great variety of colors possible in place of the old indigo monotone. This is especially observable at the larger treaty ports and their vicinity, where foreign influence is more widely felt. Of the seventeen chapters into which the book is divided there is not one that can be regarded as dull or uninteresting. The forty or more illustrations from photographs are excellent of their kind, although we cannot help thinking that we have seen several of these pictures before in Mrs. Little's previous works. There is a novelty and a charm about the publication that compels one to read on, hour after hour, without laying it down. Mrs. Little tells us in her preface that her aim is to depict China as it was before the Boxer outrage in 1900, so as to make more intelligible the reasons which brought about that unexpected insurrection and supreme act of Chinese folly. She has well succeeded in her purpose. Her graphic descriptions of critical situations; of the persons engaged in the management and negotiations of affairs, not only at the seat of the insurrection, but also in different parts of the country; her intimate knowledge of all classes of men and things in China; her years of travel and research in company with her gifted husband; her leadership in the anti-footbinding movement and the success which crowned her efforts; her ability to see the many good features in the Chinese character and to give them full credit—these and many other points are characteristic of the present volume, as of all her writings. At Mrs. Little's request many years ago, the writer of this review drew up and engrossed in gold the memorial in Chinese that was sent by the Anti-footbinding Society to the Emperor and Empress-Dowager. He is therefore in a position to endorse heartily the following extract from her *post scriptum* referring to footbinding and opium smoking:

> And though footbinding may still linger on amongst the ignorant poor, in remote parts, this curse of China may be considered to have received its deathblow. Would that China's other curse, opium smoking, could equally easily be done away with! But as the young men have been the mainspring in repressing the mutilation of little girls, so the women of China, now set upon their feet again, may yet so improve home life as in their turn to deal a deathblow to this great national vice. So far, suffering opium-smoking mothers have borne sons predisposed to desire opium. With the two curses gone there would then but remain "China's sorrow," the Yellow river, to contend against, for the happy days of Yao and Shun once more to return to the Land of the Blue Gown, which may yet afford us such an example of the Christian virtues as we have not yet even dreamt of in Europe.

Mr. Thomson's work, despite its lack of method and its occasional carelessness, is one of the most interesting and instructive books on the Chinese. It starts on the title-page with an appropriate proverb; but the awkward Chinese characters are evidently reproduced from the author's crude attempts at Chinese penmanship. The translation he gives is "One seeing, however, is better than a thousand people telling you of it." A better rendering would be "Learning a thousand times is not equal to seeing once." There is no preface or introduction. The author evidently supposes everybody will know who he is, what is his title or profession, where he comes from, what books he has published, etc. He merely dedicates his work to "L. M. S.," and then plunges into the midst of his task by telling us in his opening chapter about "the daily life of foreigners in China." Nearly all the chapter is taken up with Hongkong, which, as everybody knows, is not China, but a British colony. In the second chapter the reader is transported to Macao, a Portuguese colony, and is treated to a most charming account of Camoens and "The Lusiad." It is not till the ninety-seventh page is reached that we leave foreign colonies and foreigners, and come to the actual "daily life among the Chinese." Here the author is thoroughly at home and relates in a humorous vein his rich observations during what was evidently a protracted residence in different parts of China. It is refreshing to find so much valuable and fresh information expressed in a quaint, original manner, instead of the usual hashed-up traditions of a quarter-century or more which make up so much of what is written about China nowadays. The chapter on Japan, a Commercial Example, is well worth reading and shows a comprehensive grasp of the greatest problem of the Far East. The concluding chapter, "The Mirror of the Past," deserves careful consideration. It concludes with these prophetic words:

> This present Manchu dynasty may flutter like a candle flame and die before long

Its greatest mind, but weakest arm, was the beloved Kwang-Su, deceased as a martyr only yesterday by sinister causes, and on whose inspiring edicts of 1897 the present blessed constitutional hopes of China are based.

Few books, we imagine, could be more satisfying to those seeking to know contemporary Chinese mental attitudes than such a work as Lord William Gascoyne-Cecil's, written as it is by a trained inquirer and interviewer (of about two hundred prominent foreigners and natives in China) fresh from the field. The first part of "Changing China" tells what has caused the awakening The answer is: long seed-sowing, events, science and Japan. In matters both mental and material, the Middle Kingdom of to-day is vastly different from tnat even of 1900. The author, son of Lord Salisbury, with the sympathy that is interpretation, discusses the weak and strong sides of Chinese civilization, its meaning to the world, foreign relations, cities, rivers, the impending economic revolutions, opium, the woman question, and, very luminously, Chinese architecture. Every phase of the native religions and the missionaries is treated with catholicity and vigor, as are also the new and the old learning. It is evident that whatever changes may occur in army or navy, books, dress, education, or religion, China will be China still. The Chinese will never become Europeans. Any notion that they will suddenly create great armies, or make instant transformation in anything, belongs to dream stuff. Yet like the Japanese of 1870, the Chinese statesmen imagine that their very intellectual countrymen can in a few years absorb whatever is necessary from Western civilization. Lord Cecil shows that art is long. To weave together in one piece the two webs of Oriental and Occidental thought will take generations. His great fear is of a sodden materialism, and his plans of an international university at Hankow, with many hostels or colleges, the former for pure science and the latter for what outsiders of various sects count fundamental, are clearly set forth. This invaluable book is well illustrated and indexed.

It is a noteworthy sign when a well-known British artist goes to China to paint its wealth of beauty and interest. The average commercial dweller at the seaport and all hasty travellers miss the color of China and its artistic possibilities; but Mr. Liddell has certainly demonstrated his powers, both of appreciation and of execution, in these fine pictures, which are here reproduced with perhaps unexcelled mechanical success. In his tour, he made a visit to Japan and his verdict is that the continental, as compared with the insular country, is spectacularly superior. Despite heat, smells, dirt, vermin, and the more formidable annoyances from crowds and over-officious magistrates and underlings, the artist-invader, by tactics and strategy, won success from beginning to end. He did not have to go far afield from the rivers and beaten paths of traffic, but he made the humblest villages, as well as temples and palaces, yield "artistic tribute." The text is inferior to the pictures; and is marred with such vulgarities as "Jap" and "ricksha"; nor does an index of Japanese names reveal the author as a scholar. Nevertheless he pictures river life and scenery with some vividness, showing how the patient Chinese have made birds and beasts their friends and servants. His description of the "duckeries" is amusing. The old jokes and stories, now thoroughly venerable and cosmopolitan in their location, are revamped. The artist is a great admirer of Chinese architecture, but gives only fugitive impressions of it. China still awaits a writer like Cram to do justice to her science and art of structure. Whatever its faults of text, this book in its colored pictures stands first in the library of books on China.

To examine carefully the construction and appearance of the Great Wall of China and to trace its history from its commencement, two centuries before Christ, up to the present time, is an undertaking which only a great traveller and scholar could successfully carry out. The task has been accomplished by Dr. William Edgar Geil, who had previously visited and described in interesting detail the chief features of the great river of China, the Yang-tze. The "Great Wall of China" is certainly a unique publication. There is not one of its four hundred octavo pages that is not full of a strange fascination for every reader who is fond of geographical and historical novelties. Fortunately, the most noted of all "the seven wonders of the world" has at last found a worthy exponent, who does justice to the character of its builder and the skill displayed in its construction in those by-gone ages. Without a single illustration this book could be pronounced complete; but with the one hundred and sixteen pictures, many of them large and excellent photographs, depicting features connected with the Great Wall that could not be described in words, there is nothing left to be desired. Next to the thoroughness that characterizes this production are the quaint originality and the vein of humor which run through it. Only a man well acquainted with the language and people of China could have picked up such happy tidbits of local information and could have expressed them in so naïve a manner. The illustrations from "The Chronicle of the Hills and Seas" and other native books lend an element of drollery that is sometimes irresistible. On the other hand, on the top of every other page there are proverbs or sayings in Chinese characters with translation, which remind us of the principles of wisdom and the ethical philosophy so dear to the Chinese. Such sentences are often found written in large characters on pairs of scrolls which hang upon the walls of a room, or engraved on wood or stone in conspicuous places. They are particularly appropriate in such a book as the one before us. Here and there we find the author indulging in extravagancies which are hardly so suitable as the proverbs. As an instance, he supposes that the "wise men" who designed the Great Wall "doubtless consulted constellations, skulls, and a score of uncanny divining devices. Indeed, should the history of the devil be written, it would likely contain a highly surprising and interesting chapter on the Great Wall." Dr. Geil's is the first complete account of this enormous structure, easily visible from the planet Mars, that has ever been written—at least in any Western language. The writer of this review having visited the Great Wall in two separate localities along its 1,500-mile course, is so far able to testify as to the accuracy of Dr. Geil's statements.

"China and the Far East" is the first fruit of a capital idea. The head of the Department of History in Clark University called in July last an assembly of specialists who should give a series of lectures upon topics of present interest in a special field, and a conference of scholars was held upon China and the Far East. The names of Prof. A. C. Coolidge of Harvard; the veteran scholar in Chinese, Chester Holcombe; Dr. F. Wells Williams of Yale; T. F. Millard, recently from the Far East; H. B. Morse, formerly of the Imperial Chinese customs service; Secretary John Foord; the Cornell University professor, J. W. Jenks; ex-Consul-General at Mukden, Willard Straight; Dr. Hamilton Wright; Major Eben Swift, U. S. A.; Dr. A. P. Wilder; H. F. Merrill; President D. D. Sheffield of Tung Chou; Prof. Harlan P. Beach; Dr. Edward C. Moore; President A. F. Griffiths of Honolulu; Dr. K. Asakawa; Dr. J. Takamine; Hon. H. N. Allen; Prof. G. T. Ladd, and the Rev. E. H. Hall of Korea, suggest the value of the matter here furnished. Thirteen of the twenty-two papers read treat particularly of China and the Chinese, three of Japan, and three of Korea. The general accuracy of statement and clearness of insight make this book of unusual value to the student. In the schedule, the subjects are fairly balanced—history, economics, international relations, national defence, education, Christian missions, and the inter-relations of Japan and China and of Japan and Korea—but in substance and style the papers vary greatly. As a whole it is safe to say that this book is one of the first value for students of that problem of the Pacific which President Taft declares is the greatest before the Amer-

lcan people. Such a book as this is cheapened by the lack of an index.

CURRENT FICTION.

Poppy. By Cynthia Stockley. New York: G. P. Putnam's Sons.

The sub-title is The Story of a South African Girl, and the best parts of the book are those which give vivid and realistic word-pictures of South Africa—the Kopje at Bloemfontein where the Kaffir-girl nurses squat and jabber under the trees, while the children play among the rocks and quarry-holes; the great rolling spaces and rushing rivers of the open veldt; the tropical gardens, luxurious cool verandahs, and gleaming sapphire sea of Durban. The natives, too, especially two old women-servants, are sketched in sympathetically and convincingly.

In other respects, the novel is foolish and unpleasant. "The best of men are half-devil, half-child, and nothing more, where a beautiful woman is concerned. You know that, don't you?" says the only white woman in the book who is neither a sensualist nor a fiend, nor both; and the author evidently agrees with all her heart. Perhaps it is hardly fair to call Poppy herself a sensualist, for, though passion's slave and distressingly sex-conscious, she possesses both imagination and devotion. Her wretched childhood and the hatred between her and her incredibly cruel aunt cannot but recall the opening chapters of "Jane Eyre," and the suggestion is an instructive one. Remembering the passion which Charlotte Brontë expressed so powerfully and intimately, the fire which consumed utterly in its heat all pettiness, all timidity, all worldly convention, but which might rage till Doomsday against the rock-fortress of unconquerable will, we see more plainly, as by the light of that great flame, the triviality and vulgarity of the earth-born, wandering fires and the smoking, malodorous torches which are the only beacons to Poppy and her friends.

The Intruding Angel. By Charles Marriott. New York: John Lane Co.

One very pleasing and very convincing trait about Mr. Marriott's people is their almost complete lack of the melodramatic strain, even of that melodrama which in its highest manifestations becomes drama. It is not that the writer goes in for the drab human material in which the painters of lower middle-class English life take pleasure. He deals with people capable of a high degree of emotion, but he is at pains to show that even emotional people do not as a rule work out their destiny in outward storm and stress. Disappointed lovers plunge neither into suicide nor into despair, but go about their business quietly, and, after a while, resignedly, though the scar shows more or less. Deceived husbands bite their lips and either make an end of things or bear things without changing their habits perceptibly. Women unhappily married and strongly tempted behave as honest women usually will, and do not even lose flesh in the process. The point is that the best kind of men and women usually pass through bitter experiences without making a row.

The story of "The Intruding Angel" is the story of Lydgate, his wife the fair-haired Rosamond, and Dorothea Casaubon in "Middlemarch"; but told without mid-Victorian reserve, and with the difference that here Lydgate is in love with Dorothea and Dorothea with him and that, having told each other so, they agree that there is nothing more to be said or done about it. Pauline Noy is not quite so patently selfish as Rosamond Lydgate, but she is more shallow and feather-headed, and out of pique and ennui, she incurs the guilt for which women were stoned by the populace in Biblical times. Her husband recognizes that originally the fault was his in marrying a woman who, he knew, did not love him and whom, as he soon found out, he did not love. Having struck the bargain, he admits that he must pay the price, and he proceeds to do so with a degree of conscientiousness that will be puzzling and possibly shocking to many an Anglo-Saxon reader. His love for the other woman, the Dorothea of the story, only braces him to the task. She is the intruding angel who brings him face to face with the sacrifice and gives him the strength to make it. Their enlightened view of morality as contrasted with the utterly material standards of the erring wife supplies the plot and the lesson of an excellently sustained study in irony.

The Education of Uncle Paul. By Algernon Blackwood. New York: Henry Holt & Co.

Uncle Paul was a big, bearded Englishman who spent twenty years timber-cruising for a Minnesota lumber company. Then an aunt died, and he returned to England to live with a widowed sister. She was rather a pallid sort of person, but she had some lively and imaginative children. These latter promptly discovered that Uncle Paul was in reality as much of a child as they, only bigger. They set about penetrating the grown-up disguise he wore before them in a vain attempt to preserve a dignity befitting his age. His education consisted in the processes by which this armor of assumed maturity was torn from him by Nixie and Jonah and Toby, ably assisted by Mrs. Tompkyns, the cat. He was very soon relieved of it all, and thereafter became one of them. He invented many adventures and wrote them out for the delectation of the company. They were, as the children said, "verywonderfulindeed 'aventures.'". We learn, for instance, how he and Nixie saw the wind, and how they slipped through the crack between yesterday and to-morrow, and of what befell in the land that lies there. In the end, Nixie goes on a long journey, and Uncle Paul, who has learned that his happiness lies in that of children, goes to London to do what he can for the children of the poor. Nixie comes back so often to visit his dreams that he scarcely has occasion to mourn her death.

The tale is slight, and not always real. We do not mean to imply a disbelief in fairies or a dislike for fairy stories; but it strains our faith to hear that Uncle Paul accompanied Nixie in the adventures of which he tells. In her, however, we believe absolutely. Of course she was more than a pretty little English girl, with white frocks and slim black legs and yellow hair in the state which marks its wearer as a "flapper." The author does not actually tell us so, but we are sure she was more than half a sprite. No ordinary little girl ever had such a fund of quaint, fantastical wisdom; such queer, sudden thoughts; and a charm at once so grave and so ethereal.

Kings in Exile. By Charles G. D. Roberts. New York: The Macmillan Co.

This is another collection of animal stories done much after Mr. Roberts's usual fashion. That is to say, their substance is sometimes a queer mixture of legitimate natural history and highly melodramatic episodes in which animal intelligence is ridiculously exaggerated, together with some good descriptive writing mingled with much that is obviously fantastic and overdrawn. Mr. Roberts is fond of depicting with absurd minuteness the supposed cerebrations of wild animals in captivity, and of domesticated creatures turned loose in the woods to shift for themselves. These themes he has already worn fairly threadbare, but that does not deter him from working into the present volume the stories of "Last Bull," who is a bison confined in a zoölogical park where he bewails his fate and finally meets a tragic end; of "The Gray Master," which tells the same kind of tale about a timber wolf, and other yarns of the same general character. Perhaps the most ingenious one is the tale of the man who, while planning to rob an eagle's nest, tumbled over a cliff and lodged on a ledge where he stayed for about two weeks in the company of one of the young eagles which he had knocked out of the nest in his fall, and with which he shared the fish, flesh, and fowl brought to the eaglet by its male parent. As an illustration of Mr. Roberts's faculty for lugging queer natural history into his stories, there is in this last

story the episode of its hero's discovery that the "black eagle," of which he had seen only one specimen, was nothing but an immature bald eagle, of which he had seen many—an observation which loses its force when one remembers that the bald eagle does not get its full plumage until its second or third year at the earliest, and that, therefore, "black eagles" (as a matter of fact, the immature bald eagle is *brown*, not black) are, in the nature of the case, much more common than those with the white head and tail.

A NEW HISTORY OF ROME.

The Roman Republic. By W. E. Heitland, M.A., Fellow of St. John's College. 3 vols. New York: G. P. Putnam's Sons. $10.

"Is there room for another political study of the Roman Republic?" With this inquiry Mr. Heitland, who is known to classical teachers as the editor of some college texts of Cicero, Lucan, and Lucian, opens the preface of the long three-volume work under review. The answer of the general reader may possibly be different from that of the historical student, though the kindly reception given by him to Ferrero's brilliant, but fanciful and superficial, treatment of the revolutionary epoch suggests that he would join the specialist in welcoming cordially a fresh, vigorous reconstruction, in terms of present-day knowledge, interests, and problems, of the entire political life of the Romans. The question before us is, therefore, have we now such a work in our hands?

We have no right to quarrel with the author for giving us only the first half of a history of Rome; for even Mommsen waited thirty-one years after finishing his story of the Republic before making his advance into the period of the Principate. But we are filled with dismay at the outset, and with wonder as to what sort of historical company Mr. Heitland has been keeping, when we find him affirming, in flat contradiction to international opinion often expressed, that a new, and at the same time sound, reconstruction of Roman history is neither desirable nor possible. "After the labors of generations of scholars in collecting and sifting the mass of materials that compose our record, I do not see much opening," he says, "for an honest reconstruction of the whole story. I do not believe that the old-fashioned views of the history of the Roman Republic are mere delusions, and that it can and should be rewritten in a sensational spirit." We are all agreed that history should never be written in a sensational spirit; for that connotes hasty performance and uncritical exaggeration. It involves at best the bringing of legitimate ideas into all sorts of lawless connections. Thus the notion that capitalists are inevitably malefactors is probably playing no less havoc with the truth in some recent books than was played in 1854 by Mommsen's inclusion of the Roman Senators in his hatred and condemnation of the German Agrarians. But even at the risk of slandering a class just now unpopular, no serious historian can shirk the obligation of making and casting up again the long columns in which the accounts of the Roman agricultural and financial aristocracies are set forth in our record; for elementary justice demands that the much-abused Senate should not continue longer to answer for the sins which have been transferred to the credit or discredit of the Knights. So, too, the discovery which has been made in the last thirty years that much once thought to be characteristic in the development of Roman politics, institutions, and culture is but the Italian phase of general Hellenistic movements, is leading nowadays, in all likelihood, to an exaggeration of the dependence of Roman thought and action and to an over-depreciation of Roman achievements and influence. For this very reason, however, the whole budget of Romanism and Hellenism must be made out anew so as to satisfy the just demands of each side. How inadequate even the latest treatment in English of Roman history is in this particular every student of the third century, B. C., knows.

There can be little doubt that the German vice of turning candidates for the doctorate loose in the field of *Quellenforschung*—whence, ordinarily, none but the most catholic, experienced, and tactful scholars can derive fruit fit for historical consumption—has caused the production of many sickly weeds, and in no corner less hopeful ones than in early Roman history; but for all that, as Wilamowitz points out in his charming Oxford lecture, "On Greek Historical Writing," the investigating of sources is the one great means by which the science of history has advanced in the century just ended to a position clearly superior to any reached by the Greeks or Romans in antiquity. Nor can any one who has read the Italian sections of Eduard Meyer's "History of Antiquity" doubt that the properly accredited attempts to determine the relation and value of the extant authorities, though they have reduced enormously the trustworthy sources of knowledge for the history of early Rome, have yet left sufficient genuine old materials for a new scaffolding, if not for a complete and stately edifice—like that made fifty-six years ago by Mommsen in his "History of Rome" and about forty years ago by the same author in his "Roman Public Law." In our judgment, nothing would be more helpful to English readers at this time than an honest reconstruction of early Italian history. Instead of this, Mr. Heitland gives us both in his first volume and in his second and third, as he himself puts it, "the old-fashioned views of the history of the Roman Republic"; in other words, the Mommsenian conception of Roman history as modified and expanded in the apparatus and tradition of tutorial instruction in England. It is difficult to imagine how a question could appear on a conventional college examination paper in Roman history and antiquities for the satisfactory answer of which a student would not derive much help from Mr. Heitland's history; and when we have said this we have indicated the class of persons to which it will be most useful.

In our judgment the conception of Mommsen as modified and expanded, not in the collegiate teaching of England, but by the skilled work of the last generation of historical investigators the world over, is the only old-fashioned view that deserves restatement at the present time. This Mr. Heitland is manifestly not prepared to make. He knows Padelis, but merely through his volume of papers published in English. De Sanctis he does not know at all. He knows Beloch, to whom he acknowledges special obligations, but only as the author of the "Campanien," "Italische Bund," and "Bevölkerungslehre." Had he studied the third volume of Beloch's "Griechische Geschichte," he would have avoided many pitfalls. Eduard Meyer's work in Roman history he apparently knows only at second hand through Fowler's criticism of his paper on the Gracchi. Kromayer's "Antike Schlachtfelder," which is, of course, fundamental for any consideration of Roman "strategy on the large," he has used no more than Colin's "Rome et la Grèce." It is perfectly true that of "the modern literature of pamphlets, articles in periodicals, and so forth" he has "only been able to read a part." This part seems, further, to have dealt with a very limited group of episodes or topics, or to have been written in the *Classical Review* or some other of the British journals.

It is a pity that so large and ambitious a work as this should have been undertaken with so indiscriminating and incomplete a knowledge of the scientific apparatus, and so little actual practice in the hard, banausic methods of modern historical inquiry; for Mr. Heitland is a man who has good historical sense, an easy, lucid style, and complete freedom of movement down, if not up, the Latin and Greek literary tradition. His general amateurism is the more to be regretted in that when he has taken the pains to follow a problem through to the bitter end, as in the case of the system of group-voting in the Roman Assemblies, he shows himself by no means a despicable investigator. "It may be," says Wilamowitz in the lecture already mentioned, "that Mr. Dry-

asdust is no very agreeable companion, but he is indispensable. It is the curse of ancient historical writing that it neglected him. Very famous persons have tried to do the same in our own days. The result is the same, but they have the less claim upon our forgiveness.'

Recollections of a Varied Life. By George Cary Eggleston. Henry Holt & Co. $2.75 net.

Mr. Eggleston has approached the emergencies of life with courage and relish. The Hoosier country in which he passed his boyhood—he is the original of his brother's "A Hoosier Schoolmaster"—seems to him wholly idyllic in retrospect. Virginia, where he grew to man's estate, enlists an even more enthusiastic sympathy. There never was so graceful a life under the sun as that which the war destroyed. The women were the fairest and best; as for the men, "there never gathered together anywhere on earth a body of horsemen more perfectly masters of their art than were the men of that First Regiment" (Stuart's). From the cavalry young Eggleston passed to the field artillery, and when his horses were gone, finished the war fighting a mortar battery at Petersburg. Proceeding to New York and commencing journalism, he met such tall fellows as C. F. Briggs and the erratic Theodore Tilton, his editor-in-chief on the Brooklyn *Union*. Bryant of the *Evening Post* Mr. Eggleston served as literary editor. There was a standing order to "be tender with the poets," and on one occasion, other excuse for praise failing, the gluing of the binding of a book of verse was commended.

Become joint editor of *Hearth and Home*, with his brother Edward, our author once promised a serial, the topic and title of which were to find. The result was his first novel, "A Man of Honor." At this time Frank R. Stockton was a close associate. The imperturbability of his literary style was confirmed by the orderly impassivity of all his habits. "I never saw Stockton angry," writes Mr. Eggleston. "I doubt that he ever was so. I never knew him to be in the least degree hurried, or to manifest impatience in any way. On the other hand, I never knew him to manifest enthusiasm of any kind or to indulge in any but the most moderate and placid rejoicing over anything." Mr. Eggleston made various escapes from journalism, writing profusely and serving as a publisher's reader the while. But journalism always reclaimed him. He followed the late Parke Godwin from the *Evening Post* to the *Commercial Advertiser*, which he long served as managing editor. Without difficulty he made the turnover from the most to the least literary sort of journalism, becoming a leading editorial writer on the *World* as reshaped by Mr. Joseph Pulitzer. Some ten years ago his ultimate evasion from newspaperdom was made, and he has beguiled his leisure by the production of a score of books, including at least one "best-selling" novel, and a number of favorite juveniles.

At all times Mr. Eggleston has been a sort of minute-man of letters. In minor straits, like filling an entire editorial page single-handed, at a bare two hours' notice, he was not at a loss. In major services, such as writing on the Confederate point of view—"A Rebel's Recollections"—in the *Atlantic Monthly*, shortly after the war, he was equally successful. A fine sense of comradeship seems to have tided him over what to less robust juniors will seem almost impossible labors. We welcome the picture we get of his own activities. He represents the American equivalent of the disappearing Victorian type, with its unqualified emotionalism tempered by a strong practical sense—its naïve and refreshing geniality. These are qualities that make for readableness. And this autobiography, despite a tendency to anecdotal divagations, occasionally of a tenuous sort, is throughout entertaining. Most valuable, perhaps, are the glimpses one gets of old Indiana, and of engaging minor celebrities of New York whose sayings might otherwise have escaped the chronicler. It was C. F. Briggs, who not merely expounded the completely unmoral nature of Poe, but left the following noteworthy definition of temperance: "Temperance consists solely in never taking a drink unless you want it. Intemperance consists in taking drinks when some other fellow wants them." For *Hearth and Home* Mr. Eggleston once tried to get a Pike County Ballad, regardless of expense, from John Hay, and received the amazing answer that the talented author "could not write a Pike County ballad to save his life." John Hay went on to tell how, hearing in sermon-time the story of "Little Breeches," stupidly told, he amused himself by imagining how racy the Pike County version would be:

> On the train, as I journeyed to New York, I entertained myself by writing "Little Breeches." The thing was done merely for my own amusement, without the smallest thought of print. But when I showed it to Whitelaw Reid he seized the manuscript and published it in the *Tribune*. By that time the lilt and swing of the Pike County Ballad had taken possession of me. I was filled with the Pike County spirit, as it were, and the humorous side of my mind was entertained by its rich possibilities. Within a week after the appearance of "Little Breeches" in print all the Pike County Ballads were written. After that the impulse was completely gone from me. . . . There were no more Pike County Ballads in me, and there never have been any since. Let me tell you a queer thing about that. From the hour when the last of the ballads was written until now, I have never been able to feel that they were mine, that my mind had anything to do with their creation, or that they bore any trace of kinship to my thought or my intellectual impulses. They seem utterly foreign to me—as foreign as if I had first encountered them in print, as the work of somebody else. It is a strange feeling.

We can only indicate by sample the varied interest of this book. In it we learn how the deathless feud between Jefferson Davis and Beauregard arose from a mispunctuated dispatch, and also how, during the free-silver lunacy, the author, provided only with gold was refused supplies in the South, because "the government has went back on gold." Mr. Eggleston also knows the true inwardness of the Beecher-Tilton affair, but discreetly will not tell. Even without such a morsel the book provides good measure. Admirable is the story of two Federal officers who strayed into Eggleston's redoubt at Petersburg, exchanged compliments under a grilling fire from their own batteries, and quietly obtained information which led to their safe return after nightfall. They were without uniforms, and had they been detected would have swung as spies. Such an incident is worth pages on the conditions of that dire siege. Savory episodes of this sort are rather the rule than the exception in this entertaining autobiography.

The Philosophy of the Enlightenment. By John Grier Hibben. New York: Chas. Scribner's Sons. $1.50 net.

Stoic and Epicurean. By R. D. Hicks. The same.

A new series of books on the history of thought, entitled The Epochs of Philosophy has been planned under the editorship of Professor Hibben of Princeton, and the first two volumes have just appeared. The aim of the series, in Professor Hibben's words, is "to present the significant features of philosophical thought in the chief periods of its development," and "to emphasize especially those doctrines which have appeared as effective factors in the evolution of philosophic thought as a whole."

Professor Hibben's own book is scholarly, thoughtful, and readable. It not only presents clearly the views of each of the great thinkers of the Enlightenment, but it considers them in their relation to one another, showing how the thought of each grew out of the thought of his predecessors. The book thus vindicates its right to the title "The Philosophy of the Enlightenment," for it gives the reader not a mere collection of different philosophic views, but a study of a whole movement. The Enlightenment has definite dates, which are chosen not at all arbitrarily, but are natural and almost inevitable. It begins with the publication of Locke's

famous "Essay" in 1690, and ends with the appearance of the "Critique of Pure Reason" in 1781. The unity of the period is seen in the demand for clear ideas, the distrust of transcendental metaphysics, and the renewed interest in human nature, which were common to nearly all the thinkers of the century. The development of thought during the period is peculiarly organic, and is expressed by Professor Hibben in the form of an Hegelian triad. Locke's theory of knowledge, which forms the real starting-point of the Enlightenment, is chosen as the thesis; the development and criticism of Locke's point of view, both in England and in France, form the antithesis; while Kant's reconciling philosophy, of course, acts as synthesis.

This interesting and illuminating method of presentation, in fact, forms the basis of the chief exception to which the book is open. In his attempt to depict the process of the development of thought throughout the period, Professor Hibben seems at times to forget that the aim of his series is expository, rather than controversial. Except in the less important chapters, one often misses the judicial tone of the impartial historian, and one feels throughout that the author is holding a brief for Kant. Thus three-quarters of the chapter on Locke are given to adverse criticism, whereas in the chapter on Kant there is no criticism, unless three half-deprecating, half-apologetic sentences can be called such. The method, moreover, by which all the pre-Kantians of importance are assigned to their respective places of excellence or demerit produces the same impression of partisanship; for the decisive question is always: How far do they diverge from Kant? Thus the fundamental mistake of Locke and Hume consists in viewing the mind in a fashion quite different from that of the Critical Philosophy; the good Berkeley does pretty well, but falls short in so far as he does not say what Kant said; Leibnitz is excellent (especially in that he was a forerunner of the true philosophy), but even he occasionally errs—which means that he does not quite anticipate the "Critique of Pure Reason."

The question whether this method of presentation is really suitable for an expository work will be answered by each reader in accordance with the view he takes of the Kantian philosophy. If this philosophy is, indeed, the last word on the subject of knowledge and is itself beyond criticism, except in minor details, then truly all the preceding history of human thought should be judged by it and depicted as leading up to this far-off, sublime event. But it cannot, on the whole, be said that Professor Hibben's presentation of the Critical Philosophy itself is sufficiently persuasive to justify this method. It is even doubtful whether Professor Hibben has made the case for Kant as strong as it might have been made. So, at least, it will seem to those (and they are many) who have never been able to accept Kant's vindication of universality and necessity in causation as an answer to Hume's critique. Professor Hibben gives the impression that this question is crucial; and this is rather unfortunate, for the Critical Philosophy is left on a most precarious basis if it has to stand or fall with any or all of the twelve categories. For neither Kant nor the Kantians have ever made it perfectly clear just why experience would be impossible without necessary and invariable uniformity in events. Professor Hibben is doubtless right in saying that "a world of detached and unrelated events is not the kind of world which we are capable of experiencing or which our minds are capable of conceiving" (p. 228). But the events of a world in which there were no necessary causal sequence need not be detached or unrelated; all that is requisite for experience is that they should be related to *some* other events, not always and necessarily to the same ones. The truth seems to be that our experience presupposes and demands just so much regularity as we find in it. And the causation which Hume attacked is hardly "the presupposition and condition of the very possibility of any experience whatsoever" (p. 229).

It would, however, be most unfair to Professor Hibben, as well as misleading to the reader, to leave this volume without a final word of appreciation. Considering the difficulty of the problems dealt with, the book is a remarkable piece of clear exposition and makes an excellent introduction to the study of the Enlightenment. It will prove of interest to the general reader (if there be such a person any longer), as well as to the student of philosophy.

The subject of Mr. Hicks's volume inevitably makes his work of less general interest than is Professor Hibben's. The Stoic and the Epicurean are separated from us by so many centuries, and the answers they give to the eternal problems are often so crude, that the study of their thought is chiefly of academic value. Nor can it be said that Mr. Hicks is always happy in his mode of presentation. In spite of his really great scholarship (or in part because of it?), he has not succeeded in giving to his epoch as much significance and human interest as he might have done. The style is somewhat disconnected, and the method of presentation fairly resembles the style: we find a collection of learned details, carefully interpreted, but look in vain for the living spirit of Epictetus or Marcus Aurelius. Yet it must be said the book is a genuine contribution to our knowledge of the period and will be of high value to one who comes to it with a real interest (aroused elsewhere) in the Stoics and Epicureans. To get at the philosophical views of Zeno, Chrysippus, and the other early Stoics is no easy task, so obscured are they by the divergent views of their followers and critics. And Mr. Hicks has met the difficulty as well as his rather lumbering style and method will permit, by means of lengthy quotation from the sources and careful and critical interpretation.

One closes the book feeling how little *direct* bearing much of ancient thought has upon our modern problems. The problems themselves, indeed, do not greatly change, but the solutions which the ancients gave seem of little immediate assistance to us. And yet, in a sense, this very thing is a source of encouragement, emphasizing, as it does, the inexhaustible fertility and indefinite power of growth possessed by the human mind. And when the thought of antiquity is studied, not merely by itself, but in connection with the rest of the history of philosophy, it becomes most significant and helpful. Mr. Hicks's scholarly work, therefore, will get its proper setting and show its true value only when it takes its place with the rest of the series.

If these two books are to be typical of the series as a whole, the others cannot appear too soon.

Spain of the Spanish. By Mrs. Villiers-Wardell. New York. Charles Scribner's Sons. $1.50 net.

In all matters connected with the newer intellectual and artistic movement in Spain Mrs. Villiers-Wardell is an intelligent and diverting guide. In her more general analysis she has got at some fundamental facts usually overlooked; as that Spain is the only genuine democracy. Socially, she means, of course. And it is unquestionably true that in few lands is the sense of personal dignity so widely diffused and so generally respected. Mrs. Villiers-Wardell is enough of an insider to defend the bull-fight. It is witnessed in a spirit of fine amateurism, and its merely incidental cruelty is not the chief attraction. As a race, the Spanish are not cruel. Into these regions of casuistry it would be unprofitable to enter. Without committing the folly of indicting a nation, the history of Spain reveals a singular slow atrocity. One does no favor to a gallant race by denying the fact. As for the bull-ring, our apologist's explanation of its charms would neatly cover the Roman amphitheatre.

Against the Spain of literature and romance the reader is explicitly warned. In particular he must not key his expectations by the opera of "Carmen." A more necessary reminder is that Spain is not one but many. Very good is the little summary of Catalan traits, though here the author has observed a

caution and reticence that make her survey oddly impersonal. It is an achievement to write reasonably well on this theme without even mentioning Salmeron or Ferrer. This folble of leaving out the main thing is a bit too common in the book. Mrs. Villiers-Wardell knows that irrigation would redeem large portions of the peninsula, but forgets to say that reasonably good roads and railways would do more. The Calabrian, Sicilian, and Spanish questions are alike in hanging on communications. Toledo is described without a word about its greatest artist, El Greco. Oddly enough, almost nothing is said about society; possibly it is ruled out as affected with cosmopolitanism. A word on that peculiar and delightful function, the *tertulia*, would have been welcome. We have instead very full information about Andalusian dancing and *fiestas*. In general, too many facts have been crowded into the book with too little interpretation. Others, even the despised romancers, have seen Spain with a keener and truer eye. Our author is too much at pains to prove her paradox that Spain is not so very Spanish after all. Through her one grasps the ideas and intentions of the *intellectuels*, of such men as the admirable publicist, Ganivet, but misses the flavor of the folk itself. Her chapters inform, but they yield no coherent and persuasive picture. The book is readable, but cannot be called indispensable.

Notes.

D. Appleton & Co. announce the publication of "Appleton's New Practical Cyclopædia" in six volumes. All articles have been revised, to bring their information up to date, and a complete new index system, with analytical and synthetic groupings, has been added.

George W. Jacobs & Co. announce for early publication the life of Yoshio Markino, told by himself, in "A Japanese Artist in London."

Publication of Rear-Admiral French Ensor Chadwick's "The Relations of the United States and Spain—The Spanish-American War," as a companion volume to the author's "The Relations of the United States and Spain—Diplomacy," is announced for this year by Charles Scribner's Sons. This work will be a complete history of the war, in which Admiral Chadwick served as commander of the New York.

Beginning with the July number, the *Forum* will be published by Mitchell Kennerley, according to an announcement made this week. Ownership will still be vested in the Forum Publishing Company, of which Isaac L. Rice is president. The *Forum* will be continued on the lines of a review, as heretofore.

A verbatim reprint of the 1855 edition of Browning's "Men and Women" now appears in the green and gilt series of the Oxford University Press. That series is rapidly forming a library of reprints as admirable in selection and editing as they are attractive in form.

To Harper's thin-paper edition of Thomas Hardy there has been added "Under the Greenwood Tree," not one of his great works, but a charming idyl. The shortness of the story permits the present volume to combine the advantages of "thin-paper" size, and paper that is not really "thin" at all. The type is clear, but occasionally broken.

Intending travellers to northern Germany will be glad to know that Scribner's have imported a fifteenth revised edition of the English Baedeker, to that part of the world, corresponding to the twenty-ninth German edition.

Pierre Loti's "Egypt" ("La Mort de Philæ") is published by Duffield & Co. with eight color illustrations by A. Lamplough. The translator, W. P. Baines, has come off pretty well in a difficult task, but often follows the French too literally. The partitive, for example, rarely means "some" in spite of the grammars. An "equipage," meaning a crew, is scarcely English. In short, this book is an attenuation of what cannot be regarded as first-rate Loti. It will doubtless be read chiefly by those tourists who are its especial butt. It contains, however, some of Loti's best writing. The Hall of Mummies by Night, The Temple of the Ogress, An Audience of Amenophis II, the dirge for crumbling Philæ—these are all extraordinary evocations. On the other hand, the constant girding at the Cook tourists and the British régime becomes tiresome and even cheap, nor does the reiteration of the theme of the outraged majesty of old Egypt escape monotony. It would be delightful if the world could be reduced to an inviolate crepuscular necropolis in which a single elect spirit might form its exquisite impressions, but since that may not be, good taste forbids too overt a resentment of the world as it is.

In the pocket-size People's Library, published by Cassell & Co., we have received Stevenson's "The Master of Ballantrae." Emerson's "Essays," Dumas's "The Three Musketeers," Hans Andersen's "Fairy Tales," Pope's translation of the "Iliad," and Dr. John Anster's translation of Goethe's "Faust." Of these the Homer, Goethe, and Stevenson volumes are the most acceptable typographically, though all of them show here and there the inevitable flaws incident to the crowding of much type on an inferior grade of thin paper.

In the history of medical science and medical education, Ernst Freiherr von Feuchtersleben occupies an honorable position and enjoys a repute by no means confined to his native Austria. Even as a poet he is not altogether unknown, and his personal worth is attested by two contemporaries whose opinions are the weightier because they spoke from intimate knowledge and were both by temperament slower to bless than to ban. Franz Grillparzer recognized honesty, truthfulness, kindliness, and modesty as the foundations of Feuchtersleben's character—giving him, indeed, a testimonial which for Grillparzer was the highest, when he declared, "Nicht nur sein Denken, sondern auch sein Empfinden war einig mit sich und wahr." And Friedrich Hebbel, Feuchtersleben's first editor, said of him, "He was a *man*, born to be such, as poets are born and not made." Gustav Pollak has rightly perceived that some account of this man, unfamiliar as his name is to most of us, could not but serve to recommend a book which is so personal as Feuchtersleben's "Hygiene of the Soul." The book had already been translated *in extenso* into English (as into French), but with no memoir of the author, and an American reprint of the English translation was anonymous. The version now offered by Mr. Pollak (published by Dodd, Mead & Co.) may be described as an adaptation of the work to the probable needs of American readers. He has, by summarizing when necessary and translating when expedient, fairly represented the author whom his preliminary chapters introduce to us; and he has appended to the "Hygiene of the Soul" translations of a considerable number of Feuchtersleben's maxims, aphorisms, and philosophical meditations. Mr. Pollak's skill as an adapter and translator is well known. In these days of "mental healing" it is good service to offer in so attractive a form the wisdom of a healthy mind, and to foster a taste, not so widespread as it was three or four generations ago, for truths and views formulated with epigrammatic precision but not systematized.

With the delicacy and humor that the subject requires, W. H. Helm has written "Jane Austen and her Country House Comedy" (John Lane Co.). The critical method is that of elimination. One by one we glimpse the territories that were never annexed to Janeland. They include pretty nearly all the really important classes of English society. She never depicted with any interest a laborer, a really competent professional man, much less a politician or statesman. Her theme was the semi-parasitic class, to which she belonged herself—the small gentry who lived on inherited money and their dependents. She scrupulously avoided, with rare exceptions, the tempests that may rage even within this teapot. It would be hard to find a writer of any repute whose range was so small, whose contact with life so ungenerously measured. We believe our author is right in thus narrowing down his theme. Such a procedure avoids foolish and quite injurious comparisons between Jane Austen and other novelists. For example, if criticism of life is truly the gauge of literature, Maria Edgeworth, and even Fanny Burney, would be far the superior of Jane Austen, which is absurd, as the geometries say. It is only when we have her bounded that we begin to perceive her unique excellence. The value is in herself not in her vivacious characterizations, or in her admirably simple phrase, but in the delicate Olympianism with which she moves and ridicules her own creations. She counts personally, as our author insists. We carry in our minds the piquant image of a satirist who is winsome, whose handkerchief one would dive for when dropped at a Bath assembly. The gods loved her well enough to let her die young, and she remains perhaps the only example of the *jeune fille* philosopher in literature. Alien laurels have been imposed on her as a realist. She grows, whether consciously or unconsciously, out of the artificial comedy of manners, and her merit is to have made the novel a finer vehicle for the display and

criticism of manners than ever the play was before it. Thus may be paraphrased the implications of the seven essays making up this interesting book. The chapters on Jane Austen's ethics, on her contact with life, and on the personal and topographical elements in the novels are especially instructive. By exclusion chiefly, they build up the picture we have hinted at above. Oddly, for the literature of the subject is freely quoted, so early and indefatigable a Janeite as William Dean Howells is not mentioned. This book leaves us with the paradox that success in the novel can be obtained with a very narrow experience of life, and almost without passion, all of which emphasizes the sheer intellectuality of Jane Austen's achievement, and once more displays it as a more discreet and truthful descendant of the old artificial comedy.

The forty brief essays gathered into Hilaire Belloc's "On Everything" (Dutton) represent the fine flower of literary journalism in England. Mr. Belloc can still pursue a whim as gallantly as when he footed the road to Rome, but the casual adventure enlists him less exclusively than of old, or, rather, gathering seriousness he is likely to give the chance meeting the turn of a parable. For this innovation his art is none the worse. In fact, this little book suggests that he has measurably outgrown the rather insistent eleverness of his beginnings. Of that commodity he had enough and to spare. We find him companionable in his contacts with men and nature. In fact, these essays, written to be read at the breakfast table, seem better suited to the open. On such drifts down sluggish rivers and landfalls off the coast as Mr. Belloc describes it would be a good fortune to find his book in your pocket. Few modern volumes would give so many specular glimpses of great topics on such agreeable terms.

Eleven writers, all of whom, we believe, are connected with Brown University, have combined to make a volume called "A Modern City: Providence, Rhode Island, and Its Activities." Dr. William Kirk is the general editor and takes the subject of labor. Prof. William MacDonald analyzes a population that ranges from old Americans to Portuguese-negro half-breeds, known as bravas. Other chapters devoted to geography, industry, government, finance, education, art, philanthropy, and religion are in equally competent hands. President Faunce of Brown University, in a general introduction, points out certain peculiarities of the city. It is probably the most conservative of American municipalities. A town meeting is still held, though for the limited purpose of administering a bequest. The suffrage is doubly restricted. Stability and prosperity are the benefits set above all others. The city means to be ruled by its intelligence and wealth. Like the State of Rhode Island, Providence "is still true to the ideals of Washington rather than to those of Lincoln." It has cheerfully accepted commercial standards, but has held them with a certain grace. It is a hospitable city and devoted to the family bond. It houses its people better perhaps than any other American city. It was Lowell who, observing the deep door-yards, remarked: "You have fifty feet of self-respect between your houses and the street." If there is virtue in the restriction of the suffrage, neo-Federalists must extol the example of Providence. To an impartial outsider it seems to show simply a more sedate form of the ruling municipal corruption. What is more noteworthy is a civic spirit, rather uncommon in Eastern cities, that willingly expresses itself in benevolent, artistic, and literary enterprises, and in industrial betterments. The book is adequately illustrated, and published by the Chicago University Press, which plans to issue other city surveys of this useful sort.

"The Price of Blood" (Dutton), from the author of "The Battle of Tsushima" and "Rasplata," does not reach the high level of the earlier volumes. Capt. Semenoff's narrative hitherto has been valuable and interesting because it presented the attitude of the typical educated Russian to the war and to the government that so pitifully mismanaged it. In the present volume the captain's nerves have got the better of him. From being critical he has become querulous. Perhaps the shattering experiences of Tsushima may account for the change. It is just after the destruction of the Russian fleet that the book begins. Capt. Semenoff was seriously wounded and captured, together with Admiral Rozhestvensky. Many pages are devoted to the gruesome dressings of his wounds, and many more to the supposed "malevolence" with which the Japanese were wont to gloat over their fallen foes. His grievances are numerous, but when he sets them down we can only wonder at the state of mind of a man who can so abuse those from whom he is receiving treatment worthy of considerable gratitude. He does grudgingly record the patient care accorded him by the surgeons, but he proceeds to dilate on the outrage of forcing Russian officers—prisoners, of course—to take directions from Japanese officers lower in rank. They were further insulted by being addressed simply by their names, "without their titles"! But apparently these matters were not taken so much to heart by all the prisoners, for the author finds it necessary to hold up some of his comrades to scorn who stooped to associate with the victors. The tone of the book is rather ungracious, besides being unfair to the Japanese. Though a prisoner, Capt. Semenoff seems to think he was entitled to the best in the land. His delicate European honor shrunk from these ungentlemanly barbarians; yet he calmly tells us he broke his parole, given earlier in the war. According to the rules of the game, after his recapture at Tsushima he should have been hanged; but his offence escaped notice, and instead of executing him they healed his wounds and sent him home. But it is well to remember that he was continually suffering, in body and spirit, from his own wounds and the disaster to his country. He had, indeed, small grounds for any cheerfulness. From this point of view his book affords an interesting study in the psychology of defeat. It contains the crude material in which a Tolstoi or a Verestchagin might have worked.

There is much of interest both to the general reader and to the student of a perplexing problem in John R. Spears's "Story of the American Merchant Marine" (Macmillan). As might be expected, the earlier chapters are colored by romance and adventure, but this aspect of the story has been treated equally well by other writers. A more serious tone pervades the later chapters, especially those covering the period since our supremacy of the seas has been lost. Many of the fallacious arguments which, at one time or another, have been advanced by the advocates of ship subsidies in their various forms, or by the exponents of a policy of discriminating duties, are skilfully handled to their further disadvantage. The author does not hesitate to affirm, without reserve, that the decay of the American merchant marine came primarily, if not entirely, from natural causes; that our loss of the command of the sea and the consequent supremacy of the British were "due to the working of the inevitable law of the survival of the fittest." The statement is made, and supported by arguments which cannot be lightly brushed aside, that our one-time much-boasted supremacy of the American flag on the high seas was due, in large part, to the superior intrinsic efficiency of the American sailor at the time when sailing ships were the chief traffic carriers. The writer's view of the present day problem is tersely expressed in the concluding sentence of the volume:

> We can buy ships—whole fleets of them—if we are willing to pay the price, and we can maintain them on the high seas in like manner; but we shall never again see the Stars and Stripes triumphant upon the high seas until the American environment evolves once more, by natural process, the nautical unit as efficient for the modern day as was our ship of the sail in the days long past.

The work contains a number of well-selected illustrations, and will be welcomed as a companion volume to the author's "Story of the New England Whalers," which appeared less than two years ago.

In 1904, Hennecke, with the assistance of some fifteen scholars, edited a translation of the most important apocryphal gospels, acts, and apocalypses, along with what is known as the Apostolic Fathers. This appeared as one volume, entitled "Neutestamentliche Apokryphen," to which was added a "Handbuch" in a separate volume. The need of some such work in English is apparent, and Dr. Bernhard Pick, single-handed, it should seem, has attempted to meet the need. Drawing heavily, as all must, from the treasures gathered by Lipsius, Bonnet, and Schmidt, and with Hennecke's edition at command, our editor is in a position ultimately to publish a series of volumes which will supersede the translations in the Ante-Nicene Library. For the present, however, Dr. Pick contents himself with offering in translation, with brief introduction and notes, a few of the oldest apocryphal Acts ("Apocryphal Acts of Paul, Peter, John, Andrew, and Thomas"; Open Court Publishing Co.). These documents do not, of course, contribute much, if anything, to an historical knowledge of the apostles named, but they do reveal a popular Christianity of the second and third centuries, hospitably disposed to syncretistic influences, both in the type of narrative, as Reitzenstein has recently pointed out, and in the practical religious life, notably mystic and ascetic in color, and in the life of reflection. For example, docetism, a first century phenomenon, attacked in the Pastoral Epistles and in the Gospel and Epistles of John, appears in most attractive guise in the Acts of John. That these various Acts were widely read is shown by the fact that they were early translated into many languages. Indeed, the good bishops of the ancient

catholic church were unable altogether to prevent the circulation of this literature. There was as yet no *Index Expurgatorius*, although they did attempt to expurgate or tone down some of the gnostic extravagances, while retaining or even heightening the ascetic elements, a procedure manifest in the existence of these texts in various forms. Dr. Pick has given much time and thought to the preparation of this English edition, and both he and his publisher have rendered good service in making accessible to those who cannot read German this specimen of popular Christian literature.

"Författaren," although printed now for the first time, was written in 1886-7, and expresses August Strindberg's standpoint at that time, when his first marriage was about to be dissolved, and he had written the four volumes of his autobiography, not as "memoirs or confessions," but as "a sort of balance sheet or liquidation." The new volume covers the period of his first marriage, the story of which he, a few years later, told in the intimate—too intimate—"Beichte eines Thoren." "Författaren" deals, as the title implies, with Strindberg's work as a writer, and his mental development during the decade beginning in 1877, when he "had taken active part in a domestic tragedy, again had edited an unsuccessful journal, and just returned from his first journey abroad." The experiences of the last years "had educated him to that real humanity which reaches out in sympathy to all classes of society, even the highest, wherever he finds an unfortunate who fights his bitter struggle for his position, whether it be high or low." From this point of view he wrote the volume of short stories about life among students in Upsala, "Fran Fjärdingen till Svartbäcken," and this sympathy was one of the intermingling motives in his great satirical novel, "Röda Rummet," in which he drew from his experience and observations of life among artists, journalists, government officials in the capital. The analysis of "Röda Rummet," and of its reception by the critics, is among the most interesting parts of the book, and quite objectively written, as the author, ten years afterwards, was able to look back to this period of his life and authorship with a rather dispassionate view. The secret of the reception of the book was, he says, "that he had laid the large point of view on the small things of life. What comfort for the small, the unsuccessful, the hunted, to find that all they had worshipped and vainly striven for, was merely dust and ashes." The literary ancestor of Strindberg in "Röda Rummet" was Dickens, and not Zola, as his critics had proclaimed. He had at that time not yet read a line of Zola; when, soon afterward, he laid his hand on "Assommoir" he found, he says, that what he had wanted to say had been said once before—he felt himself superfluous, and buried himself in historical and archæological studies. The volume ends with a dialogue between Johan and a younger friend, X., who was his neighbor during a spring's sojourn in Aargau, in Switzerland, "a young man of noble family who had acquired his education while travelling, and had made a start as a painter." He was now making a new start, as a writer, and was two years afterwards to make his début with a volume of poems which opened the new movement in Swedish poetry, the poetic movement, the lyric movement which followed the realistic, of which Strindberg at that time was the most conspicuous representative. For the young man was Verner von Heidenstam. (Stockholm: Bonnier.).

Announcement of the award of the annual prizes by the Académie Française was made recently. The Grand Prix Gobert, for French history, went to two writers, the larger portion to Christian Pfister for his "Histoire de Nancy." Four shared in the Prix Borlin (3,000 fr.), two of whom were Ch. Drouhet for "Le Poète François Mainard," and Gabriel Maugain for his "Etude sur l'Italie." The Abbé Félix Klein got 1,000 francs of the Prix Sorbier-Arnould for his "L'Amérique de demain." Of the Prix Montyon (18,700 fr.), which was divided in many parts, L. Guimbaud received the largest share (1,200 fr.) for a monograph on the founder of the prize. Another award for historical writings was 1,000 francs from the Prix Thérouanne to Le Moy for his "Parlement de Bretagne et le pouvoir royal au dixhuitième siècle." Maurice Lange got 1,000 francs from the Prix Thiers for his work on La Bruyère, and Urbain Mengin received an equal amount from the Prix Charles Blanc for the monograph on Benozzo Gozzoli, the artist.

Science.

Inheritance of Characteristics in Domestic Fowl. By Charles B. Davenport. Washington: The Carnegie Institution.

We have in this work the results of a series of experiments in breeding domestic fowl, conducted chiefly for the purpose of demonstrating the fact that certain factors (known as "dominants") are more strongly inherited than others ("recessives"), and that this inheritance conforms to the laws laid down by Mendel. The great value of most of these tests is another exposition of the importance of experimental work in the detection of the forces which govern the evolution of living organisms. The only regret is that they could not have been carried out on wild species, concerning the purity of whose ancestry there would be no question.

This is not the first of Professor Davenport's contributions to the literature of this little known subject. He now advances the theory that the strength of the dominating character not only varies, but is inheritable; and many of the experiments, which relate to the number of toes, presence or absence of tail, condition of comb, and similar variations, seem to support this view strongly. In one test it was found that the single, median comb is imperfectly dominant over non-median; this results in a peculiarly shaped appendage known as the "Y"-comb. This dominance was found to be much stronger in the offspring of those birds in which the median comb was most potent, and fewer "Y"-combs resulted, proving the inheritance of the degree of dominance.

The work in color is particularly interesting. It is shown that color is determined by the presence or absence of governing influences. These are the factors which cause the presence of a color, and those which determine whether the Jungle Fowl pattern shall remain pure, or be obscured by overlying black, buff, or white. A striking experiment in support of the assertion of the presence of the Jungle pattern, where it is commonly unsuspected, is the appearance of a bird of this color in the third generation of Black Minorca and Dark Brahma (grayish) hybrids. The Jungle pattern is absent in buff fowls, the origin of which is obscure. Formulæ are presented for the expression of the chief colors; these will be useful in simplifying the expression of color results in future.

In a concluding chapter various problems of evolution are taken up in a general manner. Professor Davenport's idea of the controlling influence in the development of an organism may bear quoting:

> We have reason for concluding that each developmental process is a "response"—a reaction of the living, streaming protoplasm to changing environment. The nature of the response to any stimulus probably depends on the chemical constitution of the protoplasm—and this is hereditary. In an important sense heredity is the control of ontogeny.

Finally, the undoubted value of hybridization is explained, as a means of acquiring knowledge of the evolution of species by the removal of factors which obscure ancestral traits. A full bibliography is given, including virtually all the work which has been done in this particular branch, and will be of great service to the increasing numbers of investigators. A series of excellent plates of color types in fowl is inserted at the back of the work. It seems unfortunate that in many cases freshly-hatched chicks and well-developed embryos were examined, and that to their characteristics at this time full value was given in the percentages. It would be more satisfactory if a larger number could have been raised to maturity, particularly in the color experiments.

A recent volume of the University of Manchester Publications (No. XLVI), by Sir William J. Sinclair, is devoted to "Semmelweis: His Life, and His Doctrine." Here we have an extended, sometimes a little too extended, account of the development of the view now so clear and obvious that puerperal fever is due to local infection rather than to miasms or epidemic causes, and of the harsh criticism and violent opposition which this opinion met and slowly overcame. It makes a very interesting and instructive chapter in the history of medicine, but is quite too special for detailed notice in this column. As to the priority

of Holmes in this matter Sinclair takes the ground that he was merely a skilful user of the material furnished by others, using it so well and impressively as to deserve grateful recognition, but not himself an observer who contributed to the science of midwifery, so that "the eulogists of Holmes have compared unlike things" in comparing him with Semmelweis.

Sir William Huggins, the astronomer, died in London on Tuesday, at the age of eighty-six. After many years spent in the study of various sciences, he was elected, in 1852, a member of the Microscopical Society, which led him to make researches in the fields of animal and vegetable physiology. In 1855 Sir William erected a private observatory at his residence on Upper Tulse Hill. His more important discoveries were those which enabled astronomers, by means of the spectroscope, to determine the chemical constitution of the heavenly bodies. For these researches Sir William received, in 1866, one of the medals placed at the disposal of the Royal Society, of which he had previously, on June 1, 1865, been elected a fellow. The gold medal of the Royal Astronomical Society was awarded, in 1867, to Sir William and Dr. Miller jointly. After 1875 he was engaged chiefly in photographing the ultra-violet portions of the spectra of the stars, which discovery opened up a new field to astronomers. He was a member of many scientific societies.

Drama.

The Theory of the Theatre. By Clayton Hamilton. New York: Henry Holt & Co. $1.50 net.

This book, consisting of twenty-two essays on the theatre—its development, product, management, and mission—and the various influences affecting it, is dedicated to Prof. Brander Matthews, of whom the author is evidently a diligent student and faithful disciple. The correspondence between his views and those expressed in Mr. Matthews's recently published "Study of the Drama" is proof of this; and it is, perhaps a little unfortunate that two volumes covering so much of the same ground, and often so much alike in spirit, should have been issued so closely together. Mr. Hamilton is fluent, definite, and entertaining, and in his statement of facts he is accurate, but many of his generalizations are hasty and unsound, and he often betrays a lack of true critical observation in drawing deductions, in support of his own theories, from the comparison of plays and performances, not properly comparable because of the essential differences in their quality and character and the circumstances attending their exhibition. For instance, he says that the drama is the only art, except oratory and certain forms of music, that is designed to appeal to a crowd and not the individual. This is true in a limited sense. Painters, sculptors, all imaginative writers, seek fame and reward in the recognition by the many, although genius is ever faithful to its inspiration and convictions. All artists, including the true dramatist—the hack playwright belongs to another category altogether—do appeal primarily, doubtless, to a special class, and strive more or less to seeure its peculiar approval; but in nearly all first-class work there are qualities, apart from that one which satisfies the supreme artistic ideal—which are likely to find, and constantly have found, permanent popular appreciation.

Mr. Hamilton is greatly impressed, apparently, by the ingenious theories of Gustave Le Bon concerning the psychology of crowds, but these are less applicable probably to a theatrical audience than to any other assemblage. Undoubtedly, the collective judgment of a crowd is not equal to the sum of its intellectual entities. The baser instincts, being greater in the mass, are apt to prevail over the finer. But in the ordinary theatrical audience the level of intelligence—not necessarily of cultivation—is a good deal higher than is generally supposed. It must never be forgotten that the dramatic masterpieces which survive are supported by the many, not only by the few. Many of the most successful modern plays have also been the best from the literary or dramatic point of view. The assertion, or implication, made by Mr. Hamilton that great plays are beloved of the populace for their least worthy characteristics is not susceptible of proof. In the matter of entertainment the crowd is omnivorous. And herein lies the reason why it may be accustomed to any kind of diet. There is present profit, as everybody knows, in pandering to its grosser appetites. In that knowledge is rooted the policy of all our commercial managers—a policy that spells damnation. Most of what Mr. Hamilton says about the essentials of a good play and a successful play is perfectly correct, much of it is trite, but he seems to be a victim of the all too common fallacy that the dramatist—the dramatist, mind, not the mere play-maker—must be governed by that largely fictitious thing called the public demand. No man can write a really valuable treatise on the theory of the theatre until he realizes that it should be the aim, as it is the privilege, of the dramatist, not, indeed, wholly to disregard popular tastes or opinions, but to guide them in the right direction. He should play the part of a leader, not of a clown in a circus.

Mr. Hamilton speaks somewhat contemptuously of the subservience of the crowd to inherited emotions, but it might be argued effectively on the other side that the average audience, in its sentimental adherence to ancient standards of personal honor, morality, and nobility, and even in its desire to see virtue triumphant, not infrequently exhibits keen discernment. As a rule, it is quick to see through the sophistry which attempts to represent black as white, a fact that explains the failure of a good many clever but decadent modern dramas. In dealing with the destructive effect of modern stage management upon the art of the actor and the imaginative power of the audience, he shows acute and true observation, but he favors an abominable heresy when he speaks of the value of a musical accompaniment as a means of concentrating attention. All music that is not an integral part of the scene ought to be excluded from drama. His plea in behalf of the social-problem drama is sound enough in its general propositions, but does not meet the really valid objections to many of these pieces that they ignore the truth of nature, are special pleadings of no general significance, offer no solution, are unfitted for general representation, and are as disagreeable as they are unprofitable.

There is much good sense in his remarks on the use of blank verse on the stage, but few will agree with the suggestion that the poetical dramatist should be careful to keep his terms of expression within the limits of the literary intelligence of the majority. Blank obscurity is, of course, a fatal fault; but it is one that few great poets often indulge in. He has an admirable chapter on Barrie, and hits the right nail on the head when he argues that the specialists in the morbid do not deal with the truth, but only a fragmentary part of it. As a whole, the book is well worth reading.

Music.

Musical England. By William Johnson Galloway. London: Christophers. 3s 6d, net.

Music in the Public Schools. By E. W. Newton. Boston: Ginn & Co. $1.

Let those who look on England as a hopelessly unmusical country read Mr. Galloway's volume, and they will change their minds. He shows in a series of ten chapters that enormous strides have been made in the last quarter of a century, and particularly during the first decade of the present century. This progress is obvious in all branches of the art except opera; there is a constantly increasing enthusiasm for music the country over, and the great majority of the people respond promptly to new opportunities whenever provided. The time is past when the English public refused to take music seriously; taste is changing, and the public no longer looks on native music and musicians with suspicion. In a word, there has been "a surprising musical renascence."

Among the contributing causes are music in schools, municipal music, music in the army and navy, festivals, concerts, societies, and the competitive movement, to each of which a chapter is devoted. Much has been done by the three principal high schools of music in London—the Royal Academy, the Royal College, and the Guildhall School of Music—which have among them something like three thousand pupils. The curriculum of the public schools now includes instruction (in classes of not more than thirty-five) in ear-training by dictation, sight-reading, and voice-training, with unison and part singing. In the evening schools there are also instrumental classes, which are doing excellent service; and the National Union of School Orchestras now includes some four thousand schools. Massed performances are given every year, at which the violin parts are played exclusively by children. For adults, musical education and entertainment are officially provided by municipal bands; in London, for instance, the County Council spends £12,500 a year on band performances, which are steadily improving as regards both execution and choice of pieces. Performances for the benefit of the public are also given by the army and navy bands; the only government schools of music in the provinces are the Royal Military School of Music at Hounslow and the Royal Navy School of Music at Eastney. The author notes with satisfaction that, whereas half a century ago two-thirds of the bandmasters were foreigners, today not only the bandmasters but nine-tenths of the bandsmen are British. What is still more gratifying to British pride is that the German Government has instituted a school of military music constituted largely on the lines of Kneller Hall, at which, among other things, there are three annual competitions offering prizes for orchestral scoring, quick-march writing, and compositions for military bands. Such compositions are in great demand—a fact of interest to composers everywhere—for, as the author says: "The rubbish of past generations has gone for good, but there is little to take its place, since the great composers have not written much for military bands."

Music festivals have always been an English specialty. They have done much to foster choral and other concert music; they have encouraged English composers, as well as foreigners, among them Mendelssohn, Gounod and Dvorák; but the multiplication of concerts everywhere tends to diminish their importance, because most people prefer a weekly feast to an annual gorge. For these weekly feasts—during the "season" they are daily—London alone has, among other things, five first-class orchestras, all of which seem to be prospering.

In the value of competition, Mr. Galloway puts much faith. The most interesting chapter in his book is a defence of the competitive movement which is spreading a knowledge and love of music throughout the country. At a meeting, held at Stratford in March, 1909, there were seventy-four contests in choral singing, vocal and instrumental solos, etc. These competitions were started about thirty years ago, and they have done much to raise the standard of the music performed as well as the performance itself; they have, as one active worker asserts, "the power to riddle England through and through with music." They greatly increase the interest in music felt in schools, while at the same time creating a keen desire to learn among adults who previously had no desire to hear anything but cheap tunes. The choice of worthless music is made impossible by the prescribing of the best pieces, and publishers no longer find it easy to push trashy songs by offering prizes. The author thus finds a hopeful outlook from every point of view—except the opera. Why in England alone, of all civilized countries, opera should be less popular than concerts is something he cannot explain. The state might help, he thinks, and should help. It builds and maintains museums, picture galleries, and libraries—why not opera houses?

The state doubtless is coming to the rescue, in England as in other countries; even where it does not help to build opera houses, it pays for the music in the public schools, which are the great nurseries of future audiences. Much depends on the teachers, who frequently need guidance as much as their pupils. For them, E. W. Newton's "Music in the Public Schools" was written; it is a manual of suggestions which they can use with any series of music books. Of special value are the directions given for the treatment of the partial and complete "monotones"—pupils who cannot sing correctly; the author asserts that they sing incorrectly because they hear incorrectly, and shows how they can be taught to sing in from six weeks to six months. Another excellent feature of this treatise is that interpretation is taught from the very beginning by discussing with the children the meaning of the poem they sing, thus helping them to understand the spirit of the music.

Benjamin Cutter, musical educator and author, died last week at his home, in Jamaica Plain, Mass., in his fifty-third year. He pursued his studies on the violin, and in the theory of music, in Boston, and afterward in Stuttgart, under Eichberg, Götschius and Seifriz. Beginning in 1892 he taught in the New England Conservatory of Music, and was also a member of the Boston Symphony Orchestra. Among his published compositions were a mass in D, chamber music, and choral music, religious and secular. He was the author of "Exercises in Harmony," "Harmonic Analysis," and "How to Study Kreutzer."

Art.

THE ROYAL ACADEMY.

LONDON, May 5.

Mr. Abbey this year is showing two large panels for the State Capitol at Harrisburg. As with all such larger designs done to fill a special place, it is impossible to judge them fairly when they are seen on the walls of a gallery in quite other surroundings and under quite a different light. Until they are set up in Harrisburg, I can say nothing of their value as decorations of the Capitol, but I can at least say how they strike me at the Academy. The larger—and it is very large, stretching from the floor up to the ceiling of the gallery, where it enjoys the centre of honor—represents Penn's Treaty with the Indians. Abbey has taken as his pictorial theme the historic meeting under the elm, Penn and the Indian Chief clasping hands upon their bargain. On one side is the group of Friends in attendance upon Penn; on the other, the group of Indians squatting on the ground as they watch the ceremony with close attention, their wigwams showing in the distance. The famous tree rises high above the central figures, its foliage touched with the gold of autumn, and, beyond, the woods are ablaze with scarlet. If anything, too much stress is laid upon the tree. It dwarfs the people below. And the leaves, which have already begun to fall, are scattered so sparsely that they become little restless spots of gold, dotted over the upper part of the canvas. The proportions may be all right, the restlessness may disappear when the panel is seen under the conditions for which it has been designed, but I cannot help feeling, as it stands, that Abbey has been more concerned with the dramatic illustration of his subject than with the fine line and the harmonious color scheme that are the very essentials of mural decoration. His other painting is much smaller. The theme here is the Camp of the American Army at Valley Forge, February, 1778, and it is still less decoratively treated. It might really be an enlargement of a drawing done for *Harper's*. The snow lies on the ground, a handful of miserable soldiers in miserable makeshifts of uniform, or rather no uniform at all, are drawn up in the foreground for drill by Baron Steuben, and everything speaks of the sufferings of that cruel winter. Abbey has doubtlessly studied the detail with the utmost care, for no artist is more scrupulous when it comes to a question of historic fact, whether of costume or architecture, climate, or anecdote. But his

decorative intention is less evident, and again one fails to find the rhythmical line and color of which the great decorators of all time have had the secret.

These are the only two important examples of mural decoration in the whole exhibition. It is the more extraordinary because one hears of various large schemes of decoration that are being, or have just been, carried out—for the House of Lords, for some of the City Companies, for private houses. But it is just this sort of work that seldom finds its way into the Academy where, of all places, it should be seen, were the Academy truly to represent the art of the country. It seems, too, that it has gone out of fashion for artists to show there the big religious, or metaphorical, or mythological compositions, the huge domestic anecdotes, once so conspicuous. The reason of the change, perhaps, is that those are no longer the honored masterpieces that bring the eager outsider straight into the Academical fold. A fisherman's wedding breakfast or funeral, the Prodigal Son, a Venus on heroic scale, were once worth an associateship, or even a full membership. But the prize of late has gone to another order of performance which, therefore, in its turn, is accepted as model. A few years ago, the late C. W. Furse made his popular success with portraits of individuals or groups on windy uplands, and now one aspirant after another tries his luck with an arrangement of figures in the open air, with ribbons and draperies flying before the breeze. Lately Orpen was elected an Associate, and as his chief success was made with portraits painted indoors, his sitter surrounded by the appropriate detail, now the ambitious outsider seeks to rival him with the presentment of elaborately wrought interiors as the setting to one or more models. A few of the older men persevere in the familiar paths which they have followed so decorously for years. Alma-Tadema's marbles and blue skies and figures in classical costume are as they ever were, only this year he gives them for title The Voice of Spring and Spring Spreads one Green Lap of Flowers, for the fair maidens of Waterhouse who grow no older or less sad with the passing of time. But these painters of an earlier generation have, for the present anyway, no disciples. A few of the younger men strain frankly after idealism, or decoration, or symbolism, however they may call it. Brangwyn's Wine is apparently decorative in intention, and is certainly in effect: an arrangement of nude figures, an exuberance of fruit, and a great Arabian Nights' green jar. There is strong painting in the detail, especially in the grapes and jar, and less of the spottiness, the blobbiness, of Brangwyn's usual work; but the pattern is confused, the various parts only detaching themselves unwillingly from an incoherent whole after you have looked into it long and carefully, a confusion largely due to the fact that the arrangement is neither entirely conventional nor yet entirely realistic. Gerald Moira's London is as symbolic in its quite different way, the endeavor being to express the very spirit of the place by crowding into one canvas all that is most symbolic of it, from St. Paul's, with the heavy white clouds adrift above, to the flower girl of Piccadilly Circus, with her basket at her knees. And here again the artist has hesitated between decorative formula and actual fact, with confusion as the result. But though Brangwyn has his followers and Moira is a professor at South Kensington, the Academy gives no sign of the influence of either, and their pictures and motives are the rare exception.

The portraits are, of course, numerous, but they do not excel in quality as in quantity. For some years past, portraits at the Academy have meant, as far as interest goes, chiefly Sargent, and Sargent, for this spring at all events, has kept to his announced intention to paint portraits no more, and he shows only landscapes. Sir Edward J. Poynter fills the place of honor in the large Gallery III with a portrait of the [late] King, which he has painted for the Royal Academy. Unfortunately, the Academy has lost another of its most distinguished portrait painters in Orchardson. He is not unrepresented. Three, I believe, of the last portraits he began before his death are hung, but I doubt if, had he lived, he would have wished to show them as they are. They seem like shadows from the brush of the Orchardson who painted that beautiful mother and baby and the memorable portrait of Sir Walter Gilbey. The most complete of the three is one of Abbey, characteristic enough in pose and color scheme and refinement of handling, but shadowy—an etherealized Abbey.

Orchardson and Sargent are not easily replaced. There are, it is true, portraits by other Academicians, by Ouless, Herkomer, Fildes, Cope; some as devoid of interest or character as a painted photograph, some in which brutality is mistaken for breadth, some merely commonplace. J. J. Shannon has shown many in the past far better than his four, all of women, of this year. Even Orpen, the new Associate, is not at his strongest, though he sends one of the interiors that have attracted to him such numerous imitators. But the Hon. Sir Eric Barrington, whom he places in a small room of agreeable simplicity and pleasant, cool light, can scarcely distract attention from the tiles of the floor beneath his chair or the prints and mirror on the wall behind him: technically, he is of only secondary interest. Orpen's one other portrait is of Sir Maurice FitzGerald, who stands against a gray background with which his gray coat is in harmony; and if the coat is so flat that you can feel no body inside of it, and if the head has no greater solidity, at least the figure is not leaping from the canvas as in so many an Academical portrait, nor does it degenerate into a mannikin for the display of superfluous detail. Dignity and repose are the merit of Maurice Greiffenhagen's portrait of Maurice Hewlett, who has posed for many artists, but never very successfully, not even now for Greiffenhagen. As he stands, a strangely sinister figure, against a dark background, he recalls the saints, ascetic, gaunt, with faces yellowing like parchment, who loom from out the deep shadows of some old Spanish altarpiece.

Vitality has always been the great distinction of Sargent's portraits on the walls of the Academy, and it is the quality he now brings to his landscapes. The others, whether Alfred East's large decorative formulas or David Murray's big views like stage settings, whether the almost Pre-Raphaelite roads and pastures of H. W. B. Davis or the flower-strewn mountain slopes of MacWhirter—all the old familiar Academic *clichés* in landscape fade by the side of Sargent's impressions of Glacier Streams or of Albanian Olive-Gatherers, with the gorgeous costumes of the peasants making little bright spots in the cool grass and with the great trees beyond partially screening the blinding blue of the southern sky: a landscape of intense brilliancy, but without the hot, unpleasant color with which La Thangue, for instance, is so apt to fill his pictures of the south. Brilliant, clever, as these impressions of Sargent's are, they seem, however, like rapid, hasty notes made in passing, and they have the restlessness that the suggestion of haste gives—they almost tire you to look at them even while you are thankful to find a painter who is alive and who sees things with an enthusiasm that animates the records he jots down on his canvas so unmistakably for his own amusement. Other landscapes there are, here and there, with a quiet beauty that makes itself felt despite the strident screams for notice from near canvases. Something of the poetry of the hour is in Adrian Stokes's Dawn in Winter, with the line of light in the morning sky seen across a wide expanse of snow; something of freshness and quiet in the white "kine with trailing step and shambling gait" moving slowly through Arthur Lemon's cool pastures. The clouds are really floating across the spacious sky above the distant tower of Clavering Church, by George Clausen, but neither this little picture nor his other two have the charm of many of his earlier landscapes, in each of which he set himself some new problem of light or air to study, and, if pos-

sible, solve. Edward Stott, of recent years, has sought to appeal to the British public by the Scriptural subjects it loves, though treating them never on the scale of Martin and Lang and Doré, and always in the intimate, homely manner those painters would have thought unworthy of their themes. But there is a forced note in Stott's religious sentiment, and, however little he may intend it, the interest of his pictures is still in the landscape.

The walls of the Water-Color Room are, as usual, packed so close from floor to ceiling that masterpieces, were any hidden away in the crowd of commonplace, would run small risk of discovery. And, as usual, the Black-and-White Room is an odd jumble of drawings and prints as little representative of the best work that is done to-day in Great Britain, to say nothing of the world, as if the Royal Academy set out deliberately to disown one of the arts it is supposed to encourage. One thing to note is that the lithography the Academy of old scorned as mere "process" is now recognized as engraving, which may be a sign of grace; another thing is that the Academy has amiably yielded to the International Society an entire monopoly in the fine drawings of the Academician, the late John M. Swan. At Burlington House he is represented instead by a picture, presumably his last, The Cold North, a careful study of two polar bears in their native ice drifts, which I believe Swan never saw. There is also his original model for the colossal lions of the Rhodes Memorial to remind one that he was, on the whole, more distinguished as a sculptor than as a painter. For the rest, there is little to be said about this year's sculpture that has not been said many times before. But the Academy is the Academy, and the astonishing thing is not so much that it should still be accepted by the British public, from royalty down, as the one exhibition of the year, but that those who know better should still go to it hoping for anything more stimulating than the old dull level of commonplace. N. N.

Even those who know that an extensive literature already exists on prints, may be surprised to see more than 300 octavo pages of titles in G. Bourcard's "Graveurs et gravures, France et étranger: essai de bibliographie 1540-1910." It is easy to find omissions and errors in a work of this kind, but the industry of the author has brought together a quantity of titles that will be particularly serviceable to the student in search of information regarding individual artists. All is grist for the author's mill, the sumptuous monograph, as well as the art dealer's catalogue (often of decided value) and the magazine article. The first part (General Works) might perhaps better have been arranged in classes than by authors' names, although references from subjects to authors are included. The second part (Monographs on Individual Artists) is properly arranged in one alphabet, by artists. Even works published this year have a place here, and the United States is remarkably well represented. The wise purchaser of the book will have it bound interleaved for additions.

"The Growth of the English House," a short history of its architectural development from 1100 to 1800, by J. Alfred Gotch, is a compact, well-illustrated, and agreeably written manual for popular reading. The author is a specialist on the English Renaissance, and his admiration is given especially to those Elizabethan piles in which the problems of plan were first frankly perceived and dealt with. A similar sense of the importance of plan leads him to condemn most of the Palladian symmetrical designs of the eighteenth century. This hint must suffice for a useful and informing book, which, beside the general narrative, contains separate chapters on doorways, windows, fireplaces, staircases, chimneys, etc. The Scribners import the volume at $3 net.

The National Academy of Design, at its annual meeting held last week, elected these officers to serve for the coming year: President, John W. Alexander (reëlected); vice-president, Herbert Adams; corresponding secretary, Harry W. Watrous; and recording secretary, Charles C. Curran. New members of the council are Kenyon Cox and F. Ballard Williams, who will sit with E. H. Blashfield, Frederick Dielman, and Cass Gilbert. Five new academicians were elected: John M. Carrere, architect, of the firm of Carrere & Hastings; William Rutherford Mead, architect, of the firm of McKim, Mead & White, and Montague Flagg, Albert L. Groll, and Birge Harrison, painters.

Finance.

MARKETS AND GREAT AFFAIRS OF STATE.

A month ago, any one who had pictured to himself the sudden death of the King of England, at a moment of peculiar political and financial tension, would have looked forward also, in imagination, to the gravest sort of disturbance in the markets. In the political arena, all England was awaiting with feverish interest the clash between ministry and crown, which it believed to be impending in connection with the ministry's demand for creation of new peerages numerous enough to reverse the Conservative majority in the House of Lords. What King Edward's attitude in the crisis would have been, could only be conjectured; the one reassuring fact at which political and financial London grasped was its knowledge of the experience, judgment, and tactful mastery of exacting public problems, with which his long career in public affairs had equipped King Edward.

The King died suddenly; his son, almost an unknown quantity to the English public, succeeded to the throne. This startling news came in at a moment when the London and New York markets were slowly emerging from an exceedingly strained position, in which each had been compelled to have recourse, for relief, to unusual expedients. The Bank of England had been bidding a special premium to get gold from New York, and Wall Street had been exerting the greatest pressure, and offering exceptional inducements to place some blocks of its new loans at Paris. Neither market felt itself in a wholly secure position. London was immediately confronted with the enormous collections of the past year's British income tax, postponed during the long Parliamentary deadlock over the budget, and finally called for payment when the budget passed in the very week before the bad news from Buckingham Palace. The "rubber-share mania," in which a good part of the serious financial public had been expecting momentarily a disastrous collapse, had already shown some signs of shaking. As to the sales of American bonds in France, negotiations for the purpose had not even been closed.

On this delicate situation came the news of the King of England's sudden death, on Friday, April 6. Even the reports of his serious illness had sent down British consols 5/8 point within the day, and had completely upset the London and New York markets. It was natural that the opening of the markets, on the ensuing Monday, should have been awaited with extreme misgiving. What actually happened, in the first few business days following the King of England's death, was that consols rose a full point above the previous week's closing, that London discount rates declined nearly 3/8 per cent., and that even American securities advanced 2 to 4 points. Such a result makes it pertinent to ask, what has usually been the sequel at such junctures, and what was the reason for this sequel last week.

Financial history is singularly unanimous in its testimony. The nearest instance of the sudden and unexpected death of a ruler in a great financial state was that of President McKinley, who was shot on Friday, September 6, 1901, at 4 P. M. Next morning, the leading bankers of this city met to pledge concerted support to avert a panic—in spite of which precaution, stocks fell 5 to 10 points that day. Yet on Monday, virtually all the loss was at once recovered, markets held up throughout the week, and the President's death, on the ensuing Saturday, was followed the next week by an initial rise of 1 to 3 points on the Stock Exchange, and by continuous advance.

On Thursday, March 9, 1888, old Emperor William of Germany died. It was a troubled financial year. European markets were congested with unparalleled issues of new securities; Gen. Boulanger and the royalists were threatening the stability of the French Republic,

and grave disturbance was afoot in the Balkans. On top of all, the old German sovereign's successor, Emperor Frederick, soon proved to be the victim of an incurable disease; he died on Friday, June 15. Yet the death of each Emperor, after a day of unsettlement, was followed by an advance on the European stock exchanges. Financial critics pointed out that a prolonged "bear movement," based on other causes, had preceded each event, and that recovery was almost automatic.

President Garfield was shot at Washington on Saturday, July 2, 1881; stocks at New York fell 2 to 4 points on the news, but regained all the loss on the next business day. When Garfield died, on September 19, a week of rising prices followed.

Abraham Lincoln was assassinated on Friday night, April 14, 1865. The Stock Exchange was closed on Saturday; with the next week's opening, gold rose from 146 to 153, government 6 per cents fell from 110⅜ to 105½, and such declines on the Stock Exchange occurred as 18 points in New York Central, 28 in Hudson River, and 33 in Erie. Yet even with all the formidable uncertainties opened by Lincoln's death, markets recovered promptly. The very next business day, gold was back at its price of the week before. The Treasury bought government bonds in the open market, and the price, within a fortnight, had recovered all its losses.

The two most obvious general inferences are, first, that a sudden change of rulers is an event whose dangerous possibilities are apt to be exaggerated; next, that it draws at once, to the support of all financial markets, the strongest capital resources of the world. Whether these several episodes had, later on, an influence on the fortunes of their states which was averted on the first shock of the news, is a question which would have to be answered in the light of the subsequent political as well as financial history.

Books on Garden Field and Wood

OUR GARDEN FLOWERS — By Harriet L. Keeler

Author of "Our Native Trees" and "Our Northern Shrubs."

A popular study with those qualities of clearness, thoroughness, and charm of style that have made her other books famous.

"This book," says its author in her preface, "is the outcome of a life-long search for a volume with which one might make a little journey into the garden, and become acquainted with the dwellers therein; their native land, their life history, their structural affiliations.

"Among the many species of a genus it has often been necessary to select but one for description. As a rule the choice has been either the typical form, or the one longest in cultivation, or the greatest favorite."

Full of practical, tested, systematically arranged, and well indexed information. With 96 full-page illustrations from photographs and 186 illustrations from drawings. *$2.00 net; postpaid, $2.20*

By HARRIET L. KEELER

OUR NATIVE TREES

"It condenses into convenient shape a fund of information spread over many volumes of older works, and blends the practical and poetical in a way to delight all readers."

—St. Louis Globe-Democrat.

OUR NORTHERN SHRUBS

"Simple, clear descriptions that a child can understand, are given of shrubs that find their home in the region extending from the Atlantic to the Mississippi River, and from Canada to the boundaries of our Southern States."

—Outlook.

Each Crown 8vo, $2.00 net

By MRS. WILLIAM STARR DANA (Frances Theodora Parsons)

HOW TO KNOW WILD FLOWERS

"She has systematized her facts in a compact and convenient form. She is practical and terse, and is also alive to the things which are not entirely matters of fact."—*New York Tribune.*

Miss C. W. Hunt, Superintendent of Children's Department, Brooklyn Public Library, says: "Get this book if you only carry one flower book on your vacation." *$2.00 net*

HOW TO KNOW THE FERNS

With 144 illustrations from photographs.

"The charm of this book is as pervading and enduring as is the charm of Nature."—*N. Y. Times.*

"This is a notably thorough little volume. The author has mastered her subject and she treats it with authority."—*N. Y. Tribune.* *$1.50 net*

ACCORDING TO SEASON

Talks about the flowers in the order of their appearance in the woods and fields. With 32 full-page illustrations in colors from drawings by Elsie Louise Shaw.

"It is a privilege to own such a book, for its artistic charm and its contents well deserve their setting."—*The Dial.* *$1.75 net*

THE SEASONS IN A FLOWER GARDEN — By Louise Shelton

A hand-book of information and instruction for the amateur.

"A manual admirably adapted in every way to the needs of people who desire to utilize a small garden space to the best possible advantage."—*Providence Journal.* *Illustrated. $1.00 net*

PHILOSOPHY

THE PROBLEM OF HUMAN LIFE — By Rodolf Eucken

Translated by W. S. HOUGH and W. R. BOYCE GIBSON. *Third Edition.*

"A better introduction to the history of philosophy it would be hard to find."—*Nation.*

"It is a work of profound knowledge, it shows a happy faculty of generalization, its illustrations are drawn from the most varied sources and handled with complete mastery."—*Westminster Gazette.* *$3.00 net; postpaid, $3.30*

AMERICANS: An Impression
By Alexander Francis.

THE MEDIAEVAL TOWN SERIES

"LITERARY GUIDE-BOOKS" TO THE FAMOUS ART AND LITERARY CENTRES OF MEDIAEVAL EUROPE

A series of appreciative, sympathetic, and scholarly studies of the great individual mediæval centres of Great Britain and Continental Europe. Uniformly throughout the series the treatment of the history, architectural development, the lives and influence of the leading historic literary and artistic personalities has been consistently sustained, so that each volume presents to the reader a charming narrative of the characteristics, principal events, and human elements in the origin and growth of the subject town of the volume.

While the romantic side of each story has been especially dealt with, a popular, yet accurate survey of the literary and artistic activities in each community forms a large proportion of each narrative.

So fully has the topography of each town and environment been described and illustrated, that the series offers not only the best guide to the enquiring traveller, but offers also what a guide-book invariably lacks: a sympathetic, concise, yet full and comprehensive survey of the entire history of each town, each written by the one best qualified to prepare such an authoritative work.

The illustrations are of particular value, art objects, frescoes, paintings, etc., being reproduced in half-tone or photogravure, while the architectural illustrations are from original drawings, mostly the work of artists who have lived and worked in the towns illustrated

JUST ISSUED IN THIS SERIES.

THE STORY OF PADUA

By CESARE FOLIGNO. Illustrated with 30 Pen-and-Ink Drawings by Giovanni Vianello and 7 Reproductions of Frescoes and Paintings and 2 Maps.

Cloth, gilt top, net, $1.75. Full limp leather, net, $2.25.

The first complete history of Padua ever written. The author gathered his material from contemporary records, published and unpublished, and by a careful perusal of the works of early Italian historians for whatever was to be found on the early history of the city. The author in his preface says: "For any merit that an indulgent reader may trace in the following pages, I am therefore chiefly indebted to the spell which Padua herself exercised upon me."

LIST OF THE VOLUMES NOW READY

Each vol., 12mo, in two styles of binding: cloth, gilt top, uncut; and in full limp green leather, gilt top. Each volume illustrated with many reproductions of paintings, etc., in photogravure and half-tone, in addition to the topographical drawings by the artists mentioned after each title.

	Cloth.	Leather.
ASSISI. By L. D. Gordon; Illustrated by H. M. James and N. Erichsen..	net $1.50	net $1.75
BRUGES. By E. Gilliat-Smith; Illustrated by Herbert Railton and E. Calvert	net 1.75	net 2.25
BRUSSELS. By E. Gilliat-Smith; Illustrated by K. Kimball and G. Gilliat-Smith	net 1.75	net 2.25
CAIRO. By Stanley Lane-Poole; Illustrated by J. A. Symington and others	net 1.75	net 2.25
CAMBRIDGE. By C. W. Stubbs; Illustrated by Herbert Railton	net 1.75	net 2.25
CHARTRES. By Cecil Headlam; Illustrated by Herbert Railton	net 1.75	net 2.25
CONSTANTINOPLE. By W. H. Hutton; Illustrated by S. Cooper	net 1.50	net 1.75
DUBLIN. By D. A. Chart; Illustrated by H. J. Howard	net 1.75	net 2.25
EDINBURGH. By Oliver Smeaton; Illustrated by Herbert Railton and J. A. Symington	net 1.75	net 2.25
FERRARA. By Ella Noyes; Illustrated by Dora Noyes	net 1.75	net 2.25
FLORENCE. By E. G. Gardner; Illustrated by Nelly Erichsen	net 1.75	net 2.25
LONDON. By H. B. Wheatley; Illustrated by Herbert Railton and others	net 1.75	net 2.25
LUCCA. By Janet Ross; Illustrated by Nelly Erichsen	net 1.75	net 2.25
MILAN. By Ella Noyes; Illustrated by Dora Noyes	net 1.75	net 2.25
MOSCOW. By W. Gerrare; Illustrated by H. M. James	net $1.50	net $1.75
NUREMBERG. By Cecil Headlam; Illustrated by H. M. James	net 1.50	net 1.75
OXFORD. By Cecil Headlam; Illustrated by H. M. James	net 1.75	net 2.25
PADUA. By Cesare Foligno; Illustrated by Giovanni Vianello	net 1.75	net 2.25
PARIS. By Thomas Okey; Illustrated by K. Kimball	net 1.75	net 2.25
PERUGIA. By Margaret Symonds and L. D. Gordon; Illustrated by H. M. James	net 1.50	net 1.75
PISA. By Janet Ross; Illustrated by Nelly Erichsen	net 1.75	net 2.25
PRAGUE. By Count Lützow; Illustrated by Nelly Erichsen	net 1.50	net 1.75
ROME. By Norwood Young; Illustrated by Nelly Erichsen	net 1.75	net 2.25
ROUEN. By Theodore A. Cook; Illustrated by H. M. James and J. Cook..	net 1.75	net 2.25
SEVILLE. By W. M. Gallichan; Illustrated by E. Hartley	net 1.75	net 2.25
SIENA AND SAN GIMIGNANO. By Edmund G. Gardner; Illustrated by H. M. James	net 1.75	net 2.25
TOLEDO. By Hannah Lynch; Illustrated by H. M. James	net 1.50	net 1.75
VENICE. By Thomas Okey; Illustrated by Nelly Erichsen	net 1.75	net 2.25
VERONA. By Alethea Wiel; Illustrated by H. M. James and Nelly Erichsen..	net 1.75	net 2.25

"This series has already earned popularity by its convenience and excellence. Compact, well written, and well illustrated, they supply a need, and the intelligent traveller has not been long in recognizing their worth."

—*The Guardian.*

E. P. DUTTON & COMPANY - 31 West 23d Street New York

The Nation.

NEW YORK, THURSDAY, MAY 26, 1910.

The Week.

In looking about for Democratic possibilities for 1912, it is well not to overlook the most important of all possibilities, namely, the Democratic party itself. Gov. Harmon is possible; Mayor Gaynor is possible; Gov. Marshall is possible; and there are others. If only the Democracy does not become impossible by 1912, all of these men are possible. For it will probably be true in 1912, in a degree in which it has not been true since 1896, that the issue rather than the man will count. The issue may be a negative one from the Democratic point of view. It may consist chiefly in Republican misrule. But that is all the more reason why the man will count less than the party. That Harmon, Gaynor, or Marshall shall continue to shape into fine Presidential timber is therefore of far less importance than that the Democratic party shall not throw away, in the course of the next two years, the opportunity that lies close to hand. The traditional Democratic policy of killing opportunity and playing into Republican hands has been broken of late. In New York State, in Indiana, and at Washington the Democrats have recently had the choice to do the right thing or the wrong one, and have actually chosen the right. A greater opportunity will come after the Congressional elections next autumn. If the probable Democratic majority in Congress shall refrain from convincing the people that, however bad the Republican party is, the Democratic party can promise only worse, there will be a fine opening for any reasonably qualified Democratic candidate.

We cordially endorse President Taft's assertion, in the *McClure's Magazine* interview, that "the chief interest of the public in a tariff is as to whether it raises or lowers the cost of the necessaries of life." This plain statement of the case is not the less useful in that it repudiates the time-worn arguments with which the protectionist campaigns of 1888 and 1890 made the country familiar. President Harrison's contemptuous reference to the "cheap man inside the cheap coat," and the constant appeal to the hypothesis that high prices must mean high wages, not to mention high profits, and that therefore we ought gladly to submit to taxation for the purpose, may fairly be considered to-day as discarded arguments. This is a distinct gain in common sense, as is also the discarding of the extraordinary theory, urged by Mr. McKinley in defence of his own tariff bill of twenty years ago, that in some mysterious and occult way, "the foreigner pays the tariff tax."

The figures, however—cited by the President as proof that the tariff revision of 1909 was downward—do not appear to us convincing. The average rate of duty paid on all imported articles, since the enactment of the Payne bill, is stated to have been 12 per cent. below the average in the same months of the four preceding years. But such comparisons are not only vitally affected by an increase, for reasons peculiar to a season's trade, in imports which were not and are not taxed at all, but they depend on the movement of the various dutiable imports in relation to one another. The McKinley tariff of 1890, for example, increased import duties heavily, by the admission both of its advocates and its enemies. Yet the ratio between total import trade and duties collected from it, which had been 29.12 per cent. in the twelve months preceding the enactment of the new tariff schedules, was only 25.25 per cent. in the next twelve months, and 21.26 per cent. in the next. A question of this sort can be properly settled only by examination of the schedules themselves, with a view always to those articles in which increased taxation of the imports inevitably leads to higher prices paid by the consumer. This test has been utterly destructive to the claim of "revision downward," from the moment when the independent Republicans in Congress applied it to the schedules then under debate, to the present moment when every thrifty housewife in the country is unconsciously applying it.

Collector Loeb could have done nothing to show more conclusively his determination to execute the law than what he effected by the rigorous application of the customs laws to ex-Gov. Rollins of New Hampshire. Not to flinch from inflicting humiliation upon a prominent man, in such a matter, is as exceptional as it is praiseworthy. There is always the argument, with which officials may salve their conscience, that the person in question has done no worse than thousands of others who have suffered no punishment. But the only way to get the law respected is to punish when you can; and this one act of the Government will do more than a thousand denunciations or warnings to prevent others from breaking the law. Along with the serious aspect of the matter there goes one which is distinctly comical. Here is a prominent high-tariff politician, a man who enthusiastically votes to compel eighty million Americans who stay at home to pay a considerable part of their income in the shape of high prices for the great cause of protecting home industries; and he comes back from a pleasure trip not only laden with thousands of dollars' worth of the dangerous foreign stuff, but trying to escape the payment of the duty by concealing it from the customs officers. Is it not to laugh?

The equipment of the speedy turbine liners Harvard and Yale with oil-burning apparatus, doing away with the use of coal, is a highly interesting development in marine engineering. More and more, on the Pacific Coast, shipping men are turning to this form of fuel, not only because it eliminates the horrors of the stoke-hole and dispenses with all but a few of the engine-room force, but because it increases the efficiency of the ship by from 5 to 8 per cent. At least this is the estimate of a well-informed writer in *Out West;* the avoidance of the necessity of drawing fires, and the steady, even heat of the liquid fuel are the prime reasons for the gain. For the passengers the advantage in comfort is very great, and the loading of fuel on the Harvard and Yale takes now an hour of pumping in place of eight hours of exhausting labor in transferring coal from barges to the ship. Oil stows, too, in about 61 per cent. of the space of coal, ton for ton, and, more than that,

the ton of oil is as efficient as two of coal. The cost of oil is, if anything, a little higher than that of coal in bulk, but the saving of labor more than offsets this.

The fight against the middleman, whom most people hold responsible for the high food prices, has begun in earnest. The farmers who organized the American Coöperative Union in St. Louis a few days ago have announced their intention of opening branches in every large city in the country, with the view of eliminating middlemen in the sale of farm products. In some European countries direct purchase from the farmer has already made considerable progress, thanks to the existence of a cheap parcels post. Consul-General Robert P. Skinner writes that in Hamburg thousands of families receive their daily pot of fresh butter from the parcels postman. The Mecklenburg farmer visits the city once a year to find customers, and returns to his home with the knowledge that his trade will be served just as carefully by the parcels post as though he were established in the heart of the city. Here we have to rely on the express companies; but outrageously high though express charges are, not a few families in this city have found that they can in this way get butter and eggs and poultry and vegetables as cheaply as at the corner grocery or butcher-shop, and usually in a much fresher and more palatable condition.

The death of John A. Kasson removes one of the last, if not the last, of the men who held high office in Washington under Lincoln. More than that, it takes away a faithful, high-minded servant of the Government in various useful capacities. From 1858 to 1860 Chairman of the Iowa Republican State Committee, he played a leading part in the drafting of the party's platform in the convention of 1860 which nominated Lincoln. Long a member of the Iowa Legislature, his varied career included, prior to 1881, two terms in Congress and four years as Minister to Austria. After two more terms in Congress he reentered the diplomatic service as a most acceptable Minister to Germany by appointment of President Arthur, distinguishing himself while in Berlin by his usefulness as American delegate to the Congo Conference. In 1887 and 1888 Mr. Kasson honorably represented the United States as chairman of the United States delegates to the Samoan Conference held in Berlin. His greater service was, however, as special commissioner plenipotentiary to negotiate reciprocity treaties. Under this roving commission he obtained treaties with France, England, the Argentine Republic, Nicaragua, Ecuador, and other nations during the years from 1897 to 1901. But the stupidity and indifference of Congress made these labors come to naught, Mr. Kasson finally resigning in protest. In 1898 Mr. Kasson was also a member of the American-Canadian Joint High Commission. Dignified, courteous, admirably equipped by tastes, training, and abilities for public service, Mr. Kasson was ever a rebuke to those politicians who believe that anybody can be a diplomat, and to those pessimists who used to believe that the United States could produce no diplomats to match the long-trained representatives of foreign lands.

President Butler came very close to the truth in what he told the Lake Mohonk Peace Conference:

> I am one of those who look for the simplest motives in explanation of action or of conduct. My impression is that somebody makes something by reason of the huge expenditures in preparation for war. Have you ever noticed that about the time that the appropriations for military purposes are under consideration in Congress, in the House of Commons, in the Chamber of Deputies, or in the Reichstag, or just before such a time, hostilities are always on the point of breaking out in two or three parts of the world at once?

It would be a pretty dull reader of the newspapers who had not noticed this remarkable law of nature, or had not occasionally risen to the suspicion that somebody was making something out of preaching war. War is one of the glorious, inevitable things behind which skulk a host of mean motives. War means the march of national destiny, war means the inevitable swing of history, war means peace with honor, and many other noble phrases. Alas! war too often means the march of the ammunition manufacturer and the swing of the beef-packer's purse. War means the demagogue's thirst for an issue, and the jingo editor's hunger for sensation, and the young lieutenant's longing for promotion, and the gun-captain's longing to show what he can do with his new twelve-inch rifle.

Preparation of an annual index to one or several metropolitan daily newspapers, which is suggested in an article in the journal of the Special Libraries Association, is a work which the American Library Association, or the Library of Congress, might well take up, and by so doing fill a great need. The writer, Paul P. Foster, makes his plea in behalf of the editorial library and the journalist, but such a work of reference would be of real value to thousands, and the wonder is that there is none. Publication of the index to the New York *Tribune* was discontinued in 1906, and since then consultation of newspaper files has been a haphazard grubbing, in which only zeal and time could insure success. The carefully prepared index to the London *Times*, issued in monthly parts and in annual volumes, and listing every article, item, or name which appears in its columns, offers a convenient model which the compiler here might follow.

The magnificent addition that is now to be made to the resources of the Princeton graduate school may bring to a settlement the questions that were the cause of such intense controversy a few months ago. Precisely what these questions were never became quite clear to the outside world. To President Wilson's mind there was evidently contained in the dispute an issue of fundamental importance—one involving no less a question than that of the preservation at Princeton of ideals vital in a democracy. But it is to be hoped that the passage of time has resulted in a better understanding and that the great bequest of Mr. Wyman may be made the basis of a development at Princeton which will be recognized by all Americans as a welcome addition to the country's resources in the field of the higher education.

That our cheap magazines are doing some good work, few persons will deny. That along with the good work there is a great deal of matter that is unwholesome either through exaggeration or one-sidedness or an hysterical method of presentation, is an assertion that may be made with as little danger of successful challenge. Yet no less competent a critic than Mr. William Archer, writing in the *Fortnightly Review*, gives to the "uplift" work of these magazines praise that is not only extremely high,

but quite unqualified. Speaking of a certain article (with which we are not familiar) he designates it as "a picture every line of which was evidently the result of patient, penetrating investigation, and intimate personal knowledge"; and he gives like praise to an "equally masterly study" by the same hand—which has, in point of fact, by no means stood the test of subsequent examination and criticism. And speaking of the whole genus, he declares that "the sincerity and sobriety with which difficult topics are handled—the adherence to essential fact and avoidance of lurid and 'picturesque' detail—are beyond praise." Such laudation from over-sea must be very delightful to the ears of the "muck-raking" magazinists, but the description would hardly be recognized at home as everywhere applicable.

The Senate at Albany, on second consideration, has reversed its vote on the bill to provide a bond issue of $2,500,000 to make possible the acceptance of the Harriman and other gifts offered to the people of New York State. Failure to accept this wonderful gift would have been a monumental piece of stupidity. The Palisades Park, upon which the joint New York and New Jersey Commission has been working zealously for ten years without remuneration, already stretched well up the Hudson River, nearly to Hook Mountain. As now completed it extends to Newburgh, thus maintaining intact some of the finest scenery of the Hudson and ending such vandalism as has been going on in the stone quarries of Hook Mountain and elsewhere. It will result in the removal of the new State's Prison just under way below West Point. It happens, moreover, that there is not a single large private industry or settlement to interfere with the development of this park, which bids fair to pay for itself to a considerable degree by the sale of cuttings from its splendid forests. These are now a part of the State Forest Reservation. It is an extraordinary fact that so wild and untouched a tract of land, and one full of historic associations, can be found within so short a distance of a metropolis. As Gov. Hughes wrote to Mrs. Harriman: "Great as will be the pleasure of the people at the announcement of your gift, I am sure that in the years to come there will be a constantly growing appreciation of its importance to the State, and of the liberal disposition and far-sightedness that prompted it."

Monday's debate in the Senate, on the appropriation of $25,000,000 for two new Dreadnoughts, served to elicit, so the dispatches inform us, "two historical revelations by Senator Depew." Historical revelations are read with eagerness in these days; but of these two contributions by Mr. Depew we are compelled to say that one of them reveals nothing which was not known by every well-informed man beforehand, and that the other reveals something which never happened. The first has to do with President McKinley's attitude towards the Spanish War, concerning which Mr. Depew declared that he "knew of his own knowledge" that Spain was prepared to abandon Cuba and Porto Rico if she could be assured in advance of the acceptance of her offer. The facts in this regard have been repeatedly set forth in our columns; they have been summed up by Rear-Admiral Chadwick in his recent work on the diplomatic relations of the United States and Spain. On April 10, 1898, Minister Woodford cabled from Madrid to Washington the news of the Spanish Government's assent to all the American demands, adding:

> I hope that nothing will now be done to humiliate Spain, as I am satisfied that the present government is going, and is loyally ready to go, as fast and as far as it can.

On April 11, one day later, President McKinley sent to Congress a message ending thus:

> The issue is now with Congress. It is a solemn responsibility. I have exhausted every effort to relieve the intolerable condition of affairs which is at our doors. Prepared to execute every obligation imposed upon me by the Constitution and the law, I await your action.

The Senator's other "revelation" was ascribed to an "intimate friend" who had imparted this information regarding the Venezuela episode of 1895:

> When the President's message was promulgated, Lord Salisbury said to him: "I believe that on account of the rancor coming down from the Revolutionary war, and accentuated by certain occurrences in the civil war, America means to have a war with Great Britain at some time, and I believe now is the best time, when America has no navy." The views of the prime minister were overruled by Queen Victoria, but if Lord Salisbury had had the power possessed by some of the English prime ministers, the issue certainly would have been tried out.

Without disparagement of the "intimate friend," we are constrained to call attention to the position of international affairs at the hour when this remarkable clash between the Queen and Lord Salisbury must be supposed to have occurred. It was an hour when England's diplomatic isolation was such as has not been witnessed at any other period in our time. France, as the subsequent Fashoda episode demonstrated, was watching England jealously. What the popular and official feeling was in Germany, the incident of the Kaiser's telegram to Kruger, four or five weeks after the Venezuela message, proved unmistakably. Russia had not forgotten 1877 and 1885. The notion, then, that an experienced English statesman was at that very moment contemplating lightheartedly collision with the United States, hardly does credit to the "intimate friend."

The sentencing of the president of the Russian Duma and of one of the principal members of that body to a term of imprisonment for participating in a duel emphasizes the disrepute which attaches in Russia to murder, or attempted murder, on a small scale. Either it is that, or else it is a case of reserving certain sports for the exclusive enjoyment of the Czar and his government, just as hunting the stag in mediæval England was reserved for the exclusive enjoyment of the King. If Halley's comet is at all interested in the recent progress of affairs in Russia, it will carry with it into stellar space the somewhat mixed impression of a great country where it is wrong to fight a duel, but where it is proper for the government to organize the wholesale murder of women and children; a country where the Czar's peace must not be infringed upon, not though thousands must be sent to the gallows by judges in whom expedition tempers justice. At the present moment Jewish families are being expelled by the hundred from Kieff and other Russian cities outside of the Pale. The fugitives must either emigrate or go to swell the mass of existing poverty in the overcrowded cities of western Russia. It means a vast amount of suffering, but it is permissible in Russia precisely because it is suffering on a large scale.

A DEFENCE THAT PROVES TOO MUCH.

When Mr. Taft last week gave out his explanation of the Ballinger-Lawler-Wickersham affair, we made the obvious remark that if a frank statement of the facts had been promptly made when the question was first raised, "nine-tenths of the pain and humiliation attending this disagreeable episode would have been avoided." But we felt it our duty to point out that, great as had been the aggravation of the trouble caused by this delay, the original facts connected with Mr. Taft's letter of exoneration were such as to justify severe criticism. We have observed that a large number of perfectly well-meaning and usually intelligent newspapers have taken the view that the President and his advisers committed an extraordinary and deplorable blunder in their policy of silence, but that in the facts themselves there was nothing whatever to regret or to censure. The antedating of Mr. Wickersham's summary and opinion, the delegation to Ballinger's subordinate of the task of preparing the case for the President, the failure to mention this detailed digest of the case as among the documents before the President when he took action, the arrival at his practical decision after only a few hours' work on an enormous mass of complex and confusing documentary material—all this was perfectly blameless and a mere matter of course; the only thing censurable was that the President, or somebody for him, did not immediately let the public know all these facts, the entire propriety of which the public would at once have recognized.

It does not seem to have occurred to any of our esteemed contemporaries who take this view of the case that it carries with it a conclusion of a most startling character. It is one thing to blunder or to use bad judgment, it is another thing to act like an imbecile. Mr. Taft, Mr. Wickersham, Mr. Ballinger, Mr. Lawler, are all of them gentlemen who have managed through long professional careers to perform duties of considerable difficulty, to attend to business of considerable importance. Now men in full possession of normal intellectual faculties do not adopt a policy of denial and evasion and obstruction to avoid producing matter which could carry with it no blame. No one man does this; four men consulting together, or having the opportunity of consulting together, certainly do not persist in such a course, week after week, month after month, without a motive. Confronted, therefore, with the alternative of adjudging these gentlemen to be utter incompetents or of inferring that there was something censurable in the matters that they were concealing, we for our part should feel strictly compelled to adopt the latter alternative, even if we had no other light upon the facts.

But the conclusion thus inevitably drawn from the first principles of human nature is amply evident on the face of the facts themselves. As we have said before, we are fully persuaded that the President believed he was doing justice in the case; but that consideration cannot justify us in suppressing the truth as to what he actually did. He received from Mr. Ballinger and Mr. Lawler, calling on him in person at Beverly, a mass of typewritten documents containing several hundred thousand words and relating to matters of great intricacy. They arrived with these documents on a Monday evening. That same night, according to his own statement, after staying up until three o'clock, he arrived at the conclusion that the charges against Ballinger were wholly unfounded. On the following day, Tuesday, he was busy in other ways, and in the evening he had a second talk with Ballinger and Lawler, and commissioned Lawler to draw up a letter as from himself, the President. This letter has now appeared in full in the report of the proceedings of the committee. It comprises, besides the expression of opinion, a detailed digest of all the evidence, made entirely from Mr. Ballinger's standpoint. Attorney-General Wickersham brought this document to Beverly, and had not seen either the full records or the President until the morning of Sunday, the 12th. On the next day, the 13th, Mr. Taft wrote the letter completely exonerating Ballinger and authorizing the dismissal of Glavis. Three months later the Senate requested the President to transmit to it "any reports, statements, papers, or documents upon which he acted in reaching his conclusions." Among the documents transmitted by the President in response to this request was an elaborate summary and opinion by the Attorney-General, filling seventy-four large pages of printed matter and dated September 11—a document which the President did not have before him and which it was manifestly impossible for the Attorney-General to have produced or even to have roughly indicated, in the time at his disposal. And among the documents was *not* included the minute and laboriously constructed digest of Ballinger's subordinate, Lawler, prepared at the President's own request, which must inevitably have formed an important element in his disposition of the case.

There is no mystery, therefore, why all parties concerned should have desired the facts to remain secret. These facts were damaging. They were calculated, on the one hand, to deprive Mr. Ballinger of the benefit that had come to him from the President's favorable verdict, by vastly lessening the weight of that verdict with the country. And they were calculated also to do an injury to the President's own standing. Ill-judged as was the policy of delay and obstruction, it was not idiotic; it was not without a motive. The bad judgment consisted not in thinking that it would be well for all parties concerned if the facts were suppressed, but in imagining that it would be possible permanently to suppress them. That there was no bad intention on the President's part we sincerely believe. But neither regard for his good intentions nor concern for the dignity of his great office would justify us in helping to pass off upon the American people, in place of the truth, a view of the affair the inherent absurdity of which is no less patent than its disagreement with the facts.

RAILWAYS AND THEIR PATRONS.

Throughout the prolonged discussion of the pending Railway bill in Congress there has been manifest a determination, by a large and apparently controlling element of the Congressmen of both political parties, not to relax, directly or indirectly, such barriers as already exist against arbitrary rate-making. The comment of the railways on this attitude has been generally to the effect that an unreasoning hostility has been created against one of our greatest industries. And more particularly, it has been asked why the railways should not possess unchallenged the right, which smaller industries assert and ex-

ercise, of adjusting their business arrangements to changing financial conditions. Why, for instance, if the price of grain and cotton and iron and meat and rents has been rising rapidly and continuously, should not the price of railway transportation rise proportionately, and why should not the railway managers, like the farmers and manufacturers and graziers and landlords, be the judges as to what increase the circumstances of their business require? These have at all times been fair questions, and certain recent events may help in giving a fair answer.

A few weeks ago, there was filed with the Interstate Commerce Commission notice of what appeared to be a concerted advance of 10 to 20 per cent. in freight rates on the Western railways, and it was intimated that the Eastern railways would follow suit. In public statements several railway managers averred that, having granted substantial increase in wages to their employees, they were forced to recoup themselves by higher transportation charges. One railway president, Mr. Brown of the New York Central, went so far as to assert that "if the railways are to remain solvent, the only recourse now is an advance in freight rates." To these arguments the association of Western shippers rejoined, first, that the railways had very lately assured them that no general advance in rates was contemplated; secondly, that the progressive increase in railway earnings has been much more than enough to cover the higher wage payments. It was elsewhere pointed out that the proposed advance in rates was on the average much greater than the advance in wages, and that, in the face of their gloomy statement of the situation, the railways, including that over which Mr. Brown presides, were increasing dividends, even where the rate was already high.

In the past week or two, there has also been announced in behalf of the railways which conduct the suburban passenger traffic of this city, a seemingly concerted increase of commutation rates, averaging something like 10 per cent. A commuters' committee of the New York, New Haven, and Hartford called on the president of that road, last Friday, to remonstrate. Mr. Mellen, according to the newspaper reports, responded thus in regard to suburban passenger traffic:

> We pay out 5 cents more than we receive. I haven't asked you for anything. We lose on you. We carry you into New York for nothing and our blessing. We are not trying to rob you.

And in regard to the protest of one town upon his line, he added:

> The more you do at New Rochelle, the more you prosper, the worse off we are.

Now it is not our purpose here to dispute the facts or figures produced in their own behalf by the railway managers. But what the two incidents seem to us to prove is the entire reasonableness, under existing circumstances, of the public's insistence on a tribunal, higher than either the railway managers or the shipping and travelling public, with full and complete authority to pass on the justice or injustice of such increased charges. Mr. Mellen's attitude shows clearly the necessity for such supervision. It is not a novel attitude. Commuters on an important New Jersey railway will recall a similar incident, as much as twenty-five years ago, when a committee of passengers were informed by the president of the road that he "would rather carry dead hogs than live ones." The result was the extension to that district of a rival railway which apparently held other views regarding the profitableness of suburban traffic. Thereupon, instead of cheerfully bidding its rival godspeed, and urging commuters to patronize it, the railway with a leaning towards dead freight proceeded instantly to improve its own facilities, reduce its commutation rates, and invite fresh patronage. It was perfectly well aware that it could not afford to lose this patronage, with the profitable freight traffic which came to it from the building-up of a prosperous suburban community.

It is conceivable that it may then have cost as much to haul a fast suburban express to this city as was collected from the fares of commuters on the train. But no railway man was quite so simple as to argue seriously that his road got no compensation elsewhere. But this was not then, and is not now, the end of the matter. A railway is not in the same position as a merchant, for example, in fixing arbitrarily its charge for what it produces. If the merchant names an unjust price, his customers will go elsewhere to buy. The case with the railway is that the customer has nowhere else to go. Thanks to the franchise, the right of way, and the facility for concerted action, the railway enjoys a power not far from monopoly. Two or three decades ago, it was commonly answered to this argument that if the commuter, in the case supposed, felt seriously aggrieved, he could move to another town—if, indeed, his own town did not happen to enjoy the facilities of an energetic competing railway.

But the essential fact about the present advance in rates, to Western shippers as to Eastern commuters, is that all the railways appear to act in concert. For better or for worse, competition in rates has virtually become a thing of the past. This situation is recognized by the public, and is the real cause both of the organization of the shippers and of the vigilant, if not hostile, attitude of Congress. For it is quite impossible to ignore that such an argument as Mr. Mellen's has far wider scope than a 10 per cent. increase in rates. If 10 per cent. is claimed, simply because one branch of traffic is not profitable enough, then why not 20 per cent., or 30? So long as all competing railways acted together, the shipping and travelling public would be equally at their mercy, subject always to governmental intervention.

We say nothing of what many people describe as the astonishing lack of wisdom in projecting these higher railway charges on the public at the very moment when the fate of a railway restriction bill hung in the Congressional balance. What impresses us far more forcibly is the blindness of many railway managers in their obstinate struggle against the committing of broad supervisory powers in these matters to Federal commerce commissions and public service commissions in the States. That the Government will intervene to safeguard its citizens against injustice which is indisputably possible, may be taken for granted. But one cannot help wondering whether sweeping and drastic rate provisions, in a single set of statutes, would be deemed more satisfactory by the railway managers than the entrusting of the whole question to a body of conservative officers, with instructions to consider, in the light of all the circumstances, each general change in rates and the case of each individual railway.

AN IMPORTANT BILL HASTILY PASSED.

It is difficult to find a respectable excuso for the action of the House of Representatives on Monday of last week, in rushing through, under a suspension of the rules, a bill of extremely important character affecting the entire penal system of the United States. Mr. Parker of New Jersey, chairman of the Committee on the Judiciary, moved "to suspend the rules and pass the bill (§ 870) to parole United States prisoners, and for other purposes, as amended." Strong objection to the railroading of the bill was at once raised by Mr. Mann of Illinois. The report on the bill, he stated, had been made only on Saturday, and it had reached him and other members only on Monday. He had not had time to look at it. "Does not the gentleman from New Jersey," he asked, "think it is rushing business to try and pass an important matter like this without an opportunity to read the report and consider it?" Mr. Parker replied that the bill had been most carefully considered in committee, that there had been ample and thorough hearings, and that it had been unanimously reported by the committee. After a haphazard debate, in which a total of twenty minutes was allowed to each side, the bill was passed. The division, which was called for by Mr. Mann, showed 56 ayes and 18 noes, a total of 74 votes, the full membership of the House being 391. Thus after a random debate of forty minutes, and a vote in which less than one-fifth of its membership took part, this great change in the penal system of the United States was adopted by the House of Representatives.

The bill provides—

> That every prisoner who has been or may hereafter be convicted of any offence against the United States, and is confined, in execution of the judgment of such conviction, in any United States or State penitentiary or prison for a term of more than one year, other than for life, except when convicted of murder in the first degree, rape, or incest, and except those who have previously served a term of imprisonment of at least one year in any penal institution in the United States, may be released on parole as hereafter provided.

Application for parole can be made only after one-third of the term of the sentence has been served; the board of parole is to be composed of three persons—"the superintendent of prisons of the Department of Justice, the United States district judge for, and a citizen living in, the district in which the penitentiary is located, the latter to be appointed by the Attorney-General." The members of the board are to serve without compensation; a majority of the board (*i. e.*, two members) are to be a quorum sufficient for the transaction of business. The board is to meet at stated times to consider applications for parole. At such meetings, it "shall receive and consider recommendations, and if it shall appear to the board that there is reasonable probability that any prisoner who applies for his parole, if the same is granted, will not violate any law, and if in the opinion of the board such release is not incompatible with the welfare of society, then the board may authorize the release of said applicant upon parole." And the nature and effect of the paroling, when granted, are set forth in detail in the bill.

Now we are far from saying that the bill is without merit. The parole system is eminently desirable in the case of all minor offences, and in a large proportion of all first offences, even of a more serious character. But there is grave doubt whether it ought to be made to apply, as does this bill, to all crimes except the three specifically named as exceptions; and, apart from this fundamental question, the plan upon which the system should be administered in the case of the Federal Government, as distinguished from local jurisdictions, raises questions that demand careful consideration and discussion. Instead of such discussion, all that the House heard from the advocates of the bill were some vague generalities as to its mercy and humanity, some broad assertions of the benefit of the parole system in general, and—strangely incongruous with these—a plea for the bill on the score of the saving of government money that would result from the freeing of the prisoners. Mr. Mann put the case plainly when he said:

> Here is a very important proposition—two bills relating to the same subject, both reported back by the Judiciary Committee, striking out all after the enacting clause and inserting a new provision, and then they propose to pass the bill through the House without consideration under suspention of the rules, when certainly this bill is of a character that ought to be considered under the privilege of amendment.

Mr. Hughes of New Jersey, protesting against the railroading of the bill, asserted his entire approval of the New Jersey parole system, but declared that the bill under consideration was of a very different character from the New Jersey law. "There has been nothing in this discussion," he said, "and there is nothing that any man of ordinary intelligence can discover by a hasty examination, which would appeal to him to cause him to resolve his doubts in favor of passing this important legislation at this time. I propose to vote against the bill because I have not had sufficient time to examine it."

Among the crimes with which the penal laws of the United States deal, there is one class to which the usual arguments in favor of the indeterminate sentence and the parole system are singularly inapplicable. Such crimes as bank-wrecking, systematic defrauding of the government, or criminal financial operations generally, are committed by men not because they have never had an opportunity for self-development, nor because they have never acquired habits of order or of regular work. And when these men are put in prison, the object of the law is not at all—certainly not in any significant degree—to prevent a repetition of the same or a similar crime by the same person. Such a man finds no difficulty in being the most exemplary of prisoners; he needs no prison discipline to make him polite, neat in his person, punctual in his daily tasks, efficient in the dispatch of work. Whether his sentence should be a year or six years or twenty years is a question the true answer to which depends not on the facts developed during his prison life, but on the facts brought before judge and jury at his trial. He suffers in prison for one purpose, and one purpose only—that knowledge of the dire punishment which society thinks it necessary to impose for his crime may prevent others from committing it. To confuse his case with that of the shiftless or hopeless fellow who falls into the clutches of the law through the commission of some petty crime is to lose sight of the sole weighty purpose of the law in this most important domain. And before deciding upon so radical a change, it were well that the House of Representatives should devote to its consideration something more than can be got out of forty minutes of impromptu debate.

ENGLAND AND THE PEACE OF EUROPE.

Strong insistence has been laid upon the services of Edward VII in the cause of peace, and speculation will now be asking whether a new reign in England may be expected to bring about a change for the worse. The question must have presented itself with dramatic force to a great many people when George V and William II knelt beside the coffin of Edward the Peacemaker. But probably not many of these reflected that, in the sharpest menace to the peace of the world, the services of the late King are not as irreplaceable as may appear at first thought. The case is rather paradoxical. It is admitted that Edward VII was zealous in behalf of European peace. It is admittted that in the hostility between Great Britain and Germany lies the greatest danger of a European conflict. And it is a matter of record that during Edward's reign, Anglo-German relations grew in bitterness with the years. If Edward, ascending the throne when England was still under the cloud of the Boer war, had asked himself, What must I do to insure peace for England and for Europe? the answer must have been, Bring England and Germany into friendship. This solution he did not attain.

Apart from Germany, England's relations with the Continent during the reign of Edward VII took the form of an extraordinary succession of friendships and ententes, of which the cornerstone was the understanding with France, later expanded into a Triple Entente by the adhesion of Russia. With France virtually an ally, with Russia as the ally of an ally and a pledged friend, with Italy and Spain won over to closer friendship than ever, here was indeed an imposing record for the monarch who was understood to have taken a very active part in the framing of British foreign policy. And yet it should seem at first that for all those generous new bonds of amity, the cause of peace had not been measurably advanced. At no time was England in danger of going to war with France or Spain or Italy or even with Russia. If England made friends, it was with those who were already inclined to be friendly or, in any case, in no near danger of becoming enemies. Whereas, by rousing German fears or German anger, this policy of friendships and alliances may be said actually to have accentuated the perils of the general European situation. It was to test the strength of the Anglo-French understanding that Germany brought on the Morocco crisis. It was as a reply to the Triple Entente of Great Britain, France, and Russia that Austria and Germany broke with the Treaty of Berlin by the seizure of Bosnia and Herzegovina.

The Moroccan incident illustrates the difficulty of apportioning precisely the rights and wrongs in a complicated situation. Coming within a year after the conclusion of the Anglo-French entente, it was cited as a justification on both sides. Frenchmen congratulated themselves on the possession, in England, of an ally whose pledge of support saved the Third Republic from humiliation at the hands of Germany. But Germany argued that if France had refrained from entering into a menacing alliance with England, there would have been no occasion for the rattling of the German sabre. Common sense decides that France was right in seeking to insure her safety by means of powerful friendships abroad, instead of depending upon the forbearance of Germany. Common-sense, that is, agrees that on the whole the Anglo-French understanding has worked for the peace of Europe. And Edward VII, as one of the authors of that understanding, merited the reputation of peacemaker he enjoyed.

Yet it would be misjudging the proportion of things to overlook the fact that the final cause behind the Anglo-French entente was to be found in France rather than in England. For years the Frenchman Delcassé had been at work on his scheme of a great anti-German alliance. Its motive may have been the impossible one of revenge for 1870-71, but in principle it recognized that, single-handed, France could not hope to hold her own against Germany. The same principle was recognized by those who were opposed to Delcassé's adventurous policy. Whether war with Germany was to be risked or not, Frenchmen had grown reconciled to the fact that their country must henceforth play a secondary rôle in the politics of Europe, that her prestige and her safety demanded an ally. The question then was who that ally should be—Germany or England. The question had only to be asked to be answered. The year 1870-71 is still a bitter memory in France. In spite of Fashoda, it was England to whom the French people turned.

Prominent, therefore, though the late King's share undeniably was in the cementing of England's recent friendships, the prime impelling force lay outside himself, in the general condition of European politics. His pacific disposition, his tact, his wide knowledge of men, his geniality of temper, supplied an added impetus, but, after all, a subsidiary one. But since the forces that ultimately shaped British foreign policy lay outside the personality of the monarch, it follows that no great changes are likely to occur with the succession of George V. France needs English friendship now as she did five years ago, and English interests point to a good understanding with France as they did five years ago. There is no reason why George should be less a monarch of peace than his father was. And if he succeeds in bringing about a better understanding between England and Germany, he will have done a greater work than his father did.

PHYSICAL TRAINING IN COLLEGE.

In a recent report on physical development among undergraduates, by the director of the Yale University gymnasium, the apologetic note is distinctly present. Athletic directors have been on the defensive before this, but they have seldom been called upon to prove that physical training is good for the—body. Yet that is what the elaborate report in the *Yale Alumni Weekly* sets out to do. It attempts to explain the striking fact, as most people will find it, that, between his freshman year and his senior year, the undergraduate shows no appreciable improvement so far as may be judged by outward physical manifestations. The records show that in height, weight, and muscular development the freshman average and the senior average are virtually the same; in lung development there is a slight increase after four years. On the whole, the Yale figures indicate a sharp lack of correlation between physical exercise and physical growth, and all the more when it is recalled that 88 per cent. of Yale men are reported as taking part in some form of major athletics in addition to their gymnasium work.

The explanation brought forward by

the Yale writer is a novel one, though we have not the least ground for questioning its sufficiency. He points out that the period between seventeen or eighteen years and twenty-two or twenty-three years in men is a period of arrested development and often of actual retrogression. For a college man merely to hold his own is, consequently, something; and a gain, however slight, proves the efficacy of physical culture. For encouragement, we may look at the measurement figures of fifty and forty years ago, which show that the present-day undergraduate is physically a much better man than his father or grandfather was at his age. We find the stronger argument, however, in a plain appeal to common sense. One need not be a believer in all the miraculous benefits that are so often claimed for athletics, in order to feel that a fair amount of good cannot help coming from physical exercise. The Yale director's figures almost prove too much. They concede what the most fervent opponent of muscle-worship in the colleges would scarcely venture to claim.

But there is another argument which the Yale writer has failed to make use of, although it is one that enters into almost every discussion on the subject. Not height or weight or chest-girth or breathing capacity is the sole test of ultimate physical capacity. There is that mysterious element called staying-power on the athletic field and vitality in the sick-bed, which often differentiates so sharply two men of the same build and the same apparent organic equipment. In the long run, of course, the man with the deeper chest and firmer muscles will be the healthier man; but nevertheless, it is open to the athletic director to claim that his college boys get something out of their training that cannot be measured in inches, linear or cubic. Sand, grit, pluck, or whatever the latest name may be for it, undoubtedly plays a part in the general problem of health and survival as it does in the solution of isolated problems. At least, that is the way we should have commented upon the *Alumni Weekly's* figures instead of contenting ourselves with proving that the college man is no worse off physically than the young man who does not go in for athletics to-day, and better than the young man who did not go in for athletics forty years ago.

And yet, when all is said and done, if the Yale statistics hold good for all American colleges, here is something to strengthen the hands of men like President Lowell, who, in an age gone mad with athletics, have ventured to raise their voice in behalf of that virtue which once upon a time used to find a place within university walls, namely, scholarship. It required courage to raised the plea. For some time it had become the fashion to argue that it was absurd to decry athletics, since it was a well-known fact that the best athletes in the college were as a rule among the best scholars. It really was not a well-known fact. Common experience and common sense all pointed the other way. But the bold repetition of an obvious falsehood is always impressive. The paradox appealed; and we were really in danger of turning to the football field and the diamond for our future stars in scholarship, until some very relevant and very illuminating statistics on this point were put out, a few months ago, at Harvard. The Harvard figures disposed with neatness and dispatch of the paradox that the hardest workers are those who do not work. The athlete who found no time for study as an undergraduate made no particularly happy showing in the professional schools, and the undergraduate who was faithful to his work did. If athleticism was to be justified at all, it was within its own domain of the physical.

And now come the Yale figures to indicate that even in the domain of the physical, athleticism, with its vast and costly machinery, works results totally out of proportion to the expenditure of money, time, effort, and interest. We say "indicate" and not "show" because, as we have already stated, we believe the Yale figures prove too much. We feel that athletics must do good, and actually do so. We find the only value of the Yale figures—though a very high value it is—in proving the disproportion between the zeal and clamor that go into athletics and the result. The figures do not convince us that football and rowing produce no favorable effect on the college man's physical development. They do support the conviction that such good as football, rowing, and all the other college sports accomplish, might be attained at a much smaller sacrifice of the things colleges were once upon a time supposed to stand for.

THE LOST ART OF SKETCHING.

The extension of the professional point of view, with all the contempt for the amateur which it implies, has tended, in our day, to discourage every form of irregular application to the fine arts. The last few decades have seen a notable decline in promiscuous painting and piano playing. Those who possess, or think they possess, a real talent, pursue its cultivation farther than in the past—and not merely as an accomplishment, but with a more or less distinct professional end in view—while, on the other hand, those who are conscious of no such conspicuous gift, or who foresee no need to earn a living, are easily deterred from acquiring even the elements of those arts which may nevertheless appeal strongly to their taste, contenting themselves with such participation as may be enjoyed publicly in concert halls and picture galleries.

There was a time, in reality not long distant—though, like all things connected with our grandfathers and grandmothers, it seems more remote than antiquity—when every European traveller carried his sketch-book, just as he kept a journal of his literary impressions. But the professional spirit has long since, in large measure, suppressed both of these practices, even among our English cousins, who were peculiarly addicted to them. In one of his essays, George Moore, an exponent of this spirit, indulges in witty ridicule at the expense of art in the royal family, whose domestic tastes were an accurate reflection of the tastes of the nation as a whole. Here, as elsewhere, the critic's point of view is French rather than English. Gallic wit has traditionally found material in the tweed-suited English tourist, who sits on the highest rock in the landscape, and sketches away regardless of the attention he attracts, or of personal discomfort. Maupassant has a story of a wreck on the Breton coast, in which the life-savers who make their way through the surf to the hulk of an English ship hung up at a perilous angle on the rocks find, as the sole survivors, an elderly Englishman and his four daughters all seated in the wreck and absorbed in sketching the picturesque aspects of the disaster.

It is easy to smile at the young lady of the mid-Victorian period, with her album of sketches which, in the pages of the polite contemporary novelist, she

is always being persuaded to exhibit to visitors. With what bashful hesitation does she accede to the reiterated requests, and with what real palpitations of pride does she eventually accept the glowing praises that are bestowed upon the skilful product of her pencil! But the camera fiend, rushing at express speed through foreign parts, and stopping every few feet to make hasty snapshots, lends himself as readily to ridicule as his predecessor, the sketching tourist, and is far less susceptible of a rational defence.

Surely, one purpose of foreign travel is to store the mind with impressions, visual images. But to gain a lasting impression or image of a place or object, it is necessary to look at it, to study it with some care, to analyze it, noting its peculiar structure and characteristics. Such study was required of even the most casual and untrained sketcher; with the camera it is quite different. The hastiest glance apprises the photographer that he has found a "subject"; he levels his little box, gazes at the finder, presses the button, and hurries on. His own eye has scarcely been involved in the operation, and to that of the camera has been deputed the task of mechanically assimilating each detail of the scene. To recall what he has seen he must have recourse to his album, which has thus become a kind of detached, impersonal, mechanical memory for him. Moreover, the very operation of the mechanism, simple as it is, serves still further to distract his attention at the moment when his eye rather than the lens should be carefully focussed upon the object, so that the camera may be said to encourage and complete that indolence and lax dispersion of mental and visual attitude which are so characteristic of the average American tourist.

Far from smiling, then, with a superior air at those stalwart Englishmen and angular Englishwomen who are still occasionally to be seen sitting before their easels in the blistering sun of southern Italy, or in a gondola in Venice glancing up from their notebooks, and with fixed gaze measuring some bit of garden wall with vertical pencil grasped firmly between thumb and forefinger—far from smiling at these, we entertain a profound and hearty admiration for them, and wish we could surprise more of our own compatriots in like occupations. For we feel convinced that they are getting something out of their peregrinations and *séjours* which we, with our snapshot methods, miss utterly. Viewed as art, their work may be faulty, indeed quite negligible. Certainly, a good photograph is a better thing in itself than a bad drawing, or water-color. But to the amateur himself a poor sketch (but his own!) has a deeper personal value than the most finished snapshot, his rôle in which has been far more passive than active.

And even the camera craze bids fair to be superseded by that for photographic postcards. Now that the traveller can get his choice of scenes ready-made in prodigal variety and at the most trifling expense, he is less likely than before to burden himself with a camera which cannot compete with the postcard maker. This very perfection of the process of acquiring "impressions" without effort or reflection may, however, tend to remedy the evil which, in the beginning, it tended to emphasize. What more likely than that a natural reaction, a swing of the pendulum in the other direction, should bring the sketch-book and pencil once more into vogue? The revival of these abused articles of the traveller's equipment might not lead to any great advance in our native art, but it would at least help to render us, as a nation, more acute and careful in our observation and make us better travellers.

SHERIDAN.

There are some characters that seem predestined to serve as the scapegoats of human frivolity. Upon them legend delights to pitch and empty the whole budget of folly which respectability is unwilling to own to in itself but is perfectly ready to chuckle at in others. Such to some extent appears to be the rôle of Richard Brinsley Sheridan. In this sense story and fable have made so free with his name that it is difficult to tell how much of the current conception of the man is fact and how much is fiction. Hitherto the general reader who would ravel out the skein of tradition, which seems to grow more complicated with every effort to extricate it, has had to rely for the truth upon the biographies of Percy Fitzgerald and Fraser Rae, both of which are unsatisfactory in many respects as finished likenesses. In comparison Mr. Sichel's new biography* has an advantage in measure and precision as well as in fulness.

On the whole, it is such manner of biography as Sainte-Beuve approves—"broad, copious, even diffuse at times." For a third or fourth gleaning it contains a good deal of new material. In several instances, too, Mr. Sichel is successful in mending or piecing out his predecessors' story. While, in addition, he has expanded some of Sheridan's speeches by a collation of reports, notably the amazing "Begum Speech" before the Commons—though it must be confessed that in this instance, as in some others, the attempted restoration begins to show signs of superfetation.

Indeed, it is just this excess of fact—this disposition to dilate the subject beyond his predecessors, which forms the most serious blemish of the book as a whole. There is hardly a sentence which does not suffer from a kind of diffraction of the attention. The author has had so many things in mind that he seldom succeeds in bringing a fact sharply to a focus or in illumining it distinctly without a fringe of outlying reference and allusion—to say nothing of the inundation of detail which has overflowed the text in a freshet of footnotes. Nor does all this luggage harmonize very well with the biographer's ambition to write a picturesque narrative. After all, biography is not romance; and the attempt to write the former in the taste of the latter is likely enough to spoil both.

In view, then, of all these more or less conflicting representations and particularly of a certain inchoateness and unwieldiness in Mr. Sichel's performance—his biography includes something like a thousand compactly printed pages—it may not be unpardonable to try to draw, from the data which the successive biographers have obligingly furnished, not so much a full-length portrait of the subject, as a mere head-and-shoulder sketch which may possibly gain in compactness and consistency what it is bound to lose in scope and detail.

I.

Sheridan is one of those rare amphibians who live partly in literature, partly in politics; who belong at once to the two elements of imagination and reality. This double *ménage* makes him, like Swift, who is in so far his counterpart, a rather difficult subject of criticism. He is not to be found wholly in his plays or in his speeches—in one sense it is questionable whether he is to be found in both together. He resides in a great measure outside of his professions. He has not a trace of Swift's deadly seriousness. He is at bottom a man of pleasure, to whom these occupations are but expedients—a means to live. In the incorrigible levity of his character, he is much like Sterne—only more effectual. His genius is largely an affair of animal spirits, so little does it

*"Sheridan: From New and Original Material, including a Manuscript Diary by Georgiana Duchess of Devonshire." By Walter Sichel. Boston: Houghton, Mifflin Co. 2 vols. $7.50 net.

seem to do with the intellectual or the moral nature. It is impossible wholly to stifle the suspicion that he is amusing himself even with what purport to be his most earnest efforts.

Of such a character you can hardly expect the logical consequence of a fanatic, an idealogue, a man of principles like Burke—any more than you can expect of the stage the solid consistency of life. What stood him in the place of principle or even policy, it would sometimes seem, was a desire to strike the imagination. He was, above all, a social creature, the man of an audience. His first thought is of the play—the illusion, the stage effect. And what an effective, what a brilliant performance, it must have been! To know him at his best, it would be necessary to replace him in his original setting, to restore the situation, social and political, in all its intricate intrigue with its conflicting motives and cross purposes, to recall the vanished actors and set them wheeling again in their rounds of gayety and self-interest—the captivating Georgiana of Devonshire, the romantic Mrs. Crewe, the generous and profligate Fox, the tinsel "Florizel" of Carlton House, "first gentleman of Europe" and heir apparent to the throne of England. But the old comedy is long since played out to its foregone conclusion, and we are left to imagine as best we can the audacity and fascination of him who was one of its most striking and versatile performers.

And yet, though Sheridan realizes himself fully neither in literature nor in history, he is always oscillating between these two poles; he is constantly manifesting himself in one or the other of these two worlds—he is either the humorist, the man of fancy and invention, or else the statesman and manager, the man of affairs—ever a little too much of the former, no doubt, to make a complete success of the latter. And it is his instability—the unexpectedness with which he shifts his ground so that you never know just where to have him, the persistency with which the one character will be getting into the other's light—which makes him so interesting—and sometimes so unedifying.

It is frankly in the former capacity that he begins his career—with an elopement and two duels. About the whole affair there is something as paradoxical, as quizzical as any of his literary compositions. Whatever the feelings of the parties at the moment, whatever the bunglings of the fate that mislays our prettiest dénouements, his elopement is essentially a comic situation, which might serve as a pendant to the scene between Lady Teazle and Joseph Surface—an elopement in all the proprieties, with a duenna in waiting, wherein everything is saved but appearances. And with what waggishness the penniless lover, who is innocently masquerading as a friend to all concerned, hoodwinks his rival and contrives that some one else shall bear the expenses of the frolic! His whole genius is in it; for the future he has only to reduce himself to writing.

Nor does his later life belie the mingled jest and earnest of his beginnings. He is always living at loose ends himself, always in arrears, always behind time, his affairs in hopeless disorder, his letters unread, his appointments unmet; and yet he aspires to manage a theatre or two, to control a political party, to direct a prince, to carry out a national policy. In the general chaos of his existence he is always making shift, with incredible dexterity and presence of mind, to extricate himself from difficulties that would never have arisen in the first place without the grossest tardiness and negligence. He is admirably cool, good-humored, and resourceful. But his abilities are wasted on temporary expedients—to put off a dun or wheedle a tradesman or pass off an indiscretion. His was the dodge by which the public lie in denial of the Prince's marriage to Mrs. Fitzherbert was accommodated and the lady sentimentally reimbursed for the loss of her character. Even in his moments of power he is restrained by some refinement of delicacy—a scruple that, however fine, seems more dramatic than political, and calculated rather to meet the needs of the literary imagination than of practical common sense—from securing the advantages for which he has been working all along. In a day of party—a system of things which the conscientious Burke himself defends at length—he had too much of the original about him to become a mere col laborator in other men's plots. He is incorruptible by his enemies, but he is equally intractable to his friends. Ad mirable exception as he is to the purchasable politicians of his time, his probity is largely sentimental. It never seems to have crossed his mind that, as society is constituted, the management of money is itself a branch of morals, and carelessness with one's own is only a milder kind of dishonesty. If reports are to be believed, he must have practised methodically what Balzac facetiously calls the English system of living on the interest of one's debts. As a result, the remark he is said to have made when asked what kind of wine he preferred, would apply equally well to his preference in money—some one's else. About his management of his political credit, too, there is much of the same light-mindedness. After sharing the ill-fortunes of the Whigs for years, he finally tricks them out of power by a turn so thoroughly comic that it looks like a caprice of the fancy, an irresistible desire to score a good point at any cost.

In a word, Sheridan combined in his own person the double rôle of Joseph and Charles Surface. He had all the former's sophistry of protestation devoid of profound sincerity of conviction, and all the latter's mischievousness of impulse devoid of intentional malice. What evil he did, he expected to excuse, like the one, by the goodness of his heart, and to dignify, like the other, by the elevation of his sentiments. As his father said with reference to "The School for Scandal," "he had but to dip the pencil in his own heart, and he'd find there the characters of both Joseph and Charles." But nature is occasionally more logical than our invention; and it is in significant contradiction with the fallacy of the dénouement that he comes to grief in both characters alike. He suffers, not only in the part of Joseph, but also in that of Charles, for his want of seriousness. And yet we must be careful. To take him too seriously is to falsify his proper impression and effect. In a certain large sense he belongs himself to comedy; and while comedy, too, may be a pretty serious business, its seriousness is not that of politics, irresistibly comic as the latter often appears. At all events, it is upon the former that Sheridan's genius has stamped itself most distinctly.

II.

The French would probably say, as indeed Taine virtually does, that Sheridan, like the rest of his countrymen, has no sense for comedy at all. But we must take our drama as we find it; and Sheridan's is the very best of anything like genuine comedy that we have. We have plenty of stage faery and romance, of tragi-comedy and melodrama; but of that sort of exhibition which arouses chiefly amusement and curiosity, which appeals above all to the intelligence, and constitutes something like a *genre tranché* comparable in any degree with the French, we have next to nothing. Congreve and the whole Restoration Comedy have failed to keep the boards for some reason or other—it can hardly be on account of their impropriety, one would infer from the present condition of the theatre. With the possible exception of Goldsmith, who is not in quite the same vein, Sheridan alone survives.

And yet how different is Sheridan himself from Molière, the representative not only of French comedy, but of the comic spirit at its fullest and best. It is not merely that he never wholly rid himself of the fatal English sentimentality, that he never completely parted company with the muse of lachrymose comedy against whom he inveighed at his first entrance upon the scene—though that has a good deal to do with it, too, and accounts for his tenderness for Charles Surface, as it does for his lack of the absolute intellectual detachment of perfect comedy, the purely disinterested pleasure in the discernment of character and motive. In this particular I

cannot help thinking Charles Lamb's perceptions less at fault than those of his critics. But to take the comparison where it is most favorable to Sheridan—the striking passages in "The Rivals" and "The School for Scandal," the things by which we remember Sheridan (I take them as they come) are phrases like Mrs. Malaprop's "nice derangement of epitaphs" or "allegory on the banks of the Nile"; or Sir Lucius's "snug lying in the Abbey"; or Lady Teazle's "I deny the butler and the coach-horse"; or, best of all, Sir Peter's "I leave my reputation behind me."

But clever as these are, they are not in the same class with those which leap into mind at the mention of Molière: Orgon's "le pauvre homme!" or Harpagon's "sans dot!" or Argan's "C'est pour moi que je lui donne pour mari ce médicin"; or finally Madelon's "Pour moi, un de mes étonnements, c'est que vous ayez pu faire une fille si spirituelle que moi." Decidedly this is quite another thing. It is not cleverness—it is dissection; every stroke disposes of a character. It would be impossible to shift these speeches from one mouth to another, as was Sheridan's habit—a practice that gives much of his dialogue the effect of a uniform veneer. And it is not so much that Molière is greater than Sheridan—or the comparison would be an unfair one—as that he is different. Vastly entertaining as he is, Sheridan belongs with another class—with the wits and the phrase-makers. Like Oscar Wilde he is a maker of smart comedy. "Why don't all these people leave off talking and let the play begin?" asked Jekyll of "The School for Scandal"; and in a word he supplied the formula of the species.

Within these limits, however, Sheridan created the variety. In certain respects the case is much the same with him as with Beaumarchais, whose "Barbier de Seville" came out the same year as "The Rivals." Beaumarchais may have been trying, as he pretends, to naturalize and familiarize the drama; but what strikes us at first is the conventionality of his intrigue—the stock motive, the "literary" commonplace of the plot; it is only later that its perfidiousness becomes evident. And so in his own way with Sheridan; the lover courting his mistress clandestinely, the hypocrite seducing the wife of his benefactor—these are not very novel properties. It is Sheridan's waggery, like Beaumarchais's malice, which saves the situation. The very quality of his wit is implicated in the manner in which the triteness of the matter is turned against itself. To don a disguise in order to escape discovery by anxious duennas and guardians, is one thing; it is quite another to don it, as Captain Absolute does, to conceal his identity from his mistress herself. To betray a husband out of passion for some one else, and to betray a husband, as Lady Teazle contemplates doing, out of a tenderness for her own reputation, are two very different things. So, too, of Joseph and Charles Surface, it would be difficult to show in what respect the latter is more virtuous than the former, except in his contempt for the proprieties. And to much the same effect Mr. Sichel points out very properly that the dénouement of "The Rivals" and "The School for Scandal" hinges in both cases on what amounts to a practical joke, the duel in the one and the overthrow of the screen in the other. It is all very English, somehow; it is all good fun. And it is this that makes Sheridan so thoroughly enjoyable. And as a natural result in his case, the better the joke, the better the play. For this reason "The Rivals" is on the whole a more successful effort than "The School for Scandal"—just as Mrs. Malaprop is the best of his *dramatis personæ*—in spite of the more finished workmanship of the latter piece and its greater significance. The former is more in character, it suited the author better, and it is, if anything, the happier performance. In short, it is more fun, just as Sheridan himself is more fun than Congreve, more fun even than Goldsmith.

III.

It is much more difficult to form an estimate of his oratory than of his drama. Not only has the taste in eloquence changed almost unrecognizably; most of his speeches exist only in garbled and mutilated versions as they were put together from the reporter's memory. In many cases it is quite impossible to be sure just what Sheridan said. In others, curiously enough, the reporters seem to have improved upon the original.

As far as can be judged, however, from what remains, his is what may be called abstract eloquence. It consists very largely in dilating a commonplace by transmitting it through a medium of general and rhetorical terms, which destroy its definition at the same time that they enlarge it. To be sure, it is a kind of thing of which any ingenious man can produce a passable imitation nowadays, just as he can produce a passable imitation of the verse of the period. But this is not to belittle Sheridan's merit in its discovery or perfection. It is immensely clever, as he does it, and when properly delivered to suit its occasions, it must have been immensely effective, too, as it was unanimously applauded—though few of his contemporaries fail at the same time to refer to its artifice and elaboration.

But in justice to Sheridan's oratory it must also be remembered that those were the good old days of the four and five bottle men, when statesmen gambled and caroused all night, when orators made speeches five and six hours long, and fell back exhausted into the arms of their friends, when a public compliment drew forth floods of tears, and a public censure streams of vituperation and abuse—the days of sensibility and intemperance, of violence and declamation, when ginger was still hot in the mouth, and men thrived on massive sensations. Even Burke himself is by no means guiltless of extravagance. And while Sheridan's points seem labored and fetched, while he has none of his great contemporary's clearness of vision, which penetrates at times to the bottom of political institutions and discovers their foundations in the roots of the moral nature itself, yet he has occasionally, at his best, a way of striking words together which produces a very presentable imitation of revelatory lightning:

> An honorable friend of mine . . . has told you that prudence, the first of virtues, can never be used in the cause of vice. . . . But I should doubt whether we can read the history of a Philip of Macedon, a Cæsar, or a Cromwell, without confessing that there have been evil purposes, baneful to the peace and to the rights of men, conducted—if I may not say with prudence or wisdom—yet with awful craft and most successful and commanding subtlety. If, however, I might make a distinction, I should say that it is the proud attempt to mix a variety of lordly crimes, that unsettles the prudence of the mind, and breeds this distraction of the brain. One master-passion, domineering in the breast, may win the faculties of the understanding to advance its purpose, and to direct to that object everything that thought or human knowledge can effect; but to succeed it must maintain a solitary despotism in the mind—each rival profligacy must stand aloof, or wait in abject vassalage upon its throne. For the power that has not forbade the entrance of evil passions into man's mind has, at least, forbade their union; if they meet they defeat their object, and their conquest, or their attempt at it, is tumult. Turn to the virtues—how different the decree! Formed to connect, to blend, to associate, and to cooperate; bearing the same course, with kindred energies and harmonious sympathy, each perfect in its own lovely sphere, each moving in its wider or more contracted orbit, with different but concentring powers, guided by the same influence of reason, and endeavoring at the same blessed end—the happiness of the individual, the harmony of the species, and the glory of the Creator. In the Vices, on the other hand, it is the discord that insures the defeat; each clamors to be heard in its own barbarous language; each claims the exclusive cunning of the brain; each thwarts and reproaches the other; and even while their full rage assaults with common hate the peace and virtue of the world, the civil war among their own tumultuous legions defeats the purpose of the foul conspiracy. These are the Furies of the mind . . . that unsettle the understanding; these are the Furies that destroy the virtue, Prudence; while the distracted brain and shivered intellect proclaim the tumult that is within, and bear their testimonies from the mouth

of God Himself to the foul condition of the heart.

After all, however he may look to us nowadays, Sheridan represents what is always a disturbing phenomenon—the irruption of genius into a province usually reserved for other occupants. With posterity Burke has come off lightly, thanks to his caution in editing his own memorials—and besides, Burke was much more of the expert. But outside of his comedy poor Sheridan has always lain at the mercy of the diarists and chroniclers, who have tried him by the measure of an officialism to which he did not belong, and finding him fall short, have cried out upon him for lack of a consistency which is not in his proper character at all.

PROSSER HALL FRYE.

Lincoln, Neb.

NEWS FOR BIBLIOPHILES.

A work which will take its place at the head of books in the English language on the subject is Theodore L. De Vinne's "Notable Printers of Italy during the Fifteenth Century," just issued by the Grolier Club of New York.

Almost thirty-five years ago Mr. De Vinne published his "Invention of Printing" (first edition 1876, second edition 1878), a work which still holds its position as the best comprehensive account of the beginnings of typography. In that earlier work Mr. De Vinne held closely to his subject, and, except for a chapter on the spread of printing, dealt only with the very beginnings, playing-cards, block books, etc., and the work of the first printers of Germany, Gutenberg, Fust, and Schoeffer. In this new work on Italian printing, a subject which he has studied for many years, he tells of the work of those Germans who first carried the "art preservative" into Italy, and their immediate successors.

To Italian printers we owe the use of the Roman alphabet in printed books. For more than a century after the invention of printing the Gothic, or "black-letter," was preferred in Holland, England, France, and Spain, and it is within our own day that the German printers are making a general use of the more distinct and more legible Roman characters. The letters cut by Conrad Sweinheim, Nicolas Jenson, and printers of their age, are, with modifications, the characters with which the books of the world are printed to-day. One font of Roman type was used by the unknown and so-called "R" printer of Strasburg as early as 1464, but that it did not meet with the approval of the book buyers of the day is shown by its subsequent abandonment. For the book buyers of Italy, accustomed to the lighter-faced Roman letters in their manuscripts, the Germans were ready to prepare letters of similar form for their printed books.

The first book printed in Italy was a Donatus, or Latin Grammar, printed in Roman characters, at the monastery of Subiaco, near Rome, in the year 1464, by two Germans, Conrad Sweinheim and Arnold Pennartz, who had been invited thither by its ecclesiastics. Of this first book a single copy only is known to exist. The second book, for which a Roman type of a different face was cut, was the Lactantius, printed in 1465, and of this Mr. De Vinne gives the reproduction of a page from the copy in the library of the late Robert Hoe.

After three years at Subiaco the first press was moved to Rome. In 1472, in a petition to the Pope praying for pecuniary assistance, they said that they had printed more than fifty works, amounting to 11,475 volumes. During this time also other presses had been established, mostly by Germans, in Venice and other Italian cities, and the total number of books printed in Italy during the first decade after the setting up of the first press must have run far into the thousands. Nicolas Jenson, who began printing in Venice in 1470, was the most notable of the early Italian printers, and the Roman types first cast by him are the models upon which our modern types are in large part based.

A preliminary chapter on the Roman alphabet and chapters on type-founding, printing ink, paper, composition, and the hand press will be found especially attractive to readers not interested in incunabula as such. There are forty-one full-page plates, reproductions of specimen pages of the work of various printers, besides a few illustrations printed in the text.

The work throughout shows that it was not written by a mere bibliographer describing the books, but by a master printer who, familiar with all the processes of printing, can explain them to the lay reader. And, as the most famous printer in America for nearly half a century, and as a man who did not follow William Morris with his Kelmscott "revival" of twenty years ago, and its many imitators, Mr. De Vinne may well stand up for modern printing as most suited for modern readers. Upon this head we quote the following:

> Praise fairly due to some early books has been conceded unwisely to too many. Eulogies of the general superiority of fifteenth century typography, written by critics a long time afterward, when the printing of the seventeenth century was in its lowest estate, were justifiable then, but are not warrantable now. An old book may be highly esteemed for its age and rarity, for its quaint mannerisms or its association with a famous editor, printer, binder, or owner; but these peculiarities may not invest it with a sacredness that puts it beyond examination and comparison. The reading world of this century has its own standard of fair workmanship in printing, by which it judges the old as well as the new. The new too often suffers by comparison, but the old is not always faultless.

And again:

> Few of the written and printed books of small size, cheaply made for the needs of young scholars and poor buyers, are in existence now, for they were generally thumbed to rags by persistent handling, and for that shabbiness have been kept out of neat collections, but enough have survived to indicate the existence of the larger number destroyed. The old books that are now made to serve for comparison with new books are of the better class.

On June 1 and 2, C. F. Libbie & Co. will sell in Boston the library of the late Charles Edwin Hurd, literary editor of the Boston *Transcript* for nearly thirty years. Mr. Hurd was vice-president and one of the founders of the Bibliophile Society, and a complete set of that society's publications are included in the sale.

On May 31 and June 1, the Anderson Auction Co. will sell the books and autographs of the late Joseph M. Hart of Troy, N. Y. First editions of Shelley's "Adonais" (1821) and "Queen Mab" (1813); early New England and New York imprints; books with colored plates, etc., are included.

On June 2 and 3 the Merwin-Clayton Sales Co. offers a miscellaneous collection of books, including nearly fifty pamphlets on early American railways and a quantity of portraits for extra-illustrating.

Correspondence.

BORDEN PARKER BOWNE.

TO THE EDITOR OF THE NATION:

SIR: The deep, quiet devotion of the "great teacher" to one of the less prominent institutions, which younger men are so often pitiably but honestly unable to comprehend, was strikingly characteristic of the group of men who served Boston University almost from its inception. Their academic creed was the transcendent belief that "it is beautiful simply to know things."

And it is no vain and gratuitous lauding *temporis acti* that insists on remembering the splendid enthusiasms, the unfailing stimulus to the eternal questioning, the almost apostolic fervor for teaching as an art which they incited.

Of the three who have but recently ceased to teach, Prof. Augustus Buck, now in voluntary retirement in the Germany of his youthful university days, was for more than half a century, most of that time at Boston University, a teacher of truly inspiring type. So careful for the nice balances of the letter that he never let the smallest "particle" of his loved Greek go untranslated, he could, too, by his own impassioned interpretation, rouse the most stolid freshman to grasp something of the spirit of Socrates's sublime Apology; and even with hurdy-gurdies and florists' windows to create the illusion, he made Theocritus and the lyric fragments the joy of a senior springtime and a memory forever to be loved and forever fair.

The late Prof. Thomas Bond Lindsay was a master of the art of coördination, and whatever the Latin text studied under him, all literature was its commentary. So Lucretius brought to many the first real grappling with Whence? and Whither? Such a teacher could show the agonized vision of doubt behind the insidious melody of the "Rubáiyát" and in the laborious embroidering, in somhre richness of color, of the theme of "In Memoriam." William Watson, in that first outpouring of real achievement and ringing verse, served to give present significance to Juvenal's scorn and Persius's ire by means of "The Things that are More Excellent."

The recent death of Prof. Borden Parker Bowne, whom the academic world knows best by his philosophical writings and public addresses, brings to his pupils an intensified realization of the compelling personality of the teacher. They recall gratefully his encouragement to those who would enter the vastnesses of Thought and who learned from him that happiness is surely in travelling hopefully.

Compelled for many years to furnish lectures on the Philosophy of Theism as a prescribed course for students of varying training and receptivity, he inevitably re-

mained unknown to many younger, awe-inspired students; but he was greatly loved and sought as adviser by others. Ho could not, however, without sacrilege, be called popular with the ordinary connotations of that word. That he could so persistently take his philosophic view from the angle of theism was cause for wonder to some who follow the changing fashions in philosophical nomenclature and find an apologetic appearance in a previous decade's styles. His was a mind to prove all things, but his very conservatism helped his gift for emphasizing the few things that are really good and to be held fast.

On the margins of class-hooks, especially the "Ethics," I find pencilled epigrammatic sayings of the author-lecturer, elaborating and illustrating his text. They bring back the invariably gentle voice and the inscrutable smile that could rebuke the hollow sophistries of the unthinking and clamorously insistent youth with Xavier de Maistre's "On voit bien, excellent jeune homme, que vous avez dix-huit ans; à quarante je vous attendrai." There was infinite patience with ignorance, but a certain bitterness in the protests against the limitations of rigid, unreasoning theological bias, against the foolishness and menial vanity of halfway knowledge, and the inanity of the "well-intentioned." He could condemn without vehement denunciation. "It's the easiest thing in the world to denounce somebody," he said long before muck-raking became pleasant and profitable. In the marginal notes are found the following:

The ease with which persons are injured varies inversely as their intellectual development.

Pretty much everything in this world is an edge-tool, and fools among others exist at their own peril.

It is becoming less and less a world in which fools can live in safety.

The chief mark of the fool is that he is clamorously delighted over nothings.

Referring to a certain kind of self-imposed mental misery over remote ills, he said, "We could not distress ourselves if we would over some indignity in South Africa." Much of our seeming hypocrisy, however, he deemed merely "handy remarks to make under the circumstances"; and the note adds, "'I'm glad to see you,' as glad as the occasion demands." Many of the apparently hard sayings of Professor Bowne were directed against the elusive disguises of a perennially recurring Phariseeism, and the subtle settling with conscience that leads to various schemes of so-called altruism (really a "wise selfishness at best," as he called it). Thus:

It is selfishness that most makes for righteousness, and justice is the second choice of the many.

We have no revelation as to the bearing of to-day's activity upon the twentieth generation to come.

Many of the workers in the slums and settlements, where he occasionally lectured, he declared to be self-deceived as to motive and results; and time has shown that the self-development of the worker is the most tangible result in many cases, although the neighborhood settlement remains the best of a poor array of social palliatives. Much of our current generosity he termed "pathologic," and with the much-organized report-writing charities in the early days, at least, he lost patience. "I abominate," he said, "all general philanthropies. The natural selfishness of the race is safer on the whole than our philanthropy." Again, "the great bulk of humanitarian effort is lost objectively." A very "successful" East Side minister recently made the same admission, despairing of the great waste of individual endeavor. From certain kinds of inflammatory preaching which advocated useless sacrifice of the individual, Professor Bowne found safety in the apathy of congregations. "Much of the preaching would be calamitous if it were not for the dulness of those who listen." No one was more of a temper to quote, as he used to do:

Tho' love repine and reason chafe,
There comes this voice without reply,
'Tis man's perdition to be safe
When for the truth he ought to die.

But against offering this gospel as "an equation of happiness" no one could protest more vigorously.

In answer to the objection that woman suffrage, "like popular suffrage has fearsome possibilities," there is found the note: "Logic leads to the abysses." No saner, more temperate consideration of that burning issue could be found, by the way, than the brief page or more in his "Principles of Ethics."

He was fond of emphasizing the "Function of Illusion in Life," and his little allegory, noted merely as pleasing, takes on rich meaning after years: "If it were not for the rainbow, we should not get on. We follow the gleam; at first we misinterpret it; we live by it, eventually." His life and temperament ever exemplified belief in his own words, "This world is full of possible beauty," and "the joy of living cannot be separated from the joy of knowing." Those who knew him will recall how often those words, "the joy of knowing," were on his lips, and that other phrase, "a common faithfulness," for which he pleaded with the intense conviction that it was the sum of life, learning, and all endeavor.

In the undergraduate days, when life needed not philosophy to make it tolerable, his hearers admired his brilliancy, serenity, and conviction; when the problem became real for them, inextricably bound up with the value of life, they remembered his teachings. Greater monument could no teacher have.

MARY COWELL HAM.

Brunswick, Me., May 16.

CURIOSITY AND THE COMET.

TO THE EDITOR OF THE NATION:

SIR: Nothing pleases some people so much as facts. They will spend whole hours in persistent yet apparently aimless questioning of their acquaintances, or in concentrated application to newspaper articles and technical reviews. Details of mechanical processes, circumstantial accounts of the most unimportant happenings, are all enchantingly attractive to them, because, and only because, they are series of facts. Obviously the motive for such truth-seeking is intellectual curiosity, pure and simple, with no basis of a desire to use the knowledge gained, or of pleasure in the gaining.

Just at present, the existence of the fact-hunting point of view is even more easily discerned than usual among people in general. All you have to do is to mention the comet, and your friend's mind classifies itself immediately. He may begin to talk in a mildly historical vein of the curious superstitions it has inspired in the past; he may discourse of its wonder and natural beauty; he may take a soberly philosophic view of the littleness of man and his world. But if he begins to tell at once how many times he has seen the comet already, at what hour it will appear to-morrow morning, and how much good his little pocket telescope really does him, he is a fact-hunter, and you may know exactly where to put him.

A hundred and fifty years ago, however, nearly everybody was a fact-hunter. That remark is not a wild generalization from histories of eighteenth century literature, but a deduction from a relic of the "age of prose and reason" itself. Nothing but the general acceptance of that point of view as natural and right would ever have led to the publication of a poem that was found not long ago in a pile of old letters, dated all of them about the time of the appearance of the comet in 1759. The name of the paper in which it appeared is not given on the clipping, but it was doubtless a New York weekly of that time. One only wishes that the modern prosaically-minded fact-hunter were unsophisticated enough to unbosom himself as frankly as did the provincial bard. A lament in a current metre, one patterned after Alfred Austin, for instance, and inspired by the poet's lack of sufficiently accurate astronomical instruments, would be a relief from the flood of verse, which, I quite clearly perceive, will richly supply the magazines for the next few months. The eighteenth century model has, at any rate, "one native charm":

Hah! There it flames, the long expected star,
And darts it's awful glories from afar!
Punctual at length the traveller appears
From it's long journey of nigh four-score years.
Lo! the reputed messenger of fate,
Array'd in glorious, but tremendous state,
Moves on majestick o'er the heav'nly plain
And shakes dire sparkles in it's fiery train.
Ah! my misfortune that I live retir'd,
And nought avail me arts I once acquir'd!
Here, like an hermit, in my lonely cell,
Far from the mansions where the Muses dwell,
I'm forc'd to act the common gazer's part,
Alas! unfurnish'd with the aids of art!
O for the tube, with philosophic eye
To trace the shining wand'rer thro' the sky!
O for the ampler arch, in nicer mode,
To mark it's stages in its azure road!
But vain the wish, oh! ye that can survey
The glorious orb, and track its wondrous way,
And find it's shortest distance from the source of day,
While vulgar crowds with dull attention gaze,
And gaping, wonder at the silver blaze;
Ye sons of science, from your high abodes,
Discry it's oblique path, and mark it's nodes,
Explore with what velocity it's hurled,
And what exact its period round the world.
Now, now in this delightful work engage,
Pursue the steps of the sagacious sage,
And be this wiser than the former age.

ELIZABETH CRANE PORTER.

Audover, Mass., May 18.

LIBERIA.

TO THE EDITOR OF THE NATION:

SIR: Any one appreciating the importance of the audience addressed by the *Nation* and at all well informed as to Liberian affairs, internal or international, must regret the endorsement given in your is-

sue of April 21 to the report of the Liberian Commission.

Readers of this report or of your review of it will receive an impression of Liberia as a native republic whose difficulties are due solely to foreign interference with its independence; of Great Britain as the *instans tyrannus*, who, for a century, has been fomenting these difficulties in order to encroach on or intrigue against that independence; of the United States as an earthly providence which at the right moment will send, as a *deus ex machina*, a cruiser or a minister with a treaty in his pocket. Such an impression is as false as the information on which it is based is fallacious. The difficulties in Liberia are due solely to the incompetence and corruption of the small governing class. The country is bankrupt, and has no credit and nothing in its treasury; but the total debt charge is only 15 per cent. of the revenue, and were the collected revenue paid into the treasury, it would be amply sufficient for all requirements. Again, the disorders in the interior are caused neither by the intrigues of Great Britain nor by the turbulence of savage races raiding or revolting against civilized rule; but by the extortions and outrages of the armed expeditions sent out by the Liberian government against peaceable villages. That is the origin of the present trouble with the Grebas and the reason why the Kroo coast refuses to acknowledge Liberian rule. Indeed, not long ago a raiding force of Liberians, after ravaging several villages was disarmed by the natives and sent back to Monrovia unharmed.

Liberian rule is corrupt, cruel, and, fortunately, confined to a small coast strip; which facts should be as well known in the United States as are the same disappointing developments in colored communities of the Western Hemisphere. Until they are well known Liberia will remain exposed to the cruel kindness of good people who—

> have just got a notion
> for making a motion
> that black shall in future be white.

Now, sir, to turn to the international aspects of the report. The whole course of Liberian history goes to show that the dramatic tableau staged in the report as an American Perseus rescuing a Liberian Andromeda from the British sea monster is, to say the least, fanciful. If American philanthropists made Liberia, British cruisers made the Liberians. It was Great Britain that first recognized Liberian independence, fifteen years before the United States did so; and for the last twenty years the maintenance of that independence has been due to British support. But it is unnecessary to go further for a recognition of the true relations between Great Britain and Liberia than the recent correspondence published last year when Mr. Roosevelt recommended to Congress the appropriations for this commission. This correspondence shows that in 1897 Great Britain made the following proposal to the United States:

> It might prove of service to the Liberian Republic and encourage it to resist absorption by a foreign Power were the governments of Great Britain and the United States to make a joint declaration of the special interest taken by them in the independence of the republic.

A suitable reply was made by the State Department, and the understanding was notified to the Liberian government by the American minister in the following terms:

> It is my privilege to present these *promemoria*. . . . The one from the United States which I have the honor to represent at this court, gives me profound pleasure to present to the home of my ancestors—the one from Great Britain increases my admiration for his Majesty's government as a power of justice and equity.

Ten years later, in 1908, Sir E. Grey, foreign secretary, made another proposal that the United States government should take over judicial reform in Liberia, and added:

> While calling attention to this branch of administration which has been a frequent scene of trouble, I need hardly add that his Majesty's government would welcome the coöperation of the government of the United States with them in Liberia in any other manner which may appear most suitable or more observable on a consideration of all the circumstances.
>
> It appears to his Majesty's government that the main risk to the future of Liberia arises from the inefficiency of Liberia's administration of their own affairs, especially in matters of finance, and any suggestions which the United States might see fit to give them to follow the advice of such foreigners as they have themselves engaged to help in their administration would have a beneficial effect.

VERITAS.

Washington, D. C., May 15.

LORD CROMER AND THE EGYPTIAN PEASANTRY.

To the Editor of The Nation:

SIR: Before the echoes of Mr. Roosevelt's Cairo address have quite blown away, the following unconscious tribute to Lord Cromer's exertions on behalf of the Egyptian peasantry may prove of interest.

One of the most voluminous, varied, and picturesque of the mediæval Arabic romances of chivalry has recently (1908-1909) been printed at Cairo for the first time. It is the story of the Sultan az-Zahir Baybars, and the publisher, who was, apparently, as frequently in such cases occurs, also a redactor, announced at the beginning that it would consist of fifty parts. But for this number he was unable to find material, and was therefore obliged to fill in, from page 20 of Part 48, with a strongly nationalist outline history of Egypt, Syria, and Turkey, down to the present time. The latest date I can find is April 9, 1909; but there is no hint of a Turkish revolution, and his Majesty Abdul Hamid is still reigning gloriously.

This whole appendix is of the highest interest as an example of how popular history can be written. But the point to which I now write to draw attention is in the section on Lord Cromer (Part 49, p. 47). There the writer, evidently a townsman and of the "learned" class, complains that Lord Cromer brought young men from his own country, and put them into government posts which should have been held by natives, and that he "succeeded, by his guile and astuteness, in drawing to his side the hearts of the peasantry, and of the simple-minded among the country governors and shaikhs, who used to write to him reports and complaints and lying desires."

Of course, until the time of the English control, no Egyptian ruler or ruling class ever thought of the peasantry, except as a source of labor and revenue. That the Egyptian upper and middle classes still view it in the same way is, unfortunately, too certain. Lord Cromer's consideration of them could, therefore, be only the guile of the politician. Yet one hardly expected to find so complete and naïve an admission of the success of his policy. Perhaps, with time and patience the peasantry may at last be persuaded to exercise the voting power which it already possesses. When it does so, by far the most important step will have been taken towards full parliamentary government. For before that comes, the peasantry, the most weighty if the most silent element in the Egyptian population, must be equipped and ready to protect itself against the exactions and the contempt of the other classes.

DUNCAN B. MACDONALD.

Hartford, Conn., May 17.

THE PHILIPPINE LANDS.

To the Editor of The Nation:

SIR: In reply to Mr. Bingham's letter in the *Nation* of the 12th, may I suggest some considerations in regard to the sale of Philippine lands in large quantities?

In the first place it is a matter of common knowledge that Mr. Taft has expressed repeatedly his hope that the Philippine Islands, at a time when their independence may be properly considered, will not aspire to it, but will be satisfied with a colonial attachment to the United States, which he believes to be a desirable permanent condition. The Filipinos, whenever and wherever their voice has been able to make itself heard, protest against the colonial position and demand independence at the earliest possible date, secured through neutralization by the great Powers. This voice has spoken loudly and clearly to deplore these large sales, because it is apprehended that the establishment of interests such as those of great sugar or tobacco cultivators will create powerful influences against the independence of the islands. The true welfare of the people of the islands was sought in the establishment, under the authority of Congress, of an agricultural bank which has not been successfully developed. The admirable "Raiffeisen" system of agricultural credit was adopted by the Philippine Assembly in a bill which was done to death in the upper House (the Philippine Commission, composed of Mr. Taft's appointees). It is quite obvious why the attitude taken towards exploitation by Senator Hoar, who earnestly hoped for the early independence of the Philippine Islands, was antagonized by Mr. Taft, who has never even reckoned with it.

Mr. Taft may be a friend of the *land* of the Philippine Islands, but he cannot in any proper sense be said to be a friend of the Philippine *people*.

Ireland and even Scotland to a large extent have been depopulated by those who love the land and not the people.

ERVING WINSLOW.

Boston, May 16.

A CORRECTION.

To the Editor of The Nation:

SIR: As a reader of the *Nation* and an English Liberal, permit me to say that you are mistaken in believing that the budget

has passed as the result of "one of its most contentious provisions being struck out" (the *Nation*, May 5, p. 449). No concession at all was made. Agricultural land was from the first exempt from the increment tax. RICHARD CAPELL.

London, May 5.

TO THE EDITOR OF THE NATION:

SIR: Allow me to call your attention to an error in your article on page 449 of the last issue of the *Nation*. No actual change was made in the British budget upon its final passage except in the matter of dates to fit the new conditions.

The original budget did not assess the new 20 per cent. increment duty to land used for agricultural purposes, and the declaration on that subject in the bill as finally passed was inserted merely for the purpose of clearing up a possible ambiguity in the original wording.

One would infer from the remainder of your article that as a fiscal scheme the historic budget had been something of a failure; an idea which is hardly borne out by a careful reading of the debates in the House of Commons, as reported in the most recent London newspapers. Mr. Austen Chamberlain, at any rate, seemed disposed to congratulate the chancellor of the exchequer upon his favorable statement. Of course, a surplus of "only $14,500,000" is nothing to boast of, but it is better than a deficit. GEO. Q. THORNTON.

St. Louis, Mo., May 6.

THE THESIS OF A PLAY.

TO THE EDITOR OF THE NATION:

SIR: In your issue for April 7 there appeared an interesting notice of the revised edition of William Vaughn Moody's "The Faith Healer." I should like to raise a question about one remark in this notice:

> The great weakness of the play in its first estate, as has been pointed out in this journal more than once, was the vagueness of its intent and meaning, as if the author were himself in doubt as to the true nature of the phenomena with which he had undertaken to deal. . . . This defect is as conspicuous in the revised version as in the end.

This struck me as a very unjust bit of criticism. What attitude other than doubt as to the nature of such phenomena is possible at present to an intelligent man? And are we to exclude from the legitimate field of drama every phenomenon which we do not fully understand? If we do, how much will be left?

To make sure that I did not misunderstand your critic, I referred to his review of the earlier version of the play (*Nation*, February 18, 1909). He there remarks:

> The play would be stronger if it were clearer in meaning and purpose, more definite in argument and declaration. It is difficult in reading it to determine whether it is a profession of faith, a spiritual romance, or a *mere* dramatic study of existing conditions. (The italics are mine.)

I am reminded of a remark made by a student in our engineering department, apropos of a presentation of Ben Jonson's "Silent Woman": "I don't think it's really a good play; there isn't any moral which you can take away with you and think about."

Against the assumption which underlies the sentences quoted from the *Nation*, I wish to enter a vigorous protest. The doctrine of your critic seems to be that a play cannot deserve the highest praise unless it presents some definite thesis, some clear-cut solution of a problem. This critical attitude, I suppose, is due chiefly to the influence of Ibsen. A great master of dramatic technique has seen fit to confuse the functions of the stage with those of the pulpit or the platform; many lesser men have followed him, and, as usually happens, a criticism has arisen which sees in their practice a fundamental principle of drama.

Of course, this principle is beautifully exemplified in the plays of such men as Ibsen and Shaw, from which it is derived. Almost all their plays are what Mr. Chesterton calls "propaganda" plays. But how will the principle apply to the great dramas of the past? Can we be quite sure that Sophocles, in describing the death of Œdipus and the voice which called him "many times and in many quarters," was not "in doubt concerning the true nature of the phenomena with which he had undertaken to deal?" Is "Œdipus" or "Hamlet" "clear in meaning and purpose, definite in argument and declaration?" If they were, should we be fascinated by them still?

I am not yet ready to believe that a play is a better play because it is also a sermon or an essay. I cannot escape from the conviction that what your critic regards as the chief fault of "The Faith Healer" is really one of its greatest merits. Mr. Moody has set forth in splendid dramatic form a situation which would have tempted a lesser man to promulgate a psychological theory, thinly disguised as a play.

HOMER E. WOODBRIDGE.

Colorado Springs, April 23.

[We print this letter because it raises an interesting question of art. Our reviewer did not mean, and did not imply, that a play is better for being a sermon or an essay; he did mean that a play, or any other work of literature, is better if the writer has a clear perception of the theme he has in hand, and a clear notion of his own mental and emotional attitude toward that theme. Crude didacticism may injure a work of art, "vagueness of intent and meaning" may also be injurious," the greatest work of art will always convey a definite moral impression.—ED. NATION.]

Literature.

THE ARTHURIAN ROMANCES.

The Vulgate Version of the Arthurian Romances. Edited from manuscripts in the British Museum, by H. Oskar Sommer. Vol. I: L'Estoire del Saint Graal; Vol II: L'Estoire de Merlin. Washington: The Carnegie Institution.

The publication of a work of such magnitude as the present would in Europe be the function of some academy of sciences; it is fortunate that we have at last on this side of the ocean in the Carnegie Institution a foundation which possesses the material resources to carry through an enterprise of this nature. To be sure, the aid of the Institution has been hitherto mainly extended to investigators in the physical sciences, but we hope that with so liberal a recognition of the claims of literary research as is implied in the present publication we may look forward in future to a more abundant flow of favors in this direction. In any event, the Institution is earning the gratitude of all serious students of literature by the issue of these splendid volumes—the product of the Riverside Press—which in beauty of typography are not inferior to the publications of any learned body in the world. We only regret that it should have chosen to date them respectively 1909 (Vol. I) and 1908 (Vol. II), although they were really published in 1910. This is sure to lead to confusion in future researches in this field.

The first two volumes which lie before us comprise the branches of the Vulgate cycle generally known, respectively, as the "Grand Saint Graal" and the "Merlin." The whole work, as Dr. Sommer announces, is to consist of six volumes, of which the third, fourth, and fifth are to contain the "Lancelot," and the last the "Queste del Saint Graal" and "Mort Artus." With the very important exception of the "Lancelot," all the branches of the cycle have already appeared in print. For instance, the "Grand Saint Graal" has been edited by both Furnivall and Hucher, and the "Merlin" by Dr. Sommer himself. Nevertheless, the present publication has its value even for these works, since it rests on a much more extensive examination of the manuscript material, and in the case of the former offers the text (a somewhat abbreviated one, to be sure) of a manuscript which has not been printed before in its entirety. As in his previous publications, Dr. Sommer merely prints exact transcripts of the manuscripts, without editing them. Headlines and ample side-notes, however, make it easy to glance rapidly over the narrative, and he has also adopted a system of cross-references to previous editions of these romances, which renders it easy to compare any passage. Furthermore, collations are given at the bottom of the page from some other manuscripts, although it is to be regretted that no statement is made as to how systematic these collations are.

The manuscript which Dr. Sommer has chosen as the basis of his edition of the whole cycle is Additional 10292-4 of the British Museum. One may well question whether it is advisable to print all the branches of the cycle from this one manuscript, simply because it happens to contain them all, regardless of the fact that a less abbreviated text of each branch of the cycle—that is, accordingly, a text which represents more nearly the original form of each of these branches—may be obtained from separate manuscripts. For, although Dr. Sommer does not state it, Additional

10292-4 is really a somewhat shortened text of the Vulgate Version. This is indisputably true of the first and last branches, and it is presumably true of the intervening branches. The collations at the bottom of the page from other manuscripts will make up in part for the deficiencies of the main manuscript, but not altogether. Taken as a whole, the abbreviations, no doubt, only rarely involve the omission of incidents, but in the last branch, at least, they are in one or two places of such a character as seriously to impair the value of the manuscript. Still further, the disadvantages of a shortened text will certainly be felt, when it is used (as Dr. Sommer expects it will be) for purposes of collation in the preparation of a critical edition. On the other hand, there are certain advantages in having in print the whole of one of the only six manuscripts extant that embrace the whole cycle (each of which, however, has its imperfections), even though it is, to a certain degree, shortened, and students of the Arthurian romances will be too grateful to Dr. Sommer for undertaking the task at all to quarrel with him over this matter. To give three years and seven months to the mere transcription of the text (as he tells us he did) is devotion enough for any cause.

Notes do not enter into the plan of the present edition, but Dr. Sommer has prefixed to his first volume an Introduction of twenty-six pages which contains a description of MS. Additional 10292-4, a list of the manuscripts and early prints which he has used in the preparation of his work, and a critical discussion of the development of the Vulgate cycle, consisting in large measure of a summary of the editor's views on this subject as already expounded in various philological journals. With regard to the description of the MS. Additional 10292-4, we have commented above on Dr. Sommer's neglect to state that it offers a shortened text. But, still further, how can he speak in this place (as he has done once before) as if he were the first person to notice that the date of this manuscript (1316) was fixed by a certain miniature in the first volume, when the description of the manuscript in Ward's "Catalogue of Romances" has made this a matter of common knowledge for upwards of twenty-five years? He should also have warned the reader that his tables of manuscripts do not embrace all the manuscripts of the various branches of this cycle which are accessible in the Bibliothèque Nationale. The same is true of the list of early prints. Dr. Sommer adopts the division (already frequently in use) of the "Lancelot" into three parts, and there is no objection to this (only the older division into two has the justification of following a common arrangement of the manuscripts), but the exclusion of Part iii (known as the "Agravain") from the term "Lancelot proper" does not accord with general usage. Indeed, Dr. Sommer himself did not so use it, when he published his "Studies on the Sources of Malory's 'Morte Darthur,'" though, to be sure, in that work he made the mistake of calling the whole "Lancelot" the "Livre d'Artus," which is the term he now rightly applies to the second part of the "Merlin."

We have not the space here to enter fully into the discussion of Dr. Sommer's theories concerning the development of the cycle. In some respects, they manifestly require correction, as when he makes the "Galahad-Queste" later than the "Mort Artus," for the "Galahad-Queste" is, beyond dispute, an important source of the "Mort Artus," as the recent edition of the latter work shows. Dr. Sommer, moreover, exaggerates his originality in regard to most of what is sound in his theories here, and still more in the various articles which he has in recent years devoted to these questions. For instance, Gaston Paris recognized fully, in his review (*Romania*, 1887) of Von Reinhartstoettner's (uncompleted) edition of the Portuguese "Demanda," that this was the third part of the so-called Robert de Borron trilogy of the Arthurian romances; and Wechssler showed satisfactorily that an "Estoire del Saint Graal" (and not a "Joseph," as in the Huth manuscript) constituted originally the first part of this trilogy, even conjecturing that the Torre do Tombo manuscript contained this "Estoire" in Portuguese form. The results here indicated anticipate the essentials of Dr. Sommer's conclusions on the same subjects. Again, as regards Dr. Sommer's remarks on the place of the "Livre d'Artus" in the Vulgate cycle, they simply prove that Gaston Paris did not sufficiently note all the incongruities between this branch and the "Lancelot" (and perhaps their use of common sources, which is interesting, if confirmed), but they do not touch the main matter, in which he was undoubtedly right, viz., that this same "Livre d'Artus," no doubt the last to be composed of all the branches, was written to connect the "Merlin" and the "Lancelot." We do not believe that that eminent scholar would have been greatly disturbed by this list of incongruities —though interesting in itself—for he must have recognized that after all the different romances that make up the cycle were originally written as separate works solely for the purpose of entertainment without any thought that some day the *assembleurs* would unite them in huge manuscripts, so that their occasional want of harmony, and even bare-faced plagiarisms from one another, would stand out in the clear light of day.

We might mention still other points in which we differ from Dr. Sommer—for instance, in his inference that a "Perceval Quest," now lost, must have once formed an integral part of the Vulgate cycle—but we prefer, in conclusion, to speak of matters in which there is no disagreement between us, as in regard to the late origin of the "Didot-Perceval," and especially in regard to the "infinitesimal" influence of Celtic tradition on the romances of this cycle. After all, however, it is the texts that are the main thing, and whatever one's views may be concerning the critical questions which swarm about these romances, no student of mediæval literature will lay aside the present volumes without a feeling of gratitude to the editor and an earnest wish that he may bring his immense task to a successful conclusion.

CURRENT FICTION.

Murder Point: A Tale of Keewatin. By Coningsby William Dawson. New York: George H. Doran Co.

This book starts as if it were going to do justice to its lurid title, but the author loses his grip after a few chapters and the story becomes a bit vague. It seems to be chiefly concerned with this question: When Spurling killed Mordaunt, did he know she was a woman? As she passed for a man in Alaskan mining camps, one can understand that Spurling might have shot her under a misapprehension as to her sex. Doubt and perplexity over this matter cause much trouble in the mind of Granger, who left Spurling and Mordaunt hunting gold in Alaska, and came to Keewatin. If Spurling knowingly shot a woman, then vengeance must be had, particularly since Granger knew Mordaunt was a woman, and had fallen in love with her. On the other hand, if Spurling thought she was a man, it did not matter so much. Granger is further puzzled as to whether or not he should marry a certain half-breed girl, named Peggy. He owes it to her, but he remembers that with a squaw wife he can never return to England and civilization. This bothers him a good deal, being an Oxford man and a competent oar. These two problems keep him busy for three or four hundred pages, till one marvels at his consummate inability to solve them. A priest finally persuades him to marry Peggy, by way of fulfilling his obvious duty, but the other question is settled in a manner devious and unconvincing. Peggy murders Spurling in order to get the matter off her husband's mind, and then when the sergeant of the Mounted Police arrives, suspecting Granger, the latter gives himself up to save his wife, and departs with the sergeant in order, as the book succinctly remarks, to be hanged.

The story is evidently an attempt at realistic portrayal of life in the North-

west, somewhat after the fashion of Jack London. We can believe Mr. Dawson when he tells us of the loneliness and isolation of the life which Granger leads as a post trader. Also the effects which the country has on the man and his mind are well set forth. But when it comes to Granger's dealings with his fellow men, the touch is not so sure. A great deal of it that is meant to be powerful reaches only the level of the melodramatic. The impression left by the story as a whole is one of confusion and lack of direction. The situations often give the reader a feeling which in one place is ascribed to Granger (the italics are the author's): "Gradually the most fatal feeling that any man can experience in northland travel stole over him—*he felt that he did not care.*"

Legends of the City of Mexico. By Thomas A. Janvier. Harper & Bros.

These nineteen legends which Mr. Janvier and his wife have collected in the City of Mexico will be equally attractive to the folklorist and the disinterested reader. The stories are a genuine product of the people. A laundress and a waiter furnished the greater number of them, and several, as Mr. Janvier points out in notes, have Spanish or other European parallels. We may remark that the feat of the Mulata de Cordoba, who sailed away from her captors in a ship she had drawn on the wall, finds an interesting pendant in the tale of the Chinese artist who walked into his painted screen and disappeared forever.

Mr. Janvier has been successful in reproducing the simple manner of the story-tellers and in conveying the shudder that befits these ghostly topics. Told beside a flickering fire, these legends would infallibly produce that pleasing "cold qualm in the stomach" which the narrators so often mention as the sure sign that spirits are by. Walter Appleton Clark has contributed half a dozen effective illustrations, and there are as many photographic cuts depicting the places where these legends are localized.

The Royal Americans. By Mary Hallock Foote. Boston: Houghton Mifflin Co.

Many a reader will take up this book with genuine pleasure at the sight of Mrs. Foote's name once more upon a title-page, and only those unreasonably expectant of a renewal of her very best work need lay it down in disappointment. Pleasant, indeed, is the easy, clean-cut style, and pleasant the fresh, sweet atmosphere, moral and physical, the vein of pure romance. Though the author's pen has been trained to depict the mountains and deserts of the Far West, it has no less cunning to sketch a more homely scene. Description is, on the whole, Mrs. Foote's forte. In straight-away narrative, too, like that of Catherine's drive across the field of death at Saratoga, she is very good. But, in exposition—to keep to the academic divisions—she is decidedly at fault. When she has any complicated matter to explain, she seems to get a little flustered, like inexpert talkers who, having neither the gift of flashing quick illumination upon their subject nor the self-assertiveness to insist on their hearers' attention to a merciless succession of details, become embarrassed at the first signs of inattention, and hurry confusedly over the ends of their stories, leaving the main point as dark as ever.

Mrs. Foote's *mise en scène*—the heroine is born at Fort Ontario in 1756, and finds her happiness on the morrow of Burgoyne's surrender—can hardly fail to suggest that much faultier and incalculably greater romance, Cooper's "Spy," and to awake again the endless question, what is genius? Why will that book, with its turgid English, its insufferable *longueurs*, its detestably feminine "females," live on in literature, while hundreds of pleasant stories like "The Royal Americans" are read, enjoyed, and forgotten?

The Awakening of Zojas. By Miriam Michelson. New York: Doubleday, Page & Co.

Miss Michelson is an adroit teller of tales. The four stories which make up the present book show a good deal of versatility. The first and longest of them, "The Awakening of Zojas," is also the most striking—a fresh treatment of the old idea of a life suspended and awaking to a new world after many years. Zojas is an Italian brigand, condemned to death for a brutal murder and rescued for scientific purposes by a learned man who has discovered a way of suspending animation for a century. He comes to life to make himself leader of the popular party, and finally dictator. "The Cradle," by way of contrast, is the story of a viking's daughter, phrased in the lingo of the historical romancer. The two remaining stories, "Peach Blossoms" and "Tares," with their mingling of realism in detail and romanticism in substance, are, we take it, really characteristic of the writer, and of the order of magazine fiction with which she has identified herself. They are cleverly conceived and executed; they have a good deal of intensity and not a little humor. But they have the defect of their kind. Seeming to deal with the materials of tragedy, they really lack the scope and dignity demanded by that great word. The human figures involved are not of sufficient stature: the end of them and of their intense experiences is at most pathos. The real achievement of tragedy is, of course, beyond the reach of the short-story writer. But the tragic note may be struck, may at least be dimly heard as a sympathetic vibration. Our magazines just now are clearly under the domination of the humorous-pathetic pseudo-realism which tends to corrupt the public taste for true comedy and true tragedy.

A GREAT PUBLISHER.

Robert Dodsley, Poet, Publisher, and Playwright. By Ralph Straus. With a photogravure portrait and twelve other illustrations. New York: John Lane Co. $6.50 net.

After the few really great names, that of Robert Dodsley is one of the most frequently heard of the eighteenth century, yet of the events of his life—beyond the fact that he was the publisher and friend of Johnson—you would probably find even well-informed readers surprisingly ignorant, and of his literary work, apart from his successful editing of the "Collection of Poems" and "Old Plays," you would find still grosser ignorance. Yet Dodsley's bookshop, at Tully's Head in Pall Mall, was one of the centres of literary society from its opening in 1735 until the retirement of its founder in 1759, and indeed in a lesser degree until the death of Robert's brother and successor, James, in 1797. He was himself a poet of some distinction, and a popular playwright. Mr. Straus's biography, therefore, is not, like most of the eighteenth-century memoirs now appearing, a superfluity, but fills a real want. The work, we may add, is solidly, if not brilliantly, written. Some new material has come to light, and in all nearly two hundred letters to or from Dodsley have passed through the author's hands.

Possibly the book might have been made more lifelike if a few more of Dodsley's own letters had been printed, although it cannot be said that the master of Tully's Head possessed much of Tully's epistolary art. Only once, so far as Mr. Straus permits us to judge, does he show the poet in his correspondence, and that is when, writing to Spence (author of the "Anecdotes" and owner of Byfleet, a rival to Shenstone's Leasowes), he expresses his desire for leisure:

> But here am I, ty'd down to the World, immerst in Business, with very little Prospect of ever being able to disengage myself. 'Tis true, my Business is of such a nature, and so agreeable to the Turn of my Mind, that I have often very great Pleasure in the Pursuit of it. I don't know but I may sometimes be as entertain'd in planning a book as you are in laying out the plan of a Garden. Yet I don't know how it is, I cannot help languishing after that Leisure which perhaps if it was in my possession I should not be able to enjoy. I am afraid the man who would truly relish and enjoy Retirement must be previously furnished with a large and various stock of Ideas, which he must be capable

of turning over in his own mind, of comparing, varying, and contemplating upon with pleasure; he must so thoroughly have seen the World as to cure him of being over fond of it; and he must have so much good sense and Virtue in his own Breast as to prevent him from being disgusted with his own Reflections or uneasy in his own Company. I am sorry to feel myself not so well qualify'd for this sacred Leisure as I could wish, in any one respect; but glad I have a Friend from whose example I cannot but hope I shall be able to improve.

Not often will you find this subject treated in letters of Dodsley's age so honestly.

Robert Dodsley was born in 1704 at Mansfield, in Nottinghamshire; was educated at the grammar school in the town, and at an early age went out as footman to Charles Dartiquenave (Swift's Dartineuf), passing in 1728 into the service of the Hon. Jane Lowther, the third daughter of the first Viscount Lonsdale. Of his life of servitude Dodsley seems never to have been ashamed, although once or twice in later years the fact was thrown at him insultingly. Indeed, his first publication was a poem entitled "Servitude," and in 1732 he brought out a fuller portrait of his life in "A Muse in Livery: or the Footman's Miscellany." There is a certain frank sincerity in such lines as these:

> And first,
> As soon as laziness will let me,
> I rise from bed, and down I set me,
> To cleaning glasses, knives and plate.
> And such-like dirty work as that,
> Which (by the bye) is what I hate.
> This done, with expeditious care,
> To dress myself I strait prepare;
> I clean my buckles, black my shoes;
> Powder my wig, and brush my clothes;
> Take off my beard, and wash my face,
> And then I'm ready for the chace.

His first important success was a short play in prose, called "The Toy Shop," which was produced with gratifying success in 1735. With the money from this and a present from Pope he set up as publisher and bookseller in Pall Mall. Though evidently fairly cautious in his ventures, he had the rare union of literary taste and business sense which makes the great publisher. Johnson, Pope, Young, Shenstone, Chesterfield, Gray, Walpole, Spence, Burke, Akenside, Joseph Warton, Lyttelton, and Jarvis are some of the names that helped to make Tully's Head famous. Of his own editorial work the "Collections" and the "Old Plays" are too well known to need more than mention here. His play of "Cleone," though fairly successful on the stage, has passed into complete oblivion, nor, we think, was it so original in its domestic tone as Mr. Straus would have it. Mr. Straus does not attempt to revive a spurious interest in this play, any more than in the other forgotten works of Dodsley. But he rather jealously, and with good evidence, vindicates "The Œconomy of Human Life" for his subject, and calls attention to the grace of the fairly well-known song: "One kind kiss before we part." We will not quote those charming stanzas, but close, rather, with the poem "On Tully's Head in Pall Mall," which was written at the time of "Cleone" in 1756, by Richard Graves, the friend of Shenstone and Jago, author of "The Spiritual Don Quixote" (would the novel were as inspired as its name!) and many other books which have made themselves forgotten. We doubt if a neater or better deserved laurel was ever placed on publisher's brow:

> Where Tully's bust and honour'd name
> Point out the venal page,
> There *Dodsley* consecrates to fame
> The classics of his age.
>
> In vain the poets, from their mine,
> Extract the shining mass,
> Till Dodsley's mint has stamp'd the coin,
> And bid the sterling pass.
>
> Yet he, I ween, in *Cæsar's* days,
> A nobler fate had found;
> Dodsley himself with verdant bays
> Had been by *Cæsar* crown'd.
>
> His bust near *Tully's* had been plac'd,
> Himself a classic bard;
> His works Apollo's temple grac'd,
> And met their just reward.
>
> But still, my friend, be virtue, sense,
> And competence thy share;
> And think each boon, that courts dispense,
> Beneath a poet's care.
>
> Persist to grace this humbler post;
> Be *Tully's* head the sign;
> Till future booksellers shall boast
> To vend their tomes at *thine*.

The Drama of Saint Helena. By Paul Frémeaux. Translated from the French by Alfred Rieu. New York: D. Appleton & Co. $3 net.

This is a translation of M. Frémeaux's "Les Derniers Jours de l'Empereur," which was crowned last year by the French Academy. As the author confined his account to the period after July, 1817, it would have been well to translate the title more literally. But if a sensational title must be chosen, it would be more appropriate to say The Tragedy of Saint Helena. For the author's point of view is tragic—the horrible climate, Hudson Lowe's enormities, Napoleon's agonies. In a subject on which so much has been written, one takes up a new book with scepticism as to its justification. Yet this one has a real value as a description of the fallen Emperor's external surroundings and internal disorders.

To give an adequate account of the scene of Napoleon's last years, the author has studied the works relating to St. Helena itself. He describes the winds and the rocks, and the flora and fauna, and their relation to the exile. The reader may see a plan and views of Longwood, and learn of the use, and furniture, of each room from the cracked range in the kitchen to the faded carpet and gorgeous gold and silver toilet articles in the Emperor's own nine by fifteen-foot bedroom. On a map of the island he may trace the "four-mile limit" around Longwood, within which Napoleon was left undisturbed, and the "twelve-mile limit," within which he could walk freely, if accompanied by an English officer. A telegraph station, on a rock commanding Longwood and the sea, signalled to Hudson Lowe and to the port information of Napoleon's movements and of the approach of any vessel to the island.

The author also has an especial interest in the minutiæ of Napoleon's illness, and its symptoms. He has not only made good use of the well-known accounts left by Doctors Warden, O'Meara, and Antommarchi, but he has also gained many bits of information from the less known statements of Walter Henry, Dr. Arnott, and Dr. Stokoe. He even turns to his use points picked up from Napoleon's cooks, after they returned to Europe, and is able to state in detail what Napoleon ate and what he did not eat in his last years. The ponderous Forsyth believed it better to draw a veil over the realistic details of an illustrious end. Not so M. Frémeaux. He is in deadly earnest to describe, as he says, "how the greatest of all warriors died nobly in bed." He agrees that the ultimate cause of death was cancer of the stomach, but thinks the end was hastened by poor food, bad climate, lack of exercise, and the ignorance of the attending physicians who persisted until within a few weeks of Napoleon's death in diagnosing and treating him for hepatitis. There is much in the book that to the non-Gallic mind reads like gossip, but it is gossip touched with the grace of imagination and wit.

Notes.

Henry Holt & Co. announce the early publication of a new novel by William de Morgan, which will probably be called "An Affair of Dishonor." The first volume of the American Historical Series, "Europe Since 1815," by Prof. Charles Downer Hazen of Smith College, will be published next week.

A new novel by Henryk Sienkiewicz, entitled "Whirlpools," will be published by Little, Brown & Co. early in June.

The Putnams announce for early publication a new volume of essays by A. C. Benson, entitled "The Silent Isle," also "The Valley of Aosta," by Felice Ferrero; and "Controversial Issues in Scottish History," by William H. Gregg.

A volume on the Boston Museum of Fine Arts, the second in the series describing American Art Galleries, is announced by

L. C. Page & Co. The book is by Mrs. Julia DeW. Addison.

A series of biographies which are intended to be in themselves a history of Western development, is announced by D. Appleton & Co. Prof. Clarence W. Alvord of the University of Illinois will undertake the editorship of the series. The biographies now in preparation are those of George Rogers Clark, William Henry Harrison, John Charles Frémont, and Charles Michel de Langlade.

Norwich University, at Northfield, Vt., plans an elaborate work of two volumes, giving a history of the university and a roster and sketches of the cadets, trustees, and professors. Vol. I will cover the years 1819-1866, and Vol. II, 1866 to 1910; each will contain the university history, so that an old student need purchase one volume only.

The Boston Public Library, according to the Fifty-eighth Annual Report, just published, contains nearly a million volumes, three-fourths of which are in the central library. While the home use of the books has fallen off slightly, the number and size of school deposits have increased in a gratifying degree. The cosmopolitan character of the library work is shown by the fact that the examining committee suggests that a new edition of the standard-fiction catalogue "should contain likewise the books in Yiddish"; and also that the newspapers taken are in twenty different languages, including one in Tagalese, published in the Philippines. It is interesting to note that there is a marked increase in the use of the branches in those quarters of the city where the foreign population is largest.

In 1908 Archibald Constable & Co. of London issued in three volumes a translation of Josef Redlich's "Procedure of the House of Commons." Reviewing the book at the time (April 9, 1908), the *Nation* said:

> This is a work of German thoroughness in point of scholarly research, and of a lucidity and philosophic grasp which is, we will not say more than German, but uncommon in any language. It is no surprise to find Sir Courtenay Ilbert, clerk of the House of Commons, speaking regretfully in his introduction of the fact that it had been left to an Austrian scholar to write a book which some competent Englishman ought long ago to have produced.

This excellent and standard work has now been put on the list of E. P. Dutton & Co. of New York.

Thorough-paced admirers of the Camden sage will take pleasure in Carlton Noyes's "An Approach to Walt Whitman," published by the Houghton Mifflin Co. Mr. Noyes tells something of Whitman's life, but the greater part of his little book is devoted to a reverent exposition of Whitman's art and philosophy. To Mr. Noyes "the very perfection" of Keats's "Ode on a Grecian Urn" "is its limitation," whereas "Whitman challenges comparison with nature," and his appeal is limitless. "Whitman has in himself the instructive and absolute rightness of all natural things"; to him "God has given a special revelation of Himself," and "he was given to the world to bring to men a revelation of God."

"The Works of Sir John Suckling" (Dutton), including the poems, plays, and letters, make only a single comfortable volume, and are well worth printing complete in this convenient form. A. Hamilton Thompson furnishes a satisfactory introduction, and a body of notes which show more careful research than is often bestowed on these minor poets. Suckling's fame hangs almost upon a single exquisite poem, "A Ballad"—it might almost be said upon a single metaphor in that ballad: "Her feet beneath her petticoat." Much of his verse has indeed that peculiar carelessness—one might almost say amateurishness—which characterizes so many of the poets of that age. Yet there is good reading in such a drama as "The Goblins," and his poems, besides occasional beauty or wit, tell us more of the cavalier spirit than does many a history.

Ethel Rolt Wheeler's "Famous Blue-Stockings" (Lane) is another example of the amateur biographies, written chiefly by women, that are pouring from the British presses. Of the author's style the following sentence is a not altogether unfair specimen: "This essence has, of course, to be enmeshed in a cage of facts, or it will evaporate altogether." Of her learning we may guess from such a phrase as "these *Flora*." Of her accuracy the spelling of "Lyttleton" is witness. Of her insight into history, we may judge from her statement that "there was, perhaps, never an age when Epictetus as a teacher would have been so little understood"; when, as a matter of fact, the revival of a kind of pagan stoicism, exemplified in the "Regimen" of Shafteshury, was one of the chief marks of the eighteenth century. Yet the book is not without merit. Considerable intelligence is displayed in selecting anecdotes that set forth the characters of Mrs. Montagu, Mrs. Delany, Mrs. Carter, Mrs. Chapone, Mrs. Thrale, and the other learned ladies of the period. In particular we commend the account of Mrs. Thrale's second marriage as on the whole the most sensible we remember having read. It was a happy stroke to judge the excitement caused by that event in accordance with the rules for female conduct enjoined in Mrs. Chapone's chapter On the Regulation of the Heart and the Affections in her "Letters to her Niece." Such a comparison is really illuminating. It shows how the passion of Mrs. *Frail* Piozzi, as Walpole dubbed her, aroused the grief and resentment of her admirers; and it shows, too, that the very fact of this contrast between her action and the ideal of the age was proof of some real lack of discipline in her character.

About S. G. Bayne's cheaply facetious book, "A Fantasy of Mediterranean Travel" (Harpers), there is nothing whatever remarkable, except that a publishing house of good standing lends its imprint to so distressing a performance.

Whether "Susan in Sicily," by Josephine Tozier (L. C. Page & Co.), is a novel masked in the form of travel letters or a genuine record of travel somewhat embellished for romantic effect, is a question that must be left to the higher criticism. The present writer, subject to correction, holds the latter view. In any case, Sicily imposes itself singularly little upon Susan in comparison with various delightful men, who promptly present themselves and are never rebuffed, and the love affairs of sundry of her acquaintances. There is, however, a capital sketch of the doings and opinions of a delightful Anglo-Sicilian family at Palermo. Otherwise, the circumambience is shadowed forth chiefly in misspelled Italian and in a few half-tone cuts. Susan travels in the jaunty mood, and her letters will be liked by those whose appetite for the sentimentally flippant has not been surfeited. All the love affairs end well, though the final status of Susan's heart is discreetly slurred. Her suitors may have feared her because she read "Theocritos." As a postscript is added a letter on the Messina earthquake, very vivid and purporting to be by an eye-witness. It has drastic touches that recall the reality, and if it is imaginary is of literary quality far superior to the average of this slight work.

Garret A. Hobart, twenty-fourth Vice-President of the United States, was in many respects a classic example of the self-made American. He had the advantage of good colonial stock on both sides, and of a college education, for which he entered active life in debt. After the ritual year of school teaching he followed the law. Never an eloquent speaker, he was turned by this defect towards the most lucrative form of practice, corporation law. His geniality and sagacity brought him wealth and prominence. At thirty he was Speaker of the Assembly of New Jersey, a few years later president of the State Senate. His influence is said to have counted for much in making New Jersey a Republican State. To us it seems that the political turnover was foregone. The moment New Jersey ceased to be mainly rural, and became, with a concurrent growth of manufactures, a dependency of the New York money market, it was written that the party of "prosperity" must prevail. An admirable counsellor and friend, a high-toned partisan, a man of increasing wealth and influence, Mr. Hobart was the kind of man from whom Vice-Presidents are chosen. Unhappily his health was already broken before his election, in 1896, and he died before his term was completed, being only fifty-five years old. Here is a fine and normal career, and one worth commemorating. Great qualities of imagination and originality were denied Mr. Hobart. He struck out no new paths, and left no memorable sayings. He cheerfully did the work that came to his hand, and the deeper political ferment of his times seems scarcely to have come into his consciousness. In his public aspect he was one of those almost impersonal forces that make for industrial consolidation. At one time he held three-score directorates. That he is rather a meagre subject for biography must now be evident. With taste and insight in the biographer something might have been done. Unhappily the official biographer, David Magie, D.D., has conceived his task in a parochial spirit, eking out the exiguity of his matter with commonplace comment, and adding unnecessary details of the last illness, death, and funeral. The book is on the lines of a family memoir and is pretty nearly negligible. After ransacking it thoroughly we have found only one revelation of importance. It appears that it was Mr. Hobart who persuaded President McKinley to despair of his peace policy and submit the Cuban dispute to Congress. Let us note the words of the biographer: "He [Mr. Hobart] realized that the time had come when the President must act in conformity with the feelings of the people or *lose his control over his own party*" (our italics). On a long drive, the date of which is not given, Mr. Hobart urged the Presi-

dent "to forestall any action by the Senate to declare war against Spain," adding that otherwise the Senate would declare war of its own motion. "I can hold them back no longer," insisted the Vice-President. The drive was finished in silence, and in a few days the President's message was read in Congress. We should be glad of corroboration of this story. It is about the only instance in which Mr. Hobart appears in a tragic light or as a maker of history. It reveals his lack of the higher imagination and is inherently credible enough. This book is well printed and illustrated, and bears the Putnam imprint.

Following the practice of the German savant who builds up around himself a group of student followers and provides a means for the publication of their researches, Professor Vinogradoff has begun a series of "Oxford Studies in Social and Legal History" (Vol. I, Henry Frowde). He plans to issue an annual volume which shall contain one or two monographs. The character of the two monographs in the inaugural volume bespeaks success for the series. In the first, "English Monasteries on the Eve of the Dissolution," Prof. Alexander Savine of Moscow makes a painstaking and critical examination of "Valor Ecclesiasticus," the great six-volume folio of figures which is the principal source for our knowledge of the revenues of the English monasteries just prior to the Protestant Reformation. He approached it with scepticism, as many have doubted its accuracy. But in spite of its many omissions and undervaluations, he came to the conclusion that it compared favorably in reliability with similar statistical records, and might be safely trusted by the historical investigator. Upon its statements he bases a careful study of the whole economic life of the monastic establishments under Henry VIII. His results are often in figures and somewhat technical, but are valuable for the student of the English Reformation.

The second monograph, "Patronage in the Later Empire," by Francis de Zulueta, barrister and fellow of New College, is an interpretation of the laws in the Theodosian and Justinian codes directed against private patronage. This was a common form of graft by which powerful patrons enabled favored peasants to evade the tax-gatherers. The author has confined his study mainly to the way in which this abuse developed in the Eastern provinces, especially Egypt, and his conclusions rest largely on an interpretation of recent papyri deciphered by Grenfell and Hunt. The monograph is valuable for its account of Egyptian land-tenure and village organization in the fifth century, and for its definition of the much disputed class of ὁμόλογοι γεωργοί. In a larger relation it throws some light on the weakening of the Roman tax system, and on the origin of the later feudal tie of lord and vassal.

"Inns, Ales, and Drinking Customs of Old England," by Frederick W. Hackwood (Sturgis & Walton) takes both the private and public view of its vast theme. We follow the individual British drinker in his joyous progress from mead, through ale, to beer, gin, and assorted spirits; and similarly we note the attitude of the realm gradually changing from solicitude lest ale be too scanty and dear to concern for drunkenness and worse incidents of public-house debauchery. There are digressions on the coffee houses, which as centres of good talk find tolerance, upon smoking, and upon tea-drinking, which is regarded as no manly thing. In general, Mr. Harkwood's political conclusions might be symbolized by Hogarth's famous prints Beer Street and Gin Lane. A nocturnal tramp in beer-soaked London and whiskey-soaked Glasgow would, we think, convince the temperance advocate that the fermented drink represents distinctly the lesser evil. Mr. Hackwood, whose concern with these matters is that of an excise reformer and man of the world, believes the "public" to be a permanent institution that must be regulated and reformed. On the whole, this book, with its many quaint illustrations and various antiquarian lore, deals with the picturesque side of the subject. It is capital reading, being fortified not merely by dry records, but by literary allusions and personal experiences. The writer has achieved the feat of compiling a book which, being frankly convivial in tone, has also claims upon those who regard unregulated tippling as a danger to the state.

The difficult question as to the right of a clergyman to remain in a church whose creed he has outgrown, or which he can accept only in a sense very different from that intended by its framers, is treated in an anonymous volume, "Confessions of a Clergyman" (London: George Bell & Sons). The author was reared in the orthodox circle of Anglicanism, and in early life was devoutly attached to the High Church party. Gradually he came under liberal influences, and, at length, discarded the sacerdotal view of the church and the ministry, together with belief in miracle. For every doctrine he was compelled to reject, he found, however, a better one to take its place, and truth more genuinely Christian for each dogma he cast aside. He resolved, therefore, to continue in the ministry, without loud proclamation of his rejection of current orthodoxy. He justifies his position by his own satisfaction in the new truths he has discovered and by the evident benefits of his ministry in the community in which he labors. The position is that of an increasing number of progressive men in the orthodox churches.

Gerolamo Rovetta, the Italian novelist and dramatist, died recently. He was born in Brescia in 1850. Among his writings were "Ninnoli," a volume of stories, and "Mater Dolorosa," a romance. He was author of many dramatic pieces, chiefly comedies.

Dr. Emil Schürer, professor of New Testament exegesis at the University of Göttingen, died in that town recently, at the age of sixty-six years. He was author of many works, among them "De Controversiis Paschalibus," Geschichte des jüdischen Volkes im Zeitalter Jesu Christi," and "Ueber den gegenwärtigen Stand der Johanneischen Frage."

Science.

Nautical Science. By Charles Lane Poor. New York: G. P. Putnam's Sons. $2 net.

This is a readable account of the solar system and of such other heavenly bodies as concern the navigator. It describes, in popular terms, the principles underlying the daily problem of determining a ship's position at sea; gives the formulæ employed in this work, with practical examples, and includes three valuable chapters on the causes and the phenomena of the tides. The scope of Professor Poor's subject required a much less comprehensive treatment of general astronomy than may be found in Dolmage's "Astronomy of To-day," and but little reference to those larger, fascinating studies in which the late Professor Newcomb was *facile princeps.* Within his self-imposed limits Professor Poor leaves nothing to be desired, however, so clear has he made what is essential to an intelligent use of the mathematical methods which he recommends.

Doubtless by design, he ignores the recent speculations as to the part which radium is believed by some to play in maintaining the temperature of the sun; he holds to the long-entertained view that the contraction of the sun's sphere and the impact of outside particles are adequate forces in themselves. Until more is known of radium, this is certainly safe ground.

Few illustrations of the relative sizes and distances of the members of our system are so apt as his in which he typifies the sun by a globular light twenty feet in diameter on top of the City Hall, New York, and places a large toy balloon in Bronx Park to represent the outer planet Neptune, the earth, to our humiliation, being a big orange at White Street. He is also happy in giving a comparative idea of velocities. The light which comes to us from the sun in eight and one-third minutes covers a path the Mauretania would take more than four centuries to travel.

He appreciates rightly the importance of the Nautical Almanac, to which the sailor resorts for those astronomical data which are essential to his computations, and he does full justice to Astronomer Royal Maskelyne, its founder, and to Maskelyne's successors in England and America.

It would have tended to uniformity had he defined zenith distance as north (p. 190) when the zenith is north of the observed body, and thus kept to the sailor's phrase, "zenith bearing north." His examples of sights taken at sea are worked out in seconds of arc. If these examples are to serve as models to the navigator in ordinary days' reckoning, the seconds might well have been omitted. A saving of labor in computing and in logarithmic interpolation is thus obtained, with no real loss of accuracy. When an observed altitude is habitually affected by the rise and fall of the ship, it seems useless to regard it as true to within even ten seconds. Navigation being but an approximation at best,

prudence dictates placing upon sextant sights no more reliance than they actually command. Working them out to seconds encourages a false confidence. A ship's position is well defined if known to within one minute of arc. No captain would be justified in running near the land in thick weather trusting to a fraction of a minute in his position because so shown by his observations.

Professor Poor's explanation of the tides is lucid and valuable. Many will be glad to have fuller explanations of these periodic movements of the water than the ordinary text-books contain. The book is handy in size and well printed. It will be welcomed by those for whom it was intended, "the general reader as well as the practical navigator."

Plans for establishment of a medical college, with an endowment of $5,500,000, the greater part of which has been promised, are announced by the trustees of Washington University, St. Louis. The proposed college will be on the lines of Johns Hopkins, according to the statement of the corporation, with especial attention paid to research work. Among the medical men who are to be on the new faculty are Dr. George Dock of Tulane University, Dr. John Howland of Bellevue Hospital Medical College, Dr. Eugene L. Opie of the Rockefeller Institute, and Dr. Joseph Erlanger of the University of Wisconsin.

William Phipps Blake, the geologist, died on Saturday at Berkeley, Cal., aged eighty-four years. After his graduation from the Yale Scientific School, in 1852, he was geologist and mineralogist for the United States Pacific Railroad Company, and later served both the Japanese and United States governments. He was made professor in the College of California in 1864, and professor of geology and director of the School of Mines of the University of Arizona in 1891. Professor Blake was a fellow of the Geographical Society of London, and a member of the American Philosophical Society, and of the American Institute of Mining Engineers. He wrote extensively. Among his books are "The Geological Reconnaissance, California," "Silver Ores and Silver Mines," "Ceramic Art and Glass," and "The Life of Capt. Jonathan Mix."

Drama.

Richard Le Gallienne is the author of "Orestes," a tragedy in two acts (Mitchell Kennerley), of which the acting rights are owned by William Faversham. It was designed to fit the music which Massenet composed for Leconte de Lisle's "Les Erinnyes," a fact which necessarily imposed certain restrictions upon the dramatist for which allowance must be made. In action it follows the outlines of Æschylus, but the dialogue, the development of the characters, and their motives, as Mr. Le Gallienne somewhat superfluously explains, are entirely his own. The work is more classic in form than it often is in spirit and expression, but is written on the whole—in spite of certain verbal eccentricities—in notably fluent and simple verse, admirably adapted for declamation, and contains passages of vivid description, emotional eloquence, and dramatic force. The speeches allotted to Cassandra are full of prophetic horror and despair, and the scene in which Orestes and Electra, at their first meeting, relate their several experiences is one of indisputable imaginative power. But the piece is much stronger in a literary than in a dramatic sense, and is, moreover, of uneven quality. At times it is hysterical and fantastic rather than tragic, while many of its phrases have a sort of affectation which suggests artifice and insincerity, and is antagonistic to the stern spirit of tragedy. There is, moreover, a lack of consistency in the important character of Electra, manifested not only in her relations with Ægisthus, but in the nature of her long appeal to the avenging Orestes, which is incongruous in sentiment and far too long for acting purposes. On the stage the piece would probably have to depend largely for success upon its musical and scenic accessories, but it is an ambitious effort, showing uncommon literary adroitness if little positive inspiration.

J. T. Krein and W. T. Stead are promoters of a plan to produce, in a small way, English plays on the Continent of Europe. They ask subscriptions of $25,000 in a letter to the London press, which goes on to outline the scheme: "We only propose, in the first instance, to make, as it were, a trial trip with a couple of plays in the foreign watering places during the summer season, say, 'As You Like It,' and either an old comedy or some typically modern play, such as 'The Importance of Being Earnest.' There is no notion of squandering money in engaging stars. We want a small, hard-working company of artists, who bring enthusiasm to their task of presenting their country's drama, as well as they can, before our foreign neighbors."

An English theatrical writer gives some account of "Typhoon," a play by an Hungarian dramatist which Sir Herbert Tree is to produce at His Majesty's in London, next season. Most of the characters in it are Japanese. The central figure is one Dr. Tokeramo, who is in England on a secret mission for the Japanese government. He has fallen into the toils of Helen Kernes, a beautiful but unscrupulous woman, who encourages him simply to further the ends of herself and her English lover, the poet Linden. The latter and his friends seek to provoke Tokeramo in many ways, but are unable to disturb his Oriental calm. But at last Helen, changing her tactics, tells him that she has been playing with him and pours contempt upon his caste and color. Beside himself with rage, he seizes her by the throat and drags her behind a curtain. There is a struggle, a silence—then the Oriental emerges, breathing heavily, but once more calm and collected. He rings up his friends. When they arrive, it is decided, according to Japanese custom, that some one must die for the better man. Hironari, therefore, takes the murder on himself. The next act is that of the murder trial. Everything goes against Hironari till Molly, a friend of Helen, identifies Tokeramo as Helen's lover, not the accused. Tokeramo then breaks down and confesses his guilt. But the judge, knowing the Japanese nature, regards this as an attempt to shield Hironari, the richer and higher caste Oriental. In the concluding act Tokeramo is a shattered man, but he has fulfilled his mission. Again he confesses his guilt, first to Linden, and afterwards to his friends, and at last, just before his death, succeeds in making them believe him. Thereupon, they decide that he was a victim of European culture. The play has been acted with much success in Europe.

Jules Renard, the French dramatist, author of "Poil de carotte," died in Paris on Saturday, at the age of forty-six years. He was born at Châlons-sur-Mayenne, and was educated at the Lycée de Nevers and the Lycée Charlemagne. Among his dramatic works are "Le Plaisir de rompre," "Le Pain de ménage," and "Ragotte." Other works are "L'Ecornifleur," "Crime de village," and "Nos Frères farouches."

Music.

The Singing Voice and Its Training. By M. Sterling MacKinlay. New York: E. P. Dutton & Co. $1.25 net.

The author of this volume enjoys the distinction of being the son of Antoinette Sterling and of having been the last student who had the benefit of the full four years' training under Manuel Garcia, the greatest vocal teacher of the last century. Most of his directions have, therefore, the authority of an *ipse dixit*, being based on what Garcia said in the class-room. What distinguishes this book from others of its kind is the attention paid to the need of expression. It is not the beginner alone who needs to be told that, besides a good voice, a singer who wishes to rise to eminence needs ninety-nine other things. The musical profession is "strewn with the shipwrecks of those who trusted in voice alone." The rock on which most of them come to grief is "sameness." There is not in their singing sufficient variety—variety in loudness, in pace, in accentuation, in phrasing, in tone-color.

The attention of teachers and students is called particularly to the author's remarks on the changes of timbre needful for the expression of diverse emotions. It is in this that the best singers of our time excel those of former times, largely because of the more intimate association of music with poetry. Mr. MacKinlay in this section goes beyond the lessons of his master, who was concerned mainly with the developing and polishing of the voice. In the paragraphs on tempo it is discouraging to find the old remark about *rubato* that disfigures so many books—the remark that the displacement of values occurs in the melody alone, the accompaniment being kept strictly to time throughout. No real artist ever renders a piece or song in this metronomic manner, yet all are taught to parrot the

silly precept. Apart from this, we have found nothing to object to, except the author's suggestion that when a passage of notes occurs a second time during a song, it is sometimes advisable to make changes by the introduction of turns, appoggiaturas, or trills, "or by absolute alterations in the melody." He admits that this practice is rarely resorted to except in the old Italian airs. It certainly would not be tolerated in the music of our time.

While the remarks on expression constitute the most novel pages in this book, the chapters on voice training also deserve commendation, because of their lucidity. The important problem of breathing has new light shed on it by comparison of an athlete's breathing with a singer's, whose aims are almost diametrically opposed to the athlete's. Valuable directions are given for the cure of the tremolo. In the remarks on the classification of voices attention is directed to the fact that whether a singer is to be called a tenor or baritone, a soprano or contralto, is not so much a question of compass (high and low) as of the quality of tone. On the subject of "nasal" tone, also, the current notions persist in being incorrect:

> How often has one heard the remark that one can generally tell an American, because he speaks through the nose. It is perfectly incorrect; it is because the American does *not* speak through the nose. Some property of the ear [an obvious printer's error for air], or else the way of living, renders Americans liable to nasal catarrh, which totally or partially closes up the passage at the back of the nose communication between the nostrils and the pharynx. Hence the twang which we are wont to term "nasal."

The expenditures of the Grand Opéra in Paris last year were 4,107,436 francs. The new scenery for "Faust" cost 165,000 francs, that for "Monna Vanna" 35,000, and for "Götterdämmerung" 82,500.

Few modern poets have influenced music so much, and, in turn, been so greatly influenced by this art, as Björnsterne Björnson. By far the greater part of his significance in music is, of course, in those compositions which his works have called forth. Among these compositions, which number hundreds, are "Before the Convent Gate," which has been set to music by Grieg, O. A. Gröndahl, and the Dane, I. P. E. Hartmann; his "Bergliot" (a monologue), by Grieg and the Dane, Peter Heise; the music for his drama "Sigurd Jorsalfar" is by Grieg, that for "Mary Stuart" by Nordraak, for "Tho King" by Halvorsen, etc. Of songs for a single voice, with piano accompaniment, an all but endless list might be compiled; often one text has inspired a number of musicians, as "The Spinning Woman," for which there are six different settings, three by Norwegians and three by Danes, among them the deeply original Lange-Müller.

Pauline Garcia Viardot, a famous Spanish singer, who retired from the operatic stage in 1863, died last week in Paris, aged eighty-nine years. She was the daughter of Manuel Garcia, and sister of Mme. Malibran, and her death marks the passing of the last of that noted school. Mme. Viardot studied under Liszt, and achieved great success in Europe. She was the composer of several operas, and a number of vocal melodies and instrumental pieces.

Art.

Promenades of an Impressionist. By James Huneker, Charles Scribner's Sons. $1.50 net.

The vivacity of Mr. Huneker's style sometimes tends to conceal the judiciousness of his matter. His justly great reputation as a journalist critic most people would attribute to his salient phrase. To the present writer, the phrase goes for what it is worth—generally it is eloquent and interpretative, again merely decorative—what really counts is an experienced and unbiassed mind at ease with its material. The criticism that can pass from Goya, the tempestuous, that endless fount of facile enthusiasms, and do justice to the serene talent of Fortuny is certainly catholic. In fact, Mr. Huneker is an impressionist only in his aversion to the literary approach, and in a somewhat wilful lack of system. This, too, often seems less temperamental than a result of journalistic conditions, and of the dire need of being entertaining.

We like best such sober essays as those which analyze for us the technical contributions of Cézanne and Rodin. Here, Mr. Huneker is a real interpreter, and here his long experience of men and ways in art count for much. Charming, in the slighter vein, are such appreciations as the Monticelli, and Chardin. Seasoned readers of Mr. Huneker's earlier essays in musical and dramatic criticism will naturally turn to the fantastic titles in this book. Such borderline geniuses as Greco, Rops, Meryon, Gustave Moreau, John Martin, are treated with especial gusto. We should like to have an appreciation of Blake from this ardent searcher of fine eccentricities. In the main, the book is devoted to artists who have come into prominence since 1870, the French naturally predominating, but such precursors of modern tendencies or influential spirits as Botticelli, Watteau, Piranesi are included. Eleven "Museum promenades," chiefly in the Low Countries and in Spain, are on the whole less interesting than the individual appreciations—necessarily so, but this category embraces a capital sketch of Frans Hals at Harlem, while the three Spanish studies on the Prado Museum, Velasquez, and Greco at Toledo, are quite of the best. From the Velasquez, we transcribe one of many fine passages:

> His art is not correlated to the other arts. One does not dream of music or poetry or sculpture or drama in front of his pictures. One thinks of life and then of the beauty of the paint. Velasquez is never rhetorical, nor does he paint for the sake of making beautiful surfaces as often does Titian. His practice is not art for art as much as art for life. As a portraitist, Titian's is the only name to be coupled with that of Velasquez. He neither flattered his sitters, as did Van Dyck, nor mocked them like Goya. And consider the mediocrities, the dull, ugly, royal persons he was forced to paint! He has wrung the neck of banal eloquence, and his prose, sober, rich, noble, sonorous, rhythmic, is, to my taste, preferable to the exalted, versatile volubility and lofty poetic tumblings in the azure of any school of painting.

Here we see how winning Mr. Huneker's manner is and how insidious. Unless you immediately react against that apparently innocent word "tumblings," your faith in the grand style will begin to disintegrate. It is this very sense of walking among pitfalls that will make the book fascinating to a veteran reader. The young are advised to temper it with an infusion of Sir Joshua Reynolds's "Discourses," *quantum sufficit.*

"Town Planning in Practice," by Raymond Unwin (Scribner's importation) is, as the title implies, a practical treatise on this revived art. Many plans and perspectives are given of German cities recently improved and of English suburban schemes. The active designer will find many hints for the treatment of large building areas. Such artifices as grouping suburban houses to enlarge the lots, breaking the building line, saving out orchards or playgrounds within the blocks, grouping buildings about forecourts or commons, parked treatment of four corners, etc., are fully illustrated. An especial merit of this book, however, is the generosity with which it offers beautiful and picturesque effects sketched in many ancient and modern cities. A careful study of these drawings should make for taste, and, after all, town planning is an art, and not a casual application of geometry. On the matter of formal or naturalistic design Mr. Unwin takes an opportunistic attitude. It depends, he thinks, largely on the lay of the land and the existing monuments in the city under consideration. On the other hand, an underlying formality is desirable. It would be folly to mimic the unconscious irregularities of mediæval towns. In short, the replanning of a city is a very delicate affair into which innumerable considerations enter. It is often better to do too little than too much. A recommendation of special interest to American designers is that proper public limits, both for town centres and for suburban areas, should be provided. If a town and its outlying districts be hemmed in betimes by clearly marked zones, that distressing shading off into shanties and cow sheds can be almost entirely prevented. The parked zones set a standard of upkeep, and draw to themselves a good class of buildings. In many instances it would unquestionably pay well to establish such zones in our older cities. Since this handsome quarto deals in a liberal spirit with the elements of the subject, it may be recommended to beginners. Architects generally will find in it

an abundance of suggestive material, most of which fortunately is given in the form of plans to scale.

Franz Skarbina, painter, died in Berlin last week, at the age of sixty-one years. He studied in the Berlin Art Academy, and was made a professor, in 1888, of the Berlin University School of Art. In 1892 he was elected a member of the Academy for the Advancement of the Art of Engraving, and in 1905 a gold medal was awarded to him for his engraving, The Imperial Palace in Berlin on a Winter Afternoon. Among his best-known works are Evening of Life, Fish Market in Blankenberg, Noon in Ostend, and Villagers Playing Cards.

Finance.

AN INTERESTING CONTRAST.

Whatever else may be inferred from the series of remarkable episodes, whereby the general situation has been greatly and beneficially modified within the past six weeks, it is beginning to be appreciated to what extent the salutary results were achieved by the policies of what Europe has long described as high finance. There are occasions when the peremptory needs of one financial market are automatically provided for—in a genuine trade revival, for example. But there are also occasions when the automatic process will not answer, and one of those occasions had presented itself at the opening of April.

London, to begin with, found itself confronted, first with a wild and dangerous speculation by its public; secondly, with imminent contraction of its money market resources, through call for payment of $60,000,000 to $70,000,000 back taxes. These conditions had arisen at a moment when the Bank of England's position was weaker than in any spring-time season since 1899. New York was simultaneously confronted with unprecedented demands for investment capital; this at an hour when the investing public's surplus savings were curtailed through the high cost of living, and when an abnormal international trade situation blocked automatic recourse to Europe's open money market.

Here was a complicated situation. It was met in a manner which showed old-fashioned high finance at its very best. New York was, in any case, bound to export gold; but the Bank of England's policy was so regulated as to attract the $30,000,000 outflow into London. During the same period, other London banks were cautiously increasing their balances at the Bank of England. When, therefore, collection of the tax arrears began, after the Lords had, on April 28, adopted the long-deferred budget of 1909, the tax-money was withdrawn from the private deposit account of the Bank and transferred to its public deposit account. Private deposits have decreased $41,300,000 during the subsequent three weeks, along with increase of $43,500,000 in public deposits. That is to say, the tax payments have been made without ruffling the London money market.

Meantime New York had been watching the Wall Street bond market apprehensively, with an eye also to surplus bank reserves. High finance, having shifted $30,000,000 gold from New York to London, managed to place with Paris something like $50,000,000 of the railway loans which were overhanging Wall Street—undoubtedly impressing on Paris that if it did not take the loans, French gold would have to go to London. The result was relief to our bond market, a check to our gold exports, and a fall in our money market from 7 per cent. on April 28 to 3½ last week.

When European markets speak of the plans and purposes of high finance, it is this sort of operation which they have in mind. To understand, however, what is the true office of international high finance and what is not, the episode may be profitably contrasted with two other episodes. One was the international high finance of 1906. The strain on capital supplies was then world-wide; home and foreign markets were perplexed as to how legitimate trade requirements should be met. It was the business of great financiers to clear the decks and discourage unnecessary demands on credit. What happened was the beginning of wild speculation at New York, backed by our great banks and great capitalists and equipped with enormous sums of capital, borrowed from Europe and flung into the Stock Exchange at the hour when all of it ought to have been most jealously guarded for other purposes. The next year, everybody learned just how much sense there had been in the operation.

At this time in 1909, a spasmodic trade recovery had begun in the United States. It was clear that if this recovery were to continue unchecked, it would need for its own uses all our available supplies of capital. If it was premature and likely to break down, cautious husbanding of resources was advisable. But high finance concerned itself, that season, with fomenting an excited "bull movement" on the New York Stock Exchange, in moving heaven and earth to get a certain speculative stock listed on the Paris Bourse—an achievement which could have had no apparent result of service to any one, except the enhancement of its price. Into the wild speculation which accompanied this programme was absorbed the capital which the legitimate money market was sure to need in the autumn season. The sequel has been witnessed since December.

These contrasts suggest the query, what will be the attitude of high finance towards our markets during the rest of 1910. High finance cannot make crops grow, or turn an import balance into an export surplus. It can, however, use its influence to discourage untimely use of credit in stock speculation; restrain the advancing of bank money for the single purpose of raising commodity prices, and thereby both keep the capital fund in shape to use for legitimate purposes, and at least arrest the tendencies which created the recent unhealthy economic situation, and which, if continued, will create it again. This would be old-fashioned high finance. It is also possible, though one may hope not probable, for high finance to do what it did in 1906 and 1909—stimulate speculation, divert capital from channels where it is sorely needed into those which have no right to it, and thereby help towards upsetting things again. The character of the present situation is such as to make the programme of our great capitalists, for the balance of the year, peculiarly interesting.

HAVE JUST ISSUED

M. Little's At the Sign of the Burning Bush

A Scotch tale notable for its humor and its love story. Though theologs are prominent in it, it is said to contain "not a word of preaching." Early British notices praise it highly, "Claudius Clear" devoting nearly three columns to it in the British Weekly. $1.50.

"Vamba's" A Prince and His Ants

By LUIGI BERTELLI. Translated by SARAH F. WOODRUFF; edited by V. L. KELLOGG. With 8 colored plates and many text illustrations. 12mo. $1.35 net; by mail, $1.48.

Vamba is Sig. Luigi Bertelli of Florence. His special leaning is towards half-fanciful, half-truly descriptive nature stories for young people. His best known book has had a wide popularity among the children of Italy, and is now issued in a spirited translation. It is the engaging story of a boy who became an ant and had many thrilling adventures with other ants, and wasps and bees, and of his sister who became a butterfly.

"The impossible is such delightful fancy and so frankly make-believe—while the possible is so true and so fascinatingly told."—*From the Introduction by Prof. Vernon L. Kellogg, Author of "Insect Stories."*

FOR THE SUMMER LIBRARY

GWENDA. By Mabel Barnes-Grundy, author of "Dimbie and I," "Hilary on Her Own," "Hazel of Heatherland." An intimate, intense story, relieved by humor and a dash of worldly wisdom. 12mo. 350 pages. Frontispiece. $1.50.

THE TOP OF THE MORNING. By Juliet Wilbor Tompkins, author of "Dr. Ellen" and "Open House." A sparkling, wholesome story, full of humor, vivacity and charm. 12mo. Frontispiece in color. $1.50.

IN PRAISE OF GARDENS. Compiled by Temple Scott. Poems and verses about gardens from the whole range of English poetry. Charming in contents and in form. $1.25.

THE GARDEN IN THE WILDERNESS. By "A Hermit." A felicitous mingling of gardening and sentiment. Many illustrations, decorative end papers, etc. $1.50 net.

WOMEN AS LETTER WRITERS. Edited by Ada M. Ingpen. The best letters written by women from the 16th century until our own time. 12mo. 9 full-page portraits. $1.25 net.

June Publications of Small, Maynard & Company

When Love Calls Men to Arms

By STEPHEN CHALMERS

Illustrated by HOWARD CHANDLER CHRISTY.

$1.50 postpaid *Ready June 18*

From the time when Don John escapes from the Spanish galleon in Kilellan Bay until Rorie comes to the end of his story of Don John's daughter, the winsome but wilful Mariposa, there is breathless action in this fine Scotch romance by the new romantic novelist. The book is full of big scenes and alluring characters, not the least of whom is Bordeaux, as he calls himself, the friend of "Will Shaxper." The author's style is wrought with the fine touch of a true literary artist, so that the telling delights the reader almost as much as the galloping tale itself entertains him.

The Confession of a Rebellious Wife

Ready shortly.

50 cents net; postage 6 cents

A remarkable human document, written from the inside, voicing a real heartache, a real puzzle, a real resolve. The story stands out in its fullness, and the reader gains a deep knowledge of the nature of this one woman, and through her of that of many. A book that will command a wide reading, it is so deep, so personal, so typically American.

The Gossamer Thread

Ready June 18.

Being the Chronicle of Velleda, who understood about "the Different World."

By VENITA S IBERT. *Illustrated by W. T. BENDA*

$100 net; postage 10 cents

Velleda is an exquisite little German-American girl—sensitive, dreamy, imaginative. She is "one question mark." Miss Seibert's delightful book—some of the chapters of which have been published separately with great success in the *American Magazine*—is imbued with fine humor and human nature.

From Irish Castles to French Chateaux

Ready June 18.

By NORMA BRIGHT CARSON, Editor of "Book News Monthly"

Profusely illustrated from photographs, many of them taken by the author.

The value of this book to the traveller is that, while covering no new fields of travel, it gives the better service for that very reason. It takes the traveller over the journey he will inevitably desire and expect to take, however far afield he may go here and there, and suggests to the would-be traveller or recalls to him who has travelled what is most interesting and indispensable. From its fine atmosphere of culture the book might be called a "literary pilgrimage."

$1.50 net; postage 12 cents

The Coming Religion

Ready June 18. By Rev. CHARLES F. DOLE

An important book, bringing a message to all mankind. Its influence among men of every faith will be for good, as emphasizing the central, universal truths of religion, as offering a gospel of hope, joy, work, progress, as making life more, not less, significant, the continuance of life hereafter more, not less, hopeful. The author's style is quotable, and his manner in presenting his subject is characterized by illuminating illustrations and comparisons, and by fine moderation and charity towards all men of all creeds. It is a book of big qualities for all thinking men.

$1.00 net; postage 10 cents

Astir: A Publisher's Life Story

By JOHN ADAMS THAYER *Ready June 18.*

Retiring from part-ownership in *Everybody's* a few years ago, Mr. Thayer has devoted the leisure of this welcome breathing-space, after his thirty years of business life, to writing his autobiography. It is a singularly interesting book, the work of a man with high ideals and wide knowledge of affairs. His work as advertising manager of the *Ladies' Home Journal*, the *Delineator*, the Munsey publications, and his experiences as one of the owners and up-builders of *Everybody's* are full of interest for every man and woman in every branch of the publishing business, and his modest story of success is an inspiration to every young American.

$1.20 net; postage 12 cents

RECENT SUCCESSFUL NOVELS

The Achievements of Luther Trant

By EDWIN BALMER and WILLIAM MacHARG

Luther Trant is the great psychological detective whose name as a character in fiction bids fair to become a household word.

"Here at last," says the *Boston Transcript*, "is something new under the detective story sun. Not since Conan Doyle first made Sherlock Holmes the most famous detective in the world of fiction has there come to light a rival until this appearance of Luther Trant." **Illustrated. $1.50**

The Scar: A Story of the New South

By WARRINGTON DAWSON

"This author," says Mr. Roosevelt in *The Outlook*, "writes with power and interest of vital matters."

"'The Scar' is the most graphic story of the South yet written."—*Grand Rapids Herald.*

$1.50

The Seventh Noon

By FREDERICK ORIN BARTLETT

"Those who read 'The Web of the Golden Spider' will recall how they sat up late to finish the story; Mr. Bartlett's latest story is even more absorbing than the other."

School Advertising IN THE NATION

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

10 cents a line for 13 times.

Theism and the Christian Faith

By CHARLES CARROLL EVERETT

Late Professor of Theology in Harvard University.

Octavo. Cloth. 491 pages. $2.50.

The *Nation* says:

Dr. Everett's theological system has points of contact with current theory which make it an interesting study; but scattered through the book are sentences of insight, literary and religious, touches of quiet and delicious humor, appreciations of the masters of thought and poetry, which make the book worth reading altogether apart from philosophical or theological doctrine. The editor . . . has succeeded not only in accurately reproducing the Everett thought, but also in suggesting the charm of delivery.

INSPIRING AND HELPFUL BOOKS

WHY WORRY? and **THOSE NERVES!**

By GEORGE L. WALTON, M.D. Cloth, $1 net, each.

J. B. LIPPINCOTT CO., Philadelphia.

LETTERS AND MEMORIALS OF

Wendell Phillips Garrison

Editor of the Nation (1865-1906)

In one volume, crown 8vo, 300 pages, with photogravure portrait. Price $1.50 net, postpaid.

During the forty-one years in which he edited the *Nation,* with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews and essays, besides a fine photogravure portrait. It likewise preserves the notable letter of appreciation addressed to Mr. Garrison by more than two hundred contributors to the *Nation* on the completion of his fortieth year of service, and his acknowledgment thereof.

Important New Macmillan Importations

Professor Frazer's Totemism and Exogamy

A Treatise on Certain Early Forms of Superstition and Society, by J. G. Frazer, D.C.L., LL.D., Litt.D., F.B.A., Fellow of Trinity College, Cambridge Professor of Social Anthropology in the University of Liverpool. In four 8vo volumes. I., xiv+579 pp.; II., 640 pp.; III., 583 pp.; IV., 319 pp., with Index and Maps. *Price the set, $16.00 net; carriage extra.*

About 175 pages of the first volume are given to an introductory discussion of Totemism, and of the Origin of Totemism. The remainder and the whole of the second and third volumes contain an exhaustive ethnographical survey of Totemism, including all parts of the world. The fourth volume contains a summary and the conclusions reached as to both institutions, with full indexes and maps.

R. H. I. Palgrave's Dictionary of Political Economy

Edited by R. H. Inglis Palgrave. *In three large 8vo volumes.* $15.00 *net* (*carriage extra*).

Besides many able English writers, there are among its contributors some of the most distinguished American and foreign Economists, whose co-operation has given to this valuable work that international or cosmopolitan character which should mark any work on economic science. The work covers, under separate heads, an account of the labors of the principal economic writers and the characteristics of the different schools of economic thought of the civilized world, the development of the history of economic methods, etc. In brief, the Dictionary should be of the greatest assistance in any special investigation, by supplying preliminary information and references to the best sources of extended treatment.

Prof. Saintsbury's History of English Prosody *Completed*

A History of English Prosody from the Twelfth Century to the Present Day. By George Saintsbury, M.A. (Oxon.), Hon. LL.D. (Aberd.), Hon. D.Litt. (Dresden), Professor of Rhetoric and English Literature in the University of Edinburgh. The third volume, just ready, completes the work.

Vol. I., From the Origin to Spenser. Vol. II., From Shakespeare to Crabbe. Vol. III., From Blake to Mr. Swinburne. *Three volumes, octavo. Cloth, each,* $3.75 *net* (*carriage extra*).

W. J. Courthope's History of English Poetry *Completed*

By the former Professor of Poetry in the University of Oxford. Completed with the recent publication of the sixth volume. The volumes deal in succession with *The Middle Ages, Renaissance and Reformation, The Intellectual Conflict of the 17th Century, The Development and Decline of the Poetic Drama, The Constitutional Compromise of the 18th Century,* and *The Romantic Movement in English Poetry.*

The latter is a most interesting companion to Professor Saintsbury's new volume, which naturally touches on the same period from different points of view.

Six volumes, cloth, 8vo. Each, $3.25 *net; by mail,* $3.42.

Mr. Maurice Baring's Landmarks in Russian Literature

"His point of attack is fresh and interesting. . . . Altogether a capital little book, which no one interested in literature should miss."—*New York Tribune.* *Cloth, 12mo,* $1.75 *net; by mail,* $1.84.

Sir Horace Plunkett's The Rural Life Problem in the United States

The results of ten years' ranching and farming in this country by a man who has been a close student of rural life in this country, especially as it is now, or may be in the future, affected by the Federal and State Department activities for agricultural development. *Cloth,* xii+180 pp. $1.25 *net; by mail,* $1.35.

C. G. Montefiore's The Synoptic Gospels, Vols. I and II

A translation and commentary on the first three gospels, of special interest as being the first work to treat of the New Testament in any detail from a Jewish point of view, which is often illuminating. *Two volumes, 8vo, with bibliography.* $6.00 *net* (*carriage extra*).

The Nation.

NEW YORK, THURSDAY, JUNE 2, 1910.

The Week.

It is announced that when Mr. Roosevelt reaches the port of New York, his baggage will enjoy Ambassadorial privilege. None of his trunks or of those of members of his party will be subject to examination by customs inspectors. Now, personally, we have no objection to this favor being shown Mr. Roosevelt. We congratulate him, rather, on his good luck. But we still think that he will be missing a part of his education as an influential public man. If we could have our way, no American, however eminent or well deserving, should be deprived of that intimate knowledge of our barbaric tariff laws which is stamped upon the mind of every "resident of the United States" who comes back from Europe to find himself exposed to annoyance and insult which he could encounter in no other custom house in the world—not even in Turkey. It is in the public interest that every man who has to do in any way with the making of our tariff laws should be put into the same suffering category with the hundreds of thousands of Americans who find themselves every year treated on the docks of their own land as suspected smugglers and liars. So while we wish Mr. Roosevelt every personal comfort on his home-coming, we should be very glad if his stern sense of public duty, or even his insatiable curiosity, were to lead him to renounce his privilege and to find out by individual experience just what is the nature and the administration of the American tariff laws.

Now, in this matter of personal baggage there is no way of abolishing the abuse except by abolishing the foolish law. The system of advance declaration on shipboard, which we owe to Mr. Cortelyou when he was Secretary of the Treasury, is a great improvement over the old method, but it is necessarily only a palliative, as must be every other plan to render more easy the enforcement of a law which cannot be enforced at all without being made onerous and humiliating. We ought rather to assimilate our practice to that of all other civilized countries. For the detection of real smugglers we have an organized secret service. If it does its work properly, there can be no serious evasions of duty on articles brought in for sale. But to persist in harassing a hundred thousand innocent people so as to catch one rogue is an exhibition of helpless folly which ought to be characterized by words in Mr. Roosevelt's vocabulary.

It is said that we have no privileged class in this country, but this is to overlook the private secretaries of Governors and Presidents. They are as regularly taken care of with a good office as if they had an hereditary and indefeasible title thereto. Gov. Hughes has simply anticipated matters a little in appointing Mr. Fuller to a State office, while Mr. Carpenter, the private secretary to President Taft, no sooner shows signs of breaking health than he is named as Minister to Morocco. In both cases there was simply a following of a long precedent. If we have anything like a permanent office-holding class in the United States—that dread thing which so frightens the spoilsmen—it is to be found among private secretaries to executives, and they get their start without coming under the abhorred civil service rules. There is the less objection to this because it seems to be felt that they have so many disagreeables to put up with while serving as private secretaries that they deserve recognition and reward afterwards. Everybody will sympathize with Secretary Carpenter in his break-down, but that will only increase the wonder at Mr. Loeb's uncommon robustness.

If it prove true, as has been stated in the Washington dispatches, that the appropriations in this session of Congress will be considerably beyond the billion-dollar mark—that is, fully as large as before, if not larger—President Taft cannot fail to be chagrined. Whatever "policies" he inherited from his predecessor, economy was not one of them. That was his own. In dealing so plainly as he did with public extravagance, and setting out to reduce the national budget by $60,000,000 or $75,000,000, he took an original and promising lead. In fact, the estimates submitted to Congress by the heads of departments were cut much lower than in recent years, and it seemed reasonable to hope that the first steps in national retrenchment would be taken. But now it appears that the old total of outlay is to be reached again, if not surpassed. The leaders in Congress confess themselves unable to keep down the appropriations. Chairman Tawney puts his finger on one chief cause of this inability, so far as the House is concerned, when he says that there is no concentrated control of the public expenses. The appropriation bills have been more and more taken out of the hands of the Appropriations Committee, until now there are a dozen committees each entitled to bring in its own bill for money. Such a breaking-up of financial control, and such a breaking-down of responsibility, lead inevitably to wastefulness.

As high as $16,000,000 run the varying estimates of the cost of each of the two 26,000-ton battleships just authorized by Congress. When there is not a war-cloud on the horizon; when the navy is larger than ever before in its history; when the whole country is groaning under the increased cost of living and steadily increasing burden of taxation, Congress is content to waste perhaps $32,000,000. When it is considered that there were years before the Spanish War when our total naval expenditure was annually only $9,000,000 or $11,000,000, and no harm came to the country, the present insensate folly is inexplicable. We firmly believe that if the fact could be got into the head of every citizen that the United States is spending 70 cents out of every dollar upon expenditures for wars, past or future, this colossal waste would stop. Naturally, Congress refused to appropriate on the same day $100,000 for a commission to inquire into methods of economy in the administration of government. To have done so after the naval appropriations would have been to stultify itself.

Senator Lorimer made last Saturday his expected denial that he had bribed his way into the United States Senate, but, unfortunately, almost at the very moment he was speaking, legislators

were being indicted and arrested in Illinois for having taken bribes to vote for him. This may be only an unlucky coincidence. Mr. Lorimer has called for an investigation of the charges against him, and the Senate Committee on Elections is bound to take the matter up. Pending the result of such inquiry, final judgment must be withheld. There can be no reasonable question, after what has been already shown by the prosecuting authorities in Illinois, that the Senatorial election in that State was corrupt, but it may not be possible to connect Mr. Lorimer personally and directly with the wickedness. It may be said that he was the victim—or the beneficiary—of over-zealous and too wicked friends. But even he himself is evidently aware that the presumptions are heavily against him, and that he has no time to lose in showing, if he can, that his title to a seat in the Senate is not tainted. The first thing he should set himself to clearing up is the mystery of confessed bribe-takers without any briber.

The doctrine of States' rights has been invoked to very poor purpose, indeed, by those Southern Congressmen who have come out in opposition to Senator Dick's bill for the establishment of an additional number of mine rescue stations in the Middle and Far West. At present there are only four such central emergency camps, situated at Pittsburgh, Knoxville, Urbana, Ill., and Seattle. Following upon the Cherry disaster, a report of the Secretary of the Interior ascribed the great loss of life in mining disasters in part to the distance of the rescue stations from the mines. The Secretary recommended the establishment of twelve additional branch stations all over the country at a cost of $160,000. But inasmuch as such emergency depots would necessarily have to cut across State boundary lines, whereas mines are under the police power of the States, the States' rights shibboleth has been raised against a measure called for by every instinct of humanity and every argument from sound business policy. After the Courrières disaster in France a few years ago, a rescue party from the German mining fields came to take part in the work of human salvage. If the very real frontier that separates Frenchmen from Germans could be wiped out under the influence of a common pity and common humanity, it would be the very height of criminal absurdity to let State boundaries stand in the way of so imperative a reform.

Shorter than Paulhan's last and longest flight by some forty miles, Glenn Curtiss's aerial dash down the valley of the Hudson last Sunday surpasses Paulhan's feat in actual difficulties overcome, in the clean-cut demonstration of the possibilities of the aeroplane, and in dramatic interest. To Americans, certainly, Curtiss's achievement gains a special intensity of interest because the scene of it was the river upon which the Clermont sailed a hundred years ago. That circumstance forces upon the mind solemn recognition of that human progress which we so easily talk about without realizing it to the mind's eye or the emotions. Curtiss's triumph is none the less emphatic because it was preceded by the doubts and hesitations that a crowd eager for a spectacle is none too patient with. The aviator was quite right in saying that the very people who insist upon the show being carried off at all costs would be the ones to shake wise heads in the case of disaster. It was a doubly dramatic event for Glenn Curtiss, therefore, that his record-making flight should have lain along the historic trial course of the Hudson, and that his landing should have been on the very spot where less than a year ago he gave a certain excuse for bitter comment on his abilities and his motives.

Robert Koch was born the same year that Louis Pasteur entered the university. It would be difficult to decide which of the two men has gained the wider fame. Certainly, Koch and Pasteur are the two great names in the science of bacteriology which has revolutionized modern medicine. In range of achievements, Koch was probably the greater man of the two. His discovery of the germ of tuberculosis would in itself constitute a service of transcendent importance. But in addition, he had studied malaria, cholera, and, newest of all to European knowledge, that sleeping sickness which has been threatening negro Africa almost with depopu'ation. Associated with his name is one tragic disappointment which detracts nothing from his reputation as a scientist or a man. Everybody over thirty must recall the vast stirring that followed the announcement from Berlin of the discovery of a specific for tuberculosis. Science and the millions of afflicted who looked to science for aid in their affliction turned expectant eyes towards the Prussian capital. Pilgrimages were made. It was a vast upward surge of hope that failed of realization. But whether the dread white plague is to be conquered by a sudden discovery or by the slower hand-to-hand methods which we are adopting to-day, Robert Koch's share in the ultimate victory will be unquestionable.

Every patriot heart from the Atlantic to the Golden Gate and from the Gulf of Mexico to the forty-ninth parallel of north latitude so recently eulogized by Mr. Cannon, will thrill with pride at the news that our epic scramble for the privilege of lending China some money has succeeded. The Hankow-Sze-chuen railway matter is settled, or at least almost settled. After years of furious contention, we have won the right to participate with Great Britain, France, and Germany in the $30,000,000 loan which it is now only a question of inducing China to accept. For it would appear that at the last moment the Chinese have been seized with sore doubt. The beautifully altruistic spectacle of the four leading nations of the West fighting for the right of giving away their money has somehow failed to impress the bland Celestial mind. That the struggle for the privilege of forcing money on China was accompanied by a struggle for such sordid things as a share in supplying the necessary railway material and engineering skill, was probably only a coincidence. To the pure all things are pure. But China has had so rich an experience of the implications that go with a European loan that her hesitation is, after all, comprehensible. All the more reason, therefore, why the four allied and altruistic nations should now concentrate their efforts, and, with one eye on the main chance and one eye on each other, proceed to lend money to a heathen foreign government by hypodermic injection.

The death of Edward VII has aroused profound regret and actually some anxiety in Russia. One correspondent relates that when the order for court mourning, usual in such circumstances,

was presented for the approval of the Czar, Nicholas II with his own hand struck out the traditional three weeks and inserted three months. The *Novoye Vremya* printed, in heavy type, immediately after the dispatch announcing the King's death, the single sentence, "The death of King Edward VII is a day of sorrow for Russia." The *Russkoe Slovo* of Moscow declared that in Edward the country had lost one of its sincerest friends. The Polish press laid stress on the fact that, as a result of the Anglo-Russian understanding, of which Edward VII was the author, Russia had been saved from her humiliating dependence upon Germany. Such expressions of regret were probably as sincere as formulas of this kind usually are; and perhaps a little more so, because at the present moment the Anglo-Russian *entente* in Persia is being put sharply to the test by German diplomacy. It is the misfortune, however, of Russia's blundering autocratic system that her Czar will often pull one way and his Ministers another. It may be that Nicholas II was really moved by the death of the English monarch and its possible effects on Anglo-Russian friendship. But, on the other hand, there is no guarantee that the Czar may not be soon making another little Baltic trip with his good friend William II, and soliciting his advice on vital matters of state.

The Prussian Government has been compelled to abandon its franchise bill after carrying it through one house, which is gratifying proof that even in Prussia obstinate officialdom cannot prevail against popular opinion. The effect of those wonderful, peaceful demonstrations of the Socialists in Berlin could not be withstood, nor the sentiment created elsewhere by the clashes between police and people. According to the dispatch, the Chancellor has declared that the measure failed because it gave to the wealthy and middle classes a greater influence in the elections and that there would doubtless be a continuance of the bitter agitation against the suffrage system until the Government submitted new legislation. But if the Chancellor sees that now, why was he not aware of it when he drew the bill and announced that it would go through whether the people liked it or not? If the agitation has really converted the Chancellor, that fact, by itself, is a great gain, but the price seems high if one considers that all the ill-feeling and anger aroused among the populace could have been avoided by a little greater intelligence on the part of the rulers. The Chancellor's prestige is bound to suffer, for this was his first measure of importance. So far as suffrage reform is concerned, the attitude of all enlightened people in Prussia has been that it would be a great deal better to have the present intolerable conditions continue than to accept the proposed legislation. Even in the House of Lords the Chancellor's bill met with the greatest opposition, steadily increasing until even the Chancellor abandoned it as hopeless.

A conversation about Turkey with Arminius Vambéry at Buda-Pesth is reported in a letter to the Manchester *Guardian* by Sir William Ramsay. The veteran traveller and professor—he is now eighty-nine—holds that the new régime in Turkey must enjoy twenty-five years of peace in order to have a good chance of success. What Vambéry most fears is not attack from without, but bitter race and religious dissensions within the Empire. The Albanian trouble he regards as serious, but as really the least threatening of many probable causes of dissension. Vambéry's opinion of the former Sultan is interesting. He agrees with the general view that Abdul Hamid in his later years sank into a condition of listless cruelty, but affirms that earlier, say, about twenty years ago, he displayed great ability and tireless energy, often working thirty-six or even forty-eight hours on a stretch. It is well known that Vambéry was once in the employ of the Turkish Government, to which he made confidential reports. One of these so plainly enumerated the causes leading to the ruin of Turkey that the Sultan in a towering rage ordered all allowances to Vambéry stopped. Afterwards, narrates Sir William Ramsay, on the authority of a friend in Constantinople, when the Sultan discovered that Vambéry had been entirely right, he made tempting offers to him to resume his connection, but they were all declined.

The first Cabinet for United South Africa has been organized. Pessimists who see everything in old England going to ruin might be asked for a moment to look at South Africa. After all, there must be something of the ancient virtue left in a nation which can accomplish what England has accomplished in South Africa in the last seven years. In that space of time, a conquered population has been not merely appeased but conciliated and won over. Civil government has been reëstablished in the former Boer republics, and such government has been placed in the hands of the conquered element. Superimposed on the four separate colonial governments of Cape Colony, Natal, Orange River Colony, and the Transvaal, comes now a general government for South Africa, which, too, has been handed over to the men who only eight years ago were in the field against England. Gen. Louis Botha is the first Premier of United South Africa, and Gen. Smutz is his leading associate. Nor is it less eloquent testimony to the English genius for using the dead past only as a foundation for the present, that the son of the English statesman who was responsible for the "disgrace" of Majuba Hill should be the first Governor-General of the new nation.

The fact that the Premier and the Minister of the Interior in the first South African Cabinet hold the same positions in the Transvaal Ministry raises the natural expectation that to the Transvaal will fall, if not a predominant voice in federal affairs, certainly a degree of influence greater than would be its share on a strict population basis. The population of Cape Colony is nearly twice that of the Transvaal, and the proportion holds for whites as well as for the colored races. In the Transvaal, too, the Boer element predominates decisively over the English element, whereas in Cape Colony the two are pretty evenly balanced. The Transvaal's economic importance, of course, outweighs the mere factor of population, but it is doubtful if even then Cape Colony would have foregone its claim to the leadership in the first federal Ministry, if it were not for the manifest desire in England and South Africa to make the point that the loyalty of the Boer population conditioned the success of the great political experiment. Of that loyalty there can be no doubt, though it may well be that racial influences will color South African politics for many years to come.

POLITICAL LEADERSHIP.

The startling change in the national Republican prospects within a year, the even swifter alteration in New York State within the last few weeks, are among the most recent and conclusive demonstrations of the fact that, however intelligent an electorate may be, without some sort of leadership it cannot prosper. For the apparently irreconcilable differences within the Republican party are not sudden developments. It is only their revelation in all their mutual repugnance that is novel. While McKinley lived, divergences of view were harmonized by a spirit of peace-at-any-price compromise, for the sake of party success; Roosevelt smashed opposition where he could, yielded to it where he was compelled, actuated by conviction as well as by party success; Hughes, scorning compromise, has triumphed by making use of the only legitimate weapon, the power of public opinion. These three men, two Presidents and a Governor, represent three stages in popular political leadership. The first stood for organization. Whatever theory of government he may have held, his practice resulted in the victory of the practical politician, of the man who looked first and chiefly for the purely political effect of measures and appointments, the man who was thinking always of the next election. That President McKinley was himself the preëminent politician of his day may prove to be his best title to enduring fame. Our fathers seem to have feared the demagogue less than the tyrant; the politician who combines the hypocrisy of the one with the oppression of the other is to be feared more than either.

The uniqueness of McKinley's successor lay in the circumstance that the country, while giving him its enthusiastic support, was uncertain whether to call him politician or statesman. His aims were high; his means "practical." All the arts of the demagogue, all the resources of the tyrant, he employed with consummate skill. Those who did not trust him, feared him. Many who favored his ends censured his means. But it was such a relief to see old-timers completely beaten at their own game that his countrymen generally overlooked the method for the sake of the result. Nevertheless, Roosevelt's blazing seven years were only the middle stage. It was reserved for another New Yorker to take the final step; to do, after all these years, what the plain citizen would naturally have supposed all public officials would do of their own accord—to refuse unworthy means as quickly as unworthy ends, to think of party as no more than a means, and to act as if genuine statesmanship were its own sufficient justification. To withhold adoration from the great god Success is to run the risk of being sneered at as un-American; but there are few more successful careers than that of the Governor who has despised any success except the highest.

These three stages in democratic leadership are progressive in kind rather than in time. They exist simultaneously; and, while it is not difficult to rank them, it is very difficult to find leaders belonging to the last one. Leadership, nevertheless, democracy must have, and, if it cannot find one sort, it will perforce turn to another. It is this aspect of the Republican break-up that is serious. The only party to emerge with credit from the special session of Congress last summer was the group of partyless insurgents; the only respectable party in New York for some years has been the party-scorned Hughes Republicans. Neither of these groups now has a leader. If the nation, in order to punish the long-dominant party for its inexcusable derelictions; if the State of New York, in order to discipline the same party, entrusts itself to a long-discredited Democracy, what guarantee is there that the transfer will be an improvement in the character of our political leadership? It is a fact, as ominous as it is obvious, that the rarity of the highest kind of leadership is one of the prime causes of the existence of the lower kinds. If a people lack real leaders, the reins will slip into the hands of those who substitute organization for opinion, party for principle, power for right. The buying of votes, the dealing out of offices, the suppressing of primary reform, even the juggling with the tariff, are only phases of the situation. They one and all range themselves on the side of organization, as unresponsive as they dare to be to the legitimate sovereign, public opinion.

The ground for hope is the memory of what is notable in these last ten years: the rise of a new leadership, the assertion of an awakened popular will, the realization in actual politics of lofty ideals, the sight of living flesh-and-blood men of the highest ability and respectability out in the struggle, fighting with the superb skill long consecrated to business for the attainment of a truer democracy, and fighting with a success that makes their baffled opponents look like tyros. The people can be trusted. Give them a man possessed of a modicum of ability, fired with a desire to serve them, and their ready spirit of hero-worship can be counted upon to do the rest. This is the hey-day of the statesman of the new school. He has before him a richness of opportunity that, in its rewards no less than in its demands, can be matched by nothing short of the most dramatic moments of our history.

THE BALLINGER INQUIRY.

The long-protracted hearings in the Ballinger investigation came to an end last week with the oral arguments of the attorneys. On neither side was an attempt made to cover with convincing precision all the points in dispute. This indeed was impossible in the limited time at the disposal of counsel, as would be shown by the attempt of any impartial student to settle a single one of these questions. Not until the briefs have been submitted, and the evidence studied in the light that they should furnish, will a trustworthy conclusion on the whole case be possible. Nevertheless, the survey of the case afforded by the oral arguments makes the present an appropriate time for weighing the general controversy.

In the first place, there are some points about the nature and genesis of the case of which the public needs to be reminded. Especially as regards Mr. Glavis, it is necessary to recall to mind the character of his initial connection with the matters involved. Whatever basis there may be, or may be alleged to be, for supposing that the animating force behind the developments of the past ten or twelve months is of a political or personal nature, no such allegation can be made as to Mr. Glavis's first resolute interposition in the Alaskan coal claims. No Rooseveltian plot can have been at the bottom of his zealous interference in the year 1907, to prevent the patenting of the Cunningham and other claims without searching inquiry. Mr. Ballinger was at that time Commission-

er of the General Land Office; but Mr. Garfield was Secretary of the Interior, and Mr. Roosevelt was President. An intense desire to preserve for the nation valuable lands to which the private claimants were not in his judgment lawfully entitled is the only motive which could at that time have actuated Mr. Glavis. Not only was there no possibility of a political motive, but personal animus was equally out of the question. His efforts were made within the Land Office, and they were successful. There arose at that time no complaint or scandal. It is not impossible that Mr. Glavis was over-zealous or that his judgment was at fault; but the fact is that for two years, unremittingly, he stuck to this line, no matter who was Land Commissioner, or Secretary of the Interior, or President. Eventually, he had recourse to Attorney-General Wickersham, and finally to President Taft. In pursuance of his formal statement to the President, Mr. Taft called upon Secretary Ballinger and others for replies; and, having examined these replies, he exonerated Mr. Ballinger and his subordinates and authorized the discharge of Glavis. Only after his discharge, and more than two years after the beginning of his activity, did Mr. Glavis enter into a public agitation of the case through *Collier's*.

A second point, which should be clearly apprehended, is that the question before the committee, the President, and the people, all along, has not concerned corrupt conduct on the part of Mr. Ballinger. The question is and always has been, whether he has fulfilled the peculiar responsibilities of his office with single-minded fidelity to the rights and interests of the nation. To show that those interests have not been in safe hands, it is not necessary to convict him of a pre-conceived purpose to betray them, or to prove the existence of any corrupt motive. If, in point of fact, he has been eager to facilitate the patenting of doubtful claims; if, in point of fact, he has been conspicuously wanting in zeal for the protection of the nation's rights—the charge made by his opponents is established. The accusations against him under this head relate on the one hand to his attitude toward the Forestry and Reclamation Service, and, on the other, to his conduct concerning the Alaskan coal lands, especially the Cunningham claims. The questions of fact and law involved are anything but simple; but as regards the coal lands, some indication of the situation may be given.

It is agreed on all hands that the existing law on the subject of Alaskan coal lands is utterly unadapted to the situation concerned. That law is designed to prevent the taking up of large tracts by private owners, the normal amount permissible being limited to 160 acres. But these lands cannot be worked profitably in small parcels; and everybody agrees that a radical change should be made in the law. Meanwhile, however, there are two opposite attitudes which may be adopted. One is, that so far as possible the land should remain the possession of the nation until such time as legal provision shall be made whereby large holdings can be worked, with the people coming in for their full share of the benefit of such working; the other is, that inasmuch as the land cannot be worked in small parcels, the Government should look with leniency upon devices whereby, while superficially observing the law, private interests may contrive to get possession of large and extremely valuable tracts upon the easy terms designed for small holders. That there is a certain amount of sentiment in the far West in favor of this latter view is probable; that it is the view taken and promoted by the capitalists interested in getting possession of the lands goes without saying. And what seems established with a fair approach to conclusiveness, in spite of the complexities and contradictions of the mass of evidence, is that Mr. Ballinger's acts were largely influenced by this view of the case, and that, but for the dogged opposition of Mr. Glavis, this view would have prevailed long ago in the Cunningham claims.

To substantiate this assertion it would be necessary to adduce a number of special circumstances, all pointing in that direction, which have been brought out in the evidence. There is hardly one of them for which some explanation has not been offered, and to examine the pros and cons thus presented is here out of the question. It is only by considering them in conjunction, and getting their net result after all criticisms and explanations have been allowed for, that one can estimate their true significance. For this reason, it is so regrettable from the standpoint of Mr. Ballinger that the extraordinary series of inaccuracies and concealments took place which was the centre of public attention two weeks ago. In consequence of these developments, the President's letter of exoneration and the Attorney-General's summary and opinion have been largely deprived of the weight that would naturally attach to them. In default of a reading of the evidence—an impossible task to all but one person in a hundred thousand—it is upon the judgment of such referees that people naturally rely. That both the President and the Attorney-General were themselves fully assured of the justice of their conclusions, we entertain not the slightest doubt; but it is by no means so certain that in arriving at these conclusions they were not unduly guided by *ex-parte* information and assistance.

No survey of the case, however broad and general, can omit a reference to Mr. Ballinger's conduct on the witness-stand. In several instances, when questioned by Mr. Brandeis concerning extremely simple matters of fact, he made a pitiable exhibition of shiftiness, evasion, and—to call things by their right name—untruthfulness. To deny a thing and almost in the next breath to admit it when denial was plainly useless; to say he knew nothing about a matter, and, after a little prodding, to show that he remembered it quite accurately; to present the appearance of one willing to lie, and yet afraid to stick—this is a showing not only lamentable in itself, but doubly significant in its relation to the case. It is significant in regard to the trustworthiness of his statements in general; and it is significant as bearing on the question of his fitness for the custodianship of the great national interests of which the Secretary of the Interior is the trustee. We would not magnify the circumstance; we would not say that Mr. Ballinger's character is to be measured by these manifestations. Some men, not particularly dishonest, thus instinctively grasp at straws when placed in an uncomfortable position; and we would not say that more than this is true of Mr. Ballinger. But it is not to the keeping of such men that we entrust great national possessions for the seizure of which shrewd and unscrupulous and powerful private interests are constantly on the alert; nor is it to the statements of such men that we give the benefit of every possible

doubt when confronted with opposing evidence.

DESERTERS FROM FICTION.

A statistical comparison of half a dozen numbers of half a dozen leading magazines to-day and five years ago would probably show a marked decrease in the relative number of short stories printed. A critical comparison between the short fiction of to-day and of five years ago would probably show a decline in quality fairly parallel with the decline in quantity. Fiction has fared best in the older type of magazine. Where the appeal is to the æsthetic and not to the militant virtues, the short story naturally has the better chance. The special article which has turned our newer and more popular magazines into gory battlefields of humanity has naturally served to crowd out the mere idle teller of tales. The June issue of one of the older magazines prints almost as many short stories as three among the best-known of the monthlies whose reputation has been made in the fight for God, country, and circulation. By so much as the popular monthlies have absorbed the functions of the newspaper and won thereby the unrestrained admiration of Mr. William Archer, by so much have they naturally narrowed the field for the older kind of imaginative literature.

If quality has gone down with the supply it is largely because of facts that lie in our native psychology. No one has ever denied that in imitating, adapting, and improving we are enormously clever. Mr. William Archer thinks it natural that there should be good short-story writers in America because America is the original home of the short story. Mr. Archer is wrong when he imagines that the marketable magazine story of the last dozen years has any perceptible relationship with Edgar Allan Poe and Nathaniel Hawthorne. It is an Englishman, Rudyard Kipling, that has conditioned and shaped the prevailing type of the American short story. It is Kipling's plots, Kipling's dash, Kipling's terrifically nonchalant grown-upness, Kipling's tricks of style and very phraseology that stand out as the one powerful influence in our newer magazine pages. And as we have imitated Kipling, we have imitated such minor influences as have appeared from time to time. In other words, we have an enormous writing class in this country who write less from impulse than for business reasons, and who write less what they want than what the editors want. With our native cleverness it is possible for us to turn out excellent Kipling stories when the editors desire Kipling, excellent dialect fiction when that is what the public desires, excellent cowboy fiction, excellent "uplift" fiction, excellent detective and murder stories. It follows that when the editors want no stories, or few stories, of any kind, excellent stories will cease to be written in such numbers, and the adaptable American mind will turn to what the editor does want.

Hands that the enchanted wand of fiction might have swayed are now busy turning out special copy, and fairly good copy at that, such being our incredible cleverness and adaptability. It is possible to cite from this month's magazines nearly half a dozen concrete instances of men and women who, having made their first appearance as writers of short stories, have been hired by the editors for service on the firing line. One woman has been detailed to expose the horrid evils that inhere in the five and ten-cent stores, gigantic nurseries of woman's extravagance. Another woman in another magazine assails another form of the same shopping evil. A writer of short stories, strongly impregnated with the atmosphere of the East Side, now girds at wicked Pittsburgh and now at the horrors of the State workhouses. Two years ago a novel of brilliant promise came from a young man in Boston. Since then his decline has been steady. First he began to write for the magazines the kind of stories the magazines at that time liked. Then he was drafted for muck-rake duty. He is now pretty far from the fine originality of his first book and is probably making a good many thousand dollars a year. His case exemplifies strikingly the workings of the average editorial mind. It is in the nature of the editor to like live topics, and it is in his nature to like live names. What more reasonable, therefore, than to take this young man who writes such excellent stories, which unfortunately have gone a good deal out of style, and set him to work on something statistical, brisk, and terrifying that is in style? It is an editorial point of view which in its ultimate manifestation would write, "My dear Mr. Kipling: We foresee a hit in a series of articles dealing with brutality and underfeeding in the Indian army, at your own terms, of course"; or cable: "Rostand, Paris: Could use four articles showing connection French Prime Minister theft church property; wire acceptance and text."

So much fiction as survives in the militant monthlies is of a lower order, on the whole, than the fiction of the period before the moral awakening. After half a dozen special articles detailing the horrors of graft, smallpox, intermarriage, morphinism, tight-lacing, and over-study, the reader must have his fair measure of relief. There is very little chance, consequently, for anything but the lightest of fiction. The detective story flourishes like a green bay-tree in the company of the wildest of Wild West stories and the frankly farcical adventures of missionaries in cannibal lands. Not that the appetite for fiction is declining. This is shown by the upgrowth of a large number of magazines which print nothing but fiction, and vast quantities of it. Apparently, the average reader has let himself be persuaded that the real magazine must be chiefly social and strenuous; to quench his longing for fiction he buys an "all-story" magazine, thus learning to take his recreation and his excitement in separate doses.

That this condition of things will be permanent or even lasting, we refuse to believe. If the editors do not get exhausted, the field of human interest is pretty sure to be. And then there will be a return to the older type. Already the pioneer magazine of the militant cast is gravitating towards earlier conditions.

THE LONELINESS OF THE RETIRED

There passed through New York last week, bound to London, a former resident of Kansas City who, unlike most Americans, decided that he would not die in harness. He had made enough money some ten years ago to supply his wants, and the mere piling up of more dollars had no interest for him. So he turned over his business to younger men and sought to enjoy quietly the remainder of his years. What was the result? This typical Westerner, who had literally grown up with Kansas City, found

himself ere long a permanent resident of the capital of a foreign country. No snobbishness took him to London, however, and no desire to force his way into foreign society. Unlike some extremely rich Americans who had preceded him to the other side, he was in nowise dissatisfied with being an American, or convinced that England is a better country than that in which he "made his pile."

Why, then, does he reside in London? The question was put to him by a reporter, who plainly could not conceal his amazement that anybody would live in London who might live in Kansas City. We give the answer precisely as the reporter printed it:

> Well, there is no place in America for a man out of a job. Over there you will find more people in the same position and you can associate with them. Here, after I go in and shake hands with my friends, they wonder how soon I am going to leave, so that they can get back to work. Every Englishman, no matter to what class he belongs, gets to a certain point when he stops work.

There it is, in a nutshell; it is the unutterable loneliness of the American with leisure on his hands which has made this man turn his back on Kansas City, its heights, its river, its cattle-yards, and its turreted homes. He could not spend the whole day watering his lawn or watching the trains come into that horrible Kansas City pigsty misnamed a station, or driving an automobile, or in waiting for his friends to come back from work. We are inclined to think, too, that, in addition to his loneliness, a sort of social stigma helped to drive him to another clime. It is still felt in many communities that there must be something wrong with one who will not earn money when he can. A man of leisure, it is instinctively understood, must turn to the Devil for aid in passing his time; as a matter of course, he is also a "man about town."

Now, it must not be thought that the case of this wayward Kansas City citizen is altogether exceptional. The plaint he utters reaches us quite frequently. The man whose health does not permit of strenuous office labor, the man of moderate income with bookish taste, the retired capitalist, the superannuated bank president, are all hard put to it to obtain sufficient human companionship. This is particularly true of retired army and navy officers. A fixed day, their sixty-fourth birthday, finds them promptly shelved. They give up their regiments or the command of departments or of fleets at the stroke of noon on the fatal anniversary. They wander homewards to the towns they came from, only to find that after the first week's issue of the *Daily Watchword* recounting their gallant services on land and sea, their friends can hardly conceal their impatience if these veterans appear a second time at their offices. Hence it is that for the retired officer Washington is a Mecca. He cannot walk down Connecticut Avenue without meeting a score of men he knew in the service. Colonel, general, and admiral—one of these titles he applies to almost every man he meets. The Army and Navy Club or the Metropolitan always has its occupants. Somebody is sure to ask the veteran how he swam ashore in that gale at Samoa, or charged down the road in the Wilderness the time poor Harry Smith got that bullet in his brain. The human touch that makes the whole world kin is there.

But not officers alone find Washington the ideal city for men with plenty of time on their hands. Even our Kansas City wanderer would have discovered associates. For side by side with official Washington is growing up another Washington, comprising men and women of wealth or social leanings who like the capital's cosmopolitan flavor, who enjoy meeting the Chinese Ambassador, the colonel fresh from the Philippines, and the titled attaché of the British Embassy, at the endless teas and dinners of the season. For those of more sober tastes there are the vast treasures in the Library of Congress and the other storehouses of learning and science for which Washington is famous, and the companionship of the growing body of scientists who slave and all but starve in the Government bureaus.

A leisure class, indeed, whatever the age of its members, is not altogether an evil. Perhaps the men in it will help to redeem their sex from the old slur that only women keep alive in America the handsomer things of life. But first they must learn the difference between mere restless idling and that happy leisure which means the opportunity for many finer activities.

NEWS FOR BIBLIOPHILES.

Frederik Muller of Amsterdam announces a noteworthy sale of manuscripts, appointed for June 16 and 17, which should attract the especial attention of those interested in the earliest news of the city on Manhattan Island. A descriptive catalogue of the collections to be disposed of contains a complete list of autographs and letters in the possession of Jhr. Ridder van Rappard and others. The tale is enticing from the collector's point of view. There are the signatures of Charles V, William the Silent, Napoleon; of scientists such as Boerhave, Galileo, Franklin; of theologians, philosophers, and writers of the last three centuries. But the autographs are only examples of others of their kind; the letters do not, apparently, offer new information.

Bundle 1,795 is another matter. Herein are found seven documents relating to New Netherland, 1624-26. They do not purport to be originals, but copies made at the time. Of the originals we have no trace, so that the contents are new to us; and the comments are certainly valuable if they fulfil the promise of the catalogue. It is curious that documents pertaining to New Netherland are so slow in coming to light. Before the discovery (1904) of the Michaelis letter of August, 1628, nothing had been found for about forty years. Now this report of 1626 suddenly appears.

The list is as follows:

A. Rules for colonists to the West Indies on the ship Nieu Verdriet, "The New Sorrow" [not an auspicious name to invite emigration]. 9 pp.

B. Letter of Jan van Rijn. "Actum 25 Aprill in Wiapeco of het fort Nassau a° 1625." 5 pp.

C. Instruction for Willem van Hulst Commis on the voyage to New Netherland. No date. 1625 (?). 22 pp.

D. Further instructions for this same Willem van Hulst. Amsterdam, Ap. 22. 1625. 24 pp.

E. Particular instructions for the engineer and land surveyor Crvn Fredericxse for construction of a fort in New Netherland. Ap. 22. 1625. 19 pp.

F. Detailed report of Isaac de Ragière [Razières] to the W. I. Co. written in the Fort of the Island of Manhattan. Sept. 23. 1626. This contains a description of the life of the colonists and the difficulties they have encountered.

Surely some effort should be made to acquire these papers for the New York Library or some other public institution. They should not be absorbed in a private collection merely as curiosities and secluded from view.

Correspondence.

MARK TWAIN, SIR THOMAS BROWNE, AND THE OLD TESTAMENT.

To the Editor of The Nation:

Sir: Prof. William Lyon Phelps, in an interesting article in the *Independent* for May 5, points out a parallel to Mark Twain's delightful story of "Isaac" and the prophets of Baal and how the water poured over the altar turned out to be petroleum. It certainly looks, at first sight, as though the same devil that whispered to the disquieting of Sir Thomas Browne had reappeared for the comforting of Capt.

Wakoman (alias "Hurricane Jones"). As Browne's "Religio Medici" says (I quote from Professor Phelps's article):

Again, . . . having read far more of Naptha, he [the Devil] whispered to my curiosity the fire of the Altar might be natural; and did me mistrust a miracle in E...s, when he entrenched the Altar round with Water.

But it is probable that this explanation of the origin and recurrence of the petroleum idea gives the devil more (or less) than his due.

For some time past I have had in mind a still older parallel, which has occurred to me whenever I have thought of Mark Twain's story. It is a bit of narrative which is to be found in the Old Testament, though in a portion of it which is not as familiar to Bible readers now as it was a few generations ago. In II Maccabees i, 19 ff. we read how the sacred fire on the great altar in Jerusalem was rekindled, after the return of the exiles. Nehemiah had come from Babylonia, bringing with him the secret of the place where the fire had been hidden in a deep well, by the Jewish priests, many years before. He sent some of the descendants of those priests to find it, but they returned with the news that they found no fire, but only "thick water." Then (vs. 21) "he commanded them to draw it up, and to bring it; and when the sacrifices were laid on, Neemias commanded the priests to sprinkle the wood and the things laid thereupon with the water. (22) When this was done, and the time came that the sun shone, which afore was hid in the cloud, there was a great fire kindled, so that every man marvelled." But this was not all. After the sacrifice had been consumed, (vs. 31) "Neemias commanded the water that was left to be poured over certain great stones. (32) When this was done, there was kindled a flame; but it was extinguished by the light that shone from the altar." The obvious purpose of this second episode is to show that the "thick water," while always capable of producing fire when greatly heated, did not of itself produce *sacred* fire. The flame on the holy altar at once quenched the rival blaze, though the two had been kindled in the same way. And finally, that there may be no doubt as to the nature of this "water," the narrator adds in vs. 36 that Nehemiah (following a seductive etymology) "called the stuff Naphthar, . . . though most men call it Naphtha."

Now, it may well be that Capt. Ned Wakeman was not acquainted with this legend; though it is in the inherited family Bibles of just such old stagers as he that the Apocrypha chiefly survive among us today, and we may be sure that he would have read or heard such narratives as this with especial satisfaction. At all events, we may give his inventive faculty the benefit of the doubt. But in the case of Sir Thomas Browne there can be no doubt at all. He was perfectly familiar with the account of how Nehemiah watered the great altar with petroleum, and thus restored the perpetual fire. What the devil whispered to him was merely the suggestion that perhaps this had been the standard method of renewing the sacred fire whenever the altar had been rebuilt, and that therefore Elijah himself, in his great oncounter with the priests of Baal, had only made use of this same old oil.

CHARLES C. TORREY.

Yale University, May 25.

CAPTAIN ALDEN PARTRIDGE.

TO THE EDITOR OF THE NATION:

SIR: In your issue of May 5, under the ambiguous heading "West Point in 1824," you print an interesting old letter, written from Norwich, Vt., under date of July 9, 1824, by Theodore Sedgwick, jr., to Harmanus Bleecker of Albany, N. Y. It is perfectly clear that Sedgwick's detailed description of the routine and curriculum of "the academy" refers to Captain Alden Partridge's famous school, known at the time of its foundation (September, 1820) as "The American Literary, Scientific, and Military Academy"—the forerunner of Norwich University, now situated at Northfield, Vt. For reasons not easily discoverable Captain Partridge's "Academy" was removed from Norwich, Vt., to Middletown, Conn., in August, 1825, and remained there until 1829. Then, not being able to obtain from the Connecticut Legislature such privileges as he thought that he deserved, Partridge removed back to Norwich. The buildings at Middletown, which had been carefully constructed under Partridge's supervision, later formed the nucleus of Wesleyan University, an institution chartered in 1831. Inasmuch as Alden Partridge left an impression as an educator on his generation that is deserving of more careful record than it has yet received, will you allow me briefly to recall his career?

Alden Partridge was born in Norwich, Vt., in 1785. He died there in 1854. For a brief time he was a student at Dartmouth College, but he gained admission to the academy at West Point and graduated there in the Engineer Corps in 1806. Receiving an appointment on the teaching staff at West Point, Partridge was known soon as an exceptional teacher of mathematics and was deeply interested in the educational features of tactics and military drill. Before he was thirty years old, he was promoted (1813) to a professorship of civil and military engineering; later, for upwards of three years, he occupied the position of superintendent of West Point. His administration, however, did not satisfy the national authorities, and he was virtually forced to leave his place. After aiding as a practical surveyor in striking out the Maine boundary in the summer of 1819, he was free to turn his enthusiastic nature to the work of establishing a school in his native town of Norwich. This school he opened in September, 1820. Boys from the best New England homes came to it. Among the early catalogues, one finds the names of boys from Michigan, from Ohio, from Charleston, S. C., and elsewhere in the South, and occasionally from Cuba and parts of South America. In later years, Partridge was sufficiently encouraged or persistent to try to found similar private schools along the Atlantic slope—at Pembroke, N. H., at Brandywine Springs, Del., at Harrisburg, Pa., at Portsmouth, Va., and even as far south as the State of Mississippi. Devoted to his school projects, he was yet able for a time to be useful as surveyor-general of Vermont. Between 1830-40, he was four times chosen a member of the Vermont Legislature.

Partridge, in truth, stood for certain rational and—for his day—very advanced ideals in education. In the first place, he was among the earliest protestants against too conservative classical modes of training. While willing to admit Latin and Greek into the curriculum, he had firm faith in the discipline to be gained from mathematics and from what would generally be called scientific studies—from physics, chemistry, geology, and mineralogy. He was careful to provide instruction in the modern languages, notably in French, Spanish, and even Italian. Sprung from a line of colonial fighters, trained to some extent at West Point, he believed in the value to every youngster of military drill and in a knowledge of military tactics. To long idle vacations he was sternly opposed. Healthy boys should be occupied, he thought, at all times of the year. They should be subjected, moreover, to the open air in all sorts of weather.

One of the most characteristic features of his school was the trips which he made with the cadets, trips which always included places of historic or scientific interest, not too far removed from Norwich or Middletown. On these trips records of a casual or scientific nature were kept: heights were calculated; observations of the weather were taken; notes of the scenery and of the occupations of the inhabitants of various regions were set down. Usually a printed *Journal* was published. These old *Journals* contain the names of the cadets and general accounts of the entire course of the trips. There was, for example, a corps of 115 boys organized in June, 1822, which went from Norwich to Concord, N. H., where the Legislature of New Hampshire was then in session, and which returned by a different road. Capt. Partridge addressed the Legislature on the subject (a favorite one with him) of the Battle of Waterloo. The Governor reviewed the corps. In June, 1824, a similar corps of 132 students went from Norwich across the State of Vermont on foot to Whitehall. There they took the boat for Burlington and Plattsburgh, passing Ticonderoga and Crown Point, and returned to Norwich by way of Vergennes. It is to this trip that the letter of Theodore Sedgwick refers. In the autumn of the same year some fifty cadets, among whom was Gideon Welles, years later Lincoln's Secretary of the Navy, went to the White Mountains, where they climbed Mt. Washington and camped on its side. The longest expedition of which I have discovered a record was made in December, 1826, from Middletown, Conn.—then the temporary location of the Academy—when a corps of cadets embarked on the Oliver Ellsworth for New York city. Thence they crossed New Jersey via Trenton on foot, passed through Philadelphia, and over a portion of Delaware to the head of Chesapeake Bay, where they were transported to Baltimore. From there they tramped to Washington, D. C. At Washington the corps visited the Capitol, where they saw the Senate and the House in session. They were cordially received by President John Quincy Adams. The Secretary of War (James Barbour) addressed to them a few remarks in the nature of a homily. At Mount Vernon Judge Bushrod Washington showed them the points of special interest, and opened the vault that, in the language of their *Journal*, "contained

the mouldering remains of the greatest and best of men."

After this sort of evidence one may fairly assume that, were Alden Partridge alive to-day, he would be deeply interested in many phases of the movement toward a more rational system of education, particularly in out-of-door observation and exercise, of which he was one of the earliest American exponents. Many of his students found, as time went on, useful places in the work of the world; and some of them gave evidence of their sound military training under him in connection with the Mexican and the civil wars. They were to be found in high and low places in the army and the navy. It was such young men as Gideon Welles, Josiah Tatnall, George M. Colvocoresses, Horatio and Thomas H. Seymour, Theodore Sedgwick, Thomas Rutherford Trowbridge, and William H. Russell of New Haven, who came into close touch with much that was admirable in Capt. Partridge's spirit, and were the means of carrying his influence on to a later generation.

In an early manuscript diary kept by the late Secretary of the Navy, Gideon Welles, the writer speaks of meeting Capt. Partridge in Hartford, Conn., in the spring of 1842. Partridge had given a lecture on the subject of the "National Defences." Mr. Welles found the lecture interesting and instructive. "Capt. Partridge," he remarked, "condemns a standing army as inconsistent with public liberty, and would rely for national defence on . . . the people themselves. These he would educate to be not only scholars, but soldiers." Of the man himself, Welles set down this matured judgment: "He still possesses and exhibits that strong, marked, and honest good sense for which he was uniformly distinguished, and I find the high admiration and regard of early life was not in this instance, certainly, an over-estimate of the man."

HENRY BARRETT LEARNED.

New Haven, Conn., May 26.

THE HETCH HETCHY WATER SUPPLY.

TO THE EDITOR OF THE NATION:

SIR: In your issue of April 21 there appears a communication from Mr. George Edwards, Berkeley, Cal., in which he undertakes to throw "new light" on the Hetch Hetchy water supply. He endeavors to make it appear that the water supply of San Francisco and adjacent cities is a matter of area drained, when it is preëminently a matter of storage of flood waters which would otherwise go to waste. He attempts to make it appear that Cherry Creek and Cherry Valley are in the reservation called "Yosemite National Park," when they are beyond the limits of that reservation; also that Cherry Creek drainage basin and the reservoirs therein are "conceded" to San Francisco, when they are all in the hands of a private corporation by appropriation and grant under the laws of Congress, and if acquired by San Francisco, will have to be acquired at great cost, but to the benefit of those corporations and individuals who have acquired them at slight cost and by "appropriation" and "filing."

Mr. Edwards not only advocates the deprivation of San Francisco of her ultimate right to store waste waters in the Hetch Hetchy reservoir, of which she owns more than one-half by purchase resting upon patents issued by the United States government prior to the establishment of the reservation, but he also wishes to deprive her of the right to use the remainder of this reservoir already granted to the city, and of the right to a single gallon of waste water of the main Tuolumne, which flows to the sea each year in excess of all possible demands.

Now, instead of the so-called "new light" which Mr. Edwards attempts to throw on the subject, let us have a little of the old light of truth and fact:

By the law of 1888 reservoirs surveyed by any department of the government charged with this duty were set apart to public use. By the law of October 1, 1890, a reservation, subsequently known as "Yosemite National Park," was defined, and rigid regulations provided regarding the injury of timber, mineral deposits, natural curiosities or wonders, within the limits of said reservation and their retention in their natural condition. (26th Stat. at L., 651).

In 1898, the reservoirs in this reservation were surveyed by the United States Geological Survey, their storage at various levels estimated, and types of structures planned for their utilization. Among these were both Hetch Hetchy and Lake Eleanor reservoirs. (See U. S. Geol. Survey, 21st Anuual Report, page 453.)

On February 15, 1901, after an experience of more than ten years with the law just referred to, and in the light of the researches of the United States Geological Survey, Congress passed an act empowering the Secretary of the Interior to permit the use of rights of way through public lands, Yosemite, Sequoia, and General Grant National Parks, for canals and reservoirs for the supply of water for domestic and public or any other beneficial use (31 Stat. at L. 790). By the law of February 1, 1905, these rights of way were presented by Congress to San Francisco for municipal purposes, and under this law are not revocable during the period of their beneficial use (33 Stat. at L. 628). Under the law of 1901 San Francisco surveyed and applied for reservoir rights of way for two of the reservoirs designated and covered by the provisions of the above law; these rights were granted, and there is no just possibility of their revocation. Secretary of the Interior Hitchcock, under the able tutelage of the chief engineer of the Spring Valley Water Company, denied these rights, under the law of February 15, 1901, both upon original application and a subsequent rehearing, but Secretary Garfield, who is not an apt pupil of "the interests," after an opinion rendered by the attorney-general of the United States and a careful hearing both in San Francisco and in Washington, granted these reservoir rights of way to San Francisco, subject to certain stipulations, among which was one requiring the development of Lake Eleanor reservoir to its maximum extent before the Hetch Hetchy reservoir should be undertaken. Under this grant, more than one-half the reservoir area in each reservoir has been purchased and is held in fee simple by San Francisco, under patents granted by the United States government prior to the establishment of the reservation. The cost of these purchases and of land for exchange for the remainder of the reservoir areas and of their survey and development to date, is in excess of $600,000. These ownerships and the grant above mentioned constitute vested rights; it is the manifest purpose of Mr. Edwards's allegations to effect a withdrawal of San Francisco's rights to such an extent as to remove an adequate basis for going across the State of California for a pure water supply.

San Francisco is prepared to carry out the provisions of the stipulations in the grant of May 11, 1908, provided her ownership in the reservoir areas and her rights thereto shall not be mutilated to the extent of depriving her of that part of these properties which justifies the expenditure of $45,000,000, recently voted for this work by a majority of more than twenty to one.

To any just and fair-minded person it should appear from the above plain statement of the facts that San Francisco has vested rights of which she cannot be deprived if the Federal Administration keeps faith with this city.

Mr. Edwards misstates the prior rights of the irrigation districts. He would make it appear that they have a right to 1,500,000,000 gallons a day. They have this right only when the natural flow of the river is equal to or beyond this amount, and when they, under the laws of the State, make beneficial use thereof. These districts have legal rights to water to the extent of the capacity of their diverting canals, when the natural flow of the river is capable of yielding this amount. San Francisco has recognized their rights to an extent far greater than this legal right, namely, to the full extent of these filings, or to 2,350 second feet. The storage which San Francisco proposes to make is of flood waters in excess of this natural flow, which would otherwise be wasted. The attempt of Mr. Edwards to apportion and divide the waters of the Tuolumne River by percentages of areas drained is silly in the extreme, as the problem is not one of percentages of drainage areas, but of storage. If San Francisco can store the waste flood waters in excess of 2,350 second feet natural flow at La Grange, the water so stored will be a net gain which is to be exclusively used for municipal purposes, and such storage and use will not in the least interfere with the rights of the irrigation districts. The representatives of these districts, in a discussion held at Modesto in July, 1907, recognized that it was not a problem of diversion and use of water or scarcity of flood waters for storage, but a problem of storage alone. They have every assurance that San Francisco does not intend to divert, and will not divert, waters except in excess of 2,350 second feet, which is the ultimate limit of their rights as fixed by their own filings.

The charges, therefore, "that a few dishonest men are maturing in secret a plot so atrocious that they have not yet dared to whisper it in public, and that they are in cold-blooded villany preparing to rob the irrigationists and to convert their homes into a desert waste," are ignorant and vicious.

It would be well for the public, if Mr. Edwards knows of any such "atrocious plot," for him to state it, instead of intimating the existence of such a plot without a clear and distinct statement of what it is and who are its originators. The con-

ception that such a plot could be devised and carried out under the laws of this country rests with Mr. Edwards alone. Some motive is the actuating cause. Through the plea that San Francisco shall develop reservoirs which have been acquired by private corporations, this motive is not far to seek. MARSDEN MANSON,
City Engineer.

San Francisco, April 29.

A SOURCE OF SHAKESPEARE'S "JULIUS CÆSAR."

TO THE EDITOR OF THE NATION:

SIR: I should like to bring to the attention of Shakespeare students the "Cesare" of Oriando Pescetti, published in Verona in 1594, which has been overlooked by modern histories of the drama, though it is mentioned in Tiraboschi. The tragedy has intrinsic merit, but is of particular interest because there are a number of passages which are later found in the "Julius Cæsar" of Shakespeare, though they are not found in Plutarch, the common source of both dramas.

Some of these passages are:

J. C., i, 3, 3-4. id., ii, 2, 18-24. Ces., p., 74-75, l. 20-28, and 1-9.
J. C., i, 3, 5-8. Ces., p. 759, l. 2-6.
J. C., ii, 2, 75-78. Ces., p. 75, l. 17-18.
J. C., i, 2, 59-61. Ces., p. 73, l. 26-36.
J. C., i, 2, 68-70. Ces., p. 80, l. 28. id., p. 77, l. 17-21.
J. C., ii, 1, 187-190. Ces., p. 25, l. 21-24.
J. C., ii, 11, 62-63. Ces., p. 27, l. 1-11.
J. C., iii, l. 78-79. id., iii, 11, 106-114. Ces., p. 116, l. 22-31. id., p. 126, l. 20-21.
J. C., iii, 2, 201-203. Ces., p. 144, l. 3-5.
J. C., iii, 1, 205-208. Ces., p. 120, l. 16-24.
J. C., iii, 1, 170-172. Ces., p. 13, l. 13-15. id., p. 25, l. 189.

These passages are not all equally striking, but cumulative evidence has its value. I quote two of the passages that I consider striking:

J. C., iii, 1, 78 ff.:
Cinna. Liberty! Freedom! Tyranny is dead!
Run hence, proclaim, cry it about the streets.
Cassius. Some to the common pulpit, and cry out,
Liberty, freedom, and enfranchisement.

Idem. iii, 11, 106-114:
. . . Stoop, Romans, stoop.
And let us bathe our hands in Cæsar's blood
Up to the elbows and besmear our swords,
Then walk we forth, even to the market-place,
And waving our red weapons o'er our heads,
Let's all cry, Peace, Freedom, Liberty!
Cassius. Stoop then and wash.—How many ages hence
Shall this our lofty scene be acted over
In states unborn and accents yet unknown!

Ces., p. 116, l. 22 ff.:
Ma scorriam per la terra,
O voi che fidelissimi compagni
Mi siete all' onorata impresa,
Con le coltella in mano,
Del tirranico sangue ancor stillanti,
E coi pilei sull'aste,
E'l popolo di Marte
Chiamiamo a libertade.
Con. Libertà, libertà, morto è il tiranno.
Libera è Roma, e rotto il giogo indegno.

Idem, p. 126, l. 20-21:
Recandosi ciascun a somma gloria,
Tinger la spada sua nel sacro sangue.

Idem p. 106, l. 7-9:
Cal. Ahi, pur ch'anzi a gli Euripidi non porga
Materin, onde riusonino i teatri
Ne secoli avvenir le sue sventure.

J. C., iii, 2, 201-203:
Citizen. We will be revenged!
All. Revenge! About! Seek! Burn! Kill! Slay!
Let no traitor live!

Ces., p. 144, l. 3-5:
Arme, arme, sangue, sangue, ammazza, ammazza,
Degli empi traditor non resti razza.

Not only the verbal coincidences, but the similarities in the exclamatory style are worth noticing. There are points in the subject matter used in both dramas which will also have value in deciding whether Shakespeare knew and used the "Cesare" of Pescetti.

I hope to find time and strength to publish the work I have prepared on Orlando Pescetti in the more exhaustive form he fully deserves, for all his writings merit recognition. LISI CIPRIANI.

New York, May 27.

THE AMERICAN FEDERATION OF LABOR.

TO THE EDITOR OF THE NATION:

SIR: I would call your attention to a misstatement of fact appearing in the comment upon the death of Mr. James Van Cleave in the *Nation* of May 19. In this article the statement appears: "The officials of the American Federation of Lafor announced that they were superior to any decrees of the Supreme Court of the United States and continued to violate its injunction," etc. The Supreme Court of the United States did not issue the injunction in question. It was issued by the Federal Court of the District of Columbia. And further, the Court of Appeals of the District of Columbia has since held that in some respects the Federal Court exceeded its authority in issuing the injunction.

This difference may seem a small matter, but it is only one instance of many in which misrepresentations have been made—often, without doubt, unintentionally—which have placed the officials of the American Federation of Labor, their acts, and their utterances, in a false light before the general public, especially when this case has been under consideration.

New York, May 26.

COLLEGE DEBATING.

TO THE EDITOR OF THE NATION:

SIR: Your editorial of May 5 upon "College Debating and Writing" censures the "text-book" method of debating, and questions the value to the debater of discussing current problems. A wrong impression may be gained from the editorial as to the nature of forensics in which high-school and college students are engaged.

As the article suggests, any system that makes a mere parrot of the pupil is worthy of nothing but condemnation. Yet it is also true that legitimate means of assistance should be encouraged. To the observer the change from the old to the new way of teaching forensics doubtless seems odd. The alteration, however, has been nothing but a part of the general transition from the scholastic to the empirical method of teaching—a change that has taken place in every department of higher education. This change in forensic methods, like other similar changes, is open to misconception. One might conclude from reading the editorial, that the object of presenting a brief to the debater is to save him the labor of making one. Such an assumption is entirely wrong. The brief serves merely as a model for orderly arrangement of argument. Any one who has engaged in debating knows that it is suicidal for one side to follow blindly a brief with which their opponents are, in all probability, familiar.

To the statement that the modern method of brief-making has no place outside a court of appeals, a reasonable answer is that if the system is not used elsewhere, it manifestly ought to be. Brief-making teaches accuracy of thought, systematic arrangement and the ability to discern the essential from the non-essential—all acquisitions that are desirable, whether one be in the courtroom, on the platform, or simply reading a book.

After commenting upon the value of brief-making, the editorial asks: "But why, after all, should the high-school student or college student debate corporation taxes or central banks?" Why, one immediately wonders, should they not discuss these questions? What harm can result? Who is more willing to attempt an earnest study of corporation taxation or the problem of the central bank than the college student? He has every inducement to make that study thorough. His library facilities are adequate. His work is done under supervision of men competent to direct. Having no cause to play the demagogue, to make the worse seem the better reason, he discusses faithfully the issues before him. His general qualifications for the task are not to be made light of. Probably at no other time has one so good an opportunity for thorough research as during one's college days. Moreover, a study of the average intercollegiate debate will show that it is likely to contain in one or two paragraphs the kernel of a proposition that one not trained in arranging argument would take pages to expound. Since college men are entering more and more into our legislative halls, such training is desirable. They should be taught to write an argument in such a manner that it will not be necessary for listeners to go home to dinner while the main body of the speech is being delivered.

Inference might be readily drawn from the editorial that the "text-book" method ignores training in delivery. Modern methods not only teach the speaker to have something to say, they also teach him how to say it. What can more truly inspire a debater "to plead with passion" than the consciousness that what he is saying conforms to logic and fact? What can be more easily shown to be untrue, by present research methods, than an argument that does not conform to these essentials? If sincerity, simplicity, and passiou are desirable elements in debate, surely the present-day method offers every inducement for their successful operation.

THE "AUGUSTAN" AGE.

TO THE EDITOR OF THE NATION:

SIR: How old is the word "Augustau" as applied to the literature of the eighteenth century? The Oxford Dictionary's first reference is 1819, and that from a dictionary, where it is stated that "The reign of Queen Anne is often called the Augustan age of

England." Horace Walpole, writing to William Mason, July 21, 1772, says:

> What a figure will this our Augustan age make; Garrick's prologues, epilogues, and verses. . . . What a library of poetry, taste, good sense, veracity, and vivacity! ungrateful Shebbear! indolent Smollett! trifling Johnson! piddling Goldsmith! how little have they contributed to the glory of a period in which all arts, all sciences, are encouraged and rewarded. . . . The retrospect makes one melancholy, but *Ossian* has appeared, and were Paradise once more lost, we should not want an epic poem.

All which is delightfully bad criticism, in addition to being an early reference to the word in question. JAMES W. TUPPER.

Lafayette College, May 24.

Literature.

THE MAKER OF JOHNS HOPKINS.

The Life of Daniel Coit Gilman. By Fabian Franklin. New York: Dodd, Mead & Co. $3.50.

Some time or other the historian of America in the nineteenth century will mark the rise of a new and exacting profession that broke many mediocre persons and greatly exalted a few persons of uncommon parts. To be a university president in the period of expanding science, implied the negation of academic ease. Where a *rector magnificus*, a provost, or other traditional academic chief merely administered small and carefully husbanded revenues and ruled a compact body of teachers, the American university president had to be competent in numerous extra-academic functions. Besides the duty of administration within the scholastic family, a sufficiently difficult task, he had to deal on equal terms with men of great affairs, trustees, donors, and the like. Frequently he had to beg for the growth or the very maintenance of his university from more or less ignorant and hostile legislatures. Constantly he must make ideals of disinterested scholarship both explicable and acceptable to communities and individuals frantically given over to immediate and palpable gain. In short, he was required to add to the well-balanced imagination of the scholar, the plausible audacity of the popular evangelist, and the effective tact and energy of the captain of industry. In every sense, he was compelled to convert his thinking promptly into cash values, and this with no compromise of the dignity of his office. For such service he received a tenth of the salary that men of like abilities received as officers of business corporations.

The challenge of this new and arduous profession enlisted many notable personalities. Among them incontestably the first was the late Daniel Coit Gilman. Others may have equalled him in the quality of their service, but none conducted so many important enterprises so successfully. Deeply associated with the organization of the Sheffield Scientific School, at New Haven, with the upbuilding of the University of California, the foundation of Johns Hopkins University, and of its Medical School, he found energy at seventy to inaugurate the work of the Carnegie Institution, an unprecedented organization for the fostering of research, and in the last year of his life he practically gave shape to the Russell Sage Foundation for sociological and charitable investigation. In treating such a career, the biographer had no choice but to merge the hero in his causes. This Dr. Franklin, a former Johns Hopkins colleague, has done, making so many chapters out of Mr. Gilman's chief activities, and then adding as a sort of supplement a selection from his intimate correspondence, and a brief sketch of his family life by Mrs. Gilman. The man appears so transparently in his administrative efforts that in the interest of symmetry, one could wish that the more essential portions of these supplementary chapters might have been interwoven with the general narrative. On the other hand, a large circle of Mr. Gilman's friends—and he had the faculty of endearing himself to the most casual associates—will undoubtedly welcome these collected materials of intimate import. As to the larger issue, Dr. Franklin has set forth with admirable orderliness and lucidity the chief activities of a varied and complicated life, and his book will be necessary not only to admirers of the hero but also to all students of higher education in America.

Mr. Gilman scored more, and more various, successes than any other man who ever dealt with education in America. Accordingly, the training of this ideal administrator and his fundamental personality are subjects of uncommon interest. It would be foolish to deny that his intimates found a certain mystery in his power. His was never the obviously masterful way of the conventional commanding officer. His suavity in all relations was complete. How the genial "Uncle Daniel" of the Johns Hopkins undergraduates did so many things and did them so infallibly well was a poser. It was easy to miss the incredible industry of one who was never in a hurry, and to underrate the sterner qualities of a chief who worked mostly by suggestion and persuasion. One remarks the swiftness of his judgment, his ready sympathy with other points of view, the measured economy of all his processes; but these are inert phrases for a vital thing. Perhaps a fine confidence in other men was his strong point. His highest praise for a friend or colleague was to call him "coöperative." He had a remarkable sense not merely of policies, but of what could or could not be done with individual people. This helped him in choosing his associates. He had the gift of being discreetly personal in matters of routine. Many a student could tell of timely admonition as to crudity in work or demeanor, and such criticism never seemed made by a superior but addressed to a higher court—the better judgment of the unconscious offender. Knowing his personal capacity, Mr. Gilman very reluctantly left any negotiation to the written word. He was a born committee chairman, and at his best in small groups with work to do. A graceful speaker and writer, his impact was comparatively weak in those regards. No man of our times, probably, has left so deep an impress on higher education, but many others have aroused more discussion and launched more theories.

It was part of the genius and rectitude of the man always to seem less important than his work. If you had visited Yale about 1870 and asked about Professor Gilman, probably you would have got the picture of a brilliant dilettante. Here was a ready man endeavoring against official indifference to make a workable university library. He had travelled much, and everywhere with eager curiosity for educational and charitable institutions. At twenty-three he had spoken at Manchester for Cobden and Bright, on American public schools, and had taken a heckling well. He had for a space been a diplomatic attaché at St. Petersburg, and transiently a magazine editor. He had seriously considered entering the Christian ministry. A New England patrician by birth and training, he worked well with all manner of men in college and out. He was in all kinds of charities and semi-public activities. He had organized an art loan exhibition that paid its own expenses. Just the conventionally useful and versatile person, one would have said. A shrewder observer would have noted that a new system of study had been quietly introduced into the Sheffield Scientific School. And here we face an odd and characteristic paradox, that this orderly method of grouped studies which Mr. Gilman introduced first at Yale and afterwards at Johns Hopkins, while it is steadily prevailing, has been little discussed, whereas the elective system, which is nearly in confessed bankruptcy to-day, was the object of an ardent and diffused propaganda. The fact gives a sidelight on the respective temperaments of two great university presidents. In his hour of discouragement in California and periodically at other times, Mr. Gilman leaned toward journalism. We think he was well out of it. His public utterances were conciliatory, as if he feared the emphasis of mere words. It was his accomplished deeds that spoke cogently. There are no addresses and writings of Mr. Gilman that seem monuments of his favorite cause—the idea of scientific research in America. He simply started Johns Hopkins University, and academic America saw itself compelled to a stern chase. This

was highly characteristic of the man. He was nothing of an idealogue, nourishing the theory for its intellectual fascination, but rather a potent evoker of sane ideas to guide the next forward step. Thus, in spite of an absolute and self-sacrificing devotion—while president of Johns Hopkins he added the directorship of a great hospital to fixed duties already oppressive—he gave to many some sense of facile opportunism. On the contrary, loyalty was his strongest instinct. During his brief but effective term as president of the University of California he met with an ignorant political opposition that threatened the very existence of the university, and with the demagogic shifts of certain of his own professors. His correspondence shows how keenly he felt the lack of underlying trust. As a matter of fact, the event showed that he exaggerated the peril of agrarian interference, but it is plain that he could not be spiritually at ease in an air where competence might be at the mercy of charlatanry, and antagonists would not even play fair.

His mind was already on Baltimore and the proposed Johns Hopkins University. As the trustees made a tour of information to existing universities, four college presidents, Eliot, Porter, Angell, and Andrew D. White, independently recommended him for the position. What he proceeded to do now seems the most natural thing in the world. What could be more obvious than to naturalize in America the German university system, admittedly the best in the world? We have even got to the point of questioning whether it was really for the best. Would not a finer foresight have seen a greater flexibility in some adaptation of the more humane university organization of France? As a matter of fact, to found a university *more teutonico* was by no means an obvious course. Many people who were not fools doubted seriously if advanced students would be forthcoming in sufficient numbers to justify the enterprise. One Baltimore paper, while genially admitting the right of Johns Hopkins's trustees to commit such a quixotry, opined that in fifty years there might be a genuine demand for this new-fangled institution. The success of Johns Hopkins University was instantaneous and signal. Its reverberation extended far beyond the range of direct emulation. Everywhere among us scholars held their heads higher because of what was being done in Baltimore. If Whitney and Child in New England were relieved from elementary drudgery borne for years, it was because it was known that Johns Hopkins University had desired their distinguished services. Hardly less meritorious than the institution of facilities for research was the generous provision that President Gilman made for the publication of the results of American scholarship generally. That American research began to bulk impressively in Europe, no longer as an exceptional and individual phenomenon but as a collective fact, is largely due to the journals that Mr. Gilman encouraged, apparently in advance of any demand. The early fluid days of the university he has described charmingly himself. In shabby temporary quarters his young enthusiasts learned that not bricks and mortar counted, but the work and the spirit of the work. With the wisdom of hindsight we can now see that the university somewhat hardened as it grew, and that the wholesale imitation of its example by the older universities was by no means an unmixed good. Yet the fault, if fault there be, lies not with Mr. Gilman, but with his emulators. It was inevitable in a land of ill-organized scholarship that the first emphasis should be set on simple thoroughness, that Original Research should a little flaunt its lordly capitals. Mr. Gilman had to combat a disgraceful laxness. As late as the founding of the Medical School of the university it seemed a radical thing to insist that its students should first have been liberally educated. Most medical schools were taking students who could not have entered the freshman class of an old-style college. In fine, while it is now patent that the country did not need a score of universities on the Johns Hopkins model, it is equally clear that precisely the impulse it gave was most timely and necessary. We feel that a new university could hardly have started then and there on any other basis, and regret merely that the older colleges followed its leading with too little imagination, and left unsettled the adjustment between different orders of research and between these and the claims of higher discursive education.

It was not, we repeat, the fault of Johns Hopkins if its admirers supposed it had attained a kind of doctrinal finality. President Gilman himself never held any such opinion. On scanty and shrinking means he endeavored to liberalize its teaching. By introducing open lectures of the highest class he took a leaf from the French book. He wished to give the poet Sidney Lanier a professorship, and did get him a lectureship. He would have had Child from Cambridge; barring that, he arranged a succession of literary courses by the best critics of both worlds. In short, if other college presidents had copied not his catalogues, but his spirit, the excessive Germanization of our universities would have been tempered by some respect for the experience of France and for the finer part of our own English tradition.

A new enterprise always appealed to the imagination of this indomitable leader; a difficult problem merely set his resolution on edge. There was a moment, in 1896, when he was tempted to leave Johns Hopkins and assume the superintendency of the New York schools. What tempted him was doubtless the prospect of a great confusion to be set in order. Such service as he constantly rendered to civic and charitable organizations of all sorts, from the Village Improvement Society of his summer home at North East Harbor, Me., to the Venezuela Boundary Commission, was simply in his day's work. Probably few men of our times believed more fervently in the value of organization, or lent to what may be called bureaucratic activities a more personal touch. When past seventy he undertook the management of the Carnegie Institution, and our sole quarrel with the biographer is that he has failed to show how the work of encouraging research grew and broadened under Mr. Gilman's hand. It is Mr. Carnegie who has given the most terse expression to that mild and reasonable forcefulness which was Mr. Gilman's most marked trait. On the occasion of Mr. Gilman's resignation the founder of the Carnegie Institution wrote:

> All great men have their special feature. If I were asked what yours was, I should say, that which draws all men after him, pleasing everybody, and offending nobody, doing the absolutely necessary ungentle things in a gentle way.

With this tribute we might well leave Mr. Gilman, but it may be permissible in view of the peculiar importance and difficulty of the profession he so signally adorned, to note that not merely his personality, but his apparently desultory training made him the ideal university president. And first, he never was a finished specialist in any subject, though his attainments in his favorite science of geography were considerable. He represented rather a ready and unbounded intellectual curiosity and sympathy that swiftly caught the significance of other men's specialties. To old age, he kept his zest and alertness for new knowledge and untried experiences. His mind was equally attuned to the recondite erudition of a Henry Rowland and to the personal fragrance of a Sidney Lanier. Mr. Gilman was preeminently the astute and forceful administrator, but he was, apart from this, as few men of our times have been, a true professor of things in general. And this capacity, if not the absolute requisite, is surely the ultimate grace of that character which makes for acceptable leadership over the irritable race of creative scholars.

CURRENT FICTION.

The History of Mr. Polly. By H. G. Wells. New York: Duffield & Co.

Mr. Polly's story is roughly analogous, in setting and atmosphere, to the "Old Wives' Tale" of Mr. Bennett. It is placed, that is, in the dingy and unhopeful

scene of lower middle-class activity in a provincial English town. But Mr. Wells is anything but a realist: he is not content, like Mr. Bennett, with setting down scrupulously the facts, physical and spiritual, connected with an average shopkeeping and housekeeping experience on that plane—interpretiug them only through the luminous diffusion of sympathy we call humor. Mr. Wells must have his definitive objective, and subtlety is not his favorite means of conveyance. There is perhaps less of mere sparkle and more of humor in the present tale than is common with him. But his theory of the life he portrays has not left his mind clear for mere vision. He has set out, as usual, to demonstrate a particular thing—the possibility of the existence, even in that bog of servile and conforming tradesmanship, of an ardent if baffled idealism.

Mr. Polly's father was a small tradesman; his mother died when he was seven. At fourteen, after attending a national and then a private school, his studying was over. "By that time," here speaks the caustic, reforming Mr. Wells, "his mind was in much the same state that you would be in, dear reader, if you were operated upon for appendicitis by a well-meaning, boldly enterprising, but rather over-worked and under-paid butcher boy, who was superseded toward the climax of his operation by a left-handed clerk of high principles but intemperate habits—that is to say, it was in a thorough mess." Shortly thereafter he became apprentice to a "gentlemen's outfitter," and for some subsequent years drifted toward the misguided ownership of a shabby hose and necktie shop in a town as forlorn as that of his birth. Marriage had intervened, with a narrow-souled slattern who ministered to his now chronic indigestion and discontent. Finally bankruptcy arrives, and what with the wife, and the stomach, and the debts, and the general dinginess of life, Mr. Polly is at the end of his rope—or thinks he is. His real trouble, and his real salvation, lie in his inborn and unconquerable love of beauty and desire for grace of living. The episode of his achieved arson and attempted suicide, with the incident of the criminal turned hero, and the irrepressible old woman whom he saves, is upon a plane of true humor. And the further action—the secession from wedlock, the cheerful wandering of a delivered Mr. Polly, and the final discovery of the home and the companion in which his soul (no longer hampered by convention or indigestion) may find rest—all this part of the narrative is in Mr. Wells's best mood. The book will not breed the controversy awarded (to the amusement of her creator, no doubt) to "Ann Veronica." Mr. Polly does desert his titular wife, to be sure, but that act is incidental rather than climacteric. Mr. Polly is a person to be loved rather than quarrelled over; and may turn out to have been the inventor of a new sort of art-tongue.

The Fascinating Mrs. Halton. By E. F. Benson. New York: Doubleday, Page & Co.

Mr. Benson has an advantage over many current novelists in being sure of his *métier*. He never attempts too much. His plane is that of the social-humorous romance. He is content with few characters and simple plot. After a few of these pages, it is perfectly clear what the fascinating Mrs. Halton is going to do. Her task is an unusual one, though not unheard of: there is a very passable stage plot involved in the narrative. Mrs. Halton is a young and not over-mournful widow. She is, indeed, when the story opens, already pledged to a second mate, and on the way to a first happiness. But an unpleasant duty interveues. Returning to England from a season of mourning and recuperation abroad, she finds her favorite niece and companion almost engaged to be married to a certain young lord (of course a lord). He is a pretty fair sort of lord, but he has had his experiences, one of them connected with a lady in Paris, whom Mrs. Halton knows to have been the sister of Daisy, the girl. There is your situation. It is impossible for Mrs. Halton to tell Daisy, for the sake of her memory of the erring sister, who is now dead. And she cannot bring herself to tell the nobleman, since she regards him as a rascal. Evidently, there is only one thing to do. Mrs. Halton is almost as young and quite as beautiful as the fair Daisy. She determines to steal away Daisy's lover before Daisy actually promises herself to him. The thing is easily done: the gentleman is quite ready to change his objective. As soon as his fickleness is made clear to Daisy, Mrs. Halton's engagement to the other man is announced. Her game has been open, and both Daisy and his lordship demand an explanation—which the fascinating Mrs. Halton is forced to give. They agree that she has done right. Daisy promptly pairs off with her original second choice; milord is content to remain the adoring friend of the no longer Mrs. Halton. For her part, she has come to like and admire him very much: there is a touch of pure Briticism in the toleration with which she looks upon him as a man who has had a mistress, though the thought of his marrying the sister of that deceased mistress is a horror to her.

The Head Coach. By Ralph D. Paine. New York: Charles Scribner's Sons.

Here Mr. Paine has succeeded in creating a sabbatical atmosphere in a story about football, with its familiar accompaniment of mud, blood, and manly tears. His head coach, Kingsland, is an eminently—we are tempted to say aggressively—righteous person. At Yale, he "got out and showed his college spirit" on every possible occasion. As all college people know, there is no greater praise than this. When, to the surprise of everyone, including the reader, he enters the Divinity School after graduation, his football training enables him handily to thrash ruffians who try to take charge of mission meetings. Then he is called to a backwoods pulpit in Maine, and the team of a nearby college offers a field for his abilities as a coach. Here he has trouble with the students, who have ideas of their own about running the team. Needless to say, the Yale veteran smites the rebels hip and thigh, and creates a winning team out of chaos. He comes from the struggle crowned with such glory and honor that the hearts of his hitherto unfriendly parishioners are completely won over. So is that of the necessary girl, and behold a tale that is told. In reading it, those of us who do not play football must feel a sort of wistful regret that we can lay no claim to the many and marvellous virtues that seem inseparable from the football hero of fiction. But when we look upon him in the flesh, strolling about the campus with his Olympian air, or in later years getting "logy" and creased about the neck—we wonder. And when we read of a professional coach who is also a rising young divine—we wonder still more.

Jacqueline of the Carrier-pigeons. By Augusta Huiell Seaman. New York: Sturgis & Walton Co.

This agreeable little story of the siege of Leyden is introduced by William Elliot Griffis, whose intimacy with the Netherlands makes authoritative his testimony to the book's general historic accuracy as well as to its human interest. He calls attention to the reasons that make the topic especially impressive for American readers. We, he says, "cannot know Leyden too well, for no city in Europe so worthily deserves the name of Alma Mater," sheltering as it did the Walloons, the Pilgrim Fathers, and the Huguenots; and leading in the movement to recognize America's independence. A boy and girl are the hero and heroine of the story, which gives glimpses of some of the great personages of the time, and pictures the miseries of the siege, the heroism of the defence, and the thrilling conversion of land into ocean that brought the Dutch men-of-war to the rescue. A very excellent little preparatory study it is to the moving story of the Dutch Republic for young readers, and for their elders a sympathetic reminder. The book is admirably printed and prettily decorated with the quaint, fitting drawings of George Wharton Edwards.

ANCIENT NUBIA AND THE FRONTIERS OF EGYPT.

University of Pennsylvania: Publications of the Egyptian Department of the University Museum. Eckley B. Coxe Junior Expedition to Nubia: Vol. I. Areika, by D. Randall Maciver and C. Leonard Woolley, with a chapter on Meroitic inscriptions, by F. L. Griffith. Oxford: Letterpress and plates, printed by Horace Hart, at the University Press. MCMIX. 56 pp. and 43 plates.

An Egyptian Oasis: An Account of the Oasis of Kharga in the Libyan Desert, with Special Reference to its History, Physical Geography, and Water-supply. By H. J. Llewellyn Beadnell, F.G.S., F.R.G.S., Assoc. inst. M.M. Formerly of the Geological Survey of Egypt. With maps and illustrations. $3.50 net. New York: E. P. Dutton & Co.

As the ancient sites in Egypt are one after another exhausted, and it becomes more and more difficult to secure promising territory for excavations, modern enterprise has pushed out into the region lying on the outskirts of Egypt, or even far beyond its widest limits. We therefore find expeditions now active in Nubia, Ethiopia, and the oases of the Eastern desert. The University of Chicago expedition spent two seasons (1905-07) in endeavoring to recover completely all inscribed monuments of ancient Nubia or the Sudan. Its work, however, was chiefly devoted to monuments still above ground.

The northern end of the Nubian-Nile Valley will be deeply inundated when the Assuan dam has been raised twenty-two feet higher, in accordance with the plans now under way. At high water, Philæ will virtually disappear, and the cemeteries and ancient remains above the beautiful island will be flooded by the waters of a great lake a hundred miles long. Aroused by the outraged public sentiment of Europe, peculiarly sensitive after the loss of beautiful Philæ—for as a thing of beauty it *is* lost—the government has appropriated money for an archæological survey, which for two seasons past has been thoroughly excavating the endangered cemeteries and making exhaustive records of the monuments which would be injured by the flood. These excavations have already yielded most important and interesting results, among which the most notable is the fact that in prehistoric times the population of Northern Nubia was Egyptian and that this Egyptian population was displaced by Nubian (or Bega) immigration from the south. This shift of the Nubians, or possibly Bega, towards the north must have taken place at an extremely early date, for the earliest inscribed records which we possess disclose Northern Nubia to us already in the possession of the southern barbarians, creating a frontier in the fourth millennium before Christ, the dangers of which have only been removed within the last few years. It is, therefore, the oldest frontier in the world of which the history is known to us.

Under these circumstances, it was a wise decision on the part of the University of Pennsylvania expedition to devote their efforts to excavations in Northern Nubia, and their first volume, entitled "Areika," is a report of their work in a region lying at the head or upper end of the great lake to be created by the raised dam. Dr. Maciver, who was in charge of the work, has produced a careful report of a carefully planned and successfully executed campaign. Perhaps the two most important finds which he made are, first, the rough masonry castle of a Nubian chieftain under the Eighteenth Egyptian Dynasty (1580 to 1350 B. C.), and, secondly, a large number of stone offering tables bearing inscriptions in ancient Meroitic writing. This new material, together with further examination of older documents already known, has enabled the able Oxford Egyptologist, F. L. Griffith, to undertake the decipherment of the still unreadable ancient Meroitic writing.

The Nubian country has furnished us three different systems of writing: first, an ancient hieroglyphic system, the signs of which are largely of Egyptian derivation. This system is the oldest and goes back several centuries before Christ, continuing then into the Christian age. The second is a cursive writing evidently developed by the use of pen and ink, but preserved to us only in specimens on stone. It closely resembles the Egyptian demotic and developed in the early Christian centuries, or at least this is the date of the specimens preserved to us. The third system grew up after the Christianization of Nubia in the sixth century A. D. It is made up of Greek and Coptic letters and was used for the translation of Christian literature into Nubian. All these systems of writing have now disappeared and Arabic is the sole present writing of these Nubian speaking peoples. Some recently discovered portions of the New Testament in the third or Græco-Coptic, system of writing have enabled Professor Schaefer of Berlin to demonstrate that the language for which this system of writing was employed in the early Christian centuries, was the Nubian still spoken on the Nubian Nile. This important fact, together with some other scattered indications, has led Schaefer to the conclusion that the people who wrote the other two earlier systems, the hieroglyphic and the cursive, was also Nubian—that is to say, that the Ethiopians of Meroé, that distant and mysterious kingdom of the South, towards which the Greeks as far back as Homer's day looked with so much curiosity, was a Nubian kingdom. Lepsius had also reached the same conclusion in 1843, while on his great expedition in Nubia; but he later changed his opinion and held that the people who left us the earlier monuments in hieroglyphic and cursive, were Bega—a people now inhabiting the eastern desert between the Nile and the Red Sea.

Attacking this problem with great skill, in a chapter which he has contributed to Dr. Maciver's book, Mr. Griffith shows that the cursive is an alphabetic system of writing, containing twenty-three letters; and that where the identity of the materials will permit, the cursive corresponds, letter for letter, with the hieroglyphic. He has, indeed, established with certainty the hieroglyphic equivalents of ten of the cursive letters. He has as yet not been able to read this cursive writing or to decipher more than a few proper names in the scanty examples of hieroglyphics which survive; but he has reached one conclusion, which, if established, will prove of great importance. The Nubian of the third, or Graeco-Coptic, system of writing, as shown by Schaefer, is inflected solely by means of *terminations*. Mr. Griffith finds indications of the extensive use of *prefixes* in the cursive documents. If such be the case, the language of the cursive is sharply distinguished from the Nubian of the Graeco-Coptic system of writing. The language of the cursive will not have been Nubian, but, as Griffith concludes, Bega. If this conclusion is right, the Ethiopian kingdom of the South in the early Greek days will have been a kingdom of Bega tribes, who, as already stated, still inhabit the eastern desert; while the Nubians of Christian Nubia will have pushed in from inner Africa at a later period.

Mr. Griffith is to be congratulated on his contribution to a highly important subject. On the basis of fuller materials which it is hoped future excavations may furnish, we may confidently expect that he will accomplish the decipherment of this long-lost language. The other finds of the Pennsylvania Expedition, while not of great artistic interest or importance, are nevertheless valuable and have found their way chiefly into the museum of the University.

Mr. Beadnell's volume on "The Oasis of Kharga" is the work of a trained field observer and geologist, and furnishes a very interesting account of the largest of the Egyptian oases. His description of the geological conformation of the country, of the ancient wells, and the methods of boring new ones at present employed, as well as his account of the resources of these strange depressions in the desert, should make the volume the standard account of a Sahara oasis. In his discussion of the his-

tory of this and the other Egyptian oases he has been unfortunate in the choice of his secondary sources, as the oases are far older in the history of Egypt than one would conclude from the reading of his book. The volume is excellently illustrated and accompanied by useful maps.

English Literature in Account with Religion. By Edward Mortimer Chapman. Boston: Houghton Mifflin Co. $2 net.

The Religion of H. G. Wells and Other Essays. By Alexander H. Craufurd. London: T. Fisher Unwin.

No great while ago the eyes of lay readers would have turned, after one incurious glance, drearily away from the titles above; every one would have known exactly what dejecting banality to expect. Meantime, we have been suffering a sea-change. The spiritual welkin, long befogged and breathless, now quivers with uncertainties, faint flushes of promise, new hope of adventure—the wind of thought finding its wings once more. The literary, the philosophical, and the religious are cautiously plucking up heart together. Something important seems about to occur—perhaps has occurred already. Neither Mr. Chapman nor Mr. Craufurd knows precisely what it is; but both are conscious of a novel and significant breath stirring the face of the waters. For this reason their books have a symptomatic and barometric interest independent of their considerable literary virtues.

It has been common to speak of the nineteenth century as the era in which the warfare of science and theology terminated in religious and philosophical despair. But as we draw farther away from it, see more clearly its links with the past, see it linking itself quietly enough with the future, we begin to regard it, like every other age since the world began, as merely an "epoch of transition"—not hopelessly ultimate, after all. We begin to look upon its desperate and apparently sanguinary conflicts as the perennial contentions over form and vesture, in which there is much rending of garments but little loss of life. Thus Mr. Chapman, after examining the literature of this skeptical age, is profoundly impressed with its debt to religion and religion's debt to it. He admits great carnage among the shadows of faith, but he is resolute that the substance has got off unscathed.

In order to make good this position, he looses the irrational knots of church vesture and entirely unclothes religion of theological dogma. His preliminary attempt at defining the residual substance is broad, and his subsequent applications make the limits of his meaning still broader. Religion is that "faith or experience" which suffices "to make life coherent and harmonious"; it is the sense of obligation and responsibility; it is the sense of wonder, pity, tenderness, awe, sacrifice, and consecration. All these things are within the meaning of religion, and are under the special covert of its wings. They are present, too, in all great literature as indispensable elements in its greatness. They were incorporated in the various substitutes proposed in the last century for outworn Christianity. They were left unmolested even by the utilitarians and the militant men of science, who declared war on what they regarded as the misleading poetical fictions of the Bible. They must continue to be present in life and literature, or the coil and tumult of existence will be reduced to the proportions and significance of Carlyle's vase of Egyptian vipers. They are real because they persist; they persist because they are indispensable.

These things substantially Mr. Craufurd finds in the writings of H. G. Wells; on the strength of them he speaks of the "religion of H. G. Wells" with the greatest respect. A clergyman issuing from Oriel College, he declares that Christian thinkers who would minister to the wants of this inquiring age "must do so by addressing themselves chiefly to the vivid thoughts and feelings of detached, unsystematic, and more or less representative minds, rather than to the dry-as-dust professors of an antiquated learning that has well-nigh lost all true vitality." Accordingly, he goes a long way with the writer he criticises. He agrees with Mr. Wells that we should form our beliefs to suit our needs, and make our religion answer to the highest aspirations of humanity. But he finds Mr. Wells's understanding of the aspirations of humanity defective; he finds his distaste for the character of Christ, his ignoring of God and immortality, sure indications of his failure to perceive some of the most fundamental human needs. "If God and a future life do not exist," urges Mr. Craufurd, "we must, it would seem, invent them, if we seek to evoke from humanity its noblest and most persistent efforts." This is also the position of Mr. Chapman.

The point of interest in both these books is the ground on which their authors hold to Christian orthodoxy. Like G. K. Chesterton, they are orthodox with a difference—in an untraditional and exhilarating fashion. Like him they have rejuvenated their understandings in the waters of philosophical Pragmatism. Mr. Craufurd's book is suggestively studded with references to Theodore Parker, Emerson, Whitman, John Fiske, and William James. Commenting on Wordsworth's famous

> Something far more deeply interfused,
> Whose dwelling is the light of setting suns—

Mr. Chapman says: "I would not dogmatize here. If any reader prefer to say that there only seems to be something, I am content for the moment to have it so; simply remarking that the *seeming* is one of the vital facts of life." (Quoth Touchstone, "the truest poetry is the most feigning.") The return to orthodoxy represented by these writers is like the return to Elizabethan literature on the part of the romanticists. They feel that the various rationalistic isms of the nineteenth century—Positivism, for example—is to Christianity as the poetry of Pope is to the poetry of Shakespeare. They reject Positivism, as Wordsworth and Coleridge rejected Pope, not because it isn't sound so far as it goes, but because it is hopelessly inadequate to represent the height and depth of man's desire—the "vital facts of life." They try God and immortality as hypotheses, and they stand the test prescribed by the scientific age; they *work*—they fit the facts. Such is the hope of the new orthodoxy.

Histoire de la Langue Française des Origines à 1900 (III, 1600-1660: première partie). Par Ferdinand Brunot. Paris: Armand Colin.

The publication of the extensive work of Ferdinand Brunot on the history of the French language, which is the subject matter of his professorship in the University of Paris, advances a material step further. The first volume (548 pages; 15 francs) reached from the Latin epoch to the Renaissance; the second (510 pages; 15 francs) dealt with the sixteenth century; the third, when completed, will give the formation of the classic language from 1600 to 1660, and of this volume the first part is now published separately (456 pages; 12.50 francs). It is divided into three books, of which the first is eminently readable by anybody interested in French history and literature; and one need not be a special student to find savory mental food in the remaining and more technical pages.

Paris literary opinion received a shock at the opening of the seventeenth century when the newcomer Malherbe began his reforms, weeding out the vocabulary and reducing the language to rule. His typical adversary was that erudite and entertaining old maid, Mademoiselle de Gournay, *fille d'alliance* of Montaigne and editor of his works. Even she had to yield to her printers so far as to change in his sacred text "a few words of no consequence, such as adverbs and articles which seem to them somewhat crabbed for the taste of certain over-nice persons of this century." Malherbe's influence and the number of his influential followers grew apace. A fury for grammar raged in the *salons*. Voiture wrote to Mademoiselle de Rambouillet on the suppression of the conjunction *car*,

which Gomberville had achieved in his romance, "Polexandre." A *recommandaresse* of wet nurses complained that, in good houses, they now ask if the nurse speaks French well, "which she cannot guarantee, but only that which belongs to her state, that she has good milk, is and shall always be, please God, of good life, and shall die without reproach—with which the *monsieux* do not content themselves."

The discussion of the good use of the day introduces us to the *pédant* language; to that of the Palais or lawyers of the Parlement, whom Jodelle describes as "speaking of war in *pur jargon*"; to city and to court use. It was the latter which was bound to prevail and make of French that "classic" language whose formation is the subject of this volume. The foundation of the Academy, closely followed by its project of a dictionary; the opposition led by La Mothe Le Vayer; the carrying on of Malherbe's good work by Vaugelas and more opposition; preciosity, which was not new, but was always creating new words and phrases; and the burlesque, which is all the more instructive as it is the negation of all rule, make up these generally interesting pages.

The second book, "le Lexique," uses to great advantage the curious foreign-language dictionaries of the day—French-Latin, French-Flemish, French-Spanish, French-Italian, French-German, and French-English (eight of the latter from 1611 to 1673). In succession the author takes up words already old; improper and *réaliste* words (*poitrine* fell under the reprobation which "leg" later incurred in New England); low, dialect, and trade words; neologisms; *travail sémantique;* and various expressions and figures. This book has a valuable biblographical appendix on the dictionaries published during the period, giving the libraries in which the author has found them.

The third book gives a very complete morphology of the parts of speech at the time. A lexicological index, in the alphabetical order of words, occupies fourteen pages; and thirty-six pages of "abbreviations" of editions from which examples are cited have the interest of a bibliography.

Report of the Work of the Commission Sent Out by the Jewish Territorial Organization to Examine the Territory Proposed for the Purpose of a Jewish Settlement in Cyrenaica. By J. W. Gregory, D.Sc., F.R.S., etc. London: Ito Offices.

The object of the Ito, or Jewish Territorial Organization, of which Israel Zangwill is president, is to procure a territory upon an autonomous basis for those Jews who cannot or will not remain in the land in which they at present live. The project of colonizing the Cyrenaica was determined partly by its geographical position, highly convenient for persecuted Jews emigrating from Russia and Rumania, partly by the fact that the region wears the Turkish suzerainty so lightly that practical autonomy might be hoped for, though the word could not be used. Moreover, the Cyrenaica approaches Palestine as a sentimental goal, since it was once a home of Judaism, "the land that is in league" of Ezekiel. On the eastern frontier Egypt would be useful as a civilized neighbor, and the Turks to the west were not unwilling that a country that they have had to abandon to the Arabs should be regenerated at the expense of others. It was therefore with the countenance of the Turkish Government, and with high hopes based on the glowing accounts of the Cyrenaica in classical literature, that the Ito Expedition set out in July, 1908. It consisted of an engineer who was to survey and to report on the water supply (a question naturally uppermost when you are about to colonize a desert), a medical man to consider the probability of epidemics, an expert on agriculture, and Dr. Gregory, the professor of geology at the University of Glasgow. Never has a project so visionary been safeguarded with precautions so scientific. Few people realize how great a rôle Cyrene and her distinguished sons played in the past before she became Jewish, lost her prestige, and disappeared from history. Even Mr. Zangwill's Report, concerned as it is with her Jewish traditions, ignores nearly all the associations that spring to the mind of the Greek scholar. Tennyson himself was not quite clear about Cyrene's position on the map when he set the Garden of the Hesperides on

> a slope
> That ran bloom-bright into the Atlantic blue,

—unless, indeed, he intended to break with the prevailing tradition of the locality of the famous apple tree with its golden fruit. It is, of course, the Mediterranean that is the great commercial high-road waiting to be exploited once again by Cyrene as in the days when the Cilician pirates called these waters "the golden sea" because they could always waylay a rich cargo from the Cyrenaica. In Pindar's day it would be a cargo of silphium, a plant now apparently extinct (it is ignored in the Report), which the merchant kings of Cyrene fostered as a royal monopoly, like Congo rubber to-day. Besides this plant, which was used as a drug and for cooking and was sent in shiploads to Capua, as we see from the "Rudens" of Plautus, Cyrene exported pottery and chairs. But it was her splendid horses and chariots that made her the envy of Greece at the great games, and the swan-song of that dynasty of traders, the Battiads, was sung by Pindar in the Fourth and Fifth Pythian Odes.

> Kingdoms lapse, and climates change, and races die,

says Tennyson, but we are now told that the climate of Cyrene has not changed, that the population can never have been more than fifteen to twenty thousand, and the inspiring legend that the Jews in that district once rose and massacred 220,000 Greek and Roman inhabitants must be discarded. The fact is that the rainfall is and always was quite insufficient. At the best, Cyrene could have had only a gallon a head per day for a population of fifteen thousand, and that allows none for those horses that were the envy of Greece. It seems likely, too, that wild animals were as scarce then as now. One of Cyrene's most agreeable legends is of the lion who met the first founder, Battus, when he landed, and fled into the Libyan wilderness in terror of the hero's stammering tongue. But there were no lions to be dismayed by the accents of the Ito Expedition. "A dead jackal and a living hare were the only wild animals"; but we are told that rats and mice "are said to be found in the country. . . . Donkeys are neglected. As a consequence they are small and dispirited. . . . Crickets and locusts, fleas and flies are numerous." The first Greek colonists brought no women, and the Ito explorers recommend that, if the colonizing scheme should be attempted, only a few men should be imported at first, and those "encumbered as little as possible with women and children."

But the Cyrenaica will not be colonized by Jews; Cyrene will remain a derelict, and all the gold of the Rothschilds will not people those Libyan wastes. There are two practical difficulties recognized by the Expedition, either of which would have been enough to blight their hopes. The Arabs are unfriendly, well-armed with modern rifles, and evidently prepared to resent any intrusion. If that were not so, Cyrene would long ago have been a centre of archæological excavation. But still more fatal to the prospects of that agricultural life desired by the Ito for their immigrants, is the scarcity of water. What the Arabs would obviously shed their blood to defend from invaders is not their hearths and homes, for they are Nomads, but their entirely inadequate wells. "The absence of impermeable rock layers in the Cyrenaica explains the paucity of its surface waters, and renders practically impossible the construction of storage reservoirs large enough for irrigation. The excessive porosity of the rocks also forbids reliance on wells." The dry bones of Cyrene cannot live again.

There is, however, another obstacle to any such project of an agricultural community for the Russian and Rumanian

Jew, though it is one that Mr. Zangwill does not choose to face. The life that he had planned for the North African colony involved incessant and virtually unremunerative toil. The colonists would need to have the outdoor tastes, the hardiness, the thrift, the self-denial of the Pilgrim Fathers. Mr. Zangwill seems to forget the existence of the United States and the total lack, as far as we are aware, of any enthusiasm on the part of the Eastern Jewish immigrant for the simple life of agriculture, even under the most favorable conditions. The results of immigration to the United States have shown clearly that an oppressed agricultural population fleeing from Europe will always cling to the crowded life of large cities, and that these are the last persons whom you can persuade to make the desert rejoice and blossom as the rose.

Mr. Zangwill, in his Introduction to Dr. Gregory's Report, declines to accept as necessarily final all the damaging evidence of the experts of the Expedition. He still believes that the Cyrenaica, with its Hinterland, combines a greater number of qualifications for an Itoland, as defined by the Russian Council of the Ito in 1907, than any country of the Old World. But the Report brought disillusion to the Council as a whole, and the costly experiments in buildings, roads, railways, and a harbor suggested by the experts are indefinitely postponed. The Report contains much that is of interest to classical scholars and archæologists, and is well illustrated by photographs.

The Great Pacific Coast. By C. Reginald Enock. New York: Charles Scribner's Sons. $4 net.

The author of this volume, who is an F.R.G.S., is an astonishingly persistent traveller, even for an Englishman. A score of times, he tells us, perhaps oftener than any other European, he has stood on the white mountainous heights of Peru, and has lived in large towns where the people pursue their daily occupation at an elevation greater than that of the summit of any of the California or Oregonian snow queens, or of Mont Blanc. He has written books on the Andes and the Amazon, on Peru, Mexico, and other countries. His latest volume covers twelve thousand miles of territory from Chili to Panama and California, thence through Oregon and Washington to British Columbia and Alaska. He writes chiefly to entertain the reader, incidentally also to tell him many things about the regions traversed, and to dwell briefly on personal adventures, some trivial, others serious. Among the latter were two hairbreadth escapes; one in Mexico, where a peon guide took him on horseback up a mountain so steep in one place that only by urging the horse to utmost speed could it be kept from overbalancing—the guide's excuse being: "I came up here when a boy, on muleback, but the road has fallen away since then"; another time, in Arizona, when he had to hang on to a rickety viaduct while a freight train passed over him.

Mr. Enock comments on the difference between the black people who live under British and those who are under American rule; on the courtesy of the Mexican as contrasted with the American, who is often aggressively uncivil, merely to assert his equality, not because of inherent disagreeableness. He offers much good advice to the English on the subject of emigration to Canada. He wonders what sort of adults the American children will make who are brought up on the colored supplements of our Sunday papers. Such moralizings, however, are incidental; the bulk of the author's remarks relates to things seen by him and likely to be seen by those tempted by his descriptions to follow in his footsteps.

Notes.

Justin McCarthy, whose "History of Our Own Times" covers the reign of Queen Victoria, is now preparing to add to that work an eighth volume, which will deal with the events of the reign of King Edward VII.

G. R. Agassiz, who is preparing a life of his father, Alexander Agassiz, requests that letters bearing on the subject may be sent to him at the Museum of Comparative Zoology, Cambridge, Mass. If so desired the letters will be copied, and the originals returned to the owner as soon as possible. Those who are unwilling to part with the originals will confer a favor by having copies made at the expense of Mr. G. R. Agassiz, and sending these copies to him at their convenience.

Elizabeth Wager-Smith, who has already written several manuals of the great German card game, now offers "Skat: Principles and Illustrative Games" (Lippincott). The book opens with an instructive and entertaining chapter on the Origin and Characteristics of the Game.

The Yale University Press has issued in a slender little volume Prof. Henry A. Beers's address before the Modern Language Club of Yale, on "Milton's Tercentenary." The essay deals more with Milton's relation to the spirit of the times than with his art. It is worth preserving.

It will be sufficient barely to announce the appearance of four more volumes (VII to X) of Scribner's Memorial Edition of George Meredith. The novels now added are "Vittoria" and "Harry Richmond." Of the typographical excellence of this edition we have already spoken.

We welcome "Burdett's Hospitals and Charities" for 1910 (London: The Scientific Press), and congratulate the editor, Sir Henry Burdett, who, as he observes in the preface, has borne the burden and responsibility of the compilation for twenty-one years. The present issue contains two new chapters, one on orphanages, the other on state aid to hospitals in the United States and Canada. The price, which has hitherto been below the cost of production, is this year raised to 10s. 6d., "which still leaves it, having regard to its size and the character of the information it contains, one of the cheapest books of reference issued from the press."

We have already had occasion to note the "Complete Edition of Friedrich Nietzsche," translated by various hands and edited by Dr. Oscar Levy. Hitherto the volumes have come to us from the London publisher, T. N. Foulis. The handling of the books in this country has now been taken over by the Macmillan Co., from whom we have received the following six volumes: "Human, All Too-Human." "On the Future of Our Educational Institutions," "The Will to Power," "The Birth of Tragedy," "Thoughts Out of Season, Parts i and ii." Two more volumes, viz., "Thus Spake Zarathustra," and "Beyond Good and Evil," which have appeared in the London edition, we have not seen with the American imprint. The works, when complete, will extend to eighteen volumes.

Five letters of John Hay, written when he was about twenty years of age, are printed in the small volume, "The Poet in Exile" (Houghton Mifflin), so called because he was then in the unwelcome surroundings of Warsaw, Ill., after leaving the more congenial literary atmosphere of Brown University and the coterie which grouped itself about Mrs. Whitman in Providence. Dreams of the life of a poet, instead of dreams of state, filled the mind of the future author of the Pike County ballads, and he looked with distaste upon the lawyer's career, which his father had chosen for him. He writes:

> In spite of the praise which you continually lavish upon the West, I must respectfully assert that I find only a dreary waste of heartless materialism, where great and heroic qualities may indeed bully their way up into the glare, but the flowers of existence inevitably droop and wither. So in time I shall change. I shall turn from "the rose and the rainbow" to corner lots and tax titles, and a few years will find my eye not rolling in a fine frenzy, but steadily fixed on the polestar of humanity—$.

The letters were written to Miss Nora Perry, and are edited by Caroline Ticknor.

There must be a great many people who have been speaking Irish all their lives, without knowing it. "When our Irish forefathers began to adopt English," says P. W. Joyce, in his "English as We Speak It in Ireland" (Longmans), "they brought with them from their native language many single Irish words, and used them among their newly acquired English words." And not only Irish words, but Irish idioms and phrases have taken part in the invasion and become thoroughly naturalized. It will be a surprise to most people that the method of "assertion by negative of opposite" is Irish; that it is Irish to say, "A glass of whiskey will do us no harm," when we mean that it will do us good. It is Irish to say of an elderly maiden that she is no chicken, or to speak of its being no joke to be caught in a heavy shower without an umbrella. Yet Mr. Joyce has his authorities pat. He quotes from the old Irish tales, "The enemy slew a large company of our army, and that was no great help to us"; and the poet who has been

grossly insulted "rose on the morrow, and he was not thankful." So, too, we learn that it is Irish to give emphasis to a statement by adding the words "and no mistake." From the same source comes "I'll engage" you did this or that, in the sense of "I wager" you did; "I'll go bail"; "aye, is it"; and the repetitions "so he did," "so I do," "so it is": as in "he hit me with a stick, so he did, and it is a great shame, so it is." More suggestive of their origin are phrases like "I believe you," and "what would ail me not to?" But it is unquestionably a surprise to find a Celtic heredity claimed for such apparently universal expressions of ready assent as "I don't mind if I do," or "Would a duck swim?" A very common exclamation in Ulster, we are told, is "No, but did you?" and it is a common Irish phrase, *ná bi leagal ort* that has given us our "never fear." On the contrary, there would be danger of misunderstanding if, outside of Ireland, a visitor coming in and finding the family at dinner, should say, "Much good may it do you." Mr. Joyce admits that in Ireland the people are "rather prone to exaggeration." Hence, a chapter on Exaggeration and Redundancy. It is common to say of a person with a persuasive tongue that he "would coax the birds off the bushes." It is Irish to say "I'd give my eyes," "I'll follow you to the world's end," to let grass grow under one's feet, to be frightened out of a year's growth, to swallow a dictionary, to jump out of one's skin, to have the road fly under one, or to be so rich as to be rotten with money. What would be left to English verbal picturesqueness if the Irish were taken out, we fear to think. Until that time, however, we may quote the Irish way of describing a man who is very short and very fat: "If you met him on the street, you'd rather jump over him than walk round him."

A timely reprint of the appreciation of Björnstjerne Björnson, by William Morton Payne, which originally appeared in the *International Quarterly*, is now made by A. C. McClurg & Co. It contains additions in the way of translation, anecdote, and consideration of the poet's later works. Of Björnson in his home—after speaking of him as the orator and teacher—Mr. Payne says:

> In his more intimate relationships, on the other hand, in face-to-face conversation or in the home circle, the man takes on a quite different aspect; the prophet has become the friend, the impassioned preacher has become the genial story-teller, and shares the gladsome or mirthful mood of the hour. Such a personality as this may be analyzed: it defies any concise synthesis. One resorts to figures of speech.

To review Ralph Nevill's "Light Come, Light Go" (Macmillan) would be to make a selection from the great mass of information and anecdotes regarding gambling and betting in all its forms, brought together in one book. We could, on a pinch, add a story here and there from our own reading, but the addition would be of no significance. England and France furnish the bulk of the material, and the eighteenth century and the early years of the nineteenth offer the most startling anecdotes, although there is nothing in the book more interesting than the careful study of present-day gambling at Monte Carlo and the analysis of the various futile schemes to assure winning. Mr. Nevill mentions a dice game of creps or craps common in the old days of the Palais Royal and still played in Alaska, sometimes on the very boards brought to California by French emigrants in the forties. He seems not to have heard of the modification of the game played in our cities.

Sophie Shilleto Smith has no new information to bring in her life of "Dean Swift" (Putnam), and her manner of relating the known events is not more than moderately entertaining. The great crux of Swift's life and character, the question of his marriage to Stella, she waives with a "What does it matter?"—and this in a long chapter which undertakes to set the Dean before the world as a Don Quixote and flower of chivalrous devotion to the ladies. But if our author has no new facts, she has abundant new interpretation of them. Swift was "an idealist"; as for his ambition, he merely "stood on a pinnacle and demanded a reward to crown the citadel"; he was in advance of his age in his attitude toward women; he allowed no coarseness before them; he was without reproach in the tragedy of Vanessa; he writes the "Tale of a Tub" in a spirit of "genuine optimism"; "Shelley and Swift [was there ever a more incongruous junction of names?] are, perhaps, the two best examples of the altruist entirely misunderstood"; he had the childlike imagination described by Francis Thompson:

> Know you what it is to be a child? It is to be something very different from the man of to-day. It is to have a spirit yet streaming from the waters of baptism; it is to believe in love, to believe in loveliness, to believe in belief; it is to be so little that the elves can reach to whisper in your ear. . . .

In all the ignorance and perversions of recent biography it would be difficult to find anything more grotesque than this assimilation of the spirit of Swift with that of Shelley and Francis Thompson. As sensible lives of Swift are already in existence, we can see no excuse for the writing or the reading of such nonsense. We observe that there is no mention of Craik's Life in the strange bibliography appended to the present work.

The historical contrast between the Ionian and the Dorian spirit is familiar to all readers of Thucydides, Curtius Arnold, Pater, Wilamowitz, and Eduard Meyer. But as a term of ethnical origins Ionian is still as problematical a word as Pelasgic. Were there proto-Ionians in Asia Minor before the Ionian colonization? Were the Ionians the original dough or the later leaven of the population of Attica? Were they the survivors and inheritors of Mycenæan or Ægean culture, or like the Achæans and the Dorians iron-using invaders from the regions of the Danube? Did the Ionians make the Ionian migration, or did the migration make them, and is Ionian merely a name for mixed tribes of colonists driven out from European Greece by the pressure from the North? David G. Hogarth's six lectures on "Ionia and the East" (Frowde) are the latest contribution to this elusive discussion. He does not claim to have propounded many novel conclusions, but merely to have collected new evidence that tends to define and clear up the truth of old theories. The elements which went to the making of the Ionians are those of all the Hellenes: "A mass of the old Ægean stock, which had long been participant in the prehistoric civilization of the Ægean Bronze Age, came to be leavened by the infusion of northern blood drawn from the area of mid-European culture." The Ægean element was relatively preponderant in the tribes that came to occupy the part of Asia Minor afterwards known as Ionia. But the territory in which they settled had not itself been a seat of Ægean culture. It had been closed to the Ægean civilization by the domination, first of a Hittite, and then perhaps of a Phrygian inland power. The weakening of this power by Assyrian pressure threw the coast open for settlement, and left free play for the first expansion of historic Hellenic civilization known as Ionian.

By these hypotheses, Mr. Hogarth thinks he can account for the sudden outburst of this civilization—inexplicable if the Ionians were merely rude northern tribes—and for the traces of Oriental influence in the art of Ionia. The chief mediators with the Orient were the Hittites and the Phrygians, and probably not the Phœnicians, whose rôle has been greatly exaggerated. For confirmation of these views, Mr. Hogarth appeals to the treasure of the earliest Artemision discovered by him at Ephesus in 1904. These specimens of early Ionian art, dating perhaps from the eighth century B. C., he finds closely analogous to the "suh-Ægean" art of the Enkomi treasure found in Salamis on Cyprus, which he would date at the very end of the Bronze Age. The traces of Oriental influence in both are to be explained in the same way. Mr. Hogarth recognizes the uncertainty of all conjectures of this kind, and is not inclined to dogmatize. It would perhaps be expecting too much to ask that Mycenologists and Minoans should refrain from speculation altogether and confine themselves to the bare statement of the Greek tradition and the facts of archæological discovery in these prehistoric matters. But it would release an immense amount of the Hellenist's time for more profitable reading.

A valuable source for the study of political and constitutional history has been made available by the publication, by authority of the State of New York, of the "Messages from the Governors" (Albany: J. B. Lyon Company, State Printers). There are in all eleven volumes covering the period from the meeting of the first representative Assembly of Colonial New York in 1683 to the beginning of Gov. Hughes's first Administration in January, 1907. Ten volumes are taken up with the text of messages and accompanying State papers. The eleventh volume, perhaps the most valuable of all, is a comprehensive index of the whole with valuable tabulations of law cases cited and constitutional references. It is so rare to find works of this sort carefully and fully indexed that it is a relief to discover with this compilation a key of such utility. The work of editing has been competently done by Charles Z. Lincoln, whose experience for his difficult task comprised service as counsel for Govs. Morton, Black, and Roosevelt. He has provided historical introductions for each volume, and in the earlier period has found

it necessary and useful to piece out the sometimes meagre records by extracts from other contemporaneous records, all of which work seems to have been done with a keen regard for historical accuracy. Throughout the volumes there are frequent footnotes, not only explaining the text but providing careful citations to cases and decisions mentioned, and a systematic analysis of constitutional questions and legal development as they arose. This makes the work of considerable value for students of the development of legislative and constitutional problems, whereas without it a searcher would have to grope largely in the dark. The books are printed in clear type on good paper and are well bound.

For Samuel G. Camp's "Fishing Kits and Equipment" (Outing Publishing Company) there should hardly seem to be a need, since, though the chapters were well enough as contributions to a sporting magazine, they are not sufficiently important for a book, and contain nothing that is not already to be had in more valuable volumes. The illustrations are not wisely chosen. For example, there are no helping diagrams for such processes as the tying of leaders while a large half-tone shows four rods which vary in price from $5 to $30, but which, in the picture, appear identical. The English is slipshod. Not to speak of split infinitives and such minor weaknesses, the book is full of sentences like the following: "But the American angler who follows the above plan is a very rare bird, however numerous they [*sic*] may be in Merry England"; "The cheap fly is a snare and a delusion to the angler only."

"Old Hallowell on the Kennebec," by Emma Huntington Nason, published by the author at Augusta, Me., is notable among town histories, both for its execution and for the inherent interest of the subject. This pleasant town, opposite Augusta, was successively an Abenaki village, which was first Christianized by the Jesuits, and later acquired as a trading post by the Plymouth Colony. The foundation of the town goes back to 1771, its incorporation as a city, with which the story ends, dates from 1852. People of substance and education were among the early settlers. We find such names as Dummer, Sheppard, Merrick. The Vaughan family still occupy the house built for Dr. Benjamin Vaughan, M.P., just before the close of the eighteenth century. A man of wealth, he treated only poor patients, and free of charge; he had aided Franklin substantially in the peace settlement; his library of 10,000 volumes was put at the disposal of borrowing neighbors, in a small way he was an author. Cardinal Manning was the nephew of Dr. Vaughan's wife. It was people of this stamp that gave the community its flavor. It has supplied two Governors to the State. Among its literary citizens are Jacob Abbott of the Rollo books, and his brilliant son, Lyman Abbott; Prof. C. F. Richardson, the historian of American literature; Rev. J. H. Ingraham, a most prolific novelist of the sensational order, and his son, Col. Prentiss Ingraham, who, beginning as a Confederate officer, was a soldier of fortune under many flags, and wrote innumerable novels of a lurid cast. Such are a few of the claims of old Hallowell upon the reader's attention. Talleyrand visited it. William Hazlitt, the elder, preached there on trial, but his Unitarianism was too radical for the congregation. Charles Bulfinch designed the belfry of the oldest church. In short, the chronicle is variously interesting. It gains from the numerous illustrations based on early portraits or scenic photographs.

If the title "Britain at Bay" (Putnam) were not enough to make the stolid Englishman sit up, the fact that it is written by Spenser Wilkinson should cause disquietude from John of Groats to Land's End. With the peculiar solemnity and emphasis that distinguish this writer's ante-mortem surveys of his fatherland, Britain is warned that Germany looms large across the channel, controls the politics of the Continent, and might, at a pinch, force united Europe to attack England. "In that case"—a favorite phrase—England's vaunted supremacy on the sea, even if maintained, would not help much. You can't force enemies to make peace with you, even after the destruction of their sea power, unless you can get after them with horse, foot, and marines. The foe may not be able to attack you, but their distressing sentiments of hostility may be indefinitely continued. The only real safeguard against Germany is for England to have an army that can be sent over seas and make her, in contingencies, an aggressive ally on land. The way to get such an army is compulsory military service for a year—two for the mounted service. This can be done cheaper than the present army, the effective of which would be quadrupled. As for the inconvenience of serving a year, that is a patriotic duty, and once right principles were instilled, every Briton would be delighted to become a Tommy Atkins, with pocket money "not to exceed fourpence" daily. With such an army, invaders could be repelled, and, at need, a Continental ally substantially reinforced. We should hardly notice this ponderously harmful tract were it not that the English, and on occasion ourselves, take a melancholy delight in mumbling the tidbit of national peril. That would be an innocent recreation except that it has to be paid for heavily in guns, ships, and costly martial overprovision of all sorts. To make his bugbear horrific, Mr. Wilkinson piles up gratuitous suppositions indefinitely. He fails to see that with or without British troops France and Italy have the strongest motive, that of self-preservation, to oppose Germany. The idea of either being forced into an anti-British coalition is preposterous. Moreover, there is no reason to represent Germany, in which International Socialism is steadily gaining, as potentially an enemy of the human race. As for Mr. Wilkinson's paper army, it is by no means certain that an effective force can be obtained on a basis of a single year's service, especially if, as it is suggested, recruits who wish may live at home. But in a book of this sort one wide assumption more or less really doesn't matter.

From his "Critical Essays of the Seventeenth Century" Prof. J. E. Spingarn has reprinted "Sir William Temple's Essays on Ancient and Modern Learning and on Poetry" (Frowde), in a separate small volume. The study of Temple's style (he was, according to Dr. Johnson, "the first writer who gave cadence to English prose") would be serviceable in our schools to correct the modern tendency toward an unbalanced impulsiveness.

To the Albion series of Anglo-Saxon and Middle English poetry, Frederick Tupper now adds in monumental edition "The Riddles of the Exeter Book" (Ginn). In a prefatory essay of some hundred pages he discusses the principles of comparative riddle-study, the sources and analogues of the Exeter Book Riddles, authorship, poem, manuscripts, etc. The sixty-seven pages of text are illuminated by 223 pages, including notes and glossary. If Professor Tupper has not brought his subject into broad daylight, he has at least made darkness visible. The result of years of research in the most recondite territory, this volume is an admirably organized mine opened in the field of enigmatography.

The Oxford French Series (Frowde) contributes four volumes handsomely printed, and well equipped with introductions and notes. Two are works of George Sand, "François le Champi," edited by Alfred Mercier, and "Les Maîtres Sonneurs," edited by Stéphane Barlet. The other two are the entertaining "La Société française au XVIIe siècle," by Victor Cousin, issued by Leon Delbos, and Lamartine's "Le Tailleur de Pierres de Saint-Point," edited by W. Robertson. It is doubtful whether any of these books will make much appeal to American colleges, even the editions of George Sand, since "La Petite Fadette" and "La Mare au Diable" have long preëmpted the ground.

E. B. Iwan-Müller, journalist and author, died in London last week, aged fifty-seven years. He was engaged at different times upon the staffs of the *Pall Mall Gazette* and Manchester *Courier*, and from 1896 until his death, as an editorial writer on the *Daily Telegraph*. He was editor of the Oxford collection of "Shotover Papers," and author of "Lord Milner and South Africa," and "Ireland To-day and To-morrow."

Science.

"A Manual of Practical Farming," by John McLennan (Macmillan), belongs to the group of general works of which we now have so many. Its treatment is not deeply scientific; and this is both an advantage and a detriment. One would like, for instance, to have more attention to general principles, connecting classes of phenomena. There is in the book some undue compression: the chapter on ploughing contains no more than the average poor farmer is content to know, and barely begins to answer the numerous questions of the beginner. The treatment of the important subject of barnyard manures is most cursory. One is amused to find the recommendation not to spray plants when in blossom appended to the directions for spraying the potato, which, of all plants, needs such caution least, as its crop in no way depends on its flower. On the other hand, apart from these defects, the book has the advantage of being not unduly technical; it is generally direct and sensible, and gives much practical advice. Characteristic of this better side are the remarks on feeding the horse, and the care of the farm orchard as distinguished from the commercial.

Modern interest in children's gardens, chiefly in cities, has produced a flood of books, of which two of the most interesting are "Little Gardens for Boys and Girls," by Myrta Margaret Higgins (Houghton Mifflin) and "Children's Gardens for Pleasure, Health, and Education," by Henry G. Parsons (Sturgis & Walton). Although the correspondence is accidental, these books are complementary. The first is addressed to the child itself, and, in fifteen chapters, sometimes plain and practical, sometimes idealizing and stimulating, appeals to the two sides of child nature. Put directly into the hands of any child of ten or more, it should fulfil its mission. An excellent chapter treats of a subject usually neglected, indoor winter gardening. Mr. Parsons's book, on the other hand, is addressed to the teacher. Like the first, it is the outcome of much experience, for Mr. Parsons has had the practical direction of the movement for children's gardens in New York, started by his mother. He confines himself to the work which he has done, but its general course and his remarks upon it are of great interest. One is tempted to quote from this book passages on the relationship between gardening and citizenship. The civic instruction which the author draws from the making of a garden path and the seven lessons in the "pedagogy of the spade" are not merely novel, but significant. To one engaged in the work of children's gardening, even to a parent instructing his child, this little book will give assistance; to one inclined to doubt modern progress it will bring courage and hope.

"Explorations in Bolivia," by Major P. H. Fawcett, is the article of greatest general interest in the *Geographical Journal* for May. It is an account of his work in the delimitation of the eastern frontier at the request of the Bolivian Government, together with much valuable information about the whole country. In respect to its natural resources, he says it is a commercial Eldorado of the future, not simply from the undeveloped mineral wealth, but from the extensive pasture lands, the hard wood forests, and the vast areas of rubber trees. As to the future exploitation of the rubber, he is doubtful, because of the hostility of the savages to the white man. This he attributes to revenge for their treatment in the last century, when they were "sacrificed to rubber." Though the terrible methods of collecting have ceased, a perpetual war of reprisals is waged to-day. Among the tribes are dwarfs, "usually cannibals" who are hostile to everybody outside their own tribe. In the discussion of the paper when read to the Royal Geographical Society, Sir Martin Conway said that Bolivia was the most remarkable country in the world, because it contained regions of almost every kind from mountains covered with great glaciers and perpetual snow to tropical forests. There is also utter desert with expanses of white salts spread over vast areas, so that it "resembles a portion of the surface of the moon." Six illustrations and a map accompany the article.

"The Spirit of the West," in the *National Geographic Magazine* for April, is a résumé of the work of the Reclamation Service by its statistician, C. J. Blanchard. The vivid impression made by it is that never before in the history of the world have great desert regions been transformed in so short a time as three or four years into cultivated fields thickly inhabited. This is true of a large tract in Idaho, which in 1905 exhibited no sign of human life, but now is a garden rich and productive with pleasant homes on each 40 and 80 acres, while four prosperous towns, soon to become cities, have sprung up along the new railway. The strange sights of Mukden, the capital of Manchuria, and its wonderful art treasures are pleasantly described by Eliza R. Scidmore. Both articles are fully illustrated.

George Frederick Barker, professor emeritus of physics at the University of Pennsylvania, died in Philadelphia last week, aged seventy years. He was graduated from Sheffield Scientific School at Yale in 1858, and after holding chairs in several colleges was called to Pennsylvania in 1873. Professor Barker was the first to exhibit radium in this country. He served as United States commissioner to the Paris Electrical Exhibition in 1881, and as delegate or commissioner to several other electrical exhibitions and congresses.

Professor Robert Koch, the celebrated bacteriologist and discoverer of the germ of tuberculosis, died at Baden-Baden on Friday, aged sixty-seven years. Dr. Koch's medical education was received at Göttingen, and, after several years of private practice, he was made director of the Cholera Commission to India and Egypt. In 1884 he discovered the cholera spirillum, regarded as the positive test for Asiatic cholera. He also traced the germs of the then incurable sleeping sickness to the tsetse fly, and prepared an antitoxin. It was in 1882 that he discovered the germ of tuberculosis; in 1890 the world was startled by the announcement that Dr. Koch had discovered a lymph which would cure the disease. Thousands flocked to Berlin, drawn by the sensational reports, which, however, did not come from Dr. Koch himself. He explained the nature of his discovery, its scope and treatment, in an article in 1891. The scientific world still questions the value of the lymph in general practice. Dr. Koch continued his penetrating studies of the disease, and founded the Institute for the Investigation of Tuberculosis, which bears his name. In 1908 he provoked much discussion at the Tuberculosis Congress at Washington, because of his views on the transmission of the disease germ. He was for many years a professor in the University of Berlin, and director or member of many scientific bodies. He received the Harden medal and the Nobel prize.

Drama.

Vanderheyden Fyles, it is announced, will take up at once the duties of literary director of the New Theatre, succeeding John Corbin. This position carries with it the responsibility of selecting plays for presentation, subject to the approval of a committee of executive heads. Mr. Fyles is a son of Franklin Fyles, the dramatic critic and writer.

One of the leading events of commencement week at Middlebury College will be the presentation of a Roman drama, "Temporibus Hominis Arpinatis," a representation of dramatic moments in the life of Cicero. It deals particularly with the great conspiracy of Catiline, the play closing with Cicero's triumphant return from banishment. The end sought is educational rather than entertaining. It is to give "a true glimpse of the life of a civilization which has entered into and moulded all subsequent history."

"Oberammergau," by Josephine Helena Short (Thomas Y. Crowell & Co.), gives a full summary of the Passion Play, and a sympathetic account, profusely illustrated, of the village and the villagers, by one who speaks from intimate knowledge. The circumstances attending the production of the play are pleasantly described, and the personal tone in which the author writes accords well with the attempt to bring out the importance which the play has in the personal lives of the players.

A similar book by the Rev. E. Hermitage Day, "Oberammergau and the Passion Play; a Practical and Historical Handbook for Visitors" (Milwaukee: The Young Churchman Co.), dwells especially upon the spirit of the production. It contains a useful synopsis, and its practical guidance is accompanied by considerable descriptive matter; the historical background seems somewhat remote. An abundance of good illustrations and tasteful printing make this a neat little volume.

Sir Herbert Tree says that the play which Alfred Noyes has written for him is "a work of pure imagination, something between 'The Blue Bird' and 'Pinkie and the Fairies,' with a distinctly Christmassy flavor."

A new play by Henry James will be produced before long in Charles Frohman's Repertory Theatre in London. Granville Barker is superintending the rehearsals. It begins to look as if Mr. Frohman were really in earnest in his experiment with the literary and intellectual theatre.

The rural theatre seems to be making some advance in England. The Aldbourne Village Players are filling a two weeks' season at the London Coronet Theatre. They play every evening, with matinées on Wednesday and Saturday. The Aldbourne Village Theatre—"the first village theatre for village players in England"—was opened for Mr. McEvoy by Granville Barker on February 26. The play presented was "The Village Wedding," a cottage drama in three acts, which Mr. McEvoy had specially written for his company. Since the opening of the Aldbourne Theatre "The Village Wedding" has been played sixteen times to crowded houses, thousands of persons having travelled to the little village of Aldbourne to be present. The play has also been presented by the Village Players eighteen times elsewhere, including two performances at the Gaiety Theatre, Manchester. In London the whole original cast appears. After the London season the company returns to Aldbourne for the hay-making and harvest, and in the autumn will fulfil engagements in the provinces and in Ireland.

The Abbey Theatre Company of Dublin has begun an engagement in the London Court Theatre, opening with "Deirdré of the Sorrows," written by J. M. Synge not long before he died. "The Playboy of the

Western World" will also be given. A number of plays new to London are likely to be presented, including "The Green Helmet," a play in verse by W. B. Yeats; "The Image," a comedy by Lady Gregory; "The Eloquent Dempsey," by William Boyle; "Thomas Muskerry," by Padriac Colm; "The Glittering Gate," by Lord Dunsany; and two plays by a young dramatist, S. L. Robinson. The company will include Sara Allgood, Maire O'Neill, Arthur Sinclair, Fred O'Donovan, and J. M. Kerrigan.

Music.

Boston Symphony Orchestra Programmes. Boston: C. A. Ellis.

One of the bulkiest books that come to a newspaper office is the annual volume containing the programmes of the Boston Symphony Orchestra. The issue for 1909-1910 contains 1,860 pages. Many of these are filled with advertisements, some of which inconveniently interrupt the reading matter; but there is enough of this, too, to entitle the tome to a permanent place in a music-lover's library. The editor, Philip Hale, who, as a newspaper critic, can give free expression to his dislike of things that are good and great in music, must have suffered agonies in the attempt to write pleasantly about the concert pieces he has to comment on for these programmes, and the soloists who help to interpret them; yet he usually succeeds surprisingly well. He has somewhat curbed his pedantic passion for footnotes, and he generally avoids the foolish parsing in which some programme elucidators indulge. No less readable than his comments on the programmes are the "Entr'actes and Excursions" which are inserted to keep the Boston brain agreeably exercised while the orchestra has its intermissions. They are partly the editor's own, partly culled from diverse newspapers. Among the notable topics discussed are Bruckner, Therese Brunswick and Beethoven, Color Audition, Don Juan in Music, Legend of the Flying Dutchman, The Lorelei in Legend and Music, Newman's "Hugo Wolf," Schubert's First Singers, Liszt in Rome, Grenville Bantock, Does Music Pay? Chopin, In Defence of Transcriptions, Music in the Theatre, Daudet's "L'Arlésienne." There are sundry indexes, including one for the footnotes, and the programmes are given in full, with soloists, dates, and summaries of the number of times diverse composers were represented. The present conductor, Max Fiedler, evidently has not much interest in American music, only three of our composers—Chadwick, Converse, and Loeffler—being represented, one each. Some oddly assorted pairs are Beethoven and Strauss, who head the procession with eight hearings each, and Brahms and Wagner, who come next, with seven each. The number of composers altogether was forty-six. Max Fiedler's programmes are not always models, but, on the whole, they include what the public particularly wants to hear; and Mr. Hale's comments and erudite references will serve as a treasure-house for the editors of the programme books of the other American orchestras, the number of which has increased surprisingly within the last ten years.

Art.

THE TWO SALONS.

PARIS, May 18.

The artist in France cannot lay the blame of his own failure on the Government with the ease of the British artist, who is now convinced that art in England needs but the encouragement of the state to wake up from its torpor. Nothing strikes one more, on coming to the two Salons from the Royal Academy and the International, than the number of pictures and prints and sculptures bearing the label "commanded" or "acquired by the state." The state orders pictures and buys them, it provides wall space for the designs of its painters and buildings for the statues of its sculptors, and the results scarcely justify the belief of the British artist that inspiration must come with encouragement. Neither Salon makes a sign of that awakening, or rebellion, or new movement, or whatever it may be called, that some people think has long been due. Of course, the mistake is in counting upon an awakening with every spring. In the last century the interval of stagnation was long between the romanticists of the thirties and the impressionists of the seventies; and again there was a pause before the memorable secession of 1890 and the wonderful series of exhibitions that followed for some few years afterwards at the new Salon. So high a level could not be maintained indefinitely, and, while the older generation gives evidence of exhaustion, the younger generation has not yet come knocking at the door loud enough to make itself heard. In the old Salon the vigor, the vitality, that was once the redeeming merit of the exhibitors there, seems to have weakened; the huge *machin*, of old its chief feature, has dwindled in numbers and threatens to shrink in size; and, more unfortunately, Henri Martin, who knew how to bring to it distinction and decorative dignity, is this year among the absent. In the new Salon it is not the vigor, the vitality, alone of the artist, but in many cases the artist himself who has disappeared—for the time, anyway. You look in vain for such distinguished painters from abroad as Anglada and Zuloaga, Zorn, and Veber, Sargent and Liebermann, who at one period were always represented. The president, Roll, sends nothing, his forces this year reserved for Venice, and if Besnard does send, he is content to be represented by but one picture, and this one he has often surpassed. Altogether, the absences are so numerous and so notable that the collection as a whole inevitably suffers in interest.

I make this explanation at once, because, really, nothing is more characteristic of either exhibition than the prevailing dulness. However, a lesser degree of interest does not mean no interest, and I have not passed through these endless galleries entirely without my reward. In the old Salon I was attracted especially by the big series of panels by Jean-Paul Laurens, naturally, since they represent the Surrender at Yorktown and are destined for the Law Courts at Baltimore. It is suggestive to see them so soon after Abbey's designs for Pittsburgh now at the Royal Academy. Before the Frenchman's work you feel how much better he has mastered technically the needs and uses of mural decoration. He convinces you that he knows how to make his picture tell on the flat wall it is designed to cover, how to make his subject the motive for an effective arrangement of lines and colors. The windings of the road and the red-coated troops through the bare landscape, the enclosing fences, the raised fort, the stretch of water beyond—all become parts of an ingenious pattern, well-defined, well-balanced, restful to the eye. But so much is to be expected from the decorator who has learned his trade. More is looked for from the artist who should infuse the spirit of life into the pattern. It is just here that Laurens fails. His officers and soldiers are puppets whose place in the pattern is their only reason for being there. The title of the design cannot but recall another famous surrender that was made more famous still by the painter's record of it on his canvas—the surrender of Breda. Velasquez was not heedless of his pattern, his record is splendidly decorative. But he expressed, too, the emotion, the tragedy, of the incident; the meaning of his two central figures is none the less poignant because the lances which give the picture one of its names group themselves with such decorative beauty in the background. The central figures in Laurens's Surrender are but puppets like the rest, they convey no emotion, not so much as a hint of tragedy, they have not even a leading importance in the pattern. However, there is no other work on the same colossal scale that can compare with it.

In other kinds of work, it is extraordinary to find how persistently the Salon of the Artistes Français repeats the same familiar features spring after spring. Here again are two fine virile

landscapes by Harpignies, so like to his previous pictures that it is impossible to say anything more of them except that in one this year he shows—and shows superbly—Un Centenaire of the tree world, symbolic apparently of himself in the world of painters. Bonnot again vies with the photograph in the hard exactness of the likeness he obtains—Edmond Théry and Isidore Leroy this time his sitters. And once more Joseph Bail displays his skill in rendering an interior filled with homely domestic detail elaborately carried out in his Kitchen of the Hospital at Beaune; and also is assured of his success by the most flattering compliment of all, for his imitators abound on every side and brass and copper are brought to such a glorification of polish in so many canvases that Bail in self-protection should scrupulously shut his eyes forevermore to metal that is polishable. Also, the Spanish element is to the fore: Zo with a group of the dancing boys that bring the tourists in crowds to Seville at Easter, Ribera with Carmen, who is now an indispensable heroine of the modern exhibition; Salas with an equally indispensable religious procession; Vasquez with the inevitable scene from the Bull Ring—though Sorolla shows not. But no convention survives triumphantly continual usage, and the radiance of conventional Spanish sunlight grows a little dimmed. Nor has the American element vanished, though perhaps it is not quite so strong as in some recent exhibitions. Few things in the entire collection interested me as much as Richard Miller's Statuette Clinoise, rather for the rendering of still-life than as a portrait of the girl who sits before the idol and a mirror beyond it in which her face, with its clear rose tints and golden hair, is reflected. The beauty is in the gown of quiet but gorgeous plaid, in the figured bodice, in the reflection, above all in the little Chinese figure catching the light, and giving it out again as if the light shone but to express its subtle modelling and beauty of surface. Nothing could be better as a piece of painting, though there is no pictorial reason why the woman should be in the picture; she is a mere bit of still-life herself. Vonnoh is not so successful as he was with the portrait of his wife two or three years ago. In his Mr. Clifford Grayson, he has evidently sought to use his sitter as a motive for an arrangement in brown and black, the brown of the background repeated in the waistcoat, in the cane, in the gloves. That a portrait painter should spare a thought for color arrangement is a fact that in itself arrests attention at the old Salon. But Vonnoh's thought for arrangement has left him less time for the study of character. Another good portrait, reticent in color, graceful in pose, is one of a young girl by MacCameron; and Hubbell's La Sortie is an admirable full-length of a lady in street dress, who stands well within her frame, with the quiet, almost austerity, of color, which the younger school of Americans have learned from Whistler. Among the landscapes, Charles W. Eaton's forest in winter and moonlight night in autumn make their effect by the refinement of color and light, the wonderful gradation in the luminous sky, and the sympathy of observation. There is too a striking painting of winter by E. W. Redfield, a relief after the sprawling countrysides of the usual exhibitor, with whom inappropriate size and screaming color are bids for notice.

In the section of engraving, Pennell's etchings of England at Work, Timothy Cole's sympathetic reproduction of Carrière's Maternité with its envelope of atmosphere admirably suggested, and Henry Wolf's print after Corot stand out with a good deal of distinction, especially as year by year the old Salon devotes itself more exclusively to the big commercial print, to the enormous reproductive etching and lithograph, and spares less space and prominence to the original expressions of both these arts.

In the sculpture section, it was no doubt partly prejudice that drew me particularly to Barnard's La Vie Humaine, for not only are the two enormous designs, entitled respectively Le Fardeau de la Vie and Le Travail et la Fraternité, the biggest in the Sculpture Court, but both are to have their permanent place in my native country and, to appeal to me still more personally, in my native State. Whether from prejudice or not, certainly I found nothing else so ambitious in subject and composition. They are groups of nude figures, heroic in scale, elaborate in arrangement, full of detail, and replete with allegory for those whose pleasure it will be to unravel it from its symbols in stone. When it is a question of the more important question of the decorative value of these great groups, I feel, as I so often do with work designed for a special place and purpose, the difficulty, or perhaps I should say the impossibility, of judging it when in the discordant setting of a modern exhibition. As seen at the Salon, the composition of each group strikes me as a little incoherent; there is no fine outline, the separate forms hardly seem bold enough or simple enough or well enough subordinated to the effect as a whole. But the sculptor knows, as I do not, the conditions for which he is working, and the probability is that the groups, on the building which they are to adorn, would impress me very differently.

The balance of interest still lies with the Salon of the Société Nationale des Beaux-Arts, though not in the overwhelming degree of its earlier days. I have said how many of the exhibitors of greatest note have stayed away this spring. Too many of the others, like so many of the more distinguished members of the Artistes-Français, show an ever-strengthening tendency to repetition in subject and dependence on the same convention, with the consequent loss of the old spontaneity and freshness. I feel this very much in the work of painters like Gaston La Touche and Aman-Jean, whose work varies slightly as one sees it spring after spring, except for the size of the canvas and for the new models and sitters they sometimes—though not often in the case of Aman-Jean—may find. Both these artists have the great advantage of definite commissions to fill, but even this does not suffice to stimulate them to the point of facing fresh problems. In a new series of three panels for the state, La Touche gives but another variation of the old theme built up of swans and fountains, of sunlight and figures, ideal and real, so that I wondered if they might not be the same decorations I had seen in almost the same place a year ago. In a new design for the Musée des Arts Décoratifs, Aman-Jean's phantoms still wander and lounge in his phantom landscape, so alike in form and feature that they seem but shadows of one another, faint blossoms still blooming languorously among the fainter foliage as if they had not the energy even to fade with time. His work always has charm, but he allows it no chance to develop more virile qualities in the pale land of ghosts to which he restricts it.

Something of this same dimness, as well as the same repetition, is becoming as characteristic of the work of Barlow. But while his charm is no less than Aman-Jean's, the forms in his paintings have greater solidity. There are real women under the long cloaks he wraps about them, real heads under the white caps he always gives them to wear, seen though they are through the haze with which he envelops his peasants and their life. His color schemes are as subdued as ever, the accustomed sadness pervades the meetings of the quiet groups whom he once again arranges into so many new variations, this time four in number, of the old harmony. Frieseke has another series of small nudes in strong sunlight which filters through fresh green foliage, with a touch of rose or blue in the drapery lying across the grass; he returns to earlier motives in a group of two women watching a cage of little parrots, though their real purpose is simply to afford him an opportunity for painting the sumptuous details he delights in, and for weaving a decorative pattern out of the lines and ornament of their gowns, the cage, and the wall behind them. It is by the elimination, rather than the emphasis, of detail that Maurice Denis gets his effect, and he allows no voluptuousness of line to his figures, no charm of ornament, no dain-

tiness of dress, whether the subject is Orpheus with his lyre or Christ among the children, Joan of Arc receiving the Sacrament, or modern bathers on a modern stretch of beach. He has no important piece of decoration this year—important, that is, in size—but his Orpheus, with its arrangement of upright lines in a grove of trees, repeated in the figures clothed in long straight garments of archaic and austere cut, and with its well-distributed spaces of green, looks as if it were a suggestion for a mural decoration on a larger scale.

The growth of mannerism is no less marked among the portrait painters than among the decorators. One has come to know so well the water finish which Dagnan Bouveret gives to his sitters and the fashionable elegance that Gandara and Carolus-Duran lavish upon theirs, that one scarcely stops to look upon the yearly portraits by these painters, certain that if the modes they record have changed within the last twelve months their methods have not; though this year it is to Gandara the place of honor in the central gallery has been reserved, and Carolus-Duran has had an officer in the splendor of Italian uniform for one of his three sitters. Life, or its semblance, is apt to vanish from many portraits of masters as accomplished and of as established reputations. But not from Boldini's. His are never without life; on the contrary they overflow with life—in the sitter who is all vivacity and animation, in the painter who exults in the swift eloquent strokes of the brush that fill his canvas with the sheen and shimmer of silks and satins, and the glow and glitter of jewels. But, as I have pointed out often before now, his exuberance verges on caricature. His two ladies this year, one in a bewildering "creation" of gray, the other in as elaborate an arrangement of brown, almost step from out the canvas to meet you; their dress outdoes the exaggerations of the passing mode, and in the angular affectation of their pose and the meaningless gestures of their hands they are not far from degenerating into caricatures of the impossible ladies of the popular fashion plates. From both, it is a relief to turn to the little girl in his third canvas, not so much for the child herself, in simple frock and the long black silk stockings Boldini loves to paint, as for the great gray Persian cat she holds in her arms, rendered with a freedom and power and truth that make one wish all his sitters were so little encumbered by the fashions that too frequently distract him from themselves. Blanche is in less danger of becoming mannered, because he brings less character of his own, less sense of style to his work than either Dagnan Bouveret or Carolus-Duran, Gandara or Boldini. He has four portraits in the general exhibition, and, besides, a little exhibition to himself in one of the small galleries downstairs, and it cannot be said that he is a painter who gains by having so much of his work shown together. He is a good draughtsman, he has technical skill and vigor. He can see things for himself and put them down as he sees them; the trouble is in the way he sees them: his vision is commonplace. I think it is because of the lack of distinction that the series of portraits downstairs fail to make their effect. They are like the interiors he paints: true, exact, showing observation, but just without that indefinable quality that makes the little rooms painted by Walter Gay—six are now shown—such delightful masterpieces. Caro-Delvaille has a life-size full-length of Mme. Vallandri of the Opéra-Comique, but the figure is curiously unimpressive, easily forgotten for pleasure in the delightfully rendered vase of flowers and sheets of music on the table by her side. Ostermann has a portrait of the King of Sweden, a half-length, that might have been interesting if royalty nowadays did not seem to exact an uninteresting degree of finish from the painter when brought face to face with it. Because there is less finish, there is more character in the same painter's Archbishop of Lund. The fame of the sitter leads interest to Simonidy's very unpoetic presentment of the poet, half American and half-French, Francis Viélé-Griffin. The straightforward realism of Renouard's M. Binet, Architecte du Gouvernement, portrayed on the scaffolding with his builders and workmen, inspires confidence. Columbano also carries conviction by his uncompromising realism, almost brutality. I say nothing of J. J. Shannon because he shows no portraits I have not already seen in London. But I cannot pass over those of the young Boutet de Monvel, who endeavors to lend dignity to his sitters by an exaggerated effect of height obtained from a touch of perspective which is at least amusing. The people in the Place de la Concorde look up to his Comte E. de B., who stands there in the immediate foreground, as if he were a statue set on a high pedestal.

Perhaps I should have included Simon with the portrait painters, but his large group, La Poursuite, has the air rather of an impersonal decoration than the family group *en plein air*, for which I suppose he meant it. Two little girls, bare-footed, in short-waisted pink slips, one with flying pigtails, running, but with an effect of arrested motion, strive in vain to attract the attention of the mother and the baby in her arms who both stare placidly into space. The painting is immensely fluent and learned, as in his other two big pictures, one of Bretonnes battling and the other of Harlequin, Columbine, and Pierrot playing the Comedy, but it has hardly more suggestion of life than the splendidly gowned ladies of Gandara. No doubt there are portraits in Cottet's Ceremony in the Cathedral of Burgos, but the likeness in every case is subordinated to the spectacle, which would be more gorgeous than it is if he could have maintained throughout the splendor of painting achieved in the golden cope of one of the chief celebrants. Hochard, like Cottet, has gone to the church for subject and he has depicted in many mediums the ceremony, and the participants in it, of the canonization of Joan of Arc, but with hardly the eloquence inspired in him by the drama of the market place. Louis Legrand has no paintings, Charles Guérin but two, and both of comparatively small importance. Nor is there much among the landscapes and marines to detain one.

Rodin sends, as to the International in London, a female torso, but here adds to it the bronze bust of a man, strong in character. He himself figures in the work of Bourdelle and Soudbinine, both of whom honor the master by giving him the head and expression of a venerable satyr. Bourdelle is seen to finer advantage in a large bronze, with the movement powerfully expressed, its subject Heraklès Tue les Oiseaux de Stymphale. Bartholomé's fragment for the tomb of Rousseau in the Pantheon has not the big simple dignity of the figures and groups for his tomb at Père-la-Chaise; neither has his nude, a young girl, Au bord de l'Eau, though graceful and charming in a simple way. Here and there a bust, as, for example, a portrait of a young man by Jedrzejewicz, suggests character, and a special exhibition is made of the work of Lucien Schnegg. Otherwise, not much need be said of the sculpture one way or the other.

ISSUE THIS WEEK

Max Vernon's
In and Out of Florence

With 48 full-page illustrations from photographs and about 100 drawings by Maud Lanktree. 370 pp. With index. 8vo. $2.50 net; by mail, $2.67.

A reliable though delightfully informal book, liable to prove as attractive to fireside travellers as to those who actually cross the sea. Besides covering Florence's art treasures and the sights of interest to tourists, including the delightful excursions to Vallambrosa, and over the Consuma Pass, the Casentino, Prato, Pistoja, Luca, and Pisa, the author treats of such practical matters as House-Hunting, Servants, Shopping, etc.

They have just published:

"Vamba's"
The Prince and His Ants

By LUIGI BERTELLI. Translated by SARAH F. WOODRUFF. With 8 colored plates and many text illustrations. 12mo. $1.35 net; by mail, $1.48.

This book, which has had a wide popularity among the children of Italy, is now issued in a spirited translation. It is the engaging story of a boy who became an ant and had many thrilling adventures with other ants, and wasps and bees, and of his sister who becamo a butterfly.

"The impossible is such delightful fancy and so frankly make-believe—while the possible is so true and so fascinatingly told."—*From the Introduction by Prof. Vernon L. Kellogg, Author of "Insect Stories,"* etc.

M. Little's At the Sign of the Burning Bush

A Scotch tale of to-day. Though theologs are prominent in it, it is said to contain "not a word of preaching." Early British notices praise it highly, "Claudius Clear" devoting nearly three columns to it in the British Weekly. $1.50.

Times' Review: "Characters drawn with a sure hand, and with unusual subtlety. The story broadens and strikes deep roots into human nature and human life . . . a story that seems as if it might have been made out of the real experiences of flesh and blood, told with humor that is sometimes biting and sometimes gentle, and with very great humanness."

FOR THE SUMMER LIBRARY

GWENDA. By Mabel Barnes-Grundy, author of "Dimble and I," "Hilary on Her Own," "Hazel of Heatherland." An intimate, intense story, relieved by humor and a dash of worldly wisdom. 12mo. 350 pages. Frontispiece. $1.50.

THE TOP OF THE MORNING. By Juliet Wilbor Tompkins, author of "Dr. Ellen" and "Open House." A sparkling, wholesome story, full of humor, vivacity and charm. 12mo. Frontispiece in color. $1.50.

IN PRAISE OF GARDENS. Compiled by Temple Scott. Poems and verses about gardens from the whole range of English poetry. Charming in contents and in form. $1.25.

THE GARDEN IN THE WILDERNESS. By "A Hermit." A felicitous mingling of gardening and sentiment. Many illustrations, decorative end papers, etc. $1.50 net.

WOMEN AS LETTER WRITERS. Edited by Ada M. Ingpen. The best letters written by women from the 16th century until our own time. 12mo. 9 full-page portraits. $1.25 net.

From Page's List

BEST NEW BOOKS
FOR SUMMER READING

From Page's List

L. M. Montgomery's
KILMENY OF THE ORCHARD

Third large edition since publication a month and a half ago.

"An unusually sweet romance—beautifully told."—*Pittsburgh Bulletin.* "The entire atmosphere of the story is redolent of simplicity, naturalness, and charm."—*Rochester Post Express.* *Cloth, illustrated by George Gibbs, $1.25*
By the author of "Anne of Green Gables" and "Anne of Avonlea."

COMMENCEMENT DAYS
By VIRGINIA CHURCH.

A novelization of the successful play of the same name.

"Bright, new and interesting. The best college story of the year."—*Boston Globe.* *Cloth, illustrated, $1.50*

MY HEART and STEPHANIE
By REGINALD WRIGHT KAUFFMAN.

"Mystery, and international complications combined with a good love story make Mr. Kauffman's latest work most agreeable reading for an idle hour."—*Cleveland Plain Dealer.*
Cloth, illustrated, $1.25

A CAVALIER OF VIRGINIA
By THEODORE ROBERTS.

"A romance which the reader is loath to lay aside until the last page is read. . . . There is a compelling movement throughout."—*Boston Globe.*
Illustrated, cloth, $1.50

THE BOSTON MUSEUM OF FINE ARTS
By JULIA DE W. ADDISON.

"After reading this volume one has a distinct impression of the place, in many respects clearer than a series of visits could have imparted."—*Chicago News.* Uniform with Mr. David C. Preyer's "THE ART OF THE METROPOLITAN MUSEUM OF NEW YORK."
Each, illustrated, $3.00

SUSAN IN SICILY
By JOSEPHINE TOZIER.

"Almost everything of abiding interest in the garden of the Mediterranean is touched upon in Miss Tozier's pages. . . . All are described in that light-hearted spirit of perfect enjoyment which takes possession of a care-free tourist when first visiting foreign lands."—*Chicago Inter-Ocean.*
Cloth, illustrated, $2.00

HOUSEBOATING ON A COLONIAL WATERWAY
By FRANK AND CORTELLE HUTCHINS.

Something new in the way of travel volume—a book of real *houseboat* travel. An account of a summer lazed away on a cruise up the James River.
Cloth, illustrated, $2.50

IN UNFAMILIAR ENGLAND
By THOMAS D. MURPHY.

"The booklover who would not receive this volume with expressions of delight would be hard to please. The author's record of a seven thousand miles tour by motor of the unfrequented nooks and corners of old England is most entertaining reading."—*San Francisco Bulletin.* *Cloth decorative, boxed, $3.00*

OTHER RECENT AND INTERESTING TRAVEL AND ART VOLUMES
IN WILDEST AFRICA
By PETER MacQUEEN, F.R.G.S.

"This is a most timely volume by a well-known and adventurous explorer."—*Philadelphia Dispatch.* "The writer gives glowing descriptions of African scenery in impressive and picturesque language, of which he shows himself a master."—*The Critic.*
Profusely illustrated, cloth, $3.00

THE SPELL OF ITALY
By CAROLINE ATWATER MASON.

"This author makes one feel the *spell* of Italy where so many others have written in vain. Her experiences are always fresh and original and related with a charming lightness of style."—*Chicago Inter-Ocean.*
Cloth decorative, illustrated, boxed, $2.50

BRITISH HIGHWAYS AND BYWAYS FROM A MOTOR CAR
By THOMAS D. MURPHY,
Author of "In Unfamiliar England."

"Few readers will be able to turn these pages without experiencing in some degree the enthusiasm of its author, and indulging a longing for a personal acquaintance with the scenes it portrays."—*Chicago Tribune.*

SICILY: THE GARDEN OF THE MEDITERRANEAN
By PROF. WILL S. MONROE.

"A book interesting as a novel."—*Northampton Gazette.* "It is a work that is bound to interest the general reader of travel and description, even as it will refresh the memories of those who have already made the tour."—*Boston Globe.*
Fully illustrated, cloth, $3.00

IN THE ART GALLERIES OF EUROPE SERIES

THE ART OF THE BELGIUM GALLERIES
By ESTHER SINGLETON.

"Nowhere, in like compass, is there a better, more interesting or more trustworthy description of the art of the Belgian galleries than in this volume."—*Buffalo Express.*

The ART of the NETHERLAND GALLERIES
By DAVID C. PREYER.

"Mr. Preyer has made his narrative interesting, rich in appreciation, and free from the catalogue effect of many art books."—*N. Y. Times.*

Each, profusely illustrated, $2.00 net; postage extra.

Frontispiece in color and many half-tone illustrations. Postpaid, $1.35; *net*, $1.25.

Dogs and All About Them

By ROBERT LEIGHTON. Owners of dogs—whether breeders or not—will need no other guide than Mr. Leighton's work. They will learn from it all about the various breeds. Full details of breeding, management, and treatment of common ailments are enumerated.

Frontispiece in colors and 16 *full-page half-tones. Postpaid*, $1.62; *net*, $1.50.

The Thames and Its Story

FROM THE COTSWOLDS TO THE NORE. This delightful story of the historic Thames, its hamlets, towns and cities, will appeal to all who know England's famous river. The traveler will find it rich in reminiscent interest.

New Edition in Two Volumes. 96 *half-tones and many maps. Postpaid*, $1.75 *per set; net*, $1.50.

A History of England

By W. O. ARNOLD-FORSTER. Thirty-five thousand copies of this well-known history of England have already been sold. It is for young and old readers, for school or library. The present two-volume edition, it is hoped, will be found more convenient than the previous single volume issue. *Two volumes.*

Postpaid, $2.20 *per set; net*, $2.00.

The Faith of a Layman

By Prof. WILLIAM FREDERICK OSBORNE, of Winnipeg University. Professor Osborne, known throughout Western Canada as a brilliant orator on ethical topics, here replies to Dr. Rauschenbusch's "Christianity and the Social Crisis." His earnest plea is for a simpler, deeper and more effective faith. *Postpaid*, $1.35; *net*, $1.25.

The Home Life of the Ancient Greeks

Translated from the German of Prof. H. BLÜMNER by ALICE ZIMMERN. The third new edition is ready of this scholarly yet thoroughly readable work, which deals intimately and exhaustively with the domestic life of ancient Greece. *Index. Numerous illustrations. Postpaid*, $2.20; *net*, $2.00

Every-day Japan

By ARTHUR LLOYD, M.A. Mr. Lloyd has written this remarkable book after twenty-five years' residence and work in the country. It gives an extraordinarily vivid insight into every phase of the life of the Japanese, viewed at close quarters. *With* 8 *color plates and* 96 *half-tones. Postpaid*, $4.25; *net*, $4.00

London Town Past and Present

By W. W. HUTCHINGS. Unique, comprehensive, and incomparable in value. It limits itself to no one period of time or to no one part of the Capital. It recounts in vivid language all the important events from Roman times to the present day.

Lavishly illustrated with hundreds of reproductions of old prints, drawings, and photographs. Cloth, quarto, two volumes. Postpaid, $8.00; *net*, $7.50.

Women of All Nations

The one work of the kind in literature, which, for the sumptuous illustrations and the exhaustive and entertaining text, is unequalled by any book on Womankind that has ever been attempted. Two volumes, beautifully printed and bound in three-quarters morocco. Send for circulars and full information.

$12.00, *delivery charges paid.*

The Royal Family By Pen and Camera

His late Majesty, King Edward VII, and Queen Alexandra depicted by the camera during the past forty years (1865 to the present). A valuable and unique record, consisting of 152 superb reproductions of photographs taken by the Royal photographers, with illuminating descriptive text by Sarah A. Tooley.

Large 8*vo. Postpaid*, $4.80; *net*, $4.50.

Warwick Deeping's *latest novel* "The Rust of Rome"

A romance of to-day, by the author of "Uther and Igraine," "The Red Saint," etc. "Singularly able, well thought-out, admirably written."—*London Telegraph.* "A book that is both interesting and powerful."—*London Chronicle.*

Mr. Deeping's latest novel has completely won the London critics, who praise it unanimously.

Frontispiece in color. Net, $1.20.

Who Shall Judge?

By SILAS K. HOCKING. An idyllic love-story which, for pure interest and entertainment, ranks with the very best work of this veteran novelist.

Frontispiece in color and illustrations. Net, $1.20.

A House of Lies

By SIDNEY WARWICK. A powerful tale of regeneration. The hero builds his career upon "a house of lies," which ultimately collapses and drags him down with it.

Frontispiece in color. $1.50.

CASSELL PUBLICATIONS HAVE BEEN STANDARD FOR SIXTY YEARS

Cassell & Company, Limited

43-45 East Nineteenth Street *New York City*

LONGMANS, GREEN, & CO.'S LIST

Life of Reginald Pole

By MARTIN HAILE, Author of "Queen Mary of Modena," "James Francis Edward, the Old Chevalier," etc., etc. 8vo. pp. xv.-554. With Photogravure Plates. Cloth Extra, gilt top, $5.25 *net*.

The Author of this biography spent a considerable time in visiting places on the Continent where Pole is known to have stayed, and has obtained much new and important information from municipal archives and ecclesiastical authorities, thus enabling him to throw light on the great European questions of Pole's day and the part he played in international politics.

Education and Citizenship in India

By LEONARD ALSTON, Litt.D., Author of "The White Man's Work in Asia and Africa," etc.; Director of Non-Collegiate Students in Economics and History, Cambridge; formerly Temporary Professor at Elphinstone College, Bombay. Crown 8vo. pp. xii+222. $1.25 *net*.

Stonyhurst Philosophical Series

Theories of Knowledge: Absolutism, Pragmatism, Realism

By LESLIE J. WALKER, S.J., M.A. (Lond.), sometime Professor of Philosophy at Stonyhurst College. Crown 8vo. pp. xl+696. $2.75.

"The fact that it should have gained for its author the degree of Master of Arts with the mark of distinction for special merit from a body so little suspect of excessive sympathy with scholasticism as the London University is a guarantee of the value of the work."—MICHAEL MAHER, S.J.

Twentieth Century Socialism: What It Is Not; What It Is; How It May Come

By EDMOND KELLY, M.A., F.G.S., Late Lecturer on Municipal Government at Columbia University; Author of "Government or Human Evolution," etc. Crown 8vo. pp. xv+446. $1.75 *net;* by mail, $1.88.

CONTENTS:—Introductory Notes by Professor FRANKLIN H. GIDDINGS of Columbia University and RUFUS W. WEEKS. Introductory. What Socialism is not. What Capitalism is. What Socialism is. Appendices. Index.

Folk Stories From Southern Nigeria, West Africa

By ELPHINSTONE DAYRELL, F.R.G.S., F.R.A.I., District Commissioner, Southern Nigeria. With an Introduction by ANDREW LANG. With Frontispiece. Crown 8vo. pp. xvi+159. $1.50.

"Mr. Dayrell's *'Folk Stories'* appeal to the anthropologist within me, no less than to the lover of what children and older people call 'Fairy Tales.' The stories are full of mentions of strange institutions, as well as of rare adventures." —ANDREW LANG.

Longmans' Historical Illustrations (Architecture, Life, Costume)

A Series of 4 Portfolios, each containing 12 Plates (12 in. by 9½ in.). Drawn and Described by T. C. BARFIELD. $0.90 *net* each portfolio.

Each Portfolio contains a Sheet of Notes giving Detailed Descriptions of the Illustrations. Prospectus upon request.

LONGMANS, GREEN, & CO., 4th Avenue & 30th St., New York

AN ORIGINAL APPRECIATION

LINCOLN

A MONOGRAPH

By ISAAC NEWTON PHILLIPS

KANSAS CITY STAR

"Summarizes the life history of Lincoln, and sets forth the significance of his character and the greatness of his conduct. Such volumes, easily read in an hour or two, have a distinct value in enlightening new generations."

ST. LOUIS STAR

"Written in a concise manner which is calculated to insure it a welcome reception."

CHARLESTOWN NEWS

"Sound and accurate in its conception and estimate of the great man whose name it bears."

With Frontispiece, Novelty Binding

Letters and Memorials OF

Wendell Phillips Garrison

Editor of THE NATION 1865–1906

In one volume, crown 8vo, 300 pages, with photogravure portrait

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait. It likewise preserves the notable letter of appreciation addressed to Mr. Garrison by more than two hundred contributors to the *Nation* on the completion of his fortieth year of service, and his acknowledgment thereof.

The Nation.

NEW YORK, THURSDAY, JUNE 9, 1910.

The Week.

That the Railroad bill has been passed by the Senate, is naturally highly welcome to President Taft. With this contentious subject shelved for the time being, it is to be hoped that he will find it possible to centre the attention of Congress upon the question of conservation. That this was the subject of his talk at Detroit last Friday is doubtless merely a coincidence; but it should be made more than that. In addition to the general and permanent reasons for urging needed legislation relating to our natural resources, there is a pressing special one arising from the Ballinger affair. In no way could the President do so much to counteract the bad effects of that unfortunate business as by bringing to an end the condition of things out of which it has arisen. What is needed is a short and sharp Presidential message on the necessity not only of Mr. Taft's proposed law giving Presidential withdrawals of public lands full force and authority, but also of a law establishing a rational system for the disposal of mineral lands. It is upon the absence of such a law that the capitalists who are eager to capture the Alaskan coal fields are seizing as their chief support; and it is for Mr. Taft to make it plain that he will not, either by action or by inaction, play into their hands.

"No Congressman is safe," says the manager of the campaign for renomination of the Hon. John Dalzell of Pennsylvania. In the hard-fought primary of Saturday in the Thirtieth District, Dalzell had an apparent majority of about 400 over his Republican opponent, but the latter declares that there was cheating in the count, and is going to contest the matter in the courts. Even if Dalzell shall be shown to have won by a narrow margin, he will have to face such strong opposition at the election in November that his return must be regarded as doubtful. This intense hostility displayed against Dalzell in a district which, for more than twenty years, he has held in the hollow of his hand, is an event of first-class political significance. It is important in itself, and even more important in what it implies for his party in other contests of the kind, and in the choice of a new Congress next autumn. In the controversies within the Republican party which are to be fought out in Ohio and Indiana, in Kansas, and Wisconsin, and Minnesota, and Illinois, the fight will be along the same lines as that which was directed against Dalzell. His sad lot will make many another Congressman quake in his shoes. If Dalzell, the chief of the standpatters in the most standing-pat of States—if he, the most uncompromising of protectionists in a protection-ridden district—barely wins renomination and finds his seat confessedly in danger, what hope is there for lesser men of his kind in States less joined to high-tariff idols?

These results in the Pennsylvania primaries completely brush away the assertions about the insurgents in Congress made by Speaker Cannon and his echoes. It has been confidently declared that the whole thing was artificial, the work of a few newspapers and magazines and agitators with a talent for blowing froth. There was no evidence, it has been glibly said, that the people themselves were taking any great interest in the controversies at Washington, much less that they were ready to stand behind those who were in revolt against the ruling cliques in Congress. But Pennsylvania will have opened many eyes to the folly of all this. If Dalzell is perfectly honest with Cannon, he will go up to him on his return to Washington, and say, in the historic phrase, "Sire, it is not an *émeute*, it is a revolution."

Ex-Gov. Folk's speech at a St. Louis dinner last Thursday night, which is regarded as the preliminary launching of his Presidential "boom," has for its keynote that which first brought him into national prominence. When Mr. Folk, as Circuit Attorney for St. Louis, instituted his sweeping prosecutions of rich and influential corruptionists, the act was something new to the people of the country. It was one of the chief factors in bringing on the era of house-cleaning through which we have ever since been passing, and of which the end is not yet. In his speech last week Mr. Folk spoke of the stories of thievery and graft with which the newspapers are filled every day, and declared that the Democratic party must "insist upon the stamping out of graft and corruption from every department of the government." Along with this, however, he placed the duty of eradicating "all special favors, including bounties, subsidies, and a tariff for any purpose other than revenue." His note on the tariff is as clear as that struck by Gov. Marshall of Indiana at the State Convention some weeks ago; indeed, it seems plain that all the promising candidates for the Democratic nomination for the Presidency stand together on this issue. Gov. Folk gave it happy expression in these words:

> All political parties ostensibly oppose the privilege of lawlessness, but when it comes to privilege conferred by law there is a distinct issue between the parties. The Republican party stands irrevocably for the privilege of a protective tariff. The Democratic party, if true to itself and its teachings, must stand squarely against this privilege.

Disappointing in a way as is the postponement of the corporation-tax case, its enormous importance to the country dictates all prudence in reaching a decision. No action should have been taken by a weakened bench—there are but seven active judges now sitting as the Supreme Court. Few people yet realize just what the tax means. The unthinking rejoice at another slap at the corporations, another effort "to make them pay up as they ought." The thoughtful discern what the Republican leaders are quite ready when pressed to admit—as President Taft has often done—that the income from the tax itself is of little importance; that the taxing of the corporations itself is a secondary purpose, the real object being to drive in an entering wedge which shall permit, within a few years, the Federal Government's taking oversight of business in the United States. Not merely interstate business, but all business is involved. Above all, the object is to break down State supervision of the corporations created by the States. When it is considered that the nation

broke in two over this question of State rights—involved, it is true, with one of human rights—the apathy of the country as a whole, and particularly of the South, as to the vital importance of the corporation tax, is much to be wondered at.

Secretary Meyer talked the usual official nonsense when he addressed the Academy midshipmen at Annapolis last Friday. This time his thesis was that the navy must be so constituted and drilled as to have at every moment the "greatest possible military efficiency," for "under such conditions only" can the navy "insure peace." Otherwise, he added, it is only a menace and needless expense "when it is permitted to deteriorate and when the military spirit weakens." Well, they evidently did not teach history when Secretary Meyer went to Harvard. If they had, he would have learned that the navy, before the outbreak of the civil war, was in anything but a state of preparedness. It was far removed from the "greatest possible military efficiency." But it had not only a Farragut and a Porter, but a Dahlgren, a Rodgers, a Cravens, and a host of gallant officers whose personal quality was never sapped by the demoralization of the navy from 1850 to 1860. More than that, under those leaders were many thousands of volunteers from the merchant marine and civil life who had had mighty little training when they went on the blockade, assaulted Sumter, ran the gantlet at New Orleans, and charged the ramparts at Fort Fisher. That poor, abused military spirit! How much longer must it be said that it can be nurtured only in battleship hot-houses?

"We must be brought to realize," says Mr. Daniel Guggenheim, managing director of the Morgan-Guggenheim Alaskan syndicate, "that the greatest amount of wealth that the country makes is not by the people trading among themselves—this only adds to the wealth of one man at the expense of another—but the great wealth of a country is made by selling something at a profit to another country." It is a thousand pities that this great economic truth has not wider recognition. Through ignorance of it, an appalling waste of opportunity has been going on in this country. If, instead of being one nation, we were three or four or a half-dozen, what enormous gains might we not have been making all these years! The stupendous interstate commerce of the United States would then have been international commerce, and when the East was selling to the West and the West to the East, or the North to the South and the South to the North, each of these countries would have been acquiring great wealth by "selling something at a profit to another country." As it is, there has been no benefit to the nation in all this vast business; it has only "added to the wealth of one man at the expense of another." See what it is to be a practical man; none of the closet philosophers who have racked their brains over economic theory have discovered what this man of affairs sees so plainly and sets forth in such simple language.

One great advantage that Mr. Roosevelt has enjoyed abroad has been little remarked. It lies in the fact that his sayings, which have become a trifle worn by frequent use in English, have now had an opportunity to reach and thrill readers in a foreign language. It seems quite a new thing, for example, when we see in Italian that Roosevelt praised in his speech at Rome the essential virtues of the citizen, and declared them to be "Coraggio, onestà e il senso comune." Even in England, Mr. Roosevelt was done into another tongue; the Public Orator at Cambridge made him seem positively novel when he described his deeds in Latin. Thus for the usual reminder that different races went to the making of Roosevelt, we have the orotund pronouncement of Dr. Sandys: "Batavorum et Caledonum sanguine olim oriundus." It was a severe wrench on Latin to find words for Rough-Riders, but here they are: "equites voluntarios durum in armis genus." Even the Back from Elba Club had a recognition in the phrase "virum populo suo etiam in posterum sine dubio profuturum." It is hard not to believe it when you see it in Latin.

Comparing the statistics of the occupations of members of two Yale classes, twenty-nine years apart, the *Yale Alumni Weekly* says that they "show the continued and striking drift of the later Yale graduates of the 'culture' branch away from the professions and into business." Similar comment is often made on figures of this kind relating to American college graduates. But it is by no means clear that such comment correctly represents the significance of the figures. They may well mean that there is a steady increase in the tendency of young men who intend following a business career to obtain a college education before entering upon their active business life. In other words, it is probable that the increase in the proportion of college graduates who go into business is not due to an increasing preference for business among the class of persons who formerly went into the professions, but to an increasing desire or ability to secure a college education on the part of the class that formerly went into business without it. If such is the case, it is a welcome development.

It has long been believed that the alumni of Brown University were strongly in favor of revising the charter of that institution so as to eliminate all sectarian tests. Now the matter has been put to vote and the demonstration is complete. A poll of the graduates has been taken, and the result was announced on Saturday to be 2,008 for abolishing the present restrictions, to 223 against any change. The sectarian college is everywhere becoming more and more of an anachronism, but the absurdity of keeping Brown as an appanage of the Baptist Church has been peculiarly flagrant. We take it for granted that the decided response of the alumni will cause the movement for charter revision to be pressed. It ought to be speedily successful.

Pity the poor opera singer. When wages of everybody else are going up, his are to be cut. Here is the merciless Andreas Dippel back from a vacation abroad calmly announcing that there will be a decrease in singers' salaries from now on. Of course, this impresario is careful not to use the word "cut." He merely says: "We shall readjust salaries." But when a man who has just driven his sole competitor out of the business, and thereby established a complete monopoly, talks about adjusting salaries, we all know what it means. Singers must look out for trouble. First-class tenors who now get over $1,000 a night will be cut to $999.99 on a basis of 20 per cent. decrease in appearances. How are our prima donnas

to dress if they are to get a chance to make only some $4,000 or $5,000 a week? The thing is preposterous. Obviously, there is nothing left for them to do but to organize a union. For behind Dippel stand the European impresarios, long angry because Americans have exemplified on the opera stage their political belief that cheap clothes make a cheap man or woman. Let every singer, high and low, join their organization and have a fixed wage scale for Europe and America.

The troubled Nicaraguan situation has been rendered much more cheerful by the explicit official statement at Washington that the Government "has no present intention of assuming a protectorate over Nicaragua"—which was, of course, ridiculous—or, and this is much the more important point, "in any way intervening or recognizing either party to the controversy until one faction or the other has obtained full control of the machinery of the government by the consent of the people." This still leaves Nicaragua exposed to the evils of a brutal civil warfare. If the United States had seen its way towards extending its good offices for bringing about peace, it might have been a gain for humanity. But at least notice has been given to the Estrada faction, or to those whom Estrada would win over by holding out the hope of American support, that such hopes are illusory. It now remains for our Government to do what it can to have unofficial America maintain the same neutrality. With Americans in Estrada's ranks and supplies coming to him from American seaports, the danger of complications involving the United States will never be entirely absent.

Englishmen who complain that their politics are becoming Americanized may find a fresh grievance in the proposal of a writer to whom the London *Times* gives prominence. This is nothing less than that England should have a Constitutional Convention. The notion is borrowed frankly from American practice. After showing how grave is the English political situation to-day, how sharp the differences, how menacing the various attacks upon the British Constitution, the writer in question asks if there is no way out. His reply is:

> The way which seems to fit the occasion best, seeing that the matter in hand is no ordinary legislative measure, but the very framework of government, is the way adopted at Philadelphia in 1787, when the Constitution of the United States was hammered into shape; the way adopted only last year in South Africa—the way of common sense and sobriety, when men are really in deadly earnest about an object of vital importance—*a conference with closed doors.*

This is more interesting than convincing. Should the plan be adopted, it would mean the giving up of the great distinction of the British Constitution—namely, that it is *unwritten.* The compromises in the American Constitution, as in that of South Africa, could be put there because it was a written document; but how could Liberal and Conservative statesmen compose their differences unless there were some way of reducing their agreement to writing? That impalpable thing, English Constitutional practice, will still, it should seem, have to go on forming itself by votes in Parliament and popular elections.

Prime Minister Briand has shown himself too much a man of courage and resource to be fairly compared with the Frenchman who started out in pursuit of a mob, crying, "These are my people, I am their leader, I must follow them." Yet there is just a suggestion of that gallant spirit in the way M. Briand is reported to have gone at the task of framing a government programme for the newly elected Chamber of Deputies. In a circular addressed to the prefects of the French Departments, the Prime Minister asked for full and precise information as to the opinions expressed by the successful candidates for the new Chamber in their electoral manifestos to the voters, on every question that has been before the public for some time, such as electoral, administrative, and judicial reform, the income tax, state recognition of the trade unions, and the school question. The results of this inquiry were laid before the assembled Ministers and used as the basis of a programme of legislation which the Prime Minister intends to press home upon the members of the Chamber. Perhaps the most interesting single point upon which the people of France have spoken out strongly is proportional representation; this has been endorsed by three voters out of every four.

The resignation of the German Colonial Minister, Bernhard Dernburg, is correctly reported as marking the end of a unique governmental experiment. Official Germany was thoroughly shocked, when, a couple of years ago, the Kaiser suddenly chose, for reorganizing the demoralized Colonial Office, a man who had made a reputation as a reorganizer of wrecked or imperilled banks. Moreover, Herr Dernburg is a Jew, his wife formerly earned her own living as a governess, and his father is a journalist connected with the Berlin *Tageblatt*, a newspaper particularly odious to the bureaucracy, whose weaknesses it takes delight in exposing. All this made Herr Dernburg a bitter dose for an aristocratic officialdom. Furthermore, Herr Dernburg, who was at one time a clerk in one or more New York banking houses, has certain aggressive qualities, which do not always make him popular. It was not to be expected, therefore, that his administration, with its "American" business ideas, would last very long. It began, however, with vigor and force; the new Minister spoke well in the Reichstag, was able to take care of himself in any Parliamentary situation, and proved that he had original and clear-cut ideas about colonial administration.

These ideas he soon supplemented by facts gathered in the German colonies themselves, for Herr Dernburg speedily became a travelling Minister, last year making a visit to this country to study cotton-growing in the South. After his return to Europe he gave out an interview in which he declared that the American negro ought to be compelled to work under a system of peonage. This clearly illustrated the point of view he took toward the inferior races with which he had to deal in Africa. They were there to make money for the white man and to order their lives and habits of mind accordingly. It is only fair to say, however, that, if the total absence of sentimentality in Herr Dernburg would have satisfied Mr. Roosevelt completely, he several times intervened in behalf of justice for the natives and did all that he could to cut the red tape which often injured natives and colonists alike. Of the aggressive business exploiter of other people's lands Herr Dernburg was an excellent type. He leaves office now because

the Reichstag insists upon levying taxes on the commercial companies in German Southwest Africa, in order to pay a part of the fifty millions it cost to put down the recent war in that colony. This Herr Dernburg considers fatal to the capitalistic development of the colony. He will probably be succeeded by an official of the old type, and the African experiment of Germany will remain a great load upon the taxpayers.

THE RAILROAD PEACE.

Grim war can seldom have smoothed its wrinkled front so suddenly as in the conference between the railroad presidents and Mr. Taft on Monday. On either side, there was a swift removal of the *casus belli*. The railroads, on their part, decided to suspend the increase of freight-rates of which they had given notice, and to leave the question to be worked out under the new law. Thereupon the President announced that the Administration would not press the suit for an injunction. If no advance in rates is threatened, naturally there is no longer any reason to ask the courts to enjoin it. Thus sweet reasonableness descends upon all parties to the controversy, and they shake hands in perfect amity and agree to let the orderly working of the pending law for regulating railway rates dispose of all the questions in dispute. So the cruel war is over.

President Taft will receive, and will deserve, congratulations upon the way in which he has met the difficulty. The result will be a help to his political prestige at a time when he plainly needed it. Without grasping all the details of what has taken place, the country will get a good general idea of what the President has accomplished. The broad facts are not easy to mistake. In anticipation of the passage of a law compelling them to submit increases in rates to the scrutiny and judgment of the Interstate Commerce Commission, the railroads had hastened to file a large number of such increases. Those the new law would not have been able to touch. But the Administration caught up the first weapon handy and, seizing upon the evidence of combined action to raise rates, got the roads enjoined under the Anti-Trust act. For a week, there was a great deal of extreme and wild talk by the railroad men; we were given to understand that the whole transportation business of the country was threatened with ruin; but, in the end, reason prevailed. The railroads began to coo instead of roaring, abandoned their first purpose, and were content to look for their rights under the regulation law. The President, not to be outdone, suspended hostilities on the Government side. But he had fully achieved what he set out to obtain. The increased rates do not go into effect, and may not for several months, if at all. Upon that achievement the people will fix their eyes, without caring very much what the process was, and for it they will give Mr. Taft due credit.

That there are humorous aspects of the whole proceeding, cannot be denied. Inconsistencies and laughable changes of front have been visible on both sides. An Administration which has been urging an injunction bill, the essential feature of which is that injunctions shall not be issued without notice, secretly applies to a distant Federal judge for an injunction, and then the Attorney-General boasts of his cleverness in concealing his plans. On the other hand, the railroads cried out that they were not only tricked, but destroyed; that no more railway bonds could be sold abroad, though directly afterwards the Germans took $25,000,000 worth; then turned about and said that the proposed freight increases affected but an inconsiderable percentage of goods transported; admitted that they could get along cheerfully for the present without any advance, and finally promised to put themselves in good faith under the control of a law not yet enacted. In all this the Comic Spirit must surely find congenial material.

Serious features of the railway-rate question are not, however, lacking. One of them is the effect which the truce will have upon the fortunes of the railroad bill in Congress. That it makes the enactment of the bill certain in some form or other, is clear. We shall hear no more rumors of letting the bill die in conference. And it is equally clear that the clause empowering the Interstate Commerce Commission to pass upon the reasonableness of increased rates must be retained. No conference committee would now dare report urging that it be stricken out. That would be not only to throw away one of the great improvements made by the bill, but to imperil the whole settlement reached by the railway presidents at the White House. We may therefore set it down as a fixed thing that there will be a law, and that it will, as in the Senate bill, declare that "the burden of proof to show that the increased rate or proposed increased rate is just and reasonable shall be upon the common carrier."

There will doubtless be a good deal of pulling and hauling before the railway bill is finally presented to President Taft for his signature. It has now gone to conference, and Washington is saying that close watch will have to be kept lest some of the valuable features added to it in the Senate be eliminated, or "jokers" be introduced. On the other hand, it may be that the conference committees will take the desirable step of recommending that traffic agreements, subject to the approval of the Interstate Commerce Commission, be legalized. This would be only a common-sense recognition of the necessities of the case, and would also be in line with what both Roosevelt and Taft have proposed, besides being a fair way of meeting the latest and more reasonable attitude of the railroads. However this may turn out, the main point appears to have been securely gained: the flurry about increased freight-rates, with exaggeration on both sides, has now blown over, and we are to have the entire dispute settled in orderly and lawful fashion. On that result, not only the President, but the country is to be felicitated.

ROOSEVELT INSTRUCTS CROMER.

Lord Cromer studied and governed Egypt for thirty years. Mr. Roosevelt gave his attention to Egyptian questions for perhaps as many hours. Yet the novice is able to correct the veteran. Lord Cromer was on the platform at the Guildhall meeting when Mr. Roosevelt made his now notorious speech, and he must have been deeply impressed by the way in which a fresh mind, working with lightning rapidity and infallible judgment, can arrive at results which a plodding intellect, compelled to make its way through a maze of facts and elusive tendencies, does not feel certain that it can itself reach at all. In his book on "Modern Egypt," Lord Cromer made the humiliating confession that he was many years in Egypt "before I fully realized how lit-

tle I understood my subject." He added that "to the last day of my residence I was constantly learning something new." From this experience of his own, he was led to the rash conclusion: "No casual visitor can hope to obtain much real insight into the true state of native opinion." But Mr. Roosevelt showed the folly of all that. After one hurried visit, he was in a position to instruct and rebuke those who had given their lives to the problems of Egyptian administration. It is a great triumph for the intuitive philosophy in statesmanship. The University of Berlin knew what it was about when it made Roosevelt a doctor.

The point on which he chiefly enlightened Lord Cromer was the nationalist movement in Egypt. In cherishing or even tolerating this, England had made an enormous blunder. From this American, who announced himself "a radical, and a real not a mock democrat," the English learned that in encouraging the Egyptians to attempt anything like self-government, they had made a frightful mistake, and that they must at once retrace their steps, if they were to do "their duty to civilized mankind." This must have been peculiarly mortifying to Lord Cromer, for he, in his humdrum way, had assured his fellow-countrymen that the only alternative to annexing Egypt outright was to help on the Egyptians as soon as possible to rule themselves. His exact words were: "Egypt must eventually become autonomous, or it must be incorporated into the British Empire. Personally, I am decidedly in favor of moving in the direction of the former."

Indeed, while listening to Col. Roosevelt at the Guildhall, Lord Cromer must have blushed for the entire last chapter of his second volume, and wished that he could cancel it. In it he had asserted that the true governmental policy must be "based on accurate information and on a careful study of Egyptian facts and of the Egyptian character." He would doubtless give worlds to withdraw that now. Still more foolish, in the light of Mr. Roosevelt's convincing demonstration that Egyptian self-government is "not merely an empty but a noxious farce," appears Lord Cromer's advocacy of "a local legislature competent to deal with all local matters." He even dreamed of a scheme of autonomy "which will enable all the dwellers in cosmopolitan Egypt, be they Moslem or Christian, European, Asiatic, or African, to be fused into one self-governing body." But that was before he had heard the spokesman of the greatest self-governing nation in the world declare such a plan to be a compound of madness and crime.

With a sure hand, Mr. Roosevelt pointed out the great vice of Lord Cromer's Egyptian policy—which has long been, of course, the settled English policy. That vice is "sentimentality." Of all the broken reeds upon which righteousness may think to lean, sentimentality is the "most broken," affirmed Roosevelt. But is it not possible to be a sentimentalist about sentimentality? The real fault of the sentimentalist is that he will not study the facts, nor look before and after, but is swept away on the flood of his own emotions. Now, what are the facts about this awful "sentimentality" of the English, which so vexes Mr. Roosevelt's righteous soul? Behind the word, which he uses in opprobrium, lies a century of the liberal movement—all the aspiration for liberty and progress which has animated the speech and guided the action of a long line of statesmen and reformers. It would be absurd to call John Stuart Mill a sentimentalist. If any man ever spoke from reasoned conviction, he did; yet it was he who said: "I am not aware that any community has a right to force another to be civilized." To Roosevelt, all aglow with righteous desire to take uncivilized races by the throat and compel them to be altogether such as he is himself, that saying would seem adrip with sentimentalism; but the real question is whether there is not such a thing as a sentimentalism of fancied superiority and of what Lord Cromer himself called "a brutal antipathy" to the striving upwards of the native Egyptians. Which is the sentimentalist, the traveller who unsparingly condemns the nationalist movement in Egypt on the strength of hasty impressions, or the cautious and seasoned administrator who pleads for sympathy with it, and warns his countrymen that they must be prepared for temporary abuses of new-granted liberty, and that they, an alien race, cannot "ever create a feeling of loyalty in the breasts of the Egyptians akin to that felt by a self-governing people for indigenous rulers"? Sentimentality may be a broken reed, but it can hardly be a more unsafe support than extemporized knowledge and belligerent cock-sureness.

THE FISHERIES ARBITRATION.

The question of the North Atlantic fisheries, which has just come up for final disposition before an arbitral court at The Hague, is, in its origin, almost as old as American history. It was not many years after Cabot's discovery of Newfoundland that French fisheries began in that region. French fishing rights were defined in the treaties of Utrecht in 1713 and of Paris in 1763, and they did not cease to exist until six years ago, when they were abandoned under the terms of the general *entente* with England. Between Great Britain and the United States, the question is as old as American independence. The Treaty of Versailles in 1783 dealt with the matter. The War of 1812 disrupted existing arrangements. The Convention of Ghent in 1818 laid down the bases upon which the relations between the United States and the British colonies have continued to the present day. It is about the proper interpretation of the Convention of Ghent that the present arbitration proceedings centre. Difference of opinion on that point there has always been; but in so far as Canada is concerned, the question has been at rest for nearly twenty-five years, although under the apparently temporary form of a *modus vivendi* that has been indefinitely prolonged. Our quarrel to-day is with Newfoundland alone, and here, too, on issues that have really been raised only in the last five years. With roots running back to the year 1500, the specific questions that have led both nations to have recourse to The Hague have been to the front only since 1905.

Just what the points at issue are between the United States and the British Government, acting on behalf of Newfoundland, may best be brought out from the formal statement of the American position as it is outlined in the first of a formidable series of volumes containing "The Case of the United States." Article I of the Convention of Ghent is the subject of dispute, and concerning that article the Hague tribunal is asked to pass on no less than seven questions, of which we may mention the most important. The United States contends (1) that American fishery rights under the Treaty of Ghent

are not subject to regulation by Great Britain, Canada, or Newfoundland, either with regard to the hours, days and seasons when fish may be taken on the treaty coasts, or the methods, means, and implements employed in taking fish, unless the reasonable and necessary nature of such regulations has been passed upon by the American and British Governments. The United States further contends (2) that American vessels, in the exercise of their fishery rights, may employ as members of their crew persons who are not inhabitants of the United States. The United States contends (3) that American fishing vessels cannot be subjected to the requirements of entry or report at custom-houses, or the payment of light or harbor dues, "or to any other similar requirement or condition or exaction."

In these three provisions is contained the gist of our dispute with Newfoundland, which, at bottom, is not so much a question of fishery rights as of commercial relations. In 1905 Premier Bond of Newfoundland initiated a crusade against the American winter herring fishery as part of a campaign to compel tariff concessions by the American Government to Newfoundland. It was the Newfoundland Premier's contention that the American herring fishery was not a fishery at all, but a trading operation. As summed up by a Newfoundland journalist, Mr. P. T. McGrath, in the *Review of Reviews*, "the practice of fifty years past has been for American vessels to visit the coast and purchase cargoes of these herrings from resident fishermen who actually caught them and sold them to the American crafts as a matter of ordinary commerce." Thus the situation is that, while a cargo of herrings caught by Newfoundland fishermen and transported in a British vessel has to pay a heavy duty on being brought into the United States, the same cargo brought in an American ship is admitted free of duty.

Premier Bond's protests against such a state of affairs took the form of a series of regulations forbidding the sale of bait fish to Americans, or the enlistment of native crews by American vessels in Newfoundland waters. This last prohibition was evaded by the practice of local fishermen in going outside of the three-mile limit to take service on an American vessel. Thereupon Premier Bond introduced a bill prohibiting residents of Newfoundland from going on the high seas for the purpose of shipping on American vessels, and confiscating any American ship found in colonial waters with others than inhabitants of the United States on board. The British Government, however, refused to sanction this bill. Other regulations forbade fishing by American vessels on Sunday—a prohibition in force throughout Newfoundland and Canada—and the use of purse-seines, herring-traps, and herring-seines, as being unduly destructive of the fish-supply. American fishermen were also required to register at the Newfoundland custom-houses, and to pay light duties.

Other questions that the Hague tribunal must pass on are the rights of natives of the United States to take fish in certain bays and inlets and to enter certain other bays and harbors for shelter, repairs, wood, or water. A more important point is whether the three-mile zone from which American vessels are excluded is to run parallel with the windings of the coast, as the United States maintains, or whether the zone is to be measured from the extreme outer headlands across a bay whose depth may be as much as twenty or thirty miles. But because these questions are capable of precise determination once and for all, as well as because of their lesser material importance, they are not likely to raise such difficulties as those features of former Premier Bond's policy that we have touched upon. It was largely the dominating personality of that Minister which stood in the way of an arrangement with the United States, and has necessitated recourse to an annual *modus vivendi*. Sir Edward Morris, who has succeeded Premier Bond, is of a more conciliatory frame of mind. On the specific point, for instance, of American ships purchasing their cargoes from Newfoundland fishermen, there is a large party in the island which believes that the practice is for the benefit of both countries. In any case, there should seem to be little doubt that a solution will be found at The Hague which will remove all chances of serious misunderstanding in the future.

PHILANTHROPY AND STATISTICS.

Never in modern times, it is safe to say, has there been so large or so fine a body of workers, turning away from lives of ease and self-indulgence to devote their capacities and their energies to the service of those who are at or near the bottom of the social scale. In the pages of the *Survey*, as one scans them from week to week, one gets some idea of how widespread are these activities, how earnest are these laborers. Every issue brings its tale of effort or achievement — investigation, agitation, legislation, relief.

In the number of last Saturday, the Poles of Buffalo form the leading subject. Following the example set by the Russell Sage Foundation in instituting the Pittsburgh Survey, a small group of citizens of Buffalo, headed by A. C. Goodyear, a young Yale graduate, have supported and supervised an investigation into the conditions which prevail in the Polish colony. The results of this undertaking are set forth in an admirable spirit in the *Survey* article by Mr. John Daniels, the director of the inquiry. He does not paint a picture of unrelieved darkness; on the contrary, he begins by presenting a large number of facts that testify to the thrift and progress of the Polish settlers. With a population of 80,000, with 60 per cent. of the men common laborers and 30 per cent. semi-skilled laborers, they hold real estate (including churches) whose estimated value is about $12,000,000, subject to mortgages amounting to about $4,000,000; they have about $2,500,000 in savings banks; of the 19,000 families, 4,000 own their homes. They have about 1,000 "shops and business places"—most of them, of course, very small, but some of them of good magnitude. And these facts are the more impressive when we consider that the immigration is so recent; the 80,000 of to-day was only 10,000 no longer ago than 1881. It is no wonder, then, that Mr. Daniels says: "The Poles are industrious, thrifty, pertinacious, home-building, family-founding. So they possess many of the qualities fundamental to the best citizenship. With their homes and business places, they have built up a large area of the city. These are the things which make them an asset to Buffalo."

With this exhibit to begin with—as evidence, perhaps, of good faith and as encouragement for the optimist—Mr. Daniels goes on to tell us of the hardships that exist and of the evils that should be overcome. It is a familiar story. Overcrowding, irregular employ-

ment, insufficient wages, inadequate schooling, and the rest of it. A special feature consists in the alienation from the general currents of American life due to concentration in one district and to the support of parochial schools in the lower grades of which the English instruction is very meagre, many of the teachers not speaking English at all, or too poorly for use in teaching. For these various evils, Mr. Daniels urges remedies—an active city employment bureau to reduce unemployment, industrial schools to bring about increased wages, more adequate tenement inspection to improve housing conditions, restriction of the number of saloons and the rooting out of the worst of them to diminish crime, compulsory school attendance and a higher standard of instruction in the parochial schools to improve educational conditions. And there is little doubt that the earnest and careful statement of facts, and the proposal of these remedial measures, will work out great good.

When we come, however, to statistics, and especially to the comments on them, we find here, as so often in similar cases, a certain lack of insight and lack of perspective which it is by no means unimportant to note. Let us take, in this instance, the way the case is summed up in the editorial columns of the *Survey:*

> Thus Buffalo, and for Buffalo again read America, has permitted low wages, low standards, poor houses, crowding, and it has been paid in kind. The Poles form 16 per cent. of the population; 33 per cent. of the applicants for charitable relief are Polish, and from 25 to 28 per cent. of the court cases; so are 38 per cent. of the Buffalo babies who die before they are a year old; so are 37 per cent. of the Buffalo children who die before they are five; so are over 38 per cent. of the Buffalo boys and girls who get to the Juvenile Court. The Poles furnish 31 per cent. of the truants as against a Polish enrolment of 22 per cent. All this means not only vital loss, but waste of municipal expenditures. Other evidences might be multiplied.

Now this statistical showing is evidently meant to be of a terrifying, even a tragic character. But is it? Is there anything surprising or shocking in the fact that a body of people, many of them newly arrived in a state of extreme poverty, the great bulk of the whole belonging to the ranks of unskilled labor, should furnish twice as many applicants for charitable relief as would be their share in comparison with the whole population of this wealthy American city? Is it appalling that the number of court cases per thousand inhabitants among the poorest people of a city is one and a half times as great as it is in the population at large? As for the infant mortality, the figures do not on their face bear any intelligible significance; it is impossible to tell in what degree the fact that the Poles furnish two and a quarter times their share of infant deaths may be due to their furnishing much more than their share of infant births. Some hint of the actual conditions in this regard is unconsciously furnished by the figures of truancy; for the editor of the *Survey* does not note the significance of the fact that the school enrolment of the Poles, by his own figures, is nearly half again as great per capita as that of Buffalo at large. When it is borne in mind that the Polish children, of course, are not kept so long at school as the average, it seems plain enough that they have far more than their quota of children of school age, and in all probability far more than their quota of births. Indeed, looking at the whole set of figures with the eye of reason, they are so far from appalling that the only surprise is there should be so little about them of sinister significance.

In making these comments, we by no means wish to break the force of the assertions or conclusions of Mr. Daniels as to the conditions he describes. Statistics or no statistics, the living conditions of the poorest of our workers are such as we must bend every effort to improve. Many of the details he gives speak for themselves and need no elaborate computations to indicate their importance. But it is nevertheless important that we shall not acquire the habit of viewing with consternation displays of figures which may not mean what they imply on their face, and which, even if they do mean that, have no profounder or more startling significance than that there are rich and poor among us. This we all know without the figures; and before these are accepted as constituting a new arraignment of the existing state of society—a kind of arraignment abundantly used for the promotion of socialist agitation—it is our duty to ask whether they add anything to the general facts which no one denies, and with which the world has been dealing in a spirit of conservative progress for a century.

THE MATERIALS OF ROMANCE.

O. Henry's stories have the swiftness and the point of the anecdote. In this he was like Maupassant, with whom he has been somewhat recklessly compared. It is the essence of the anecdote that it shall keep its surprise to the end. Just enough art must be employed to keep alive the hearer's interest for the laugh or the gasp to which everything else leads up. That is the way the school-boy tries to write a short story, and that is the way Maupassant wrote his close-packed little tales of fifteen hundred words apiece. This final start of humor or surprise, which imprints a narrative sharply on the mind, O. Henry had in the stories that first brought him into notice. It appears in the burlesque adventure of the two American roustabouts in Venezuela who call up their last reserve of manhood to celebrate the Fourth of July with appropriate patriotic ceremonies, only to discover that the day is Christmas. It appears in the story of the little East Side tailor who gives up his week's wages for the honor of shaking hands with the saloonkeeper who achieves the honor of shaking hands in a Broadway restaurant with a weary member of the Four Hundred who, in turn, breaks the monotony of existence by going down to the East Side and shaking hands with the little tailor's apprentice. Later, O. Henry fell away from this highly architectural form of the short story. He went in more for the long and sprawling narrative, where the climaxes come in every paragraph and where the beginning or the middle is just as exciting as the end. The final little choke-up of laughter or tears was not quite so apparent.

But at all times the anecdotal quality was strong in O. Henry's stories, and it was this quality that made them capable of conveying the romance of New York's streets and her common life as no one before him had succeeded in doing. The anecdote must have swiftness and point, and they were most easily obtained by seizing a cross-section of life and giving to it the polish of fancy. O. Henry wrote many impossible stories. But they were impossible stories about possible people, whereas the ordinary product of the magazines to-day is impossible stories about impossible people. He took the tramp, the waitress, the shop-girl, the clerk, and

put them into a setting of tragedy or farce, but always in a romantic setting. He put plot into their drab lives, keeping the psychological realities largely true. He lacked Maupassant's perfection of form, which consisted in a seeming unconsciousness of form. On this point the difference between the two men might be something like the difference between the survivor of a shipwreck who tells of his escape and the gifted narrator who tells the story at second-hand. Maupassant would be the actual survivor in the case. O. Henry would be the anecdotist. He was always aware that he was telling a story. The art of it was quite visible. But beneath the art the sense of something real, something poignantly human, was seldom lacking.

It is probably by his earlier stories, his dramatic pen-sketches of New York, that he will be best remembered. With prosperity came a certain coarsening, or at least an overemphasis, of his manner. He made concessions to the public's ravening demand for slang; his fancy often became fantastic, his humor grew boisterous. But the instinct for dramatic surprise, which is the making of a real short story, he retained, and with it that sense of human reality which, united to fanciful form, makes romance. How was it that the romance of New York should have been so well caught by one who, until almost middle age, had not known the city? He himself once supplied the answer. It was not the romance of New York he was depicting. It was the romance of the common human heart and of the common life. He put the case in simple fashion:

> They say I know New York well. Just change Twenty-third Street in one of my New York stories to Main Street, rub out the Flatiron building and insert Town Hall, and the story will fit any up-State town just as well. So long as a story is true to human nature all you need to do to make it fit any town is to change the local color. You can make all the characters of the Arabian Nights parade up and down Broadway.

This is so old and so undisputed a formula that it is natural to find it quite neglected in practice. The local colorists among us have been busy enough in all conscience; it is the elemental factor of human nature that they have so persistently overlooked.

A "LAOKOÖN" FOR THE TIMES.

Nearly a century and a half ago, Lessing wrote the "Laokoön" to attack the prevailing pseudo-classic doctrine of imitation, and especially the maxim that poetry should be pictorial—*ut pictura poesis*. Undoubtedly his vigorous polemic did much to discredit the pedantic criticism and arid verse-mongering at which it was aimed, but apart from him the solid earth was trembling under the maxim makers and the society they represented. Rousseau and Diderot were already preaching the gospel of lawless spontaneity, and the French revolution was a short generation away. Since Rousseau, the primacy of feeling and the distrust of thought have been either advocated or tacitly accepted by our most considerable artists in letters. The emphatic bombast of *Sturm und Drang*, the more ingenious sensualism and Titanism of the French and German romantics, the formless yet iridescent pruriency of much of recent decadent poetry—all are phases of one process, the exaltation of the isolated sensation and the scorn of the controlling mind. And as literature has been deintellectualized, it has been devitalized, for real passion being substituted frenetic emphasis or diffused voluptuousness. With a sense that we are at a spiritual pass that requires a reaction analogous to Lessing's, Prof. Irving Babbitt of Harvard has attempted to sketch out a New Laokoön, for the times.*

I.

For a moment, we shall follow the argument of this stimulating and masculine book. This will imply an elaboration of the antithesis rudely stated above. The pseudo-classic fallacy rested primarily on a misunderstanding of Aristotle's theory of imitation. This word played havoc with criticism from the Renaissance onwards. Evidently promiscuous imitation of unselected nature was inexpedient—here the common sense of the period asserted itself. Instead, however, of seeking a law of selection—and in this Aristotle rightly read would have helped—the critics had recourse to authority. Imitate nature, yes, but beautiful nature (*belle nature*), and that you will most conveniently find already selected and consecrated in the pages of Homer and Virgil. Under the pressure of pedantic intermediaries, literature, in fact, began to shrink in content and expressiveness. Nothing was left to whim or inspiration. Common sense almost supplanted imagination, which for more than a generation was a term of reproach, denoting mental extravagance. The poet was conceived as a shrewd linguistic geometer, deftly assembling his words and phrases in the interest of an illusion potent enough to capture a skeptical reader. Poetry itself, then, was to be an elaborate and thoughtful deception. Professor Babbitt points out most suggestively that the pseudo-classical tendency to subtleties of analysis, the dogma of the immutable *genres*, the assertion of the authority of the classics, were in essence so many by-products of the Catholic reaction. Those casuists who in life believed that men should be deceived for their own good, quite logically consented to the theory that in art men should be deceived for their own pleasure. The police of the Church, who dreaded all spontaneity as a step towards insubordination, naturally minimized the rôle of imagination in poetry. The reason they could deal with, for, prelates or critics, they were cleverer than the minds they addressed. The feelings were refractory; put them then in the safe-keeping of Aristotle and Mother Church. *Endlich kam Lessing.*

To the well-worn subject of Lessing, Professor Babbitt brings not merely a fresh enthusiasm, but also some new points of view. Excellent is the parallel between Lessing's reform and Luther's. Just as the great Protestant appealed from a beclouded tradition to an infallible but misread Bible, so Lessing appealed from the commentators of Aristotle to the text of the "Poetics." He sought to overthrow the pseudo-Aristotelians by making real Aristotelians. The success of his polemic was great, because he literally undermined his opponents, showed that they grossly misunderstood not merely their master, Aristotle, but also their working models, Virgil and Homer. On the constructive side Lessing's work was less effective. He struck out to be sure with unique emphasis what we may call the law of the artist's material. But oddly enough Rousseau had anticipated him in the statement that painting works immediately in space, whereas literature works piecemeal in time. Moreover, singularly little has been made practically out of what would seem a germinal idea. Except for casual flashes in Ruskin, I hardly recall any serious consideration of this law of the material. Possibly the easiest confutation of some recent literary extravagances would be not that they do violence to common sense or morals, but that they do violence to language itself. In any case, Lessing's constructive counsels were few, and infected with a certain Protestant dryness. What he succeeded in proving was that a literary order already doomed richly deserved to die. It perished at the hands of revolutionists, whom Lessing, could he have read their course, would have regarded with equal scorn and with more misgiving than he bestowed upon the Rymers and Gottscheds. In fact, the simple and pregnant

**The New Laokoön.* By Irving Babbitt. Boston: Houghton Mifflin Co. $1.25 net.

distinctions which Lessing had substituted for the puerile distinctions of his antagonists were in their turn to be engulfed with all distinctions whatsoever in what Professor Babbitt calls the new "subliminal uprush or overflow of emotion."

II.

Of this inundation Jean-Jacques was the gate-keeper, and he played his part by launching the gates on the torrent. We shall find much to criticise in this subliminal uprush, but shall not be able to withhold admiration for its amplitude. The flood has been running copiously for more than a century. Its ramifications all proceed from Rousseau. Excess of individualism, from the Titanism of a Nietzsche to the hectic social pity of a Hugo, from the wilful whimsicality of a Tieck to the deliberate narcotism of a Baudelaire, each and every potentiality of romantic exuberance, seems contained in the experience of the founder of the cult. So Professor Babbitt does well to emphasize the central position of Rousseau. Feeling is everything, is the single article of his faith. From it follow such deductions as that thought is hostile to life and must be avoided. Feel as widely and as intensely as possible, pour as much experience as possible through your sensorium. Acknowledge no limits, add emotion to emotion, bring about a universal reverberation and interpenetration of the pleasures of the several arts—such is the gospel of spontaneity. Conceiving the rational life as evil, Rousseau yearned for the innocent state when the world was young and unspoiled by intellection. Out of this primitivism has grown the worship of nature and of the child—the Wordsworthian mood, in short—and by a crude yet inevitable perversion the grosser forms of scientific naturalism in philosophy and in the arts. All this originated in the fervid imagination of Rousseau. Nay, he anticipated the wildest vagaries of his followers. He regretted that the sublime delusions of delirium might not be recorded, and presumably had the delight of seeing the graphic transcripts of an architect's fever visions made by Piranesi in "I carceri."

Where Professor Babbitt possibly misses a point is in the failure to note that everything had to be comprehended once for all in Jean-Jacques. It is of the very essence of his anarchism that no progress is possible. In the realm of thought one may add generalization to generalization, confute, modify; in short, grow. In the realm of pure emotion experiences have merely the nexus of the individual's memory. Passions may be various, but unless they are taken up by the reason, they remain unrelated. The emotional life advocated by Rousseau in the name of liberty, admits only quantitative analysis. We may say that emotional crises are few or many, weak or strong, they never constitute a fabric or structure the quality of which may be judged. The ideally perfect free man is the lunatic; no ratiocination dims the colors or breaks the continuity of his revery. In other words, no progress of romantic individualism was possible except upon condition of retaining the despised reason, and the only step that Rousseau's disciples could take was to throw off the residuum of reason that had persisted in the master's spacious personality. This they promptly did. Where he, in behalf of spontaneity, appealed magnificently to reason, they more consistently set themselves to evoking emotional states, to what our author picturesquely calls "the dalliance of soul and body in the tower of ivory."

Nothing is more cogent in the book than the brief chronicle of intellectual decline, the abyss in which romanticism has chosen to welter:

> We can trace with special clearness in the romanticism of nineteenth-century France this tendency toward an hypertrophy of sensation and an atrophy of ideas, toward a constantly expanding sensorium and a diminishing intellect. Judged by any standard, Rousseau is a man of intellectual power, and he seems especially great in this respect when compared with Chateaubriand. Chateaubriand in turn appears an intellectual giant compared with Lamartine. Lamartine's ideas begin to look serious when compared with those of Hugo; Hugo himself strikes one as intellectually active compared with Paul Verlaine. Traces of cerebration may be discovered even in Verlaine, compared with some of the later symbolists. In these last anæmic representatives of the school we arrive at something approaching a sheer intellectual vacuum—the mere buzzing of the romantic chimera in the void. Such is the result of divorcing literature from rational purpose and reducing it to the quest of sensation; for it is the quest of sensation that is at the bottom of the whole movement, however much this quest may at any time assume the guise of a heavenly idealism.

This is well said, and the argument might have been carried a point further. Quite as noteworthy as the increasing atrophy of ideas has been the waning of real passion. The prevailing hypertrophy of sensation has produced an attenuation of real emotion, comparable only to that which marked the end of the pseudo-classic period. Has Henri de Regnier any more essential passion, for example, than the Abbé Delille? By different paths we seem to have attained an identical goal, a literary limbo where the lack of inspiration is disguised by a poetic diction, in the one case artificially dry and reasonable, in the other artificially luscious and far-fetched. In both cases the substitution of rhetoric for emotions and ideas is evident, and between dry rot and the other putrescence the former may seem on the whole the less offensive and more respectable. The shibboleth of spontaneity, in short, contained a self-destroying principle. Live solely for emotion, and you annihilate the capacity for experiencing it vividly, you will pass through various troublous cerebral reflections of actual emotion to a cross-roads where, like Huysmans's Des Esseintes, you must choose between a madhouse or quite vulgar submission to some constituted authority.

III.

Happily nature works silently against extremes of all sorts, and the romantic dilemma rarely presents this tragically uncompromising aspect. We have to do, usually, with a merely relative diminishing of thought which produces emotions first unrestrained and next variously confused. Just as the pseudo-classic discipline resulted in confusing intellectual distinctions, so the romantic anarchy results in fusing together alien emotions and planes of being. Ignoring the discriminations which have approved themselves as useful in individual experience, and in that of the race, life is reduced to a flux, the individual to an amazed observer of its superficial and inexplicable interweavings. The notion finds its most picturesque assertion in Renan. He writes, "A philosophy, doubtless perverse, has led me to believe that good and evil, pleasure and pain, beauty and ugliness, reason and madness, are transformed into one another by shades as imperceptible as those on the neck of a dove." Evidently the expression of such a state of mind will be an art where all boundaries are merged in dove-like iridescences. All emotions being on a parity, and each individual the only judge of the value of his own, art becomes a general perturbation of the entire sensorium. We write pictures, paint poems, orchestrate both, seek emphasis of emotion in overflow from sense to sense. Professor Babbitt traces these symptoms keenly through the legitimate artifices of verbal suggestion, through programme music, and the Wagnerian concentration of the visual and auditive arts, to such eccentricities or abnormalities as color audition and the cult of scents. We cannot follow him in this vivid and diverting analysis. Let us insist in general that all these adventures in multiple hyperæsthesia indicate a lack of aim and a corresponding ignorance of sound artistic economy. Matthew Arnold has shrewdly pointed out that Keats's "Isabella" contains more picture words than the whole of Sophocles, and withal as a narrative is inferior to the simple anecdote of Boccaccio. In the name of expressiveness, that is, we find a lavish and essentially unexpressive surplusage of the means of expression. The story has not been grasped as a whole, but as a congeries of glittering parts, has been imperfectly felt because imperfectly rationalized.

As the pseudo-classical thinker naturally put himself under the protection of

Aristotle, the romantic propagandist naturally claims Plato as patron. But he is, as Professor Babbitt neatly shows, at best a pseudo-Platonist. The confusion of different passions or of different stages of a single passion is profoundly alien to the teaching of the Dialogues. Plato's best remembered distinction, a typical one, is that between the earthly and heavenly Aphrodite; the true romantic, as in Hugo's poem "Le Satyre," rolls together in one vague surge all stages of sexuality from basest lust to the most ideal love. One could wish that concrete examples of this sort might have been multiplied. Such a course would have broken somewhat the march of the demonstration, but it would have helped the book with the average reader. It is in this lack of concrete illustration, and only here, that the new seems to me to fall behind the old "Laokoön." When I think what cases of the precise confusions of feeling discussed would have been afforded by Shelley, or Browning, when I recall the Swinburnian rage that lashes meaning and feeling together into an indeterminate opalescent spume, I regret a little the somewhat austere restrictions Professor Babbitt has imposed upon himself.

IV.

But the "New Laokoön" must be taken as a statement of principles. Their applications are only hinted at. Even the *genres* are not enumerated or defined, and, though the author is avowedly a lover of the *genre tranché*, he prudently omits to say just where the cleavage should be. Plainly, this would be matter for another book. I cannot resist the temptation to suggest that in all study of the mingling of the *genres* the opera must be the bone of contention, both because it is the most characteristic creation of the last century and because in it we find the mixture most extensive and apparently most successful. Personally, I doubt if the opera has yet fully justified itself as a clear-cut form. I believe the most musical admirers of Wagner will tend to close their eyes in the opera house and listen to the music; some will prefer to hear their Wagnerian favorites in the concert hall. In short, that elaborate visual accompaniment upon which he spent himself will seem to many of doubtful æsthetic utility. What makes Wagner rather than Richard Strauss the central point of any judgment is, first, Wagner's indubitable genius; next, his perfect sincerity, and, finally, his very typical sickness of soul. "'Tristan' is sick music," Vernon Lee has somewhere said; and I think no one who has really felt the web of narcotic love shimmering off into the alien passion for annihilation will deny the justness of the epithet. At many other points the course of the various arts since Rousseau might illustrate and emphasize the argument of the "New Laokoön." We see architecture slipping away from its moorings in tradition, and drifting at random in an inept individualism that hardly deserves the sounding name of chaos. Ornament similarly forsakes constructive geometry and sinks into stupid naturalism. We find painting under the tutelage of Diderot moving vapidly in the realm of the novel, wandering solitary in the fields with Constable and the Barbizon School (naturalism), with the Pre-Raphaelites and Puvis de Chavannes seeking the *faux naïf*, with the very latest Parisian school reverting to the synthesis of the cave-dweller who worked with a flint on a bone (all of these are various aspects of primitivism). On the other hand, Manet and Monet represent, though the phrase by no means bounds them, a marked tendency toward scientific realism. More specifically, the Impressionist school would have afforded an admirable target for Professor Babbitt's shafts. Its ruling principle is the isolation of the single ocular impression, the inhibition of any inflow, through memory, of previous knowledge or feeling, the swift denotation of what can be keenly felt in a glance. The golden text of the movement might be drawn from a passage of Bacon which Professor Babbitt quotes most appositely in another connection: "The affection (emotional nature) beholdeth merely the present; reason beholdeth the future and sum of time." The true impressionist chooses unhesitatingly for the "affection," and regards the forward and backward-looking reason as an intolerable obstructor of artistic traffic. Or, to put the case of impressionism historically, the earlier romanticism resolved personality, which had been regarded as a kind of equilibrium between intellect and emotion, into a single dynamic but disorderly flux. Impressionism then disintegrates the flux itself and personality becomes so many unrelated eddies. Oddly enough, philosophy has taken up tardily a neo-Heraclitanism rediscovered by a pack of painters and already pretty well played out as a guiding principle of art. Possibly, the easiest way to understand the theory of Bergson would be to study the pictures of Claude Monet's middle period.

V.

Such casual observations are a tribute to the stimulus received from this powerful book. In abundant learning, lightly carried; in the number and importance of the distinctions it establishes, in a certain passion of the intellect and masculine eloquence, the "New Laokoön" seems to me no whit inferior to the old. On the constructive side, Professor Babbitt pleads for the supremacy of the reason. Let us form the distinctions by which, as artists or as men, we must live, but let us hold these distinctions flexibly. The mind should control the passions, but with a constant delicate scrutiny and criticism of its own overlordship. The literary *genres*, being merely summary definitions of artistic forms that in the long run have succeeded, deserve our study and respect, but they exist to steady and not to trammel us. In short, while our author for polemic purposes appeals often to Plato against his errant disciples, he himself is rather an Aristotelian, *pur sang*, advocating a kind, sweet reasonableness that expresses itself practically in tempering each extreme by its opposite, in a delicate equilibration of the claims of mind and instinct. Not the craze for liberty, *eleutheromania*, but the sensitive pursuit and practice of self-discipline, constitutes a whole man. Such is the teaching to which in an earlier book Professor Babbitt gave the name of humanism. It is an old teaching, but its value is permanent. Happy is the land and the university in which old truths are restated with so seasonable an emphasis.

I can see sound tactical reasons why Professor Babbitt should be merciless to his romantics, but I feel, too, that one acknowledgment was due them. Whereas the pseudo-classic dogmatist erred doubly, and in kind (he rejected an indispensable thing, the imagination; and having given sole dominion to reason, proceeded to reason badly), the romantic dogmatist errs singly and only in degree—he too rejects an indispensable thing, the intellect, but at least he lives up to his own ideal of feeling tremendously, and merely wants too much of a good thing. Some hint of an ultimate enrichment of the resources of the arts through romantic excesses there is, but the concession might have been a more generous one. To do the Rousseauist justice, his error is æsthetically, if not socially, more tolerable than that of the pseudo-Aristotelian. With emotion regnant we shall always have art of a kind, though nebulous, or, merely some faint "buzzing of the romantic chimera in the void." With imagination suppressed, we should have no art at all, but simply some measured crackling of lifeless thorns under an archaistic pot. The romantic, after all, venerates the Dionysiac principle without which no art is, and leads us, if in unmannerly fashion and by erratic paths, somewhere near the Heliconian springs. On the other hand, his exaggeration, if logically more pardonable—since artist must speak as artist—is socially more perilous. Practically nobody ever did succeed in suppressing the emotions, while most practically the reason has been disastrously suspended in both men and nations. Thus we arrive at the seeming *impasse* of a hostile art and morality. Pascal is profoundly right: "The imagination is a proud power hostile to rea-

son." Yet the true Aristotelian, for working purposes, will adroitly adjust this enmity by a succession of reasonable treaties, while the true Platonist, virtually making a similar adjustment, will indulge the faith that the antinomy is resolved on some higher plane of being.

Let me recall in conclusion that the issue is not merely one of art or of ethics, but of life, and let me illustrate by a homely example: What did *savoir vivre* mean in Boileau's time? It meant, of course, ability to handle one's self among men, to understand one's *milieu*, a tactful and practical rationalism. Well, the other day I heard one of my most intelligent friends—a disciple of William James, by the way—gravely distinguish between "capacity for life" and "capacity for thought." By capacity for life he meant an eager and unhesitating pursuit of maximum emotions, and a ruthless performance of the deeds thereby suggested. "Capacity for thought" interferes with this vital process, and he was inclined to regard it on the whole as an evil. The eighteenth-century seeker for *savoir vivre* was at some risk of idealizing his dancing master, the neo-romantic apostle of "capacity for life" is in considerable danger of deifying Jack the Ripper. We need a conception of personality broad enough to take in both passion and discipline. If the present cult of impulse continues, the hazard will surely pass from the individual to the collective stage. Those who admit no criticism of impulse are unwittingly preparing themselves for servitude to those impulses which are strongest—the hunger for gold and the lust for empire.

NEWS FOR BIBLIOPHILES.

Another copy of the exceedingly rare first issue of the first edition of "Lyrical Ballads" (1798) was discovered a few months ago in England by a New York bookseller. This little volume of verse, the joint production of Wordsworth and Coleridge was printed in Bristol and the title-page of the first issue has the imprint: "Printed by Biggs and Cottle, for T. N. Longman, Paternoster Row, London, 1798." After a few copies had been distributed a new title-page was prepared, having the imprint, "London: Printed for J. & A. Arch, Gracechurch Street." Of the earlier issue only some five or six copies are known. One, formerly Southey's, now in the British Museum, contains Coleridge's poem "Lewti," which was, for some unknown reason, cancelled, his "The Nightingale" being substituted for it. As this second piece was the longer there are in all other copies two unnumbered pages between pp. 69 and 70. Col. Prideaux in his notes to Shepherd's bibliography of Coleridge tells also of a copy of the book belonging to R. A. Potts which contains an additional leaf, recto unnumbered, verso numbered 63*, upon which are printed lines entitled "Domiciliary Verses, December, 1795." These lines were the composition of Dr. Beddoes of Bristol, father of Thomas Lovell Beddoes, the poet.

Joseph Cottle, the Bristol publisher, paid the authors £30 for the copyright, and the book was published "about midsummer, 1798." In September of the same year Cottle "quitted the business of a bookseller," and it was at this time no doubt, that the new title was printed and the stock transferred to London.

On June 16 and 17, Sothcby, Wilkinson & Hodge in London will sell a collection which contains a considerable number of notable rarities, manuscript or printed. Among the books are Goldsmith's "Haunch of Venison" (1776), the first edition, with the rare half-title; a large and fine copy of Pliny's "Historia Naturalis," printed at Venice by Jenson in 1472; Spenser's "Faerie Queene," both volumes dated 1596, being the second edition of the first and the first edition of the second; Lynton's "Newes of the Complement of the Art of Navigation and of the Mighty Empire of Cataia" (1609), one of the first books in English on China and Japan; John Florio's "World of Wordes" (1598), John Evelyn's copy, with his autograph inscription on fly-leaf and with the cypher in gold on the binding; a fourth folio Shakespeare (1685), and other books. Among the manuscripts the most important is the original autograph manuscript of Sheridan's "School for Scandal," written on about 137 pages, quarto. This is the manuscript which was submitted by Sheridan to William Chetwynd, "Examiner of Entertainments for the Stage" under the Lord Chamberlain, and accompanying it is a short note from Sheridan, sent with the manuscript:

> If the following Comedy called "The School for Scandal" meet the Approbation of the Lord Chamberlain we shall have it performed at The Theatre Royal in Drury Lane May 7th, 1777.
>
> R. B. Sheridan.

In 1834 Sir George Chetwynd, grandson of Sir William Chetwynd, sent the manuscript to a bookbinder, a Mr. Fairburn, 10 Duke Street, Adelphi, whose shop was destroyed by fire while the manuscript was in his possession. It was recovered from the ruins several days later, but some pages of the manuscript are scorched at the edges. It was formerly in the collection of Augustin Daly of this city. At the sale of his library in 1900 it brought $1,750. Another manuscript, Sir Walter Scott's "Romance," written for and published in the six-volume supplement to the Encyclopædia Britannica, edited by Macrey Napier, and issued in 1824, has also appeared in an American auction room, having been sold in the Buckler sale at Anderson's in 1907. It there brought $425. It had earlier appeared in the James T. Gibson Craig sale at Sothebys in 1887, then bringing £35.

On June 14, 15, and 16 C. F. Libbie & Co., in Boston, will sell the library of the late S. P. Mayberry of Portland, Me., with additions, including a very extensive collection of civil war literature, and about 130 lots relating to the history of printing and allied arts.

On June 15 and 16 the Merwin-Clayton Sales Company of this city will sell a miscellaneous collection of books and prints, including a few first editions of American authors.

The Anderson Auction Company held their last sale of the present season on June 7 and 8.

Correspondence.

THE RHODES SCHOLARSHIPS.

To the Editor of The Nation:

Sir: It seems to me unfortunate that in the course of the six years since the Rhodes scholarships went into operation, the interest in them on the part of American teachers and college students has been so slight. Evidently American teachers and boys, for the most part, believe that the opportunity offered by these scholarships is of little value. Apparently this belief is due to the fact that Oxford training is regarded as unpractical, inefficient, and out of date. If this be the true reason for our indifference, the situation is the more unfortunate because the criticism of Oxford conveyed in it contains a certain amount of truth, and this truth blinds us to the fact that Oxford training, notwithstanding its defects, has for American boys very great value. The things which Oxford can do for our boys are precisely those things which our own universities do not do at present, and yet which they must do if our system of education is to be a success in the future. I am not alluding now to the incidental benefits of the Rhodes scholarships: travel, study in foreign libraries, acquirement of foreign languages, and acquaintance with men from every Anglo-Saxon country. It may well be that these advantages are the most important of all, but they do not exhaust the list. Besides all these, Oxford has certain lessons to teach us in the aims and methods of university education—matters concerning which our own ideas and practice are somewhat confused.

One of these lessons is the meaning of thoroughness. Each of the various undergraduate courses at Oxford is much more limited in range than that pursued by the average American student under the elective system. At the same time the Oxford examinations for the honor degree are much more thorough and searching than ours. The result is more thorough and efficient training. Nor is this good counterbalanced by the narrowness so much feared by our undergraduates. No man is made narrow by intelligent study of any liberal subject. Our common method of taking scattered courses in order to widen the range of our interests is only a clumsy and extravagant way of getting the benefit which could be obtained far more naturally and easily from a certain amount of general reading. Indeed, the widely scattered courses in the average American undergraduate's programme—planned as they are likely to be for specialists and not for browsers—often result in killing rather than in stimulating the mild interest which prompted the student to undertake them. An ever increasing number of our graduates spend an additional year taking the master's degree, in order to obtain that amount of familiarity with their special subject, which a more unified course would easily have given them in four years. The average American Rhodes scholar, who has gone no farther than the A.B. in this coun-

try, finds it worth while to take that degree again at Oxford, because of the greater thoroughness of the English course. In this respect, it is a grave question whether or not American college training is really so practical and efficient as the English.

Another lesson which Oxford has for Americans is her solution of the problem of what is the meaning of a liberal education. This is not—in the universities of our Middle West at any rate—a popular ideal, but it would be a mistake to dismiss it as not practical. It is practical for any sort of fine work which requires a cultivated mind. In an English university it is now, as much as in Newman's day, the aim of a university course. It is a problem that we are likely to study more and more keenly as time goes on. Perhaps the English methods will not prove to be best for us, but they can never be without interest and value. At Oxford one finds a solution of the problem which has worked and is working, and is thus practical and not theoretical. This letter is no place for a dissertation upon the subject, but it may be well to point out two elements in the English solution which are with us usually neglected.

The first of these is the social life, the value of which the university recognizes by its requirement of residence. The average English undergraduate does only part of his work during term time, reserving the rest for the vacations, which are longer than ours. He has thus a great deal of time for "Oxford life." The life in the colleges is comfortable, even luxurious; the men know each other intimately year after year, since most of them follow their courses straight through without intermission. The conversation which this life makes possible is not the least important part of an Oxford man's training, and it is that part of the training which earnest American students are most likely to miss at home.

The second element which Oxford utilizes and which we waste in the education of undergraduates is sport. The English college system demands that every man who has any athletic skill whatever shall take part in some outdoor games. A college of 100 to 200 men maintains six or eight teams and crews in the various forms of athletics. Matches and races are frequent through most of the year. The result is that at inter-college games there are almost no spectators. The men play more for sport's sake and less for glory than do American athletes. It is this fact which seems to me responsible for the high ideal of sportsmanship which one finds in England. I believe that it is the presence of spectators which has, more than anything else, caused the deterioration of our baseball and football. The spectators are eager to win at any cost; they are interested mainly not in the game itself but in the result; they have lower ideals of sportsmanship because they have not been trained in sport. Their part is a weak and helpless one, despite our superstition as to the value of "rooting," and the effect upon them and upon the players is what one might expect. The moral quality we call sportsmanship—the love of a fair game, and willingness to accept the result—is by far the most important good to be gained from athletics, more important than physical health. Nothing else will give a boy so effectively the kind of moral stamina which he can get from healthy well-conducted sport, and few things will do him more harm than playing to win at any cost.

In the ways which I have outlined English education has for us great value. This value is not less because we do not always clearly feel the need of it. Our educational aims are, it seems to me, definite and practical enough, but I question whether our practical sense has guided us so surely in selecting the means to these ends. The contrast is an interesting one. I have heard a distinguished Englishman say that the thing which struck him, in talking with Harvard students, as more remarkable than anything else was the fact that each undergraduate seemed to know just what he was there for, had decided what his career was to be and exactly what training he needed for it. It is true that American students do know, as a rule, what they go to the university for, and from the beginning of their course have the end clearly in view. Our universities—especially in the Middle West—have sought to meet the demand of these students by organizing many special courses which combine liberal and professional studies in the way which is regarded as giving the best preparation for various callings—journalism, law, medicine, teaching, engineering, and so on. It is an example of the trend in this direction that Harvard has a graduate school of business methods. The number of students who are in search of what is ordinarily called "a general" course, grows fewer every day, and the function of the American college is becoming more and more vague. All this is a natural result of the practial aim of our education, and it makes understandable the indifference of our best students to the opportunity offered by the Rhodes scholarships.

However, in spite of these practical aims, our education is, from another point of view, highly theoretical. We see clearly the end to be achieved, but we are perfectly willing to follow the newest theory as to the means of reaching this end. So far are we from following traditional methods, sanctioned by long experience, that we tend to despise such methods: with us the greatest of crimes is to be out of date. One of the best examples of this is the teaching of English composition in our colleges during the last ten or fifteen years. The aim has always been perfectly clear—to enable our undergraduates to write the English language with "clearness, force, and ease." To this end a thousand means have been tried: the study of rhetoric, books of selections, text-books on style, daily themes, committing to memory whole chapters of great authors, etc., etc. Our undergraduates are no longer viciously ungrammatical, they can for the most part produce fluently, in classroom or examination, enormous masses of commonplace English in which the spelling, punctuation, and grammar will pass; but they do not write well and we are being driven to the conclusion that the problem is more complex than was at first thought, that there is after all some connection between thinking and writing, and that some traditional opinions on the subject may not be without value—for instance, "Here therefore is the first distemper of learning, when men study words and not matter."

This is only one example. There are many other ways in which American education, in enthusiasm for a practical end, has been prone to overlook the necessity for workable means. In the cultivation of patience and thoroughness, in distinction of real efficiency from rampant idealism which simply underrates the task, Oxford has, I believe, something to teach us, and the Rhodes scholarships a value to our boys which our teachers have perhaps underestimated.

Closely connected with the contrast explained above, between the practical and theoretical elements of our education, is the question of broad standards versus high ones. This question is one certain to come up in any democratic country: it is felt in England no less than here. The English solution of it is to make a frank distinction between passman and classman, to separate the two classes entirely and to demand for the honor degree a higher standard than ours and for the pass degree a much lower one. This solution I am inclined to think a bad one, but nevertheless it succeeds in doing certain things which we fail to do. It gives the honor degree a meaning which we can give our A.B. degree only by the uncertain system of recommendations. It keeps the standards for the degree higher than we can make ours and thus furnishes for the best men an ordeal suited to their ability. Our system of education is an attempt to train the whole people. The danger in this attempt—that we should train them on a low level—has been often enough pointed out; but the American student who comes in contact with the honor men in an English university will realize this danger in a more vivid way than he can from any warning of Renan's or Arnold's.

I do not for a moment believe that the English system of education would do as a substitute for ours. We must work out our own problems, but we have not solved them yet. We need the help of the best ideas which can be obtained anywhere. Oxford is strong in those points where we at present are weak, and nothing would be of greater good to our education than the presence in our country of business and professional men whose education had been better in some respects than our universities are able to make it.

FRANK AYDELOTTE.

Bloomington, Ill., May 31.

ENFORCEMENT OF THE LAWS.

TO THE EDITOR OF THE NATION:

SIR: With regard to the President's duty in enforcing the law a tendency has recently developed which merits careful attention, the tendency, namely, to assume that the enforcement of a law is discretionary with the President. Now the simple fact is that it is the President's plain duty to enforce every law without regard to its effects; that he has no concern with the wisdom or unwisdom of a law after it is once enacted, and can in no way be held responsible for any ills resulting from its enforcement, although he is entirely responsible for such as result from its non-enforcement. The question at issue is whether Trusts are law-breakers, and that question is not to be tried at the bar of public opinion, but in the courts of jus-

tice exclusively. Neither has the President, as the representative of the public, anything to do with it except that it is his bounden duty as the public prosecutor to present to the courts all available evidence which tends to show that they are law-breakers. Their appeal to the President asks him to omit the performance of that duty in their case and thus protect them against the due administration of justice. That appeal and every similar one is necessarily one of two things, viz., it is either a tacit confession of guilt and a plea for Executive clemency in advance of trial and conviction, or it is a plea of innocence and an appeal to the Executive to rescue the innocents from the jurisdiction of the courts upon the ground that the judiciary is, in their case, unfit to be entrusted with the administration of justice. The absurdity of all such appeals is well illustrated in the one now made by the Trusts. That appeal is based upon the claim that the law, if enforced, would work a great public injury by destroying practically all trade combinations, both good and bad, and by paralyzing business. Now the intention of the law is, as everybody knows, not to injure but to benefit the public; and all that the courts are asked to do in enforcing the law is so to interpret and apply it as to effectuate that intention. The main purpose of the law is perfectly clear, viz., to prohibit and punish such combinations as are harmful, and those only. To suppose for a moment that Congress intended to prohibit and punish all those thousands of combinations that are not only harmless but beneficial, and to do so to the extent of "bringing business to a standstill," as they say, would be the height of absurdity, but that is what we are told the courts are required to do in enforcing this law. But no judge in his senses would hold that such was the legislative intent, even if the law were so unfortunately worded as to be literally susceptible of such construction. He would hold that the intention of the law was to prohibit only such combinations as are harmful, and that it devolves upon the courts to determine in each instance whether the particular combination in question is or is not harmful and obnoxious to the purpose of the statute. This task it is conceded will in some cases be a very difficult one, but it is by no means impossible.

Tribunals that habitually grapple with much more difficult problems—such, for instance, as determining whether a certain man who was at all other times sane, was at a certain hour in a certain day and year insane—surely ought to be equal to it. To say that they are not equal to it, and must not be allowed to undertake it, would be to admit that these harmful combinations are more powerful than the government, that their illegitimate methods have become so intertwined with the legitimate methods of those that are not harmful that the former cannot be distinguished and disentangled from the latter, but must be permitted to continue their noxious growth till the harvest. Certainly it is not for the Executive to recognize, and be swerved from his duty by, any such alleged inability on the part of the courts. And as regards the merits of the matter it is a noticeable and somewhat amusing fact that these cries for Executive interference with the courts of justice come, not from the thousands of small, harmless combinations which are thus alleged to be threatened with ruin, but from the few great ones whose characters have become notoriously shady. The latter have suddenly become the self-appointed guardians of the former, and are striving nobly to save their wards from destruction at the hands of the courts of justice. The solicitude thus shown by these big ones for their smaller and weaker brethren (whom they have not yet crushed) is a beautiful and touching example of corporate altruism, thus belying the reputation fastened by Lord Thurlow on all corporations as wholly selfish and soulless beings, non-kickable and non-cursable.

Such being the nature of these appeals to the Executive, the growing tendency to tolerate them and to recognize the assumption that the President has such discretion needs to be vigorously repressed by keeping before the public mind the true nature of law and of Executive authority, and their relations to each other.

What is the law as regards the Executive? Is it a license? or a mandate?—a license to do or not to do something as he may choose? or a mandate *to do* regardless of his own choice? A legislative enactment which is not such a mandate—which does not lay upon the Executive the duty of its own enforcement—is no law at all. It lacks the very first essential of all law, namely, a definite and positive legal sanction, which is as binding upon the Executive authority as upon citizen or subject. An enactment which leaves that sanction to the pleasure of the Executive is virtually an abdication *pro tanto* by the legislative power of its proper function, and leads either to government by personal dictation as distinguished from government by law, or to anarchy. In so far as the Executive branch of the government is concerned, there is no logical halting place between a strict enforcement of the law according to its terms because it is the law, and an enforcement or non-enforcement according to Executive pleasure. If the Executive may rightfully suspend the operation of part of the law part of the time, he may, in like manner, suspend the operation of all of the law all of the time. This notion that the law is in the nature of a power of attorney from the people to the Executive under which he is to act according to his own discretion, and to determine when and where and how far and against whom the law shall be enforced, is a radical innovation and is irreconcilably at war with the spirit of our institutions.

And yet that notion has now become strangely prevalent, as is shown in connection with the Anti-Trust law, where one hears on every hand the question, "Is the President going to enforce the law?" Is he going to enforce the law! What a question! You might as well ask, "Is he going to remain President?" For what is he President, if not to enforce the law? For what was the law enacted, if not to be enforced? It is frequently said, too, that he is going to enforce the law because he finds that the people want it enforced. What a misconception of the nature of law is thus involved! When and how did he make this astonishing discovery? We had supposed the people's wishes in this regard to be well understood ever since the law was enacted. What better evidence of the will of the people has the President found than that which is contained in the law itself?—the law being nothing more nor less than the will of the people carefully formulated and declared through and by the authorities regularly constituted for that express purpose.

In the making of every law found on the statute books, the President has already exercised a voice—the voice given him by the Constitution. Every such law has been enacted either with his approval or by virtue of such a majority of the people's representatives as makes it a law notwithstanding his disapproval. Now to concede him the discretion in question would be to vest him with a second and extra-Constitutional veto power far greater than the first—a power by which he could virtually nullify every law and override not only the expressed will of the people, but also his own approval or that of a previous Executive.

Witness the action of the last preceding Executive in connection with the so-called Tennessee Coal & Iron merger, in which the President assumed to fix in advance the status of the proposed merger as legal or immune by giving it his approval. If a President can validly do what was thus attempted, what becomes of the line of demarcation between the Executive branch of the government on the one hand, and the legislative and judicial branches on the other? Nay, what become of the latter branches themselves? They are henceforth merely subordinate and advisory assistants to the supreme authority exercised by the Executive.

The evils of non-enforcement are impressively exemplified in the case of the Anti-Trust law. When this law was enacted, some twenty years ago, the evils against which it is aimed were still in their infancy, and, had the law been promptly and faithfully enforced from that time to this, as the Constitution requires, the present conditions would never have existed. There would have been a gradual adjustment between the law and the business interests involved, in which the latter would have gradually shaped themselves conformably to the requirements of the law, and the law would have been interpreted, and if necessary modified or amended, so as to meet the legitimate exigencies of business. Let us then have done with this pernicious idea of Executive discretion in law enforcement, and no longer

> Make a scarecrow of the law,
> Setting it up to fright the birds of prey
> And leaving it inert till custom make it
> Their perch and not their terror.

HERBERT L. BAKER.

Detroit, May 23.

NEEDED CHANGES IN OUR PATENT SYSTEM.

TO THE EDITOR OF THE NATION:

SIR: Senator Daniels has presented a bill to Congress which provides for a new Patent Office building at Washington. The interest shown in this bill, together with the fact that there is a movement among European nations to aid and promote invention, makes a consideration of our patent system extremely important.

A study of the lives of inventors shows that many have struggled in poverty and hardship, without encouragement or assistance, and when at last their work has been completed, they have often failed through lack of business ability or through failure to interest others in their work. In al-

most all these cases the work has been hampered and delayed through lack of equipment, and in some of them, by actual physical privation. If this is true of those whose lives we find recorded, how many there must be who lie in unmarked graves, their aims not realized, their life-work unrewarded.

The inventions of the past century have been, to a great extent, the practical application of discoveries of an earlier age, and have been worked out through a process of development to which more than one man has contributed. Under our system it is difficult to establish priority of claim, and the granting of a patent to the first claimant has sometimes been unjust. Also, there is no protection for the man who has contributed to the invention, unless he has patented some part (which might seriously interfere with the granting of a new patent). In this way the contributions of other inventors have often been overlooked in the completed work. The origination of an idea is essentially important; those who aid in development are also deserving of recognition, but too often both have been disregarded because a patent was issued to the man who made the final discovery or improvement.

In addition to this hardship and injustice our present system also permits a monopoly in the manufacture and use of inventions, which is costly to the public, and causes economic loss by limiting production. Take for example the leasing of patented machinery to favored producers, or the patenting of processes of manufacture, which prevent competition and establish private monopolies. This monopolistic idea too often makes the inventor a victim of unscrupulous promoters, and the attempt to protect him results only in the piling up of wealth in the coffers of those who have done little to deserve it. Would it not be a decided help to American progress if we could establish a system which would encourage the worker, give recognition to those who assist in the process of development, and at the same time protect the interests of the public?

We have at Washington a corps of experts whose duty it is to pass judgment on all applications for patents, to examine the practicability, and priority of claim, and to decide according to their findings. Would it not be feasible to have this board of experts examine the plans of an inventor, on application by him, and, if they found the project a promising one, provide him with means to carry on his work? Perhaps the most practical method would be to establish a government workshop where the inventor would have every advantage of equipment, and where the supervision of government experts would greatly facilitate his work. Such supervision would also prevent a wrong use of government aid. This would be the same kind of assistance as that which we are now giving to farmers by means of the Department of Agriculture and the various experiment stations. The government workshop would probably be self-supporting, just as our patent office now is.

In order to reach some of the other defects of our patent system, we might introduce a plan whereby the successful inventor, who had received government aid, should receive a royalty on his invention, while the government should retain the patent right. It could then allow freedom of competition in manufacture, or grant special monopoly privileges in case of inventions which carried a greater amount of risk and thus needed protection. The government could exact a royalty, to repay its expenditure, in cases of commercial and industrial improvements.

This plan need not affect the private inventor, or anyone who preferred to carry on his work in his own shop or laboratory, but I believe the payment of a royalty to the inventor would prove to be of general advantage. This royalty could be made larger in the case of the private inventor, but the government would still control the patent rights, and could give the public all the advantages to be derived from new devices, as well as prevent the strife and litigation which are so common to-day.

In Germany men of science are aided by the government, and that country has advanced by enormous strides in the past two decades. In France aid is given to carry on experimental work. In a recent article Sir George Reid urged the English people to take active measures to promote invention. Now that we are about to expend several millions of dollars in the erection of a new home for our patent office, it seems eminently fitting that we should make some provision to promote our own industrial progress.

WILLIAM C. AVERY.

Boston, June 1.

AN AMERICAN NEWSPAPER INDEX.

TO THE EDITOR OF THE NATION:

SIR: The approaching joint meeting of the two leading American library societies, the American Library Association and the new Special Libraries Association, to be held at Mackinac Island in July, will afford opportunity to discuss a project which would be of the greatest value to patrons of every library, public, private, or special. This is the proposed publication of an adequate index to one or more representative American newspapers.

No better example can be found of what such an index should be than the Annual Index to the London *Times*, which has been issued in monthly parts and annual volumes since 1906. In thoroughness, completeness, and usefulness it is unsurpassed. The volumes constitute a treasury of current English and world history of constant value to the editor and professional student. Few volumes are more frequently referred to or relied upon in the libraries of carefully edited periodicals.

The fact that we have no great national newspaper in the United States, owing largely to the vast area of the country, and to its diversified local interests, precludes the selection of one newspaper for indexing. Even if that were feasible, it would be argued, very properly, that the publication of an index to a single newspaper should be undertaken by the publishers of that newspaper, as is the case with the Index to the London *Times*.

The support of the Carnegie Institution, for example, might, however, be very properly enlisted in supporting an index to three or four representative newspapers from different sections of the country. Thus such an index might include the following newspapers: the New York *Evening Post*, the Boston *Transcript*, the Chicago *Tribune* or *Record-Herald*, and one Pacific Coast paper. It would list every important article, omitting minor local items, and should cover adequately the interests of the entire country.

No index to news in general or to any one newspaper in particular can be so valuable as one upon the lines of the periodical indexes, which can be relied upon to list the important articles and news in certain representative newspapers. Every one knows that articles are constantly appearing in newspapers of the standing of the Boston *Transcript*, the Springfield *Republican*, and the New York *Evening Post*, which merit rescue from that chamber of oblivion, the library newspaper room. Many of these articles are just as valuable as most of those listed in the periodical indexes, far more so than nine-tenths of the fiction and verse, the titles of which crowd the pages of those indexes.

What library, for example, can refer to Prof. Barrett Wendell's biographical study of Henry Cabot Lodge, to Thomas Wentworth Higginson's page of reminiscences of Agassiz, to John Jay Chapman's life of Samuel Gridley Howe, to Wardon Allan Curtis's study of Milwaukee and the triumph of Socialism, to the *Evening Post's* article on the sale of American securities in Europe, to mention but a half-dozen articles which have appeared in newspapers within the past few weeks? PAUL P. FOSTER.

Boston, The *Youth's Companion* Library, May 25.

SHAKESPEARE AND PESCETTI.

TO THE EDITOR OF THE NATION:

SIR: I am very glad that Miss Cipriani has called attention to Orlando Pescetti's "Cesare," an interesting play in spite of its long-windedness, and in these days strangely overlooked. I have discussed it briefly in my article on Shakespeare's "Julius Cæsar" in the current number of the Publications of the Modern Language Association, and attempted to indicate its relations to Muret's Latin "Cæsar" and to the stream of dramatic tradition concerning Cæsar, which sprang from his adaptations of Seneca. It is, however, a matter of grave doubt with me whether it can be shown that Shakespeare made any use of Pescetti's play. Verbal coincidences there undouhtedly are, hut so there are between any two Cæsar plays; considering the large amount of material and the frequency with which it has been handled, any other situation would be surprising. For example, the flourishing of the bloody sword and the cry of "Liberty!" is in Muret and all the rest, but the washing in the blood of Cæsar, which does not appear in the passage quoted from Pescetti, is not only in Shakespeare, but also in Sir William Alexander's "Cæsar." Yet between these last it would be virtually impossible to show any immediate connection. The parallel-passage argument is nowhere more tempting and nowhere more dangerous than in dealing with such a vast body of material of all ages as connects itself with Julius Cæsar.

HARRY MORGAN AYRES.

Columbia University, June 2.

TO THE EDITOR OF THE NATION:

SIR: The same mail which brings me the *Nation* brings me also the June number of the Publications of the Modern

Language Association. From Dr. H. M. Ayres's article on Shakespeare's "Julius Cæsar" it appears that an expert source-hunter has already tried and rejected Pescetti's tragedy, "Cesare," as a source of the Elizabethan play. The verbal parallels suggested by L. Cipriani in this week's *Nation* are not of a kind to suggest direct borrowing. The speeches are such as would be required in dramatizing Plutarch, although nothing in the original appears directly to suggest them. By the way, one scholar says of Pescetti's play that it is "intolerably wordy," the other that "it has intrinsic merit." When doctors disagree, etc. HENRY NOBLE MACCRACKEN.

Yale University, June 2.

Literature.

REMINISCENCES OF OSCAR BROWNING.

Memories of Sixty Years at Eton, Cambridge, and Elsewhere. By Oscar Browning, M.A. New York: John Lane Co. $5 net.

Students of early Italian painting will recall those vivid representations of human souls being tugged in mid-air by a representative of heaven and of the pit. There was a time when Oscar Browning's soul was thus disputed. Lady Tennyson firmly drew him toward revealed religion, while George Eliot vigorously claimed him for positivism. Happily, the gentler influence prevailed, and latter-day Christianity was not deprived of the ornament of an "O. B." Some slight travesty of this interesting episode must be pardoned because it gives emphasis to a marked quality of this autoblography. Mr. Browning zealously records the adventures of a soul among celebrities. Established for fifteen years as a master of Eton, and for thirty-five as a Fellow of King's, Cambridge, multilingual, a traveller throughout Europe and a frequent sojourner in the most favored resorts, gifted with a genial and attractive personality, Mr. Browning made acquaintance as distinguished as it was wide, so that eventually standing before kings was almost in his day's work.

We cannot call the roll. In more or less vivid fashion Cavour, Antonelli, Gladstone, Lord Salisbury, King Edward of England, Browning, Tennyson, Ruskin, Newman, Henry Sidgwick, Jebb, the brilliant parodist and orator, J. K. Stephen; the creator of the new journalism, G. W. Steevens, are passed in review. Americans rarely appear among Mr. Browning's lions, but there is cordial, if not quite tactful, mention of John Bigelow at Berlin and of the Storys at Rome. Such reminiscences are in general rather casual and amusing than extended and intimate. We see Gladstone solemnly doing Cambridge and remarking the growing "brutalization of the House of Commons." A reverent throng followed quietly, and Mrs. Gladstone suggested: "Let us stop a minute and let them have a good look at him." Through the need of filling a column expeditiously, Robert Browning's first book was reviewed by the London *Repository* in the following summary fashion: "Pauline—balderdash." For the next number John Stuart Mill offered a favorable notice which had to be rejected because the *Repository* was already on record. By this accident the poet felt his fame had been delayed twenty years. Tennyson once told our author that "Lucretius" was written to show "how an indelicate subject might be treated delicately," and as he was reading it he exclaimed: "What a mess little Swinburne would have made of this!" The visitor spoke of Swinburne's lyrical power, and Tennyson said: "Yes, he can write French lyrics."

Just before the capture of Rome our author saw the Papal Court in its splendor, and at the Œcumenical Council of 1870 met many of the chief actors. Lord Odo Russell, astutest of papal ambassadors, told him that the most delicate affair he had ever adjusted concerned a cat. The exiled Queen of Naples, an excellent pistol shot, lived near Cardinal Antonelli's mother, "the houses standing back to back, a wall forming the frontier of their respective domains":

> On the top of this wall used to parade a magnificent Persian cat, the property of the cardinal's mother. The Queen, who rose very early, saw the cat one morning, and the temptation was too strong for her. She fired, and it fell. The excitement was tremendous, the chanceries of the Holy City were overwhelmed with correspondence, but the affair was at last composed by the efforts of Odo Russell, the universal peacemaker. He told me that up to that time the two most difficult affairs which had fallen to his lot to arrange were the embroilment of Gen. Fox [who had been challenged by the French commandant] and the murder of Cardinal Antonelli's mother's cat.

Although deeply interested in the picturesqueness of old Rome, Mr. Browning is a believer in the *Risorgimento*. He finds the Rome of the King in many respects superior to that of the Pope, and by no means less fascinating. At Florence, before the march to Rome, he was surprised at the lack of enthusiasm for Victor Emmanuel. A cab-driver said sadly, "If it had only been Garibaldi!" As a matter of fact, the Florentines are little given to noisy enthusiasms. A few years later, while visiting a secondary school at Rome, Mr. Browning saw full justice done to the King liberator. The reading was in the first canto of the "Inferno," where appears a mysterious hound (*Veltro*) symbolizing a liberator of Italy. The master asked for the interpretation of the symbolism, and an eager small boy shouted the traditional answer, "Can Grande della Scala." "The master's face fell, but the other boys, more astute, if less well-informed, cried out with one voice: 'Vittorio Emmanuele,' and the honor of the school was saved. The Italians delighted to think that Veltro was a cryptogram, the solution of which was: Vittorio Emmanuele, Liberatore Trionfante, Re Ottimo." Certainly, the anecdote casts a certain light on the enthusiasms that made modern Italy, and it is not so sure that the shade of Dante would have disowned this apparently grotesque interpretation of his symbol.

Before leaving the celebrities we must recall that memorable visit at which Mr. Browning's fellow-guests were Turgenieff and Mr. and Mrs. Lewes.

> The conversation turned upon the character of the French nation, and Turgenieff related how he had seen a play in Paris in which a woman with young children had been deserted by her husband and left penniless. A kind friend took her as his wife, but could not marry her, because the husband was alive. He became very rich, and they lived very happily together. Twenty years afterwards, the husband, a thorough rascal, reappeared, and, finding that his wife was prosperous, determined to profit by it. He revealed himself to his daughter, whom he had left as an infant. The second husband came into the room and kissed the young lady as he had done for the last twenty years. The real father hit him in the face, and said: *Vous n'avez pas le droit de faire cela*, upon which the whole house applauded, and Turgenieff stood up in his box and hissed. George Eliot listened to this with breathless interest; there was so much in it which fitted her own case, that I wondered that Turgenieff should have repeated it. The whole scene was deeply impressive.

Turgenieff on this occasion told some almost incredibly good stories of Victor Hugo. On mentioning Goethe to Hugo, he readily replied, "Yes, I have read his 'Wallenstein.'" On a reminder that not Goethe, but Schiller had written "Wallenstein" the poet remarked genially: "My dear man, I assure you that I have never read a line of those fellows, but I know them as if I had written their works myself." Goethe, whom Victor Hugo naturally pronounced Goet, was dismissed on another interview with the saying, "Pour moi, je regarde Goet comme Jésus Christ aurait regardé Messaline."

Mr. Browning is so well known as a wit and man of the world that many readers will resent a little the space given to his educational theories and experience. We are not of that opinion. Mr. Browning's miscellaneous and historical writing, though considerable in extent, and his legend, though it is a diverting one, both fail to express him. Through a laborious career as schoolmaster, tutor, and college lecturer, he has stood for certain definite and valuable ideals of education. His concern has been to train statesmen; his faith that they are best bred in the humani-

ties; his programme to enrich the traditional classical course by the study of politics and modern literatures. Long before Kipling had berated

The flannelled fool at the wicket,

Mr. Browning, at Eton, had protested against "school play" as a fetish, and had contrived to interest his boys in such alien matters as history, modern languages, and the fine arts. He was the leader of what were scornfully called the "high souls" against the "blodgers." His zeal cost him his position, for the "blodgers" then as now predominated in the land. In 1875, he became a fellow of King's Cambridge, just in time to aid in its transformation from a comfortable annex of Eton to the most active of the "reading colleges." Here he found his opportunity. The Political Society, a voluntary weekly club for papers and free discussion, was founded by him, and conducted for a full generation. In his rooms, he held Sunday evenings with talk and music which were frequented by the undergraduates. He endeavored to liberalize the Modern Language Tripos, but was outvoted by the philologians. With Henry Sidgwick, he founded the Training College for Teachers, at Cambridge. With quite extraordinary friendliness he has left his impress upon successive generations of undergraduates, and his pupils, not his bibliography, represent his work. Among them, including those whom he tutored privately, are Alfred Lyttelton, Gerald Balfour, Austen Chamberlain, Leo Maxse, and Lord Curzon. An ironic destiny has willed that a genuine Liberal and Home Ruler—Mr. Browning twice stood unsuccessfully for Parliament on that issue—should have sharpened the wits of Unionist and Tory statesmen. But this is a chance of war and teaching, which he has cheerfully accepted. We may close a random survey of this very interesting book with a passage that gives at once the author's attitude toward education and that of all humanists:

> For me education, apart from instruction, consists in literature and literature only. Classical education, however narrow it may have been, was at least an education in literature, and it cannot safely be dispensed with, unless some other form of literary education takes its place.

There are several portraits of the author beginning with Simeon Solomon's delicate drawing, which dates from the Eton mastership, to Zuloaga's robust presentment of ten years ago, which well confirms the memory of an occasional visitor at King's.

CURRENT FICTION.

A Life for a Life. By Robert Herrick. New York: The Macmillan Co.

Again Mr. Herrick has written a striking novel rather than a big one. In structure and machinery the present story shows a distinct advance upon "Together" and its predecessors. In reviewing "Together" we had occasion to deplore this writer's "tendency to scatter the interest by the multiplicity of minor actions." We have been interested in Mr. Herrick's subsequent declaration that "what the ignorant reviewer calls the formlessness of that crowded canvas is a more or less deliberate attempt to return to the larger, more fluid form of the novel as developed by the great English and Russian writers." Whatever the attempt, the result was diffused to the point of weakness; and apparently the experimenter has not thought well enough of his effort to repeat it. There are few figures upon the present canvas, and there is no doubt of their meaning. The problems of private life, of matrimony, of business, and pleasure, pursued by the individual as such, have but an incidental place in this story. In a sense, it is a parable—a modern Pilgrim's Progress along the hard ways of our life of to-day, the pilgrim representing humanity, not a personality. It seems that the writer has meant to invest his human figures with a certain vagueness, to represent them as types and symbols: a hard attempt for a man with the realist's training and habit. Again and again the elevated and mystical strain chosen for the narrative is broken in upon by passages of clear-cut and remorseless description, effective in themselves, but irritating and distracting in their context.

The persons and the setting are, we say, deliberately vague. The hero, Hugh Grant, is youthful manhood; Alexandra Arnold is youthful womanhood; her father is power incarnate—unscrupulous and insatiable power. In connection with these three the action virtually works itself out. The theme is "timely" to the point of commonplaceness—the theme with which scores of American story-writers are now wrestling. What is the honest man to do in the presence of unjust monopoly, of heartless greed and fraud exercising themselves openly, under the protection of the law? Hugh, the typical healthy youth, approaches the problem with an honest and open mind. He is a foundling, decently reared by a poor and honorable man. On the threshold of his own career, he meets Alexandra, of another class by virtue of her father's wealth. She has her father's temper and point of view. To play the game, to win at all costs, seem to her the rules of a man's life. Hugh plays the game and succeeds up to the point when his eyes are fully opened to the meaning of his success. Then he throws up all his chances, and proclaims himself the enemy of the grasping corporation for which he has worked, and to whose high councils he has risen. Of course he can do nothing: his facts and protests fall flat upon the ear of a smiling administration at Washington. He becomes a humble wage-earner; disease assails him; the woman he loves marries one of his enemies. He dies, an obscure failure in the eyes of the world. But through all his struggles he has ripened and grown. His is the real success so blatantly travestied upon the hoarding which corrupts the sky-line for a whole city; so impossibly claimed by the rich criminals from whose number he has fled. And his spirit is destined to live after him in the ministrations of the woman Alexandra, converted to his point of view by suffering and love.

The latter part of the narrative is, we must confess, disappointing, composed of incident and dialogue which not the most serious intention of the author has been able to raise above melodrama. The poetic justice of the final chapters is done with too sweeping a hand. The author betrays too personal a delight in killing off his magnates. But we must not quarrel with such aptness in a parable. We may more properly take exception to the scenes and persons which interrupt the simple march of events—especially those passages which have to do with the absurd and impertinent "Prophet."

Love, the Judge. By Wymond Carey. New York: Dodd, Mead & Co.

No type of story is more disheartteningly familiar to the habitual novel-reader than the elaborately conceived and executed narrative which is the product of diligence and intelligence rather than of a real impulse or instinct for story-telling. Our vaunted "high average of workmanship" brings its penalties in the form of an encouraged mediocrity. Fiction especially is in the way of becoming a dull, mechanic exercise by means of which any persevering person may hope to develop a creditable wrist. This is not Wymond Carey's first or second novel, and one may safely guess that it will not be the last. He is able to do the trick respectably well, and, it is to be supposed, without undue effort. "Love, the Judge" is the story of a magnanimous financier, the blunt, hard man of the newspapers, so far as externals show; but really a man of the tenderest susceptibilities, morally and otherwise. It is his privilege throughout the tale to stand as the protector of one pretty woman, the betrothed of a second, and the adored and pursued of a third. Of course, there are complications. The blameless relation of protector and protected is duly commented upon by a literal-minded world. The beautiful betrothed, as it is understood shall happen in books, believes all charges and suspicions against her lover. And the pursuing lady makes matters lively with her machinations. This is all strictly according to the amiable rules of the game as understood

by the high-average workman: the events of the last few pages might be foretold by an infant. So much the better, no doubt, for the novel, since there is a large and infantile public that asks nothing better than the expected.

Kilmeny of the Orchard. By L. M. Montgomery. Boston: L. C. Page & Co.

The author omits Anne of Green Gables from this her third venture into fiction, although we have the familiar setting of Anne's Prince Edward Island. Its salt shore and spring blossoming have their wonted charm, and one reflects that an island is a portion of land bounded by perpetual fitness for romance. Never, surely, did romance glide onward so gently, so balmily, so florally as this. Never did the roughnesses inherent in the course of true love disappear so gracefully. Hard-hearted guardians are melted by a kind word. Prohibiting parents yield at a touch. Critical friendship melts under beauty's first glance. How mildly the eerie mystery of Kilmeny's dumbness unfolds and later clears itself! How amiably the lions in the path of young affection take themselves off! How lightly falls the foot of crime that only treads on flowers! But "the pleasure that's almost a pain" stirs at the self-taught violinist girl who plays "an airy, delicate little melody that sounded like the laughter of daisies"; who lures from her violin divine music—music that revealed "the whole soul and nature of the girl, . . . the beauty and purity of her thoughts, her childhood dreams, and her maiden reveries."

Britz, of Headquarters. By Marcin Barber. New York: Moffat, Yard & Co.

It may not be fair to expect much knowledge of the Orient from a maker of detective stories, although he centres his plot about the oft-used theft of a great Oriental diamond. But even a writer who seems to have watched the world from the windows opposite the old headquarters on Mulberry Street should not set a band of Brahmins on the recovery of a stone which had once been in a Buddhist temple. Mr. Barber does not make Fifth Avenue society much more real than his Brahmin-Buddhists; but his Britz is a good detective of the old school, with yet a tinge of originality in his make-up, and the plot which Britz unravels is sufficiently devious and doubtful to satisfy the taste of an exacting connoisseur of this branch of fiction.

TWO TUDOR QUEENS.

The Nine-Days' Queen: Lady Jane Grey and Her Times. By Richard Davey. New York: G. P. Putnam's Sons. $3.50 net.

The Girlhood of Queen Elizabeth. By Frank A. Mumby. Boston: Houghton Mifflin Co. $3 net.

The possibilities of Tudor biography are certainly recognized these days as never before. Mr. Davey's book shows that Major Hume's Romantic History Series, to which it belongs, continues to find its richest field in sixteenth-century England; while Mr. Mumby's work apparently betokens the advent of another set of biographies of the same period, written, so far as possible, in the language of contemporaries. Both books are confessedly attempts to popularize history. The mere nature of their printing, binding, and illustrations proclaims as much: but of the two Mr. Mumby's work is by far the bolder and more original in conception, and, in our opinion, more successful in execution. The bulk of the work consists of transcriptions of carefully selected letters from Elizabeth herself, from her relatives and the inmates of her household, from ministers, foreign potentates, and ambassadors, while occasional paragraphs from Mr. Mumby's pen are inserted here and there to serve as connecting links and necessary explanations. Sometimes the very wealth of authors on whose letters Mr. Mumby has drawn gives rise to difficulty and confusion. The points of view of the Protestant theologian, John Jewel, and of the Spanish Ambassador, the Count of Feria, concerning Elizabeth's religious policy at her accession, are sufficiently diverse to make the juxtaposition of their letters somewhat perplexing to any one not intimately acquainted with the *dramatis personæ* of the times: even Mr. Mumby's intermediate paragraph does not entirely disguise the abruptness of the change.

Sometimes, too, the author is tempted into inaccurate generalizations, from which a more thorough knowledge of the characters with which he is dealing would have saved him. The fact that Lady Brian wrote to Thomas Cromwell in 1536, just after the execution of Anne Boleyn, to complain that the little Princess Elizabeth had neither "kirtle nor petticoat, nor no manner of linen nor smocks, nor kerchiefs, nor rails, nor body stitchets, nor handkerchiefs, nor sleeves, nor mufflers, nor biggens," can scarcely be adduced as an evidence of "the strange duties which fell on ministers of state in those days." Thomas Cromwell, shearman and tailor in his youth, occupied an entirely exceptional position in this respect. As the letters of the time will show, he was consulted in matters of garb by his royal master and, indeed, the entire royal household, as no minister ever was, before or since.

But these are mere criticisms of detail. In all essentials Mr. Mumby has done his work admirably. He has searched diligently among the manuscripts at the Records Office and the British Museum, in the calendars and the older collections, for his material; when the occasion demands it he warns us against the inaccuracies, prejudices, and imaginations of some of the less trustworthy of his authorities; he has modernized the spelling and punctuation of the originals, but his renderings are otherwise, on the whole, exact. The reader lays the book down with a feeling that he has got closer to the characters and scenes which it describes than would be possible in an ordinary biography.

Mr. Davey's life of Lady Jane Grey, on the other hand, follows far more closely the lines of the conventional historical biography of the type to which it belongs. Like the other works in Major Hume's new series, it is well written, and never misses an opportunity to narrate thrilling details and describe dramatic scenes. Executions furnish its greatest opportunity (the path of the heroine was plentifully besprinkled with them), and "the flash and thud of the axe," and "the crimson deluge on the straw-strewn scaffold," are conjured up with vividness and frequency. But there is little or nothing new in the book, either by way of discovery or interpretation, with the possible exception of dissent from the over-favorable verdicts on Somerset which characterized Mr. Pollard's first book. All in all, the work may indirectly benefit the specialist: it will certainly amuse and instruct the general public.

The whole life of Lady Jane Grey (1537-1554), and the first twenty-five years of that of her cousin Elizabeth (1533-58), touched each other, so closely at so many points, that the story of the one is in large measure also the story of the other. And yet the fates of the two women were as diverse as could be imagined. The one, a lovely, gentle creature, the tool of unscrupulous men, was forced against her will to assume a crown to which she knew she had no right, and to pay the penalty for so doing with her life. The other, harsh, crafty, unscrupulous, shifting with the wind, preserved her life and right to the succession in the midst of appalling dangers, and in and by so doing gained experience which bore precious fruit for England. "The girl was mother to the woman to an exceptional extent in Elizabeth's case." To the singularly indecorous conduct of her first suitor—Lord Seymour of Sudely, brother of the Protector Somerset—and the knowledge she gained in dealing with him may be traced the "political flirtations" which afterwards made her name a by-word in Europe. The windings and tergiversations to which she was forced to have recourse during the swift oscillations in religion in the reigns of Edward and Mary, were an admirable training for the lying diplomacy and avoidance of extremes which

characterized the policy of the first thirty years of her reign. Her experience of the evils of French management of English affairs in the days of Northumberland and Noailles, and of the evils of Spanish intervention in the time of Philip and Mary, Renard and de Feria, made her resolve, when she became queen, to hold aloof from entangling alliances and continental complications. She learned how to make men and events serve her, instead of drifting with the tide; and though her career cannot ever evoke the sympathy which will always be accorded to her unfortunate cousin, it is idle to deny that her final success was chiefly due to her own energy and abilities.

How to Help: A Manual of Practical Charity. By Mary Conyngton, M.A. New York: The Macmillan Co. $1.50 net.

The first edition of this book appeared in 1906. It fully realizes the author's aim of being "a practical hand-book, serviceable alike to busy men and women who feel some responsibility for right treatment of the want which appeals to them from every side." The usefulness of a treatise of this kind was demonstrated some years ago, when a circular letter of inquiry was directed to a score of the best-known charitable workers in the United States with the request that they would designate the books that had proved especially helpful to them. The two volumes which were tied for first place were Warner's classic, "American Charities," and Mary E. Richmond's "Friendly Visiting Among the Poor." The objective scientific handling of the facts by Warner is admirably supplemented by the vitalizing treatment of the same phenomena from the standpoint of practice. As an incentive to really helpful activity among the needy such a volume as "How to Help" is probably more frequently serviceable than the colorless analysis of the problems of poverty.

The book under review is admirable in its balance. About fifty pages in Part i give a review of the General Principles of charitable effort. The charity organization movement, its advancing ideals in the direction of "preventive work," the necessity for sanity in diagnosis, and reliance upon expert advice, where possible, in affording relief or aid, are all admirably sketched without any obtrusive allusion to abstract principles. Part ii, which analyzes the most frequently recurring cases demanding relief, is compact of good sense, shrewdness, and humor. With a wealth of concrete instances in mind, the author admirably subordinates the individual case to illustrate the typical problem in hand, whether it be The Homeless Man, The Homeless Woman, Beggars and Impostors, or the Care of the Needy in their Homes. One cannot too highly commend both the sense of proportion and the well-weighed restraint everywhere in evidence. Of mawkish or maudlin sentimentality, she has a complete horror; and, unlike Robert Hunter, for instance, who is always discovering the *lacrymæ rerum*—and adding to them—she appreciates the not infrequent gleam of humor which even scientific charity cannot suppress. When repeated and well-planned effort fails to reclaim "vagrom men," she tells you, as would honest Dogberry, to "thank God you are rid of a knave." Whatever view she may hold of social or economic regeneration, she confines her advice to doing charitable work in the world that now is. The following tag may serve as a sample of the book's quality. It is the revised version of the Good Samaritan:

> A certain proportion of the people who passed by the crippled seller of shoe-strings bought from him, telling him to keep the change. A certain other proportion thought to themselves that such beggars ought to be kept off the streets, and went their way. Another proportion really did not perceive him, merely accepting him as part of the street surroundings. One man brought him to the attention of the Associated Charities, where he found friends and resources, to give him the chance he needed. Which now of these three, thinkest thou, was neighbor unto him that fell by the way?

Notes.

Ex-Mayor Charles F. Warwick of Philadelphia has completed a life of Napoleon, which follows in theme his studies of Mirabeau, Danton, and Robespierre. It will be published in the autumn by George W. Jacobs & Co.

The Yale University Press will soon issue Gov. Hughes's Dodge Lectures on the Responsibility of Citizenship. The book bears the title "Conditions of Progress in Democratic Government."

Thomas Y. Crowell & Co. promise for next autumn a complete collection of the poems of Sophie Jewett. The same house has ready for immediate issue "God's Troubadour," the story of St. Francis of Assisi told in prose for children by Miss Jewett.

George Meredith's "Celt and Saxon" will be brought out in book form this summer by Scribners. Only about two-thirds of the novel was completed by Meredith, but the work is finished so far as it goes.

The Putnams announce the following volumes for early publication: "John Murray's Landfall," by H. N. Dodge; "Islam Lands," by M. M. Shoemaker; "The Unexplored Self, An Introduction to Christian Doctrine for Teachers and Students," by the Rev. George R. Montgomery; and "The Future of Trade Unionism and Capitalism in a Democracy," by Charles W. Eliot. The publication of "The River and I," by John G. Neihardt, has been postponed until autumn.

We are glad to call attention to a proposed plan for the publication of the complete works of William Penn. The addresses and writings of Penn have never been really collected, and it is appropriate that the present project should emanate from the State that bears his name. The editor is Albert Cook Myers of Moylan, Pa., who will be glad to receive letters or copies of letters bearing on the subject, or to hear of their whereabouts. The following committee of advisers is proposed, all of whom are members of the Historical Society of Pennsylvania: Samuel W. Pennypacker, William Brooke Rawle, Charlemagne Tower, John Bach McMaster, Isaac Sharpless, William I. Hull, and William Penn-Gaskell. The estimated cost of producing the work is $18,000, which is to be raised by subscription.

Routledge (New York: E. P. Dutton & Co.) has a quite astonishing book of general information, called "Every Man's Cyclopædia," which gathers into a single volume tables of universal biography, historical allusions, battles and sieges; a gazetteer of the world; general information; and dictionaries of law, words frequently misspelt, synonyms, abbreviations, and pseudonyms. The information given is necessarily brief, and the gazetteer even dispenses with pronunciations, but the book carries the promise of wide usefulness.

F. M. Gregg of the Nebraska State Normal School has compiled a "Handbook of Parliamentary Law" (Ginn & Co.), which may be commended for its convenience of arrangement.

"The Passions of the French Romantics" (Scribners), by Francis Gribble, gives in a series of chapters the love affairs of Bernardin de Saint-Pierre, Lamartine, Alfred de Vigny, Alfred de Musset, Victor Hugo, Sainte-Beuve, and other gentlemen of the high romantic movement—not omitting the ladies. Granting that the thing is worth doing, Mr. Gribble has done it smartly, and, one may almost say, learnedly. He attempts no excuse for his theme except that it is entertaining, and ought to be instructive. We may add to his excuse that he has been frank without being prurient.

This is the season for new Baedekers to catch the summer travel. The latest volume in English (imported by Charles Scribner's Sons) is "Southern Germany: Wurtemberg and Bavaria," now appearing in an eleventh edition, corresponding to the thirtieth German.

What is apparently planned to be a complete translation of Sainte-Beuve's "Causeries du Lundi" has been begun by George Routledge & Sons (New York: E. P. Dutton & Co.). Five volumes, translated and annotated by E. J. Trechmann, have reached us. If all the fifteen books of the first "Lundis" and all the thirteen books of the "Nouveaux Lundis" are to come from the same single hand, it will be something of a monumental work, embodying the virtues and defects of so large an enthusiasm. We may expect a spirited and uneven translation. As a matter of fact, though the rough spots are many, Mr. Trechmann's version impresses one as absolutely adequate from the point of view of fidelity and clearness. He has kept Sainte-Beuve's verve and color at the sacrifice here and there of the English idiom. But though Mr. Trechmann's text is obviously translation, it is a translation that reads very well. Where Sainte-Beuve rises above

his usually high level, as he does when he writes of Mme. Récamier, of Lamartine, or of Chateaubriand, the present version follows him. We may quote a few sentences from the essay on Mme. Récamier:

M. de Chateaubriand was the pride of this salon, but she was the soul of it, and she it is I must try to exhibit to those who did not know her; for to try to recall her to the others is superfluous, and to paint her impossible. I have no intention here of attempting her biography; a woman should never have a biography, an ugly word for the use of men, smacking of study and research. Even when they have nothing essential to conceal, women can only lose in charm in the text of a continuous narrative. Can a woman's life be told? It is felt, it passes, it appears.

Such verse quotations as occur in the French text are retained in the English page, but are translated in the notes which are compact but useful. Each volume has a complete index of proper names.

Henry Murray, whose memories, confessions, and opinions are presented in a book with the expressive title, "A Stepson of Fortune" (The Baker & Taylor Co.), is one of those professionally plain-spoken persons whose foible is the scorn of what they term nonsense. For a generation the author has wintered and summered in or near Grub Street, London. He early fled from severe and unsympathetic parents and became the helper of his versatile brother, David Christie Murray. They lived joyously and precariously from London to Monaco. Henry Murray's best novel, "A Song of Sixpence," brought him repute and literary acquaintance, but next to no money. He has the novelist's vivid sense of character, and his most interesting pages are those in which he describes the dear, shabby comrades of his early days, their gayeties, their shifts to turn a penny. There was a certain Anatole, who, having established a market in the pawn-shop for old porcelain statuettes, bought the imitations in neighboring bazaars and throve for a deal or two. There was Marie, a favorite girl model, whose father used to try to kill her until reminded that there was revenue in her good looks. She was a good girl and capable of wheedling a free ride out of a cabby, not only for herself, but for her sweetheart. Twelve years later he saw her ill, faded, widowed, and the mother of six children. In the early days Henry Murray fell in with Alfred Harmsworth, then a cub journalist. On the concentration of newspaper management our author has strong opinions:

Another twenty years of uncontrolled exploitation of the press on the lines followed by Lord Northcliffe will deliver the British empire hand and foot, body and soul, to the tender mercies of a journalistic Trust, will make our sovereign its powerless pensioner, our Lords and Commons the registrars of its *ipse dixit*, and our proletariat a flock of sheep to be fleeced and flayed at its sweet will.

Among the amiable figures that come and go in these pages is the Parisian hotelkeeper, M. Paulet, a wag after the fine tradition of Cyrano. His friend was the poet Belmontet, an ardent imperialist, who, it was said, enjoyed a pension on condition that he should not eulogize the Emperor. Belmontet's most perfect couplet was in honor of the opening of the new market, the Halles Centrales. It ran:

O peuple de Paris, que belles sont tes Halles!
Béni soit l'Empereur qui nous les fit Centrales!

Henry Murray passed in and out of journalism with the ease of versatility. He was long in association with that erratic poet, critic, and playwright, Robert Buchanan. Together they took a theatre, which cost them infinite pains and some money. Through Buchanan many of our author's most valuable friendships were made. Being a confirmed agnostic, he had the shock of hearing Herbert Spencer say: "I have passed my life in beating the air." We catch some delightful fooling of George Meredith's—the imaginary autopsy of a student addicted to mineral water, whose interior glittered dazzlingly with stalactites. Meredith's talk was like his books. On the whole this book is very interesting, being impregnated with a sardonic amiability, and hitting off effectively many racy characters in the two Bohemias. But, alas, it boasts neither index, table of contents, nor even running headlines. One reviewer who has tried to find his way about in it cannot wonder, though regretting, that fortune has been stepmotherly to its talented author.

Prof. Hermann L. Strack's "The Jew and Human Sacrifice" (Bloch Publishing Co.), now translated from the eighth German edition, with corrections, a new preface, and additions by the author, may be said to give the final word in its field. While happily there was no serious call for its appearance in English—for English-speaking lands are free from such a popular superstition—in densely ignorant sections of the East, and even in parts of Europe, the accusation is still occasionally heard that Jews make use of the blood of Christians for ritual purposes. Hence, Strack's researches, which were published as far back as 1882 in connection with the Tisza-Eszlar trial, serve an excellent purpose with every new edition. The work is a careful study of the religious beliefs and superstitions connected generally with the sacrifice of the blood of men and of animals, but is most exhaustive in its interpretation of Jewish belief and practice. Professor Strack vindicates the Jewish people against this monstrous accusation, showing how false and misleading are the "authorities" adduced in its support. The book, with its array of notes and opinions, its full bibliography and citations, is of interest to students of religion and sociology—especially so since it comes from the pen of a scholar and clergyman of strict evangelical type. The translation is by H. F. E. Blanchamp.

In "The New Baedeker" (Dodd, Mead & Co.), Harry Thurston Peck hits off with customary perkiness the ocean voyage, Havre and Trouville, Berlin, Rome, Rouen, Brussels and Malines, and Liverpool; then turning homeward conducts the reader to Portland, Me., Boston, Lake Pleasant (where Spiritualists congregate), Utica, N. Y., Trenton Falls, N. Y., Atlantic City, N. J., and finally across the continent by the Canadian Pacific. It is a diverting book, and catches idiomatic features of nearly every city it interprets. Mr. Peck's characteristics are so well known that we may merely remark that, like tripe, he is either adored or detested. To the reviewer his literary manners have the unnatural swagger that a professor caught in bad company might assume to prove he is a man of the world, but precisely this quality gives him a hold on thousands of people. He is the Elbert Hubbard of the American universities, which may serve, according to the reader's bent, as eulogy—or as simple description.

The secondary title of Principal Fairbairn's volume, "The Church in Idea and in History," is accurate, whereas the first, "Studies in Religion and Theology," is misleading. The book is not a general collection of religious essays, chiefly doctrinal, as one might expect from the author and the primary title, but an elaborate and earnest apologia of the congregational polity and the idea of a free church. Much of it was composed nearly thirty years ago, when the distinguished author was chairman of the Congregational Union of England. Polemical discussions of church polity are not infrequent in Great Britain on such occasions, where ecclesiastical rivalries run higher than in this country. The American reader will be somewhat surprised at the vigor of Principal Fairbairn's contentions against the episcopal form of government and the Catholic and Anglican conception of the church. Unlike the older anti-episcopal polemic, his purpose is not to prove that the congregational polity is authorized by the New Testament, while the episcopal government of the church is not apostolic; his criticism cuts deeper and aims to establish that the sacerdotal idea inherent in episcopacy is opposed in principle to the nature of the Christian religion as taught by Christ. Principal Fairbairn minces no words, and it is needless to say that his polemic is able, keen, and based on thorough scholarship. An American scholar would have written in milder tone, if he had felt the need of entering upon such a controversy. It has been sometimes said that American Congregationalists do not really believe in their church, since they display so little zeal in its defence. It may be well, therefore, that the polity of Robert Browne and John Robinson has found a champion like Principal Fairbairn. The volume contains lengthy discussions of the teaching of Jesus, Paul, and John as bearing upon the doctrine of the church. It is published by the Macmillan Co.

The seventh volume of "The New Schaff-Herzog Encyclopædia of Religious Knowledge" (Funk & Wagnalls Co.) includes titles from "Liutprand" to "Moralities." The prominent articles are not in the Biblical field, in which this encyclopædia is least valuable, and the volume accordingly makes a better impression than some of its predecessors. Dr. J. M. Buckley's article on "Methodists" is good, as is the treatment of "Lutherans," by Professors Spaeth and Fröböess. Considerable space is given to a careful sketch of "The Mennonites," by Professors Cremer and Horsch. The article on "Missions," including several sections by Dr. Warneck of Halle, contains a large amount of important information. In the article on "Marriage," the history of both Catholic and Protestant views and treatment of the subject is expounded at length and with regard for accuracy. Prof. George W. Gilmore, one of the editors, contributes articles on "Mohammed—Mohammedans." As in the former volumes, the brief biographical articles are valuable, including the notices of prominent ecclesiastics and theologians of the Middle

Ages. Special pains has been taken to furnish thorough bibliographies.

The principal article in No. 18 of the Berlin *Internationale Zeitschrift* is a masterly parallel of Bismarck and Carl Schurz, drawn by Prof. Eugen Kühnemann, of Breslau, one of the American exchange professors. The paper is a *Festrede*, delivered at the great annual Bismarck *Kommers* of German scholars in Berlin. Professor Kühnemann traces in the divergent methods and manners of Bismarck and Schurz, the higher unity of ideas and ideals for Germany's greatness.

The Proceedings of the Bostonian Society, just published, contains a paper by the superintendent of markets, G. E. McKay, which is of more than local interest from the light which it sheds on our early days. Public sentiment, for instance, was at first greatly opposed to the establishment of a market, largely for fear that the "Market Cross" would be set up. Even as late as 1740, when Peter Faneuil offered to present a market building to the town, the gift was accepted at a special town meeting by a majority of only seven votes out of 727 cast. When provisions were imported they could not be sold at wholesale, according to an act passed by the General Court in 1695, "until after three days' notice had been given by a public crier; this was considered to be in favor of the poor, who were thus to have an opportunity to buy in small quantities at wholesale prices." The development of the market business in Boston was slow, for when John Hancock had to entertain Count D'Estaing and the officers of the French fleet in 1778, he was obliged to send his man with a letter to a friend in Providence begging him to recommend him "where he can get some chickens, geese, ducks, hams, partridges, mutton, or anything which will save my reputation in a dinner, and by all means send me some butter."

Goldwin Smith, the noted scholar, professor, and journalist, died on Tuesday at his home, The Grange, in Toronto, Canada, aged nearly eighty-seven years. He was born in Reading, England, in 1823, and was educated at Eton, and at Christ Church and Magdalen, Oxford. There he took many signal honors, and after his graduation, in 1848, with a master's degree, was elected a fellow of University College, the colleague of his friends, Arthur Stanley and Conington. When Parliament created the commission to take up university reform, in 1850, Stanley was made secretary and Goldwin Smith his assistant. He served on two other commissions of a like nature, and in 1858 was made regius professor of modern history at Oxford; while there he tutored the Prince of Wales, afterward the late King Edward VII. He eagerly entered philosophic and religious controversy, opposing both the Tractarians and the followers of Herbert Spencer, but aroused more feeling by his opinions on English politics and policies, especially in respect to her colonies. His advocacy of freeing Canada, Gibraltar, and the Ionian Isles brought upon him the wrath of Disraeli and his party, and of the Tory organ, the *Times*. Soon after this, while the civil war was being waged in the United States, he wrote several pamphlets denouncing slavery and upholding the Union cause. The tragic death of his father, in 1866, compelled him to give up his professorship, and the expiration of his fellowship, in 1868, left him wholly free. It was then that Andrew D. White offered him the chair of English history in the new Cornell University, at Ithaca, which Mr. Smith accepted. He took a leading part in directing affairs of the university, until he moved to Canada, in the seventies, and then continued his lectures there, but gave most of his time to writing. He married, in 1875, Harriet E. M. Boulton, who died in 1909. Among his writings are "Irish History and Irish Character," "Three English Statesmen," "The Empire," "Lectures on the Study of History," "Does the Bible Sanction American Slavery?", "The Civil War in America," "Rational Religion and Rationalistic Objections," "Canada and the Canadian Question," "The Political Destiny of Canada," "Cowper," "Jane Austen," "William Lloyd Garrison," "Specimens of Greek Tragedy," "Guesses at the Riddle of Existence," "My Memory of Gladstone," "Irish History and the Irish Question," "Revolution or Progress?", "Labor and Capital," and "No Refuge but in Truth."

William Sydney Porter, whose fiction and sketches over the name O. Henry had made him one of the most popular and deservedly successful short story writers in the country for the last eight years, died last Sunday in this city. He was born forty-two years ago in Greensboro, N. C. Several of his ancestors had been Governors of the State. Not being strong enough as a boy to go to college, he went to Texas and spent two years and a half on a cattle ranch. A period of drought dried up the grass lands and decided Mr. Porter to give up ranch life and be a writer or an artist. He went to Houston, where he got a place on the staff of the *Post*. His success as a journalist was immediate, although he had but little special preparation. A common school education and considerable reading of the classics from his thirteenth to his nineteenth year, were the best parts of his training. He was especially fond in those days of reading Burton's "Anatomy of Melancholy" and Lane's "Arabian Nights." It was while he was in New Orleans, ten years ago, that he adopted the pen name by which he is best known. He had sent stacks of manuscripts to unappreciative editors, and when they were returned, as they nearly always were, he put new stamps on the envelopes and sent them on their travels again. He felt that he ought to adopt a literary alias, and O. Henry was selected by chance. In 1901 he came to New York, and soon won his way to the top as a story writer. His published books are: "Cabbages and Kings" (1905), "The Four Million" (1906), "The Trimmed Lamp" (1907), "The Heart of the West" (1907), "The Gentle Grafter" (1908), "Voice of the City" (1908), "Options" (1909), "Roads of Destiny" (1909), and "Strictly Business" (1910).

The death is announced from London of Edward Jenkins, who, thirty or forty years ago, was the most talked-of man in Great Britain, on account of a brilliant pamphlet called "Ginx's Baby," in which he ridiculed the British Poor law. He was born in India in 1838, the son of a clergyman. He received his education at McGill University and the University of Pennsylvania. He was called to the English bar at Lincoln's Inn, became agent-general for Canada, entered the British Parliament as a Liberal Imperialist, but drifted into the Conservative ranks. He once contested Truro against Gladstone, but lost. When he died, he was editor of the *Overland Mail* and the *Homeward Mail*. He wrote several other books besides "Ginx's Baby."

Alfred Trübner Nutt, the well-known London author-publisher and scholar, met a tragic death week before last at Medun, where he was drowned in an heroic attempt to save the life of his son. It was Mr. Nutt who first recognized and gave publication to the poems of W. E. Henley. Some of his notable achievements as a publisher were the initiation of the Tudor Translations, the Tudor Library, the Northern Library of old Norse texts, the Bibliothèque de Carabas, of scarce fifteenth and sixteenth century works, and other series. His chief interest as a scholar was in Celtic legend and folk-lore, in which he was a leading authority and an extensive writer. He was one of the founders of the Irish Texts Society, and of the English Goethe Society.

Dr. Gottlieb Planck, the noted jurist and professor at Göttingen University, died recently, aged eighty-five years. In his early days he entered upon a political career, but gave this up and turned his labors to the law. He was a member of the commission appointed in 1874 to revise the civil code. He published several commentaries upon the "Bürgerliche Gesetzbuch," which was the result of the commission's work.

Science.

Die Antike Tierwelt. Erster Band. Säugetiere. By Otto Keller. Leipzig: Wilhelm Engelmann.

Keller's "Thiere des classischen Alterthums" is a standard book well-known to students of antiquity. The volume before us, though giving essentially a new treatment, does not entirely replace the older book, which, with the "Tier- und Pflanzenbilder auf Münzen und Gemmen," published by Keller and Imhoof-Blumer, still offers a valuable supplement in both text and illustrations.

Following Aristotle's classification, which he finds sufficiently modern and satisfactory, the author treats in the present volume the different varieties of mammals. Under Quadrumana, we find the ape, under Chiroptera the bat, under Inseetivora the mole, and so on. The largest class is naturally Carnivora, represented by lion, tiger, lynx, fox, wolf, cat, dog, and twenty others, while Rodentia has seventeen and Ruminantia twelve. At the end, in the proud category of *sui generis*, appears the unicorn. One could hardly name a single source of information that the author has overlooked. Not only ancient scientific authorities like Aristotle and Pliny, but works of literature are constantly cited. Plentiful illustrations, taken from sculptures, gems, coins, vases, wall-paintings, appear in the text, and there are three plates at the end of the volume. Chronologically, the account begins with ear-

ilest Egypt and Assyria and often descends to Byzantium and the western Middle Ages.

While discussing the subject as scientifically as the material allows, the work has inevitably something of the romantic flavor which makes ancient science delightfully readable. Any one of the articles will furnish entertainment, as well as instruction. The reader will learn that elephants are afraid of mice, that rats are a later addition to the legend of the Pied Piper, that to dogs were given names of two syllables, whereas horses often received three syllables or more. What varied interests could name a horse, appears from the following list; Centaurus, Æolus, Tiberis, Octopeda, Psylla (flea), Anthypatos (consul), Mysticus (transcendentalist). The bull-fight, which a learned lecturer has recently declared less brutal than foot-ball, was banished in classical times from all lands save Thessaly, but had flourished in Egypt and Crete. The ass receives a long-deserved vindication. When well born and well treated, he is not stupid, but "ein sehr kluges Tier." A distinguished royal line was proud of its descent from a totemic ass; King Midas's ears were not symbols of stupidity, but instruments for absorbing wisdom quickly and capaciously. The royal Nimrods of old were less favored than those of to-day, for not so many curious specimens could be recognized by name, and many beasts were protected by the symbolic qualities with which a wholesome superstition invested them; thus, as the rhinoceros was, in Buddhistic teaching, an emblem of virtue, even a most bellicose huntsman would hesitate to slay virtue incarnate without provocation.

Among the most interesting articles is that on the cat, to which the author has lately devoted a special study elsewhere. The earliest Egyptian name of the cat is the familiarly onomatopoetic *mau*, which reappears in the French *matou*, and in such personal names as Minette and Mareou; it furnished personal names in other languages, too, as Felicula and Kätzchen witness. The cat came late to Europe, but as Keller shows, it was ridiculously inappropriate for Hehn to congratulate the Occident on procuring the precious animal before Mohammedanism had overrun Egypt and blotted out its religion, including the cat. The truth is, the Prophet was extremely fond of cats, and like Gregory the Great, often carried one about with him. Some time between the second and the fifth centuries of our era, Europe adopted the cat in place of the weasel as a catcher of mice. This fact not only is historically momentous, but helps solve a literary problem, the date of the fabulist Babrius. As Phædrus, in the time of Tiberius, makes no mention of cats, and as Babrius has various stories about them, Babrius did not write before Phædrus, as certain scholars have believed, but some hundred years after. But the weasel was not altogether given up. Keller overlooks at least one later reference to this animal as mouse-catcher, in an idyl of Maximus Planudes who wrote at the end of the thirteenth century.

Dr. D. Everett Lyon, in his well-informed and well-written "How to Keep Bees for Profit" (Macmillan), correctly characterizes the untrustworthiness of Maeterlinck's writings on bee culture as follows:

> The Belgian Maeterlinck is not to be taken seriously in his interesting little book, "The Life of the Bee"; for however attractive it may be from a literary standpoint, it teaches the rankest heresy concerning the habits of these wonderful little people, and shows but a superficial knowledge of them.

It is unfortunate that the most widely read English treatise on the honey bee must be so described. Dr. Lyon has selected his material wisely for his purpose, which is to equip the novice with such information as will enable him to begin practical bee-keeping with a reasonable prospect of success. On some points an experienced bee-keeper would be apt to advise caution, as, for example, reliance upon the "Shook method" of controlling swarming, the production of extracted, rather than comb, honey, and the rearing of queens by beginners. In general it may be said that the art of successful apiculture is somewhat more difficult than it is made to appear in these pages. The reader will derive a good idea of the business of honey production, however, while the earnest novice will do well to pursue his studies further with the aid of the manuals of Cook and Root.

Dr. Arthur Bordier died recently at Grenoble, aged sixty-nine years. He was professor of medical geography at the School of Anthropology, and left there in 1895 to go to the medical school at Grenoble. He was author of a number of scientific works, among them, "La Colonisation scientifique et les colonies françaises," and "La Vie des sociétés"; and he was at one time president of the Society of Anthropology of Paris.

Dr. Elizabeth Blackwell, widely known in England and America as a pioneer woman doctor, died in London last week, aged eighty-nine years. Her life was notable for her early struggles to overcome the prejudice against the study of medicine by women; no institution in the United States would accept her, but she gained admission to the University of Geneva, and was graduated at the head of her class. There was much opposition to her practice in New York, but she resolutely set to work, and founded an infirmary for women and children. When the war of the secession broke out, Dr. Blackwell began the movement which led to organization of the National Sanitary Aid Association for the provision of trained nurses. She was the leading spirit in founding, in 1865, the Woman's Medical College, which was later merged with Cornell. She returned to England in 1869, where she took up general practice, and wrote a number of books and pamphlets, among them "The Influence of Women in Medicine," and "The Moral Education of the Young."

Drama and Music.

Forbes Robertson, now once more in London, will reappear in New York on the 26th of September, and expects to remain in this country for two years. This would be extremely good news, if so much of his time was not to be devoted to repetitions of "The Passing of the Third Floor Back," a wholesome enough piece, indeed, but one —from the literary, artistic, or dramatic point of view—almost wholly unworthy of his ability and skill. It is satisfactory, however, to be assured that before he shall leave America for good, he will revive several Shakespearean works. We may hope, therefore, to renew acquaintance with his Hamlet, and see his Othello. It is reported that he does not mean to act for more than four or five years longer.

The success which "La Fleur Merveilleuse" of Miguel Zamacoïs attained recently at the Théâtre Français must be attributed apparently to the charm of the poetry, the excellence of the acting, and the beauty of the scenery, rather than to the interesting quality of the plot. The story, indeed, is of the thinnest possible description to support the burden of a four-act play. Mynheer von Amstel so greatly covets a certain marvellous tulip that he is willing to barter even his lovely daughter, Griet, for it. Florent's mother is the possessor of it, and Florent is in love with Griet, but he, alas, poor fellow, is a little mad. His mother is willing to part with the tulip to insure his happiness, but, when he learns the nature of the bargain, he refuses to profit by it, and magnanimously gives the tulip to Griet for nothing. Griet, for her part, is so touched by this nobility that she returns the flower, and her heart with it; whereupon Florent recovers all his wits, and the two are happy ever after.

Admirers of Brahms will welcome the new collection of fifty songs by him just published by G. Schirmer. They are edited by Max Spicker, with an introductory essay by H. E. Krehbiel.

Ordinary pianists do not succeed in the concert halls, because there is too much sameness in their playing—no variety, no novelty, no expression. The better class of pianists often fail to draw large audiences simply because there is too much sameness in their programmes. One would think that, instead of several thousand good piano pieces, there were barely a hundred in existence. There is Tchaikovsky, for instance. Why does no pianist ever play any of the short pieces of this emotional and popular composer? The average pianist will, no doubt, ask: "Did he write any such?" Indeed he did, and among them are some gems, as may be learned from Edwin Evans's book on that composer (E. P. Dutton & Co.), pp. 173-182. Another neglected composer, with whose pieces concert players could win great favor, is Jensen. The copyright on his works having recently expired, Breitkopf & Härtel are now bringing out a new and much cheaper edition, which will no doubt carry into general vogue again this splendidly melodious composer whom Dr. Riemann called "the real heir of Schumann." The "Album leichter Klavierkompositionen," containing

the best of his easier pieces, is to be especially commended to amateurs. Jensen's songs, also, are included in this cheap edition. Amateurs who do not know them will be astonished by their wealth of melody and their poignant yet always beautiful harmonies.

Carlos de Serrano, the Mexican musician and orchestral conductor, died in New York last week. He was born in Mexico City in 1854, and studied music abroad, chiefly under Thalberg. Returning to Mexico, he was for a time leader of the famous Orfeon chorus, and conductor for several South American opera companies. In New York, Serrano was conductor for the Milan and Clara Louise Kellogg opera companies, which appeared at the Academy of Music. In his later years he devoted himself entirely to teaching.

Art.

SEYMOUR HADEN AND ETCHING.

It is notable in the art of the nineteenth century that so many of its best practitioners were amateurs. Watts, Rossetti, Puvis de Chavannes, Manet, Cézanne are examples of artists who either practised other professions or did not depend upon their art for their living. This was emphatically the case with the late Sir Seymour Haden, who, in the intervals of a successful surgical practice, made himself one of the most distinguished etchers of his time. Within the limits of his art he was highly influential, as much so as Manet or Puvis in the general field of painting.

The young etcher who began just before the middle of the last century found the art of his predilection in a sort of premature dotage. It had served the Italian eclectics as an admirable means of sketching. The cosmopolitan illustrator, Hollar, had applied it charmingly to landscape and architecture; Rembrandt had made it almost a rival of painting. Such artists as Canaletto, Tiepolo, and Piranesi still treated it as a swift and vigorous means of pictorial notation. But the decadence was in sight. The French and English engravers of the eighteenth century used etching chiefly as a first stage in line engraving. Bartolozzi reduced it to clever copyism. Even Turner, one of the greatest masters of the etched line, treated it with more power than finesse, and in the "Liber Studiorum" made it merely the skeleton of compositions finally executed in tone. A few painters in England maintained an etching club which published dull transcripts of the anecdotal pictures of its members, or neatly finished and sapless illustrations for poetry.

The young surgeon, Seymour Haden, quietly reacted against the anæmic tradition to which one might say he had been born. He saw that the acid-bitten line was a means of sketching, not of elaborate picture-making. He felt that the line had a value in itself, must be kept isolated and significant, not lost in masses of cross-hatching or smears of printer's ink. Having divined the sound principle of his art, he very logically attached himself to the great tradition of British sketching, of which, with Hercules Brabazon, who died about four years ago, he was the last distinguished exemplar. The water-colorists, David, Cox, Turner, Cotman, were the natural models for the young amateur, but as he developed he evinced a scholarly and eclectic quality, and became an ardent collector and student of the prints of Rembrandt. This influence betrays itself in a growing incisiveness of line and in a tendency to force the blacks.

The simple, even naïve, compositions of Seymour Haden were so superior to the mass of contemporary etching that he soon gained notice on the Continent, at first in the invidious form of having his plates pirated in Paris. The sanity of his method promptly won the praise of the critics and the suffrages of the dealers. He himself wrote forcefully upon his chosen art. Everything conspired to make him its most prominent representative, and one may say that just as in his youth the possession of a copy of a Carlo Dolci indicated a family of taste, so the display of one of his own prints constituted a kind of diploma of taste during his old age. In fact, with Whistler, he had possibly unduly obsessed the artistic imagination of his time, at the expense of the admirable etching of Méryon, which he did not fail to celebrate, and that of the French romantic painters.

Haden's etchings lack charm. About the lovely qualities of things he recked little. It takes a Whistler to show you the beauty of river barges, of stuccoed walls, of dingy bridges and warehouses. In fact, more than criticism has yet perceived, Whistler quite frankly depended upon the inherent picturesqueness of his material. Seymour Haden's approach to nature was much more intellectual and less passionate. He seems to have almost avoided the obviously picturesque. His endeavor seems to have been so to simplify any scene that the residuum should have consistency as a picture. His art, then, was not one of immediate representation and naïve expression, but of selection, elimination, arrangement. He was versatile, often took an old-fashioned pleasing subject, could give you admirably the actual texture and build of the Agamemnon or the Kensington Oaks, but, in general, he dealt in the broader effects. Indeed, so austere, and in a manner ungenial is much of his sketching that its popularity remains something of a mystery. He can be intimate, but usually is so only in his smaller and slighter plates, such as the little series which he did in a single day in Wales.

He was the last of the great English sketchers, the last who had the synthetic attitude toward big landscape. He did a thing that was more difficult than to be picturesque. More mind went to his sketching than ever to those bungling scrawls with which Corot, after all, conveyed a poem to the copper. It seems to us that Sir Seymour Haden's place is not with the great artists, but with the great preceptors of art, the Pollaiuoli, David, Manet—men who vigorously impose a procedure or point of view. His plates will always constitute a classic course in sketching landscape, and it is in many ways a pity that, in lieu of following his clear leading, modern etching is veering in uncertain directions or too closely following the lead of Whistler and of France.

The St. Louis City Museum has recently acquired two beautiful paintings by George Inness, sr. The Coming Storm was purchased by the museum, and the Storm on the Delaware River, by the Bixby fund, for the collection, belonging to Washington University, which is lent to the city museum.

John Hutchinson, R.S.A., the sculptor, died last week at Edinburgh. He pursued his studies first at the Trustees' Academy, and later in Rome. Among the busts which he executed were those of Norman Macleod, Queen Victoria, and the Prince Consort. He had exhibited for many years at the Royal Scottish Academy, and at the Royal Academy.

Sir Francis Seymour Haden, founder and president of the Royal Society of Painter Etchers, died last week in London, aged ninety-two years. He was educated for the profession of medicine at the University of London and at the Sorbonne, but when some forty years old, turned his attention to art, especially to etching. His first work exhibited at the Royal Academy was in 1869; two of his most notable plates were The Breaking Up of the Agamemnon, and Calais Pier, after Turner, both of which were shown at the centennial exhibition in Philadelphia in 1876. Sir Francis won the Grand Prix at Paris in 1889, and again in 1900. He was an honorary member of the Société des Artistes Français, of the French Academy of Fine Arts, and of the Institute of France.

Finance.

THE RAILWAY RATE SCARE.

Briefly summed up, the real incidents on which the extraordinary stock market of last week hinged were pretty much as follows. The railways advanced freight rates in 1908, despite the industrial depression. This year they conceded demands of their laborers for higher wages, though only for the lower-paid groups, and they very generally increased dividends. There had been much talk of another advance in rates. The Railway Rate bill pending in Congress gives the Interstate Commerce

Commission power to pass by its own initiative on the reasonableness or unreasonableness of a rate increase—a power which it does not now enjoy. On the eve of action upon that bill, the railways announced a general advance, throughout the country. The shippers' protective association, when the one-month's notice was filed, protested that the advance was inequitable, and asked the railways for its suspension pending arbitration of its fairness.

The railways paid no attention to the request. Finally, on Tuesday of last week—the day before the new rates would have gone into effect—the Attorney-General procured an injunction against twenty-five Western railways which had acted through a joint committee, thereby in substance violating the Anti-Trust law of 1890, as interpreted twice by the Supreme Court. No other rate advances were enjoined, among the hundreds filed, but a wild outcry arose from the railway managers. One of them, the president of an important Eastern road, publicly declared that the rates must be advanced to keep the companies solvent, adding later that, since the Government's intervention, credit of the railways had been all but totally destroyed. A violent collapse on the Stock Exchange ensued, running to 10 or 15 points; the selling was enormous. Last Monday, three of the railway managers conferred with President Taft. He agreed to suspend the injunction proceedings if the railways would agree to postpone the advance in rates until Congress should act upon the Railway bill. They consented; thereupon stocks rose violently in Wall Street.

The salient fact, then, is that a thoroughgoing liquidation has occurred on the Stock Exchange. Was this liquidation solely a consequence of the rate dispute? This is a pertinent inquiry, to be answered in the light of actual facts. Early this present year, an admittedly critical situation had been created, first, by an abnormal and unwholesome inflation of credit in this country, resulting in heavy shrinkage of capital reserves at home; secondly, by collapse of our credit balance on foreign trade account, resulting in loss of our hold on foreign capital and in heavy export of gold from our bank reserves. All previous experience has taught that to remedy such a situation, a drastic readjustment of values and speculation must ensue.

That readjustment began with the fall of stocks in January—ascribed, as usual, to something else. It was continued later in the produce markets, and in progressive curtailment of facilities for the country-wide land speculation. The symptoms of the day indicated that the remedy had not yet gone far enough. Recourse was then had to borrowing abroad on railway bond and mortgage—a process which gave apparent relief, but which competent foreign critics declared could be merely a temporary palliative, and which was followed by renewed advances on the Stock Exchange. Next came a three-week period of complete stagnation and deadlock on the Wall Street market, leading to private but forcible expression of opinion, among conservative financiers, that the readjustment process had not been completed.

If the line of least resistance had been followed, next, through a sudden and drastic scaling-down of Stock Exchange values, without "news" of any sort, it is not improbable that the financial community would have agreed that the reckoning had been inevitable. But such a situation usually drags along until there is some news. It may be a crop report, or a Venezuelan message, or a Lawson advertisement, or the death of a celebrity. Whatever it is, that news will thereafter be held responsible for the crash in stocks.

In very large part, it may have been responsible. News such as that of the government rate injunction—especially with the comments which accompanied it—will induce somebody to sell who might not otherwise have sold. But the question even then will remain, why the selling should have had such effect on the market as it had. There will also remain the further question, what is to be the longer sequel on the market, and the answer to both questions must be sought in Wall Street history.

There were three notable events the news of which, in their respective years, was received by Wall Street much as this news was received. The first was the Supreme Court's decision that the Trans-Missouri Freight Association, as organized and conducted, was an illegal combination in restraint of trade; it was handed down on March 22, 1897. To Wall Street, the decision was a complete surprise; a comfortable conviction had existed that the Anti-Trust law could not be made to apply to railways. The news from Washington was followed by a break of 3 to 6 points in the granger railway stocks, and by a further fall of 2 to 4 points in the ensuing week. Then came a period of dulness; next, in May, a slow recovery, gaining ground until, in July and August, an advance of great scope and violence was under way on the Stock Exchange.

It was after the close of business on February 19, 1902, that Attorney-General Knox announced the government suit against Northern Securities. The news was received in Wall Street with a clamor of apprehension. A million shares changed hands in the Stock Exchange the next day; stock declined 1 to 6 points throughout the list. This done, the market steadied; the next week active speculation for the rise began again, some stocks advancing 2 to 9 points. Prices gained ground still further during March, and in April occurred the wild Stock Exchange boom under the "Gates clique."

President Roosevelt's "Standard Oil message" went to Congress on May 4, 1906; it was followed immediately by the beginning of suits against the company. But the market's reception of the news was singular. Prices had already fallen twenty points, or so, since the San Francisco disaster of April 18; they began to recover on the very day when the news from Washington arrived, and they continued this advance until the "boom" reached its culmination along with the Steel Corporation's resumption of dividends in July, and the Union Pacific's increase of its annual dividend rate in August, from 6 to 10 per cent.

The most obvious moral of these earlier episodes, as applied to that of the present week, is that the real effect of unpalatable news of this sort on the Stock Exchange depends on other things than the news itself. Where prices broke violently on the news, as in 1897 and 1902, the reason was that the market was in shape to yield, for causes quite unconnected with the news from Washington. Where they did not break on the news, as in 1906, it was because the market had been already liquidated. Perhaps the most interesting fact is that none of Wall Street's ultra-pessimistic predictions of either period materialized. The case turned out to be altogether different from what the Stock Exchange had excitedly imagined, and the fortunes of the rest of the financial year were governed by such homely considerations as the crops, the export trade, the condition of international exchange, and the credit situation as reflected in the money market.

ISSUE THIS WEEK

Viola Burhaus' THE CAVE-WOMAN

A Novel of To-day, $1.50.

One of America's leading critics, who saw this book in MS., commended "the originality of the story, the writer's real literary capacity, the carrying power of the whole."

The romance begins and ends literally in a cave—and in one so dark that the hero cannot distinguish so much as an eyelash of the woman who is his companion, and who refuses to disclose her identity.

The story is thoroly American in characters, scenes and humor.

Max Vernon's IN AND OUT OF FLORENCE

With 48 full-page illustrations from photographs and about 100 drawings by Maud Lanktree. 370 pp. With index. 8vo. $2.50 net; by mail, $2.67.

A reliable though delightfully informal book, liable to prove as attractive to fireside travellers as to those who actually cross the sea. Besides covering Florence's art treasures and the sights of interest to tourists, including the delightful excursions to Vallambrosa, and over the Consuma Pass, the Casentino, Prato, Pistoja, Luca, and Pisa, the author treats of such practical matters as House-Hunting, Servants, Shopping, etc.

READY NEXT WEEK

A further enlarged edition of

H. A. Beers' WAYS OF YALE

$1.20 net; by mail, $1.30.

NEW NOVELS FOR VACATION READING

"One should carry away for vacation reading a novel of goodly length, that it may not be done with before vacation has really begun; of pervasive and persuasive humor, that it may entertain a mind above the cheaply comic; of gentle flow in narrative, for the merely sensational gives no lasting pleasure; above all, a story whose characters are so real and friendly that the reader is content to spend his vacation's leisure hours in their company."—*The Outlook.*

THESE ARE JUST SUCH NOVELS AS ARE RECOMMENDED BY "THE OUTLOOK." THEY ARE THE BEST NEW NOVELS OF THE SEASON

Mr. Winston Churchill's *new novel*
"A Modern Chronicle"

By the Author of "Richard Carvel," "The Crisis," "Coniston," etc.

"He has done nothing that is so sure in its art and so readable as a work of fiction."—*Chicago Daily News.*

"From the beautiful Southern city, through New York's suburbs, smart summer resorts, Newport, and the West, one follows the heroine, Honora, with profound interest." "Honora is one of the most vital women in modern fiction."

"Nathan Burke," *the remarkable novel by*
Mary S. Watts

"An exquisitely delightful piece of literature of a sort that isn't common nowadays."

The above paragraph on vacation reading quoted from *The Outlook* was followed there by the sentence, "Just such a book is Nathan Burke."

"One of the big books of this or any year . . . Few books have been written in years that will please so much."

Gertrude Atherton's *strongest novel*
"Tower of Ivory"

By the Author of "The Conqueror," "The Splendid Idle Forties," etc.

"It is a powerful, gripping piece of fiction, in which the story of the love of a real man and of a great woman for each other is told as no other Anglo-Saxon living could tell it."—*Evening Mail.*

Mr. F. Marion Crawford's *last novel*
"The Undesirable Governess"

By the Author of "Saracinesca," "The White Sister," etc.

No one who knows the versatile powers of this "prince of story tellers" should feel that his acquaintance is complete until he has read this merry tale, in which the author indulged to the full a light-hearted, infectious gayety and a characteristic ingenuity. It is distinctly a book which contributes to the incredulous but admiring reader's laughing delight.

BY THE AUTHOR OF "TOGETHER"

Robert Herrick's *new novel*
"A Life for a Life"

"I do not hesitate to say that the book is the best one, beyond all question, which Mr. Herrick has yet written."
—*The Chicago Tribune.*

Editor of the Nation (1865-1906)

In one volume, crown 8vo, 300 pages, with photogravure portrait. Price $1.50 net, postpaid.

During the forty-one years in which he edited the *Nation,* with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews and essays, besides a fine photogravure portrait. It likewise preserves the notable letter of appreciation addressed to Mr. Garrison by more than two hundred contributors to the *Nation* on the completion of his fortieth year of service, and his acknowledgment thereof.

HOUGHTON MIFFLIN COMPANY. Boston and New York

School Advertising in the Nation

The Nation stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions.

SPECIAL RATE

TEN CENTS A LINE NET FOR THIRTEEN TIMES (minimum space three lines)

Orders may be forwarded through any responsible advertising agency, or directly to

Questions on Shakespeare

By ALBERT H. TOLMAN

A Plan of Study Intended to Develop the Student's Personal Judgment on Shakespeare

PART I. - - - - - - - - - Introduction
220 pages, 16mo, cloth; postpaid 81 cents.

PART II. - - First Histories, Poems, and Comedies
364 pages, 16mo, cloth; postpaid $1.09.

THE author aims not only to make the study of Shakespeare in the classroom more uniform but to help private students as well, and to save even the occasional reader from a desultory and mechanical perusal of the text. Study clubs in particular will find that these questions answer their demand for a careful, systematic, and illuminating guide to the text. The exercises on each play follow a logical order, embracing general questions, questions on individual acts and scenes, character study, the relation of the play to its sources, and questions concerning the text or meaning. Part I is introductory to the series. It includes "The Study of Shakespeare's Language," "The Study of Shakespeare's Verse," and a select general bibliography. In the first section the chief differences between the language of Shakespeare and present-day English are pointed out, and the reader is asked to find for himself good examples of each peculiarity indicated. Under "Versification" Professor Tolman traces the changes that appeared in Shakespeare's method of writing verse. The bibliography (in fifteen sections) gives convenient lists of books on sources, editions, historical data, interpretation, etc.

Part II contains detailed questions for the study of Shakespeare's four early histories (the three parts of *Henry VI,* and *Richard III*) which deal with the fall of Lancaster and the coming of Tudor; the early poems; and the first comedies, *Love's Labour's Lost, The Comedy of Errors, The Two Gentlemen of Verona,* and *A Midsummer Night's Dream.*

The exercises are planned so as to develop in every way possible the individual powers of the student. The questions place him upon his own resources—"ask him to handle the play as master-interpreter." There is no proper place in any classroom or in the work of any private student for haphazard questioning. The pupil is asked to enter with full sympathy into the life of the plays. The process of working out under proper guidance his own commentary will be more useful than the reading of the best commentaries of others; after such study, the discussions and interpretations of others will have for him an added interest and value. Teachers will find in these books much that is helpful in organizing their work, in arousing interest, and in securing the solid results which are the aim of all literary study.

The books are neatly bound in blue cloth with the titles stamped in gold

READING CASE FOR THE NATION

To receive the current numbers in a convenient temporary form. Substantially made, bound in cloth, with "The Nation" stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75c.

THE NATION 20 Vesey Street, N. Y. City

Important Announcement

GARNER'S INTRODUCTION TO POLITICAL SCIENCE

By JAMES WILFORD GARNER, Ph.D., Professor of Political Science, University of Illinois.

Price, $2.50

This octavo volume of 616 pages is a college textbook, containing a systematic and elaborate treatise on the science of government, including the nature, origin, forms, organization, and functions of the State. The bibliography of English, French, and German literature is select but extensive, and the work is thorough and detailed in treatment, and systematic in conception and execution. There are numerous footnotes and references to every subject discussed, the style is plain and simple, and the work is more comprehensive than any other of equal grade now to be found in English.

The Recollections of a Life-time of Association With Great Men

"Without doubt the most important contribution to our political literature that has appeared in many a day."—*San Francisco Bulletin.*

Something of Men I Have Known

By ADLAI E. STEVENSON

Mr. Stevenson writes charmingly of the acquaintances formed with men of national and international prominence, during his long public career. His book is a refreshing and most illuminating volume.

Fully illustrated. $2.75 net; postage, 17c.

NEW YORK, THURSDAY, JUNE 16, 1910.

The Week.

The compromise which has now been reached by the Railroad-Bill Conference Committee regarding the question of Federal control of issues of stocks and bonds is of a kind very natural under the circumstances. In general, the line-up was between the "regular" Republicans on the conservative side and the Democrats and "insurgent" Republicans on the radical side. But the State-rights aspect of the Federal control of stock and bond issues caused Democratic opposition to that feature of the radical programme, and, though President Taft was strongly committed to it, he could not bring the regulars to support it, along with the insurgents. They had the excuse that, in order to procure the assent of the Democrats to the bill, it had been necessary to promise them that this feature would be left out. The compromise, it is stated, provides for a commission to inquire into stock-watering; this will certainly not interfere with State rights, but will give the States, and the country, information on which future action may be based. It was a happy thought to shelve the difficulty in this way, and with its disappearance the long-continued troubles of the bill on its way to adoption are virtually at an end.

The passage in the House of the bill to create a system of postal savings must be accounted a decided victory for President Taft. But for his urging, the measure certainly would not have been enacted in this session of Congress, although both parties had declared themselves in favor of it. It has to be admitted, also, that a great deal of general support for the plan has been called out, especially in the West. This was shown by the fact that twenty-three Democratic Representatives felt compelled to vote for this Republican bill. The final roll-call showed 195 in favor to 101 against. The bill differs in some respects from the form in which it passed the Senate, so that it now goes to conference. There can be no doubt, however, that it will be made law, and that we are to enter upon this interesting experiment. It has been asserted that in the course of it $500,000,000 in small savings will be drawn out and added to our banking resources. If that proves to be even half true, the financial consequences of the step will be highly important.

On the main question between the President and Representative Harrison, we think that Mr. Taft had a substantial grievance. The Congressman had publicly accused the President of dishonest motives—his statement being that "the President and the Attorney-General had *agreed* to furnish to Congress misleading information." Mr. Taft might well take offence at that, and conclude that he would have no further personal relations with Mr. Harrison. But granting this, the manner in which the President chose to snub the Congressman was most unfortunate. The latter had a regular appointment to go to the White House with a delegation, and no intimation had been conveyed to him that his presence would be unwelcome. It is true that he was there privately told that the President would not see him, but under the circumstances this was tantamount to a public humiliation. As for Mr. Harrison, he is aware that the affront is really a godsend. He now has a new political asset. When Martin Van Buren's nomination as Minister to England was rejected by the Senate, even after Van Buren had begun his service in London under an interim appointment, Lord Aucklaud said to him: "It is an advantage to a public man to be the subject of an outrage." Benton declared to the exulting Whig Senators at the time: "You have killed a Minister, but you have made a Vice-President"; which turned out to be the case. We hope it will not be inferred from this that Mr. Harrison is our candidate for the Vice-Presidency.

John Dalzell, seeking in the courts a temporary stay of the hand that struck him, is apparently anxious to delay the inevitable as long as possible. It was a hard blow to his dignity to come so near to defeat in his own party primary, but when his late opponent procured a recount and Dalzell's meagre majority began to sink rapidly, it was necessary to act at once. The injunction which he obtained last Friday is only temporary and the Pittsburgh Cannon lieutenant cannot hope to put off the agony much longer. At most he can force by court order the opening of the ballot boxes about which Dr. Black, his opponent, has made no protest. As it was, the county commissioners opened one of the boxes in an uncontested district before the injunction was served on them, and it added two votes to Black's total. If this average were kept up in other districts it would more than wipe out the 198 votes by which Dalzell now leads. If that should be the outcome, it would give point to the comment of "Boss" Oliver's paper, the *Gazette-Times*, which, in congratulating Pittsburgh upon its escape from "a national calamity," declared that Dalzell's defeat "would have been hailed from Maine to California as repudiation of the Payne-Aldrich tariff bill, as a rebuke to the Administration, and as a sign of weakening in the Republican phalanx."

The decision of the California Labor Bureau that Japanese immigration is necessary to the welfare of that State, comes as a striking commentary on the anti-Japanese agitation of two years ago. The protest at that time seemed to be unanimous. The Legislature was prepared to pass a whole series of restrictive laws, ranging from the total exclusion of Japanese laborers to the segregation in schools of all Japanese children. But at the eleventh hour pacific influences from Washington prevailed, and the proposed legislation was withdrawn or defeated. As a matter of fact, the apparent solidarity of California against Japanese immigration was an illusion, as apparent solidarities usually are. The anti-Japanese element was organized and vociferous, while the pro-Japanese element was unorganized and quietly busy about its work. The Legislature was induced to compromise the issue by ordering an official inquiry wherein mere lung power would lose its customary advantages. A canvass of the whole State was undertaken by means of circulars. Employers of Asiatic labor were invited to say which kind of As-

iatic they preferred, and why, and to enumerate the benefits and the drawbacks of the different races. A similar inquiry had been made previously, though upon a narrower scale, and the answer then was the same as it is now: the California rancher must employ Asiatic labor because no white labor is available; and while in a great many instances he prefers Chinamen, he is well content with the Japanese. A California "solid against the Japanese" is therefore translated into a California that depends upon the Japanese for crops and general prosperity.

The fact remains, however, that opposition to Japanese immigration will continue as determined as ever, with all its noise and intimidation, and with a better organization. And the Legislature will be fully as amenable as before to the blandishments and the threats of a labor unionism that is more aggressive than elsewhere in the country. San Francisco is opposed to Japanese immigration for the simple reason that the Japanese workman in that city is in direct competition with the white man, whereas elsewhere he is his very obedient and humble servant, doing necessary work that no one else will do.

Last Friday's conviction of two high officers of the Sugar Trust, after a long trial, is not to be taken, as the lawyers for the defence would have the public believe, merely as the result of a blind desire to reach men "higher up." It is, rather, an application of common sense to the whole disgusting scheme of thieving which the Sugar Trust followed. No man in his right mind ever believed that this was the invention or the work of subordinate employees. They were but executing the orders of the unscrupulous men who devised a method of getting rich by daily pilfering from the Government. And the sense of justice would have been revolted had the criminal responsibility been brought home to none of the superior officers. Hence it is a great thing for public morals that a jury, after dispassionately and deliberately considering all the evidence, has found two of the higher officials guilty. If the former head of the Sugar Trust were living, he would undoubtedly have to go to prison for his crimes. But the law which, it is now shown, can reach the men higher up, has no power to go deeper down into the grave.

Princeton's troubles over her Graduate College came to a happy ending last week. Mr. Procter's offer of $500,000 was renewed and accepted, and this sum, added to the Wyman legacy, which it is thought will certainly amount to $3,000,000, will enable the Princeton authorities to lay their foundations broad and deep. An additional $500,000 is to be raised by the first of the coming year, so that there is already in sight a fund larger than the original endowment of Johns Hopkins. On the question of the site at Princeton, President Wilson yielded his personal preference, as it was easy for him to do in view of the way in which the entire scheme has now expanded. In his statement to the trustees, however, he specified the understanding that "the life of the Graduate College should be organized upon the simplest and most natural lines possible, and that the college building should be of common use and benefit to all members." This shows that the money is not to be employed to promote luxury or snobbery.

What large sums are needed to run the Hampton and Tuskegee Institutes is shown again by their annual reports. Thus Booker Washington's budget for next year is $259,164.72, as against $249,522.16 during the financial year just ended, in which no less than $196,777.87 besides was spent for permanent improvements. At Hampton, the outlay is nearly the same; it will be about $250,000 for the year just completed, owing in part to the increased cost of living. Hampton has only $2,180,376 endowment, while the Alabama school possesses $1,387,111.98, and Mr. Washington is asking for $3,000,000 more. No one who is not familiar with the circumstances can appreciate the strain put upon Mr. Washington and Dr. Frissell by the need of perpetual begging. Because of it, they have to forsake their duties as principals; and the struggle becomes harder year by year, as the number of such schools increases. It is difficult to understand how the General Education Board, with its Rockefeller millions, can be unmoved by this state of affairs. Mr. Carnegie, too, having given a million to Tuskegee, might well continue the good work. But the General Education Board seems for the present wrapped up in aiding the smaller colleges. Some day, it is to be hoped, it will enter the field of the small Southern industrial schools for whites and blacks.

Even art comes to him who waits. A Fine Arts Commission to supervise the erection of all new public buildings in Washington, and in general to assist and advise in everything pertaining to the embellishment of the national capital, has been appointed by President Taft. He was authorized to do this by act of Congress. Thus closes an artistic storm. It will be remembered that President Roosevelt undertook on his own motion to constitute such a Fine Arts Commission, but his legal warrant for doing so was doubtful, and Congress legislated his creation out of existence. But Mr. Taft quietly pressed for a reversal of the action, and finally won a real triumph in securing the necessary statute. The whole story shows once more that we do somehow manage to flounder along towards a regard in our public life for what is fit and beautiful.

Mount McKinley has been scaled a second time, and two more expeditions are about to attempt the feat with very fair chances of success. Dr. Cook therefore stands vindicated to this extent, that his claims never embraced the impossible. He may not have climbed Mount McKinley, and he may not have reached the Pole, but by almost a miraculous power of prevision he has seen the coming event a few months in advance of his fellow-citizens; and that is a gift not to be ashamed of. As a harbinger of success he is almost without a rival. It might be a very good thing for civilization if Dr. Cook could be induced to come out of his retirement and announce that he had discovered a cure for tuberculosis, solved the cost-of-living problem, and persuaded the Kaiser to consent to a reduction of armaments. Within a few months these things would actually have been accomplished—by some one else.

Literary free-lancing is usually regarded as an extra-hazardous occupation. The other side of the picture is presented by one of the contributors to a recent volume published by the Women's Educational and Industrial Union of Boston under the title, "Vocations for the Trained Woman," and dealing with

every form of occupation open to the educated woman, other than teaching. Newspaper-work as a profession, on the whole, offers few opportunities for women. The pay is not very good, and the work is exhausting, physically and mentally. But with the free-lance the situation is different:

> It may be said in general, our informant asserts, that it is a comparatively easy thing for a very ordinary writer, with very ordinary industry, to make $1,000 a year free-lancing in New York. It is a very easy and a very speedy matter to write a thousand words. It is not a matter of time or difficulty to get the material to fill a thousand words. The crux of the matter comes in knowing what sort of material to get, how to get it, and where to sell it.

No one will take exception to this sanguine statement of the case. We have no doubt that $50,000 a year is very easy to coin for the lawyer who knows how to find clients who will pay him $50,000 a year, or the author who can sell two hundred thousand copies of his book.

Within a little over a month since the beginning of his reign in England, the new monarch has had the appointment of two "proconsuls," as the English have proudly learned to call their colonial rulers. Lord Gladstone was named Governor-General of South Africa about two weeks ago, and last week Sir Charles Hardinge, permanent Under-Secretary of State for Foreign Affairs, was named Viceroy of India, in succession to the Earl of Minto. The Government has thus reverted to the policy it followed in the appointment of Lord Curzon, who held the same post as Sir Charles Hardinge for three years preceding his elevation to the vice-royalty. Unless the precedent of Lord Curzon is followed in another respect and Sir Charles Hardinge is raised to the peerage, he will be with one exception the first commoner in seventy-five years to occupy this exalted position. It must be said, however, that the new Viceroy is the brother of a viscount, the son of a viscount, and the grandson of a viscount—this last one having held the Governor-Generalship of India from 1844 to 1847. The appointment of a man so well trained in diplomacy as Sir Charles Hardinge indicates a desire on the part of the British Government to follow a line of action midway between the traditional policy of naming a noble figurehead and the latter-day policy of blood and iron that found expression in the desire to see Lord Kitchener made Viceroy.

Reports agree on the probability of a harmony conference between the Liberal and Conservative leaders in England. What is not so clear is whether the arrangement contemplated is to be in the nature of a truce or of a more lasting treaty of peace. Nor is it wholly evident just what reasons impel Mr. Asquith to go into a conference in which it is said the representatives of neither the labor party nor the Irish will participate, and of which the radical element among Mr. Asquith's own followers disapproves. Apparently, the Premier seems to be inviting a recurrence of the situation which caused him great embarrassment a few months ago and from which he extricated himself only by making ample concessions to the radical drive within his own party. At that time it was Mr. Asquith's purpose to proceed with his budget legislation without explicitly pledging himself to a policy of fight on the question of the Lords' veto. This position he was compelled to abandon, and the budget was not passed until Mr. Asquith had made the pledge that, in case the Lords threw out the veto resolutions, he would ask for "guarantees" from the King. A new King now rules in England and the desire to spare his reign an inauspicious beginning is probably strong enough among all parties to postpone the quarrel for some time to come. But Mr. Asquith must have got a firmer grip on his followers than he has hitherto held if he feels strong enough to enter into a permanent compromise with the Opposition.

While to the late King of England has been generally accorded the title of the leading "peacemaker" of the world, there is an equally general impression that in the matter of naval armaments England has been the world's "pacemaker." The London *Economist* is by no means pleased with this "double and most unenviable compliment," and proceeds to dispute it by the production of statistics that point in other directions. Of these the most striking are the figures for the naval expenditures of Germany and of the United States. While Great Britain's naval expenditure has risen from £15,600,000 in 1890 to £40,600,000 in 1910, that of Germany has advanced from £3,600,000 in 1890 to £17,400,000 in 1908, and that of the United States from £4,100,000 in 1890 to £23,600,000 in 1908. Thus British naval expenditure was two and a half times as great in 1910 as it had been twenty years before, while in Germany the outlay had been nearly quintupled in eighteen years beginning with the same date, and in the United States, in the same time, nearly sextupled. The *Economist* urges the revival of the proposal looking to limitation of armaments made by the Czar at the first Hague Conference as an imperative duty of the British Government; and it does seem as though England could press such a proposal with a good countenance.

News of the suppression of the Albanian revolt comes surprisingly close on the heels of the report of Turkish reverses. It is only a few weeks since the Government forces were supposed to have been fought to a standstill, and important towns like Pristina and Prizrend seemed in danger of falling into the hands of the insurgent tribes. That a complete reversal of the situation should have taken place in so short a time, and this, too, without the report of a great battle reaching the outside world, would savor almost of magic, if a more matter-of-fact explanation were not available. The truth would seem to be that the Albanians were not beaten, but placated, and that the wholesale surrender of arms by the tribesmen was voluntary. The outcome has been credited to Shefket Pasha, commander-in-chief of the Turkish armies, and the hero of the capture of Constantinople and the overthrow of Abdul Hamid. But it was Shefket Pasha the diplomat, and not the soldier, who won over the Albanians. His appeal is said to have been made to the patriotic and religious sentiments of the rebellious tribesmen. He pointed out that, taking advantage of the Government's difficult situation in Albania, the enemies of Turkish rule in Crete had renewed the campaign against even the semblance of Ottoman authority in that island, and that the Mohammedan remnant in Crete was being persecuted by the Christian majority. The need of making a united front against European aggression seems to have completely won over the Mohammedan Albanians. In Shefket Pasha Turkey has to-day a man as potent in peace as he is in war.

THE NEW FEELING ABOUT THE TARIFF.

Several defences of the Payne-Aldrich tariff have appeared within the past few days, almost as if concerted. Senator Hale praised highly the new law in a speech in the Senate, declaring that there had been an unconscionable and wholly unjustifiable amount of "barking and howling" about it. Then there was the Wisconsin convention of high-tariff Republicans. They resolved solemnly that the new high tariff was just the kind of thing they liked. And on Saturday, the Washington correspondent of the New York *Tribune* set forth an array of figures to show how the Payne-Aldrich tariff has been "persistently maligned." As a matter of fact, he wrote, it is proving a fairly good revenue-producer. For the nine months ending with April 30, it brought $252,000,000 into the Treasury from customs duties, or nearly $40,000,000 more than the Dingley tariff yielded in the like period of 1908. Furthermore, the average rate of duty collected has been 41.73, whereas under the Dingley law it was 42.41. Thus the promised revision downwards is achieved: it amounts to nearly seven-tenths of one per cent. What could be a more complete demonstration of the fact that we ought all to rise up and call the new tariff blessed?

Such defences are, we believe, put forward in good faith. There is every reason to think that the Administration and the old-style Republican leaders regard the argument as entirely sound. From their standpoint, the critics are naturally thought of as querulous or partisan. If the Payne bill can be proved to be no worse than the McKinley bill or the Dingley bill, and, in truth, a shade better than either, why all this continuous complaint? The party and the country acquiesced in the former high-tariff laws, and did not long keep angry over the way in which they were framed, and who will give the reason for so great a difference to-day? It is in genuine perplexity and with real pain that such questions are asked by those bred in the old school of tariff-making.

What the old school fails to perceive is that a new sensitiveness on this subject has taken possession of the nation. It was expressed by Gifford Pinchot in his speech at St. Paul on Saturday, when he alluded to the tariff as an example of the way in which special interests had been allowed to write the acts of Congress. He specified the indefensible woollen schedule—even President Taft admits that there is no defence for it, except the necessity of yielding to *force majeure*—and the cotton duties raised utterly without excuse, and the trick by which the rate on structural steel was increased, with other offences, including the sugar duties. These are the things which, with the belief that the tariff has helped to drive up the cost of living, have made millions of people angry; and they feel that they do well to be angry and propose to keep on being so and to vent their resentment in their votes, at the first opportunity. To men in such a state of mind, it is not of the slightest use to say that the tariff is doing well as a revenue-getter. That is entirely beside the point. Nor is it of any avail to show by a nice handling of the figures that duties have been, on the average, reduced by a hair. This is not at all the question that is troubling the complainants. What they object to is the evidence that interested citizens and corporations were too strong for the President and for Congress, and were able to write their own schedules into the tariff. This grievance cannot be removed by statistics of revenue or comparisons of the rates of duty carried out to four figures of decimals.

The new feeling about the tariff seems highly unreasonable to the old politicians moving about in a world not realized. "Why," they say in their exasperation, "the tariff has always been made in this way, and why do you begin kicking about it now? You say that you can't stand having people get what they want by 'seeing Aldrich,' but they used to 'see' McKinley and Dingley in just the same way, and you never thought of howling about it then. We can't understand your sudden spasm of virtue." Well, this was also the state of mind of men who couldn't understand the popular outcry against railway rebates. Those, too, were an old story; favored shippers had always got them. What was the use of protesting? But the time came when public sentiment would no longer tolerate that practice. Similarly with the exploitation of the public domain by private interests: that, also, had gone on for years virtually unchecked. It was fairly buttressed with arguments from the antiquity of the abuse. Yet it has had to give way: its fortress has been carried by assault. And in the same way it is absolutely foolish for defenders of the tariff to sally forth and say that the memory of man runneth not to the contrary of such methods as were followed by Aldrich. Man's memory is making new dates very rapidly in the United States; and the old fashion of creating tariffs in the dark by secret bargains will soon seem as far away as the Flood.

ROOSEVELT IN EUROPE.

The close of Mr. Roosevelt's European tour pricks the mind with the question: Why was it so extraordinarily successful? Begin by making every allowance. Grant that much of the favor shown to Roosevelt was really an evidence of friendliness to the United States, with which all Europe so evidently desires to be on good terms. Concede that the "publicity" department of his travels was carefully attended to, the press being used with all his old skill. In comparing his European reception with Grant's do not leave out of the account the immense changes in international knowledge and international advertising which have taken place since the day of the silent General. Subtract these and all the other items you can think of from the total, and it still remains so large as to challenge explanation while exciting wonder.

No one at all acquainted with the facts can deny the genuineness and spontaneity of the interest which Europe took in Mr. Roosevelt. His fame had preceded him. We may doubt if he added anything to it by means of his journey, except as the vividness of a personality is always heightened by the chance to visualize it. That may explain in part the crowding of Italians and Frenchmen and the others to see the man of whom they had heard so much, and with whose portrait they were so familiar. But with every abatement made, the tribute paid to Mr. Roosevelt by the rulers and people of Europe is something wholly unparalleled. It constitutes by itself a remarkable event which Americans are bound to try to understand—and this not in a spirit of national vainglory, but solely in the endeavor to estimate at their true significance the political ideas which sway the masses of mankind, and with which we shall have to reckon in all our future striving.

Many partial explanations of the European manifestations over Roosevelt lie ready to hand. His dæmonic energy and versatility are qualities which captivate the common imagination everywhere. Then, too, there was an inevitable idealization of the public career of the man, on the part of those who had simply beheld it looming gigantically across the ocean, and who had not had occasion to scrutinize it from near by. It was easy, for example, for an orator in Europe to hail Mr. Roosevelt as the "conqueror of corruption." Such words would stick in the throat of an American familiar with the ex-President's desire that the arch-corruptionist, Addicks, should be elected to the United States Senate from Delaware, or with his private and "practical" arrangements with Harriman to raise money in order to debauch the voters of New York. In Europe, the run of the people know nothing about any of these flaws in the marble; so they are free to take the statue as one ideally perfect. They believe in Mr. Roosevelt's uncommon civic courage; they think of him as one who took his political life in his hands and dashed against rich monopolists; they delight to regard him as a public man of shining honesty and of unrivalled chivalry. It is thus in part an ideal Roosevelt—and we all of us have an ideal Roosevelt tucked away somewhere—whom Europe has been acclaiming; but we cannot bewail or begrudge the glamour of distance which has made this so easy. If there is truth in the saying that the verdict of foreigners on a public man anticipates the judgment of his countrymen in the future, there is matter in this European triumph of Roosevelt which we cannot afford to ignore.

The chief reason for saying so lies in the chief reason for Europe's having so risen to Mr. Roosevelt. This can be got at only by those who have stopped to analyze the emotions of the throngs who pressed upon him. To those thus attentive, it is clear that Mr. Roosevelt was hailed as the champion of the masses against the classes, of the poor against the rich. To thousands and tens of thousands in Europe, this American typifies what they vaguely call the social revolution. In him they think they hear the voice of the struggling common man uttering protests and warnings to the wealthy. That is the final secret of the great stir of popular admiration for Roosevelt in Europe. He bulks there a large-limbed Goth ready to strike down every form of privilege. He himself seemed to be aware of this, or to respond as an orator does to the sentiments of his audience, in avowing himself, on more than one occasion, a thorough "radical." He has never done that at home. Here he has always chosen to figure as the great mediator between capital and labor, between wealth and poverty, between conservatism and radicalism. But in Europe he instinctively perceived the sign in which he was thought to conquer and declared himself, without mincing words, Theodore Roosevelt the Radical. There is no doubt in our mind that in this he accurately grasped the real cause of the enthusiasm for him on the part of the common people in Europe. They think of him as a fearless and powerful ruler who seizes plutocrats by the throat and compels them to disgorge. He has become a sort of transfigured leader and representative of social and political struggle. That is the thing which made Italian laboring men run after him madly, though they could not understand a word he said, which drew to him even the *blasé* crowd in Paris, which caused the German Social-Democrat to feel that in Roosevelt he had a brother at heart. This is something that goes further and means more than official or academic honors; it is deep answering to deep in the discontent and aspiration of our time. What the European masses see in Roosevelt and hope to get from him, is certain to be more and more in the mind of the American masses, too; so that if he enters public life again we may reasonably look to see him adopt much more radical policies than any that have been associated with his name before. Thus Europe's chorus in praise of Roosevelt is a distinct notification to his fellow-citizens of what they have to expect.

FINLAND AND RUSSIA.

The cry of "Finis Finlandiæ" with which the most notorious reactionary leader in the Russian Duma greeted the passage of the anti-Finland bill may still be belied by the future. But the exultation of the Russian reactionaries does serve to demonstrate how futile it is for Russia's apologists in the matter of Finland to labor at making out a case for the Czar's Government. Even if this bill aiming at the suppression of Finnish liberties were, in the eyes of the Czar's Ministers, just and necessary, the yell of triumph with which it was hailed by the former leader of the Black Hundred would be enough to condemn it. It is Russia's misfortune, and at the same time her just penalty, that the forces of misgovernment and reaction within her may seize even upon the good intention and turn it to base uses. It has been Russia's complaint that her motives are misunderstood in the outside world, which refuses to give the Empire credit for good faith in whatever it may attempt. But how, in this present case of Finland, for instance, is it possible to listen to M. Stolypin's assurances of honest intent when above them sounds the "Finis Finlandiæ" of the men who are enemies to all liberty and all progress? The terms conservatism and nationalism are respectable in every country except Russia. There conservatism has spelt dark reaction, and nationalism has meant the persecution of every minor race within the Empire.

Not that the law against Finland's liberties passed by the Duma on Friday is in any way open to the suspicion of being wise, necessary, or justified. Nor has opinion, even in Government circles, been unanimously in its favor. So important a member of the Russian Cabinet as M. Kokovtsoff, Minister of Finance, has sharply criticised the bill and the policy which it embodies. M. Kokovtsoff has argued that Finnish autonomy has its guarantees in the Fundamental Laws of the Empire and has been confirmed in turn by every Emperor since Alexander I. The bill provides that, in matters of joint imperial interest, the Russian Parliament shall be competent to legislate for Finland, and to that end Finland shall send five representatives to the Russian Duma and one representative to the Council of Empire. Such meagre representation, argued M. Kokovtsoff, would not only leave Finnish interests virtually undefended, but would add to the legislative burdens of the Duma, which is now in danger of being swamped by the mass of accumulated legislation. It is absurd, therefore, to complain, as the anti-Finland leaders invariably do, that the cause of the Finns is strong only among foreign professors, legists, sentimentalists, and anti-Russian agitators. Within

the Czar's own official family criticism has spoken out in unmistakable tones.

The principal argument in favor of the new law has been plausibly put. In its terms the measure does not invade Finland's right to manage her own affairs. It simply transfers to the Duma the right of legislating on affairs common to Russia and Finland, which is at present exercised by the Czar through his Ministers. If Ireland had her Parliament, the argument runs, that body would not be allowed to impose its veto on imperial legislation at Westminster, yet that is just what the Finnish Diet has been doing up to the present and wishes to go on doing. Finland's reply is prompt and sufficient. What are these questions of "imperial" interest which alone the Russian Government plans to reserve for its own consideration? Dr. Dillon, in the *Contemporary Review*, gives a list of "imperial" topics taken up for consideration by the Ministerial Council on a certain day of last January. One question dealt with "the summary dismissal of officials and servants of the Finnish railway department, who come to their official duties in a state of intoxication." The Ministerial Council also debated whether it was expedient to create the positions of watchman to the Geographical Department of Helsingfors University, and stoker in the physical laboratory of the same institution. The appointment of a statistical clerk for the financial department of the Finnish Senate at an annual salary of $1,000 was also discussed. It is such matters of high "imperial" interest that necessitate the dispatch of Finnish representatives to the Russian Duma. After a few years of such active "imperialization," Finland's autonomy and Finland's Diet would be in a fair way of becoming almost as real as the "constitutional" system within Russia itself.

The present campaign against Finland is a resumption of the Bobrikoff policy of 1899, but intensified by the Russian Government's resentment at the part played by the Finns in the revolutionary movement of 1905. Finland alone has kept the liberties which she won in that year of popular upheaval. Elsewhere in Russia the autocratic system has regained its hold. Finland is, therefore, more than ever an eyesore to the champions of the "old Russian" ideals. In her case this hatred is doubled by the fact that Finland is "foreign," as well as free, just as the Jews and Poles in Russia are "foreign" without being free. The campaign against Finland, while it has its own special causes, is also part of this general campaign against the minor races within the Empire. In pursuance of that campaign the Jews are once more being hunted out of the cities of the Empire and herded into the Pale. In pursuance of the same campaign against the Poles, M. Stolypin is even ready to install a Zemstvo system in Polish provinces on the basis of universal suffrage—in the provinces, that is, where the Poles are in a minority. High reasons of state are adducible in plenty. But the driving force behind the policy is reaction and race hatred.

THE AIM OF THE COLLEGE.

When the elective system was introduced into our American colleges some forty years ago, the question seemed simple. On the one hand the field of human knowledge had so broadened, and on the other the demands of professional life had become so intensified, that no single required course of study could satisfy the obvious needs of all college students. How to meet the situation thus presented was, indeed, a problem of some difficulty. But the radicals and the conservatives and the men midway between them differed chiefly in their estimate of means, and stood on essentially the same ground as regards the end. The question was not the object of the college, but how that object could best be attained.

How far we are now from that simple condition of things, there have recently been many reminders. The latest of them is to be found in an article in the *Popular Science Monthly* for June, which is a reproduction of the address given some weeks ago by Professor Cattell of Columbia at the annual dinner or the Harvard Teachers' Association at Cambridge. Professor Cattell is a vigorous fighter and a brilliant controversialist. The fact that the pendulum is now swinging strongly away from the free elective system constitutes for him no reason for compliance or compromise; quite the contrary. Nor did the circumstance that he was talking in a Harvard building to Harvard men deter him from making at the president of Harvard every kind of clever thrust known to the swordsmanship of controversy.

In substance, and almost in form, the speech is a reply to President Lowell's inaugural address. To the views there advanced Professor Cattell objects in almost every instance. He does not believe that the faculty can choose for the student better than the student can; "the collective unwisdom of a college faculty is not often exceeded by an undergraduate student." And he does not believe that the faculty can enforce its choice; its "skill in devising restrictive regulations" being exceeded by "the ingenuity of the student in dodging them." He does not believe in the student being required, or even encouraged, to pursue studies which he does not himself feel will be of special benefit to him in his life work; and he does not believe that interest in such studies can be effectively stimulated by any plan that can be devised. These things, and others like them, are set forth by Professor Cattell, not didactically, but largely in the form of epigram and irony; and his article has rather the pungency of acute special pleading than the convincingness of a thoroughgoing discussion. Placing it alongside Mr. Lowell's inaugural, we do not see—but for one reservation—that it makes any really formidable attack on the position taken by the president of Harvard.

But that reservation is of cardinal importance. The real line of division between Professor Cattell and President Lowell relates not to the mechanism of the college, but to the purpose of the college. President Lowell's address is permeated throughout with the idea that a college education is worth having, and worth giving, for its general effect on the man who gets it; Professor Cattell's words are instinct with contempt and even bitterness for any ideal of a college education in which its results are not measured in terms of specific achievement in after life. It is, we believe, his preoccupation with this view that causes Professor Cattell to present the position of President Lowell in a way that the latter's own statement of it by no means justifies. The reaction against the free elective system has not at all the character of a plea for amateurishness, in any such sense as Professor Cattell seems to suppose; on the contrary, one of its leading motives is the revival of the idea

of mental discipline as a good in itself. That reaction does emphasize the value of culture; but while from the narrower standpoint of the future professional man studies pursued in this spirit may seem those of an amateur, to the student himself they may be the most bracing and the most exacting of intellectual tasks. And it is the idea of subjection to something like a common discipline which, more than anything else, has inspired the opposition to the extreme form of the elective system.

The thesis has been advanced—not by Professor Cattell, though his article points somewhat in that direction—that the funds of a college, being a public trust, cannot justifiably be used for the promotion of the culture of individuals, since such a use serves no public purpose. The premise, however, is decidedly open to question; he would be a bold man who should assert that it is of no benefit to the nation at large to have within it a considerable body of men and women whose intellectual interests have been broadened and deepened by liberal studies, even though no specific outward result may be traceable to those studies. But apart from this, those who advance such a doctrine go into waters far deeper than they are aware of. If everything for which public or quasi-public funds are used is to be held subject to this dogmatic test of surface utility, we must apply it not only to the kind, but also to the degree, of service which any proposed expenditure furnishes. If we may not spend quasi-public money to enable students to acquire knowledge or culture for its own sake because this does no service to the public, how shall we justify the spending of public money on objects that are not primary essentials so long as these primary essentials are not supplied in full measure? What right have we to erect handsome public buildings, or to beautify parks, or to acquire works of art, so long as there are bad streets or inadequate schoolhouses or insufficient provision for the poor? And yet, if we had waited to do the apparently less essential things until the essential things had been completely supplied, we should never have had either the one or the other. More things go to the making of a nation or a city than can be enumerated in the census; and the instinctive common sense of mankind has always sanctioned the acquiring of elusive and intangible things, in due measure, even at the sacrifice of things more obviously necessary. But as soon as you grant this, the ground falls from under the feet of those who would deny to a liberal education any standing as an object of public interest, unless it can be justified by some colorable plea of concrete public service.

GOLDWIN SMITH.

Most readers probably thought that the announcement of the death of Goldwin Smith marked the passing of a scholar, a professor, an historian, a publicist; but more than any of these, he was in a very true sense a great journalist. He himself said that he was by preference a journalist. This definition of his chief activity is based not merely upon his voluminous and lifelong contributions to newspapers and periodicals, but upon the method and aim of most of his writing. It was intensely actual and opportunist, in the best meaning of that word. He was deep in history, but his most vivid interest was in that living pageant of present government and politics which is history in the making. Even some of his books—such as his "Political History of the United States" and his "History of the United Kingdom—have a high touch of journalism. They are like expanded "leaders." Miracles of condensation as those volumes are, and racy with acute characterization, they seem a kind of lofty journalism in their overmastering purpose of flashing all the light to be had from the past upon the instant day.

Forty-five years ago, Cobden said well of Goldwin Smith, "His pen is a power in the state." And what a pen it was! In swift-moving lucidity, in force of phrase, in formidable attack and in even more powerful rejoinder, it was unsurpassed in all the years during which he plied it so busily. Even his ephemeral writings in the press had a masterly ease and a conquering felicity of style. Who like him could embalm a politician in an epigram, or give to even a bitter epithet the character of enduring justice? If his work was essentially journalistic, as he himself, with the grave accuracy in judging himself that he brought to the dissection of others, said that it was, it was a rare species of journalism — dignified, high-minded, courteous, and shot through with learning and conviction.

In Canada, where Goldwin Smith lived for the past forty years, he held a singular position. It might be said that he was at once the most disliked and the most admired citizen of the Dominion. Politically, he became more and more isolated. He never bowed to gales of popular passion; and the greater the majority against his views, the more insistent was his ice-cool demonstration that the majority was wrong. The machine in politics he hated with a perfect hatred, and upon its successive advances in Canada he poured the vitriol of his scorn. This inevitably made him enemies; and as the national feeling in recent years ran so strongly counter to the views he advocated, he seemed to be a sort of Athanasius *contra mundum.* Yet nothing could rob him of the distinction of being the chief Canadian man of letters; nor did any of those who withstood him question the sad sincerity in which he wrought, or doubt that the blade which he wielded with such effect was tempered in deep conviction. On the occasion of his eighty-sixth birthday, greetings came to him from all parts of the Dominion, as well as from over the border and across the seas; and at that time the *Canadian Courier* justly declared that "the homage paid to Dr. Smith is one which has been evoked by his sincere and lofty personality."

It is this personal quality which will long keep green the memory of Goldwin Smith, even after his books and articles are forgotten. His bearing was always that of one who considered himself a soldier in the war of humanity. To his chivalrous spirit, nothing was more natural than to enter the lists in behalf of justice and liberty; and the angry outcry of the crowd simply meant nothing at all to him. If he was occasionally betrayed into a biting retort—as when he telegraphed to England that Disraeli's attacks upon him in "Lothair" were "the stingless insults of the coward"—in general he set a fine example of the honorable spirit in controversy. In all his long battling for free trade between Canada and the United States, one knows not whether to admire more his intrepidity and resourcefulness or his measured courtesy and sobriety of statement. Some of his best work was unsigned—such as the

reviews which for many years he contributed to the *Nation*.

In so prolonged and incessant an intelleetual activity as that of Goldwin Smith, there were inevitable disappointments; and in more than one case even his friends felt that his judgment went sadly astray. But no one questioned the intellectual integrity with which he beat out and defended his views. The world, latterly, did not go according to his mind. Not for him was the flush of the "Happy Warrior" who, in the end of his days, "sees what he foresaw." Yet it could be said of him that through the heat of conflict he kept the law in calmness made. The principles which he espoused in his young manhood animated him through those last remarkable years of his great age, when, amid failing physical powers, his mind gleamed out with all of its early brilliance. His eager keeping abreast of the political and scientific and religious problems of the day; his continued description of himself as yet a learner—though with the pathetic addition that old men have little time left for learning; his undimmed intellectual curiosity, rank him among the most wonderful and inspiring old men that ever lived. In losing him, at last, we are deprived of one of the leading lights of two generations.

ITALIAN BOOKS OF HISTORY.

FLORENCE, Italy, June 1.

Among reeent works on historical topography Giuseppe Tomassetti's "La Campagna Romana" is specially notable. It is to be complete in three volumes, of which the first has just appeared (Rome: Loeseher, 24 lire). The author attempts to deal with the Roman Campagna in all its aspects and throughout its entire history, classical, mediæval, and modern. The present volume is a general essay on the region, and, after a short chapter on its natural conditions (geology, fauna, and flora), the author proceeds to set forth the really vast amount of information which he has collected during more than thirty years' study of its ancient cities, aqueducts, villas, castles, roads, temples, cemeteries, etc. Agricultural and pastoral life are also treated, both in ancient and modern times, and mention is made of such divers matters as country *osterie*, brigandage, tombs, and popular poetry, and many curious documents are included. It cannot be said that Signor Tomassetti has put all his material together very skilfully; the work is much too diffuse and lacking in synthesis. But when complete, it will prove a mine of information for the student and provide excellent material for the compilation of a really useful handbook of the Campagna, of which there is need since Abate's admirable guide is somewhat out of date.

Giacomo Barzellotti's volume on Monte Amiata, and the curious religious agitation promoted by David Lazzaretti ("Il Monte Amiata e il suo Profeta"; Milan: Treves, 10 lire), is a curious study of religious psychology. The book is, in part, a reissue of the author's essay on Lazzaretti published twenty-five years ago, but with a great deal of new material added, especially on the history and general conditions of the region which was the baekground of the movement. Lazzaretti, who was a earrier by profession, became imbued with mysticism at an early age, and assumed the rôle of prophet and advocate of a social and religious reformation which, from the wooded slopes of Monte Amiata, was expected to spread throughout Italy and the rest of the world. By his preachings and writings and by his austere life, he acquired much influence among the mountaineers and the people of the Tuscan Maremma, and was regarded at first with favor by the Clerical party, both in France and Italy, who hoped to use him as an instrument for the reactionary movement then contemplated; but, on account of his subsequent lapses from orthodoxy, he was branded by the Church as a vietim of "diabolic illusions." The fanaticism which he aroused among the peasantry disturbed the political authorities, also, who were at that time alarmed at the Clerical intrigues on the one hand (it was soon after the occupation of Rome by the Italian troops) and by the "internationalist" anarchistic outrages on the other. On the occasion of a great religious procession on Monte Amiata there was an affray between the police and the peasants, and the prophet was shot dead. There is still, however, among the people of the district believers in Lazzaretti's divine inspiration and in his forthcoming resurrection. Prof. Felice Tocco adds another contribution to the already large Francisean literature with his volume "La Questione della povertà nel secolo XIV" (Naples: Perrella, 5 lire), in which he publishes a number of documents on the eontroversies among the Franciscans, the Dominicans, and the secular clergy, concerning Christ's poverty and the duty of Christians to divest themselves of all property. The Francisean movement, which had begun as a reaction against the gross corruption and worldliness of the mediæval ehurch, degenerated eventually into a fantastic doctrine, which denied the rights of property and every form of law and even of family life. In the documents collected by Professor Tocco, the arguments on both sides are set forth in a series of responses to the question put by Pope John XXIII. After hearing the different views, of which the most notable were the replies of Cardinals Della Torre and Vitale on the Franeiscan side, and of Cardinals Ganeelme de Jean, Pietro Colonna, and Napoleone Orsini on that of the Dominieans, the Pope closed the eontroversy with the curious bull which declared that any one denying that Christ possessed property, either individually or in common, was guilty of heresy. The author takes the view that this deeision, although expressed in a surprising form, was sound, and that the Church performed a useful work in condemning the extreme Franciscan argument. Another unpublished document contained in this volume is the polemical dispute on the same subject between Robert Kilwardly and John Peckham, successive Archbishops of Canterbury.

Historical guidebooks of Italian towns are becoming an ever more popular form of literature, and Dr. Massimiliano Falciai's little volume on Arezzo ("Arezzo, la sua storia e i suoi monumenti"; Florence: Lumachi, 2.50 lire) is a useful addition to the series. Vittorio Lugli has published a work on Italian family life in the fifteenth century ("I Trattatisti della famiglia nel quattrocento"; Bologna: Formiggini, 2.50 lire), based on the letters of historical personages and contemporary treatises regarding domestic manners and civil life. The author believes that the common opinion as to the general corruption during that brilliant period of Italian history is greatly exaggerated, being derived from the licentiousness of many of the courts and from the vices of a few celebrated humanists and men of letters.

More recent history forms the subject of several new books. From the pen of Captain Eugenio Barbarich, a distinguished Italian staff officer and author of an excellent volume on Albania, we have the first part of a work on Napoleon's Venetian campaign of 1796 ("La Campagna del 1796 nel Veneto. Parte prima: La Decadenza militare della Serenissima"; Rome: Voghera). Capt. Barbarich describes the conditions of the military forces of the Venetian republic towards its fall, a subject which has hitherto been neglected, most historians having limited themselves to the far more brilliant exploits of the navy, but which deserves attention as explaining some obscure points of Napoleon's Italian campaigns. He has made extensive researches in the bulky and almost unexplored *filze* of the *Senato Militar*, and of the *Provveditori* Foscarini and Battagia in the Frari archives, which shed much fresh light on the operations of the French army from Lodi to Leoben. The Venetian army was composed partly of mercenaries and partly of the *cerne*, or local forces, levied in time of war and modelled on Machiavelli's proposals for

a national militia. The mercenaries had been declining in efficiency and the summoning of the *cerne* had fallen into disuse. A revival of the latter became necessary, in view of the threatening attitude of Bonaparte, but military capacity was wanting and the proposal to raise fresh levies aroused great opposition. The troops which the Republic was able to collect proved no match for the disciplined veterans of France, and the decrepit government, faced by the Austrians on the one hand and the French on the other, collapsed.

The Società Editrice Libraria of Milan continues the Italian edition of Oncken's universal history. The latest instalment is a volume on the Second Empire and the Italian Kingdom ("Il Secondo Impero e il Regno d'Italia"), edited and enlarged from the original German of C. Bulle by Savelli, who often corrects and contradicts the former writer.

A bulky volume on the second Bourbon restoration in France and the July monarchy has been brought out by L. Cappelletti ("La Seconda Restaurazione e la Monarchia di Luglio"; Turin: Bocca, 6 lire), which completes the author's series of studies on French history from the fall of the Bastile to Sedan, filling up the gap between 1815 and 1818. It does not add much to our knowledge of the period, and is, indeed, hardly intended to do so, being merely a piece of careful book-making.

The crop of books on the Risorgimento is larger than usual in this year of patriotic celebrations. Several works on Garibaldi's Sicilian expedition (1860) have appeared, of which the most notable is Alberto Dallolio's "La Spedizione dei Mille nelle memorie bolognesi" (Bologna: Zanichelli, 5 lire). As its title implies, it does not deal with the expedition as a whole, but with the part which Bologna and the Romagna in general played on that occasion. The author has made an exhaustive study of the documents in the Bolognese Museo del Risorgimento, and sheds some fresh light on the history of that wonderful epoch. One of the chief points brought out is the importance of Agostino Bertani's influence. Garibaldi, with all his magnificent audacity, hesitated at the apparent foolhardiness and hopelessness of an invasion of Sicily by a handful of volunteers, and if Bertani, from his sick-bed, had not constantly urged him to persist, he might perhaps have given up the scheme. There were few Bolognese in the first expedition, but the local branch of the famous National Society assisted it in various ways. After the conquest of Sicily it was the Romagnols who organized and carried out the insurrection in the Marche; and this led to the occupation of those provinces by the royal troops, and to the fateful meeting between King Victor Emmanuel and Garibaldi which gave birth to the Italian kingdom. The latter part of the volume is made up of documents, mostly unpublished and of considerable interest. E. T. Moneta, an ex-Garibaldian and now president of the Milan branch of the International Peace Society, is continuing his series of volumes on the Italian revolutionary wars, written in a spirit of genuine and militant (I had almost said military) patriotism. His latest publication is an excellent little monograph on the campaign of 1866 ("Custoza e Lissa"; Milan: Società Internazionale per la Pace, 2.50 lire), in which he sets forth the causes of the Italian defeats in that year—the faulty military preparations, the exaggerated quixotism of Lamarmora, who refused to fall in with Prussia's proposal to promote a rising in Hungary, because he considered it "disloyal," his horror of the revolutionary movement in Italy (which Cavour had skilfully utilized), Bismarck's bad faith, and the imperfect welding together of the various parts of Italy's new army. Custoza was lost, according to Signor Moneta, largely on account of Lamarmora's incapacity to handle large bodies of troops and on account of Gen. Della Rocca's culpable jealousy of his chief, which induced him to keep a heavy reserve force inactive when the arrival of reinforcements would have turned defeat into certain victory. At sea the defeat at Lissa was due to Admiral Persano's utter inefficiency and cowardice, although Tegethoff's real merit deserves recognition.

LUIGI VILLARI.

NEWS FOR BIBLIOPHILES.

A fourth copy of an exceedingly rare and little-known pamphlet, which has been styled the first printed book relating to the settlement of Boston, turned up some months ago in England, and has now come to New York. It consists of title and five leaves, and is the notable "farewell address" of John Winthrop and his fellow-passengers to their friends in England, written just before they were setting out for their new homes in the wilderness. The title in full is, "The Humble Request of his Majesties loyall Subjects, the governour and the Company late gone for New-England; To the rest of their Brethern, in and of the Church of England. For the obtaining of their Prayers, and the removall of suspitions, and misconstructions of their Intentions. London, Printed for John Bellamie. 1630." It is dated "From Yarmouth aboard the Arbella April 7, 1630," and is signed by John Winthrop, the Governor, and six others.

Although there is a copy in the Prince collection in the Boston Public Library, and a second in the Bodleian, the book is almost unmentioned by American historians, though the letter itself is cited and quoted. From a third copy, acquired by the John Carter Brown Library a few years ago, a facsimile reprint was published in 1905. The title is given in full, even to the imprint and date, in Joshua Scottow's "Narrative of the Planting of the Massachusetts Colony" (Boston, 1694), and the letter is printed entire in the little book "Massachusetts or the first planters of New England" (Boston, 1796), likewise compiled by Scottow. It has also been frequently reprinted since. The "Request" was probably written by John Winthrop, though early writers attributed it to John White, the Puritan divine, called the Patriarch of Dorchester, who was the father of the Massachusetts Bay Colony and author of "The Planters Plea" (London, 1630), which contains in the words of the title-page "a manifestation of the causes moving such as have lately undertaken a plantation in New England." This little book contains the earliest printed account of the planting of the colony, though White himself never came to America.

The Merwin-Clayton Sales Company will sell on June 22 and 23 a miscellaneous collection, including bibliography, books on the drama, some first editions of Tennyson, etc.

On June 24, they will hold the last sale of the season, a miscellaneous collection, including some thousands of photographs and stereoscopic views.

On June 28 Sotheby, Wilkinson & Hodge will sell in London the library of Thomas Gray, including several very rare American tracts. The most notable of these is Benjamin Thompson's "New England's Crisis," printed at Boston by John Foster in 1676. This is a small octavo of sixteen leaves. The only copy previously known is in the Boston Athenæum library, and that lacks the title-page. Evans, in describing this, surmises that it bore a title similar to "New England's Tears for her Present Miseries," which is actually another book by the same author printed in London and of which the only known copy is in the John Carter Brown Library. Five rare quarto tracts, Higginson's "New England's Plantation" (1630); Vincent's "Relation of the late Battell fought in New England between the English and the Salvages" (1637); Lederer's "Discoveries in three Several Marches from Virginia to the West of Carolina" (1672), and two of the John Eliot "Progress of the Gospel" series are bound together in one volume and sold as one lot.

On June 24 they sell a large collection of Book-Plates brought together by Matthew Dorey of Dublin and other collectors.

Correspondence.

A PERSISTENT FORGERY.

TO THE EDITOR OF THE NATION:

SIR: The *Nation* for January 28, 1892, contained two communications, from Prof. Morris Jastrow and myself, in regard to certain archæological forgeries which had recently come to light in a sparsely settled region northwest of Lansing, Mich. These consisted chiefly of caskets and tablets of clay on which a medley of ancient writing, with cuneiform and Egyptian as well as Greek characters, had been stamped before drying. They were taken seriously by many people, who found in them evidence of an early colonization of the region from the Orient; particular interest was manifested in a tablet on which scenes from the Deluge

BERKELEY PUBLIC

were depicted. The workmanship was of the crudest sort, and the clay contained so much sand that the objects were easily broken; the forger had evidently no acquaintance with the things which he had tried to copy, but was translating into substance designs which he had found in printed form. Publicity destroyed the market for the relics, and after a time nothing more was heard of them.

In 1898 a new series of forgeries appeared. The maker had learned something from his critics, and was improving in technique. The clay was baked hard, and slate also was utilized for designs and symbols of writing. Gaining confidence, the forger fashioned a winged clay figure measuring, with the base, twenty-two inches in height; leaning against it in front was a clay tablet. This image and a number of smaller objects were taken about as an itinerant exhibit, which was advertised as "The finest collection of prehistoric relics ever exhibited in the United States." The venture proved unsuccessful pecuniarily, and the collection was left in charge of the Museum of the University of Michigan.

Three years ago the forger again became active. He had turned his hand to copper. Marvellous were the designs and hodgepodge of strange characters incised, not only on tablets, but also on a rude crown of copper. The surface of the metal had been treated to give it the appearance of antiquity. Here, too, was a Deluge tablet; the pictorial design was almost identical with that previously worked out in clay. The copper objects had the advantage of being free from danger of breakage, easy to work, and last, but not least, more marketable. The centre of distribution was now Detroit. Many collectors were skeptical, yet sales were made, and men of high standing were duped. Again the newspapers gave warning of the true character of the "finds," which continued to be solemnly dug out of mounds in the presence of witnesses. An article presenting the important types in illustrations, and pointing out their fraudulent character, was published in the first number of the *American Anthropologist* for 1908. Nevertheless, since then letters of inquiry from various parts of the United States have borne witness to the activity with which the sale of the bogus relics has been pressed; and finally a volume of plates has been published, in order "to arouse the interest of students of philology or those engaged in historical and archæological research."

This brochure, which is obviously designed for foreign as well as domestic consumption, bears the title "Engravings of Prehistoric Specimens from Michigan, U. S. A."; and on the title-page stands: "Copyright, 1910, by Rudolph Etzenhouser, Proprietor," with a certification by the engravers "that the halftones are accurate reproductions of the prehistoric originals." With unconscious humor the compiler placed next to the title-page the portrait of a former Secretary of State of Michigan, who is represented as comfortably seated in an armchair; to him, we are told, "belongs the credit of having been for several years the moving spirit in the investigation of these prehistoric relics," one of which, apparently, he holds in his hand. The claims of those who believe in the relics are thus set forth:

Students of American archæology will find in the following pages, reproductions of the monuments of a race of primitive Americans, monuments of a people whose existence has hitherto been involved in an obscurity as complete as that which envelops their history. They have been unearthed for the most part, through the efforts of amateur investigators, and represent the contents of hundreds of mounds scattered over the lower peninsula of Michigan. The language inscribed on these tablets has not as yet been interpreted, but will doubtless, some day, succumb to the advance of philology, and they will perhaps yield an interesting chapter to the ancient history of this continent.

The thirty-four plates of objects of copper, slate, and clay make a pitiable showing. They reveal such paucity of design, crudeness of execution, and fantastic incongruity that it is amazing that persons of average intelligence—not to speak of experts—should be deceived. Yet it must be acknowledged that for nearly two decades the forger with cunning, persistence, and a brazen face has been on the alert to entrap the guileless; and so long as human nature remains the same, it may be presumed that men will be ready to believe what they wish to believe, and that no hoax will be too preposterous to be without a following.

The early forgeries of clay and the later objects of copper and slate have in common one cuneiform character which the maker seems to have adopted as his sign manual. A reporter for the Detroit *News* in 1908 directed attention to the fact that while a number of persons were engaged in the exploitation of either the first or the third series of forgeries, one man was connected with both. This is James O. Scotford, a sign-painter, who formerly lived in the region where the first discoveries were made, and afterwards moved to Detroit.

While this Scotford was still living in Edmore, Prof. Charles A. Davis, who is now on the staff of the United States Geological Survey in Washington, heard of the wonderful discoveries he had made and called at his house to see him. He was not at home, but his wife was, and while Mr. Davis and another gentleman were waiting she showed them the relics which were on hand; then, to indicate how remarkable these were, she brought out an encyclopædic volume, "which had a full page plate giving in parallel vertical columns various alphabets of the ancient languages, pointing out from the pictures that this character was like the Greek and that was Egyptian or Assyrian. The resemblances were certainly remarkable, so much so, that they actually seemed to have been copied!"

The origin of the spurious relics is easily accounted for; but for the suggestion of a Biblical element in them they would probably have failed to attract attention, and the maker would long ere this have ceased his operations from lack of encouragement.

THE ARGENTINE SHIPBUILDING.

TO THE EDITOR OF THE NATION:

SIR: Mr. Charles F. Dole, in his letter in your issue of May 19, does not strengthen his case against Mr. Knox's foreign policy by his remarks about the Argentine battleships. He accuses the United States government of "persuading Argentina to set up a little fleet," and asks: "Is it not somewhat like the old-fashioned business of selling muskets and gunpowder to the Indians?" To this question there is one answer: It is not. The Argentine Republic is a progressive civilized nation, quite capable of judging its own needs. It built its battleships because it needed them, and the United States had nothing to do with the decision. If Mr. Dole will refer to Brassey's Naval Annual for 1910, page 53, he will find an illuminating article on the Argentino programme by the well-known naval writer, John Leyland. This article begins: "The Argentine shipbuilding programme is an answer to the Brazilian." In 1907, a year before the cruise of the American fleet, Brazil adopted a programme including three battleships of the Dreadnought type. Argentina's programme was a well-considered defensive move in reply.

As to the share of the United States in the increase of the Argentine navy: Bids were asked for from the leading builders of the world. The contracts were obtained by American firms—quite independent of the government—after what Mr. Leyland calls "one of the keenest competitions ever known in warship-building business." The ships are building in American yards, because American yards have agreed to build them better and cheaper than they could have been built in Europe. There is no justification for the charge that "the United States uses governmental influence to saddle other and poorer peoples with the burden of building battleships"; still less for Mr. Dole's innuendo that the Argentine Dreadnoughts are the result of apprehensions in regard to American encroachments in South and Central America. Mr. Dole would have us believe that the United States government is inducing the South American republics to buy ships to be used against the United States!

TEACHERS IN SECONDARY SCHOOLS.

TO THE EDITOR OF THE NATION:

SIR: As a secondary school executive, there increasingly looms before me a problem vitally concerned with the educational success of our country. It is the inability to procure the highest grade teachers for secondary schools and especially to keep them in such service, even when secured. Unfortunately there seems to be a widespread feeling that secondary teaching is to be engaged in only until some college position opens, even though the college position may offer a smaller salary; and few teachers, I fear, contemplate with any degree of joy the thought of a life spent in secondary school work. Of course, there are fine examples to the contrary in some of the older and better known schools, and I am glad to say that on my own faculty I have several teachers who consider their field and opportunities far beyond those of their college friends. But in general my statement is true.

It is easy to see what some of the causes for this are. Among others is the fact that the college and university have always been overemphasized in this country, and the secondary school has received too little attention, even by educational specialists. The emphasis should rather be placed on the preparatory side. Teachers

should be made to feel that the secondary work is just as dignified, and just as important as the college work, and they should know that the chances for making deep impressions on their pupils and accomplishing real good are greater in the former than in the latter.

Another difficulty is that the teaching profession is adopted by many for the time being until they can get some money and go on with their training for other professions. The disastrous results of this practice are evident: it tends to increase the number of changes in school faculties, since naturally most of these teachers occupy secondary positions; it keeps the salaries lower than they should be, and discourages any who might be inclined to consider teaching as a life-work. It should be the duty of every college professor to withhold from the business of teaching all his pupils who do not intend to make it a life profession.

Another hindrance to permanence in the ranks of secondary teachers is the fact that so many schools have such poor endowments that they cannot compete with the colleges in the matter of salaries, and that the Carnegie pension fund and the Rockefeller foundation do not apply to this field. Naturally the best teachers will seek the college ranks, in order that they may become eligible to pensions, unless some similar fund is established for the secondary schools. While helping to solve the college problem these funds are making the case of the secondary school harder than before. And it must inevitably follow that if the preparation for college is in any way weakened, the colleges themselves will suffer. Not only must the friends of secondary education fight in its behalf, but those who are especially interested in the college and university must for self protection give their aid. It is to be hoped that the trustees of the Carnegie Foundation can be induced to consider this vital problem in American education, or that some other rich benefactor will see the justice of the secondary schools' claims and hasten to their rescue. We must induce more of our really capable young men to enter teaching as a life vocation, with an especial view to remaining in the secondary field; and to do this the dignity of such schools must be raised and their ability to pay living wages and hold out proper inducements must be much increased.

THE RHODES SCHOLARSHIPS.

TO THE EDITOR OF THE NATION:

SIR: Your recent article on "The Rhodes Scholarships" (*Nation*, May 12) is in the main sound and just. Some of your readers, however, may be misled by the great emphasis you there lay upon the fact that "the trustees of the fund have refrained from passing judgment on the merits of the scheme." The Oxford secretary to the Rhodes trustees, Mr. F. J. Wylie, has by no means been silent in the matter. From the first he has expressed himself freely, and in these very columns we have had semi-official accounts of the Rhodes scholars which were far from discouraging. In a very interesting pamphlet, "Cecil Rhodes and His Scholars as Factors in International Conciliation" (published by the American Association for International Conciliation), Mr. Wylie has recently given us again his hopeful opinions. In your article you say that "the influence of the Rhode scholars upon Oxford has been exaggerated." In the pamphlet cited, p. 13, Mr. Wylie says:

I will therefore content myself with saying that I believe the great majority of those who know the younger Oxford of to-day would agree, both that it has become in these recent years more catholic in its sympathies and broader in its outlook, and that the contribution of the Rhodes scholars to that result has been material if unobtrusive.

The closing paragraph of his pamphlet is also important. We read:

For my own part—if I may be allowed to close with a personal expression of belief—the consideration of these questions leaves me with the conviction that always among the forces making for harmony of peoples ought to be found, and will be found, the Cecil Rhodes Foundation.

Thus we see that to lay great emphasis on the silence of the trustees is misleading.

ARRESTED DEVELOPMENT.

TO THE EDITOR OF THE NATION:

SIR: I have not read the article in the Yale *Alumni Weekly* noticed in your editorial of May 26 on "Physical Training in College," but I wish to express my approval of your argument. Not all doctors of medicine or surgeons are trained and trustworthy experts for estimating the comparative vitality (staying power) of men apparently equal otherwise, or of one man at different times. How, then, can the physical trainer or the ordinary observer be expected to possess that special faculty? The Yale writer, as you read him, "points out that the period between seventeen or eighteen years and twenty-two or twenty-three years is a period of arrested development." Permit me to add to that observation another: The four or five years ending at seventeen or eighteen have been devoted to such prodigious growth and development that the vitality has fallen off, the power of endurance has become lessened or inhibited, and an equal period of time following is needed to replenish the store. Thus the period of arrested development is a necessity to the man. During this period, if its significance is recognized and respected, his physical development is measurably maintained, while his staying power is in process of becoming restored. Teachers should accustom themselves to view the subject in its entirety, and not in a one-sided fashion.

DR. BLACKWELL'S TRIALS.

TO THE EDITOR OF THE NATION:

SIR: A recent notice in your columns concerning Dr. Elizabeth Blackwell, recalls an incident that occurred when I was not more than seven years old. A near and dear family of relatives lived within a few miles of Geneva, where Dr. Blackwell was a student in the Medical College. One day, on entering the sitting-room, I found a dignified stranger present, and as I listened to the conversation I was surprised to see her hurst into tears. When she rose to go to her room, she said:

I can hardly tell you how greatly my courage is renewed by coming into your home. But for the feeling that I can have this privilege any Saturday, when my work is laid aside, I scarcely know whether I should hold out.

After she had closed the door, I asked what made her weep, and one of my aunts told me the awful experience Elizabeth was undergoing. She was daily subjected to insults from the young men in the class, which she had been forced to join because she could in no other place be allowed to fit herself to minister to the physical needs of women and children. "When thee has grown to maturity," said my aunt in conclusion, "I trust every avenue to development, including the ballot, may be open to women."

Literature.

CLAY AND DOUGLAS.

Henry Clay. By Thomas Hart Clay, completed by Ellis Paxson Oberholzer, Ph.D. American Crisis Biographies. Philadelphia: George W. Jacobs & Co. $1.25 net.

Stephen A. Douglas. By Clark E. Carr, LL.D. Chicago: A. C. McClurg & Co. $2 net.

These lives of two great figures in our national history appear now almost simultaneously half a century after their deaths, and may properly be considered together. In some respects the men stand in strong contrast. One was active to advanced age, the other died in his prime; one was the soul of the Whig party, to whom Jackson was the most dangerous of *bêtes noires*, the other was the sturdiest of Jacksonians, inspired by his ideas and character as he began his public career, and faithful to the end to the Jacksonian tradition; the great work of the one was the Missouri Compromise, of the other the undoing of that Compromise and bringing it to naught. Important differences, indeed. On the other hand, both were alike in these respects: poor boys from the older States, they sought what was then the far West, Clay a friendless emigrant from Virginia into Kentucky, Douglas a Vermont boy of nineteen appearing in an Illinois town with his coat over his arm and thirty-five cents in his pocket; both rose speedily to the highest eminence, displaying extraordinary ability in moving and managing men; both failed of the Presidency when to succeed seemed inevitable, a disappointment borne with dignity and magnanimity; finally, it may be said of each that without his powerful and patriotic agency in our political tempests the Union might have ceased to be.

Good books about statesmen of such

rank are not superfluous even though their lives have been written before, and by able men. This biography of Clay is by a grandson, naturally partial and affectionate, but painstaking and truthful: the portrayal has been capably revised and supplemented by Dr. Oberholzer. Mr. Carr, who recounts the story of Douglas, is an old man who heard in part the great debates of 1858, and then and later was on friendly terms with the contestants, of whom he gives interesting personal anecdotes. He declares himself to have been then and at all times a Republican. He writes his book out of full knowledge and in a spirit of candor, believing that full justice has not been done to a man of whose career he in many ways disapproved.

Although Clay and Douglas were dominant figures in almost every great public event which fell in their eras, it was as preservers of the Union that their service was highest; and since their desert here has perhaps not been adequately recognized, we may well devote a little space to the consideration of their work as it is described by these their latest biographers. Rhodes remarks that, had the civil war come ten years earlier, the chances for the South would have been better. Probably the Union could not have survived. In the decade between 1850 and 1860 a number of circumstances came in to give the North strength which earlier it had not possessed. Chief among these were, first, the construction of great railways bringing together East and West. Whereas, prior to 1850, the easy outlet for the West was southward, down the great rivers, the new lines made it more convenient to go eastward, a fact which at once established a powerful link, not before existing, between the Mississippi Valley and the Middle and Atlantic States. Secondly, the foreign immigration, particularly of Germans, began in those years to be heavily felt, adding much to the sentiment against slavery and in favor of national preservation. In 1850 the clash was imminent. That it was postponed ten years was for the North an advantage of the greatest moment, probably of decisive moment. It will not be denied that this happy postponement was due to the Compromise of 1850, in which Clay was the leading spirit. Denounced it was, and in the Fugitive Slave Law it was certainly repulsive, but it served a happy purpose as a temporary bulwark behind which the North had time to grow strong and knit itself together. Clay was an anti-slavery man, as Washington, Jefferson, and Madison were anti-slavery men, thoroughly persuaded that human bondage was an evil, but persuaded, too, that it was so deep-rooted and inveterate that its gradual extinction must be sought, not its sudden abolition. To avert the horrors of war he was ready to temporize, to permit for a time suffering in order to ward off vastly greater suffering. Vials of wrath and contempt have been poured upon the head of Clay the temporizer, but can it be said he was more a temporizer than Abraham Lincoln, whose views of slavery and methods for dealing with it scarcely differed from those of Henry Clay? As there are good grounds for asserting that the Compromise of 1850 saved the Union by postponing for ten years the civil war, as much, no doubt, can be claimed for the earlier conciliation, equally due to him, the Missouri Compromise of 1820. In that stage of our history the duration of the Union seemed doubtful indeed. The sentiment for its preservation was weak in the North and West as well as the South. The service was great which held the rather uncertain bond together until the influences of a later time reinforced its precarious hold. These facts as regards Clay's desert as a saviour of the Union are, of course, not newly revealed, but they have been to some extent obscured and minimized, and such a setting forth as they receive in this latest biography is not labor thrown away.

If the service of Clay here has lain under unmerited shadow, still more has it been the case with the service of Douglas. His advocacy of the repeal of the Missouri Compromise was regarded both North and South as a going over to the South—a judgment proved presently to be quite erroneous when Douglas denounced the Lecompton Constitution, framed by intruders into Kansas, to be a fraud, declared his conviction that the real settlers preferred a free soil, and stood strenuously, therefore, for the admission of Kansas as a free State. Consistency required of him this course; nevertheless, it was brave and manly for him to pursue it. His declaration was unhesitating and unequivocal, without thought of what he must have seen would be the consequence. It estranged from him solidly the South and cost him the Presidency. When the storm broke he hastened with fine magnanimity to the support of his rival, Lincoln. While the shots were falling upon Sumter, Lincoln and Douglas, closeted at the White House, struck hands to resist. Through the Associated Press, together with the tidings of the bombardment, went forth to the country a message from Douglas. He pledged himself unalterably to support the administration in its battle and summoned his followers to do likewise. This impassioned call, reiterated as it was immediately in the speeches at Springfield and Chicago, brought to the Government, as nothing else could have done, the aid of the millions who till then had stood aloof from it. From the platform at Chicago Douglas went home to die; but not before he had rallied to enthusiastic and persistent defence of the Union a vast army, whose support proved indispensable, and whom only his voice had power to sway. Mr. Carr, a life-long Republican, believing that the man of whom in early life he strongly disapproved has suffered injustice and failed of recognition as a most potent factor in saving the Union, makes very vivid the memorable work of Douglas in his last days; and thus clearly to tell the tale is a work worth while. For Lincoln at the critical moment he made the North solid.

While Clay's anti-slavery sentiment was decided and often strongly expressed, it was yet of that moderate kind which looked to the slow and gradual abatement of the evil, and by no means favored risking the nation's life by an attempt at its sudden extinction. As to Douglas, the woes of the negro affected him but lightly. It was a white man's country, it was the white man's interest that he sought to guard and further, with small thought for the time of bettering the black man's condition. And yet, as Mr. Carr relates, he declined to receive a large fortune in slave property, refusing to become enriched by owning slaves or from the proceeds of their sale. To the impatient consciences of the abolitionists, both men seemed to fall short of their duty. We are not saying here that this judgment was unjust. But with all their imperfections they were statesmen in a high degree well-purposed and able, without whose devoted struggle it is hard to see how the Union could have survived.

CURRENT FICTION.

An Interrupted Friendship. By E. L. Voynich. New York: The Macmillan Co.

Nothing merely light or agreeable is to be looked for from the author of "The Gadfly," but one may have hoped for something a little less clearly reminiscent of that striking book. The literature of obsession is a very old type, centuries older than Peter Schlemihl or Peter Rugg. Poe and Hawthorne developed it in their totally different ways; Mrs. Voynich has been successful in giving it a modern setting. "An Interrupted Friendship" presents a mystery of human character, without venturing upon its solution. It is hard to say whether the man who goes by the name of Felix Alvarez is hero or villain of the tale. We do not know, even at the end, what is the secret of his tragedy. He is a gentleman by birth and breeding; but something has happened in the first hour of his manhood to destroy his faith in human relations—some frightful shock to his moral nature from which he can never recover. He casts family and society behind him, and becomes a wanderer. His personality is winning, and he finds it hard, wander as he will, to keep clear of those bonds of affection

which he dreads and despises. He sinks lower and lower in the scale of living, and has become clown in a South American circus, when a chance of physical rescue comes in the form of a party of French explorers who are going to make their way over the Andes from Ecuador to Brazil, and who need an interpreter. "Rivarez" runs away from the circus, and gets the post of interpreter through the advocacy of one of the party, a young French geographer. This man, René Martel, sees little to be said for the candidate, who bears all the marks of a disreputable adventurer, but is inexplicably drawn to him from the start. Gradually, as the months go on, his feeling for the interpreter becomes the single great emotional experience of René's life, though for a long time he conceals the feeling with shame: they return to France acknowledged friends. René has a sister who, at first keenly jealous, presently falls under the spell of the interloper. But at the height of the three-cornered intimacy Rivarez suddenly and unmistakably withdraws himself, and leaves the brother and sister almost equally stranded in their different ways. They have demanded too much of him—more than the peculiar obsession or curse under which he lives allows him to give. So the blight which lies upon his own life is communicated to theirs. The curious atmosphere of horror in which the author invests the simple incidents of the story is intensified by the vagueness which is allowed to remain, cloud-like, about the looming dreadfulness of that early experience which fixed the fate of Rivarez, and of all who were so luckless as to love him. Morbid is the easy word to apply to this kind of thing; but there is a haunting force in the book which defies so casual an exorcism.

White Magic. By David Graham Phillips. New York: D. Appleton & Co.

The bull in the china shop is, perhaps, too vigorous an analogue for this attempt on Mr. Phillips's part to disport himself in the field of romantic comedy, but he has certainly tried to do an unnatural thing. Hitherto we have esteemed his vigorous, if crude performance as the voice of one crying to our edification. We have had other young Lochinvars out of the Middle West, with their lively romantic ways. Far rarer and more valuable the sturdy bruiser, with a heart and thews to fall foul of our little Eastern fashions. Our sybaritic culture, our white-handed young men, our pleasure-seeking young women, our unbridled luxury, have hitherto inflicted upon Mr. Phillips a noble pain. Especially has his righteous indignation been aroused by the thing on the decaying seaboard called "society." He has aimed bitter shafts of irony and invective against it, he has dispatched Western champions hither to trample upon it. In short, he has had "a high old time" at our expense, and we have been glad to pay the bill. The troubling thing is the prospect of his becoming reconciled to us. What if we should presently find him admiring, or affecting to admire, a male something that has come out of Harvard, or a female something that hails from a Newport villa? To that deplorable pass he here draws perilously near. From the band of fashionable romancers he is still happily remote. His present effort aspires rather to the genre of the late Henry Harland—the light and piquant and well-bred. Unluckily, his people are neither well-bred nor especially amusing. The hero, Roger Wade, whose nickname is Chang, is as conventional a hero of the novel à la mode as Mr. Chambers himself could portray. Physically, he is made up for the part—the kind of man called by his sort of girl "stunning." "His countenance, his whole body, seemed an effort of Nature, adequately to express a big nature." The lady in the case is very small, young, fair, and golden-haired. Chang is an "artist" who does not want to marry; and the whole idea of the story lies in the overt pursuit and conquest of him by the girl. She not only does the proposing, she refuses to take no for an answer. Of course, he really loves her desperately, and is grateful to her for bagging him in the end. Mr. Phillips's women are not very "convincing" as a rule; this one is rather ludicrous. She is supposed to be a member of the most exclusive New York set—with the manners and speech of a rather superior shop-girl. No doubt, Mr. Phillips has meant to show the modern woman exercising her privilege of choice. It is a pity he should have chosen to garb his conception in the airy draperies of social comedy. We respectfully suggest that he stick to his blunderbuss.

The Crowds and the Veiled Woman. By Marian Cox. New York: Funk & Wagnalls Co.

If it were not for the altogether horrible ending of this book, the weary reviewer might take a certain grim satisfaction in showing samples of the amazing rubbish through which he had been condemned to wade. "The endeared and mutual meaning of these precincts"; "that grim appearance of the species around you in question-marks, of your own flesh's devising"—this apparently means having children; "he is unite with his soul"; "must involute it from out of himself into the elements of its visibility"; "some point of departure which would lead him from the inward mazes, like an Ariadne thread, and would gather all the scattered threads of his thought and being into one perfect chord"; "the heart bitten by aridity and chills"; "all those puerile, modern anacreonics [*sic*]—called love by others—whose inevitable percussion leaves a dead place upon the heart instead of a flame"; "a mysterious, indescribable personale of levitation"; "A wild, frenetic eagerness seized me to make her aware of her circumambience"; "the white finesse of my Othello-like craving"—but one must stop somewhere! The author is hardly more fortunate in French, when she ventures from the safe ground of "mon cher" and "probablement"; "l'amour du beauté est l'horreur de joli" shows what she can do in this line. Her scholarship is evidenced by the interesting statements that "the sunlight was to be to her similar to the blows of Perseus liberating her like an Antigone"; that "Shelley, who deserted Mary, wrote his most exquisite poetry to her."

Why are such books published?

Simon the Jester. By William J. Locke. New York: John Lane Co.

Simon de Gex, M.P., light-hearted man of the world, enjoying apparently perfect health, is told by his physician that he has only six months to live. Thereupon he arranges his affairs, resigns from Parliament, releases himself from a marriage engagement, and calculates how best to pass the short time allotted him. Attracted by a passage in Marcus Aurelius, he adopts a plan of "eumoiriety," which is to give him happiness by indulging in his benevolent impulses. Among other things, his benevolence leads him to undertake the separation of a friend from a woman, a *dompteuse* or animal tamer, who is, he thinks, ruining the young man's career. At the end of the six months, he suddenly finds himself relieved of threatened death by an operation, with his money all gone and in love himself with the woman. Marriage with the woman solves one difficulty. For the rest, he turns in his distress, where all troubled heroes turn these days, to the East End, and in place of "eumoiriety" takes up with his wife a kind of mission work among the poor. The first part of the plot is gayly fantastic; the latter sinks to about the worst abused device of the modern novelist who does not know what to do with his people. It is peculiarly lacking in carrying power in Mr. Locke's hands. The real interest of the book is in the whimsical acts and speeches of the characters. Mr. Locke is always master of the humor of irresponsibility; but the wit of "Simon the Jester" seems a bit more labored and less captivating than that of "Septimus," perhaps because one scents from afar the desperate attempt to be serious and socially constructive in the dénouement.

THE OLD MERCHANT MARINE.

The Ships and Sailors of Old Salem. By Ralph D. Paine. New York: The Outing Publishing Co. $3.50 net.

Within the limits of a review, it is quite impossible to do justice to the variety and extent of the subjects presented by Mr. Paine in this large, handsome, well-illustrated volume. The rise, apogee, and decline of a famous and picturesque New England port, the exploits of her sons off her own coast and in foreign waters; their achievements in carrying her trade to remote parts of the globe; their skill, courage, and farsightedness in war and in peace; their contributions to nautical science, etc., combine to form an epic which finds its appropriate culmination in the extraordinary career of the late Gen. Frederick T. Ward, who created, organized, drilled, and fought the "Ever Victorious Force" which gave the first check to the formidable Tai-ping rebellion, and which, after Ward's untimely death on the field of battle, proved, under a subsequent commander, the instrument by which "Chinese Gordon" earned his chief title to undying fame.

The author himself has been able to present only a general view of his topic, although on occasion yielding to the temptation to enter into the particulars of some exceptionally varied life or some unusually noted vessel. In not a few of such instances, he has wisely used the actor's own words as recorded in log-books, journals, or letters, and so he has brought the writers, as it were, face to face with us of a later day. So diverse are the treasures opened to us in this account that we have only to choose any subject within its scope to have our curiosity immediately gratified. If we seek acquaintance with the early days of the now powerful and growing Empire of Japan, we turn to the log of the ship Franklin, Capt. James Devereux master, which in 1799 was chartered in Batavia to convey to Nagasaki the members of the Dutch Commission which enjoyed the exclusive right to trade with the Japanese; here we obtain the outlines of this first visit of an American craft to those waters together with minute instructions as to the etiquette to be observed on approaching her destination. Following the Franklin, the Salem vessels, Massachusetts, in 1800, and Margaret, in 1801, were similarly chartered. Happily for our benefit, their captains' clerks were brothers, William and George Cleveland, who wrote in copious diaries their experiences and observations during the four months they each spent in this practically unknown harbor and among this little-known people. It is worthy of remark that most of the log-books and letters cited by Mr. Paine are written in a style which for clearness and correctness might serve as models of English composition to-day; while their chirography, in its clear-cut precision, is in marked contrast with the careless slip-shod handwriting now but too common. Mr. Paine appears not to have found so many poetasters among these old-time sailors as have others in prosecuting similar studies, happily for him, since a long cruise told in rhyme is a fearsome thing. The pen and ink sketches which adorn some of these old volumes, as he points out, are always interesting, while in the case of Capt. Carpenter of the Hercules they are distinctly creditable and artistic.

If we are interested in maritime events during the War of the Revolution, Mr. Paine gives us a most readable dissertation on the Salem privateersmen of '76, in which are described the transformation of peaceable traders into armed vessels fitted out to prey on British commerce, with the results of their cruising. One chapter is devoted to Capt. Jonathan Haraden's voyages in command of the letters of marque, Gen. Pickering and the Julius Cæsar, than which no fiction of the sea is more entrancing. Time and again, by coolness and sheer audacity, he captured shipping of greater size and superior force in battery and crew. Meeting at dusk the Golden Eagle mounting eight more guns than his own command, he boldly hailed her, announcing that "This is an American frigate, sir. Strike or I'll sink you, with a broadside." And strike the Englishman did immediately. On another occasion Haraden fought three vessels carrying forty-two guns to his sixteen, manœuvring so skilfully as to engage one at a time and capturing them all, to the immense surprise and delight of his crew, who thought that for once their captain had incurred too great a risk. At the end of a stubborn and inconclusive action with a larger and more powerful "king's mail packet" Haraden found himself with only one round of ammunition left in his magazine. Ramming home his last charge, he ranged up alongside of his enemy and hailed her: "I'll give you five minutes to haul down your colors. If they are not down at the end of that time, I will fire into and sink you, so help me God." He had not counted aloud as far as "four" when down came the English colors, and the prize was his. With men of this stamp in command we are quite prepared to read that the 158 privateers sent out from Salem captured 445 sail of British ships.

Of the vicissitudes of the sea-faring life few narratives exceed in long-continued suffering that of Daniel Saunders, who, in the year 1792, was wrecked in the Salem ship Commerce on the southern shore of Arabia. For five weeks he and his comrades made their toilsome way over the sands to Muscat, now helped and now cruelly treated by the natives, only eight of the original seventeen surviving the hardships. The story was written by Saunders after his return home, and is quoted at considerable length by Mr. Paine. Our modern views of the irresponsibility of youth would seem to require readjustment in view of the fact that those Salem men, in frequent instances, became mates and captains of ships before attaining their majority, sometimes while still in their 'teens. To acquire a competent fortune and retire while under thirty years of age, was among the actual achievements of certain lucky and resourceful individuals.

Salem merchantmen began pushing into the South Seas only a few years after the British East India Company first traded with the Fiji Islands. Sometimes they paid for their temerity with their lives, sacrificed in conflict with natives; or in the loss of their vessels through shipwreck in uncharted waters. It was the tragic fate of the Salem ship Friendship, Capt. Charles M. Endicott, in 1830, which brought about the dispatch of the United States frigate Potomac, Commodore John Downes, to Quallah Battoo on the west coast of Sumatra in the following year, with instructions to punish the treacherous Malays who had killed many of the Friendship's crew and had seized, gutted, and burnt the vessel. Thereafter our flag was highly respected in those quarters and our trade was prosecuted with less hostile interruption. Less picturesque but equally honorable are the careers of certain Salem merchants whose sagacity and enterprise made their town famous and whose sails were to be found the whole world over. Yet even these had served an apprenticeship afloat before taking to the counting-house on shore, as had also Nathaniel Bowditch, author of the "Practical Navigator," still indispensable to those who navigate the seas on account of his methods, which, while accurate, are so simple that the humblest sailor who can read, write, and cipher, can employ them with confidence.

We get in Mr. Paine's book some insight into piracy in the seventeenth century and into its last flickering less than a hundred years ago; a fairly adequate picture of Yankee seamen in British prisons; the story of the building of the Essex, famous in the War of 1812 for her work in the Pacific Ocean and for her surrender by the first David Porter to superior force off Valparaiso; an account of Salem's second contribution to privateering in that same war, but, to her credit, very little about the slave trade. While not wholly guiltless under this head, Salem appears to have had but a minimum share in this nefarious traffic. The spirit of her best men speaks in the language of Capt. Jonathan Ingersoll, of Elias Hasket Derby's ship, Grand Turk, whose "employers

would rather sink the whole capital employed than directly or indirectly be concerned in so infamous a trade."

The author fails to draw the proper distinction between continental (naval) vessels, state vessels, privateers, and letters of marque. For example, the Protector and the Jason were Massachusetts crafts, and were not commissioned by Congress. The work is not free from unimportant errors, such as northwest for northeast monsoon, etc. At times, it lacks specific reference to the authority cited; and the index is quite incomplete, a real fault in a volume of this encyclopædic nature.

Marcus Aurelius and the Later Stoics. By F. W. Bussell, D.D. New York: Charles Scribner's Sons. $1.25.

Vice-Principal Bussell's volume is certainly in one sense the boldest that has yet appeared in the series of The World's Epoch-Makers. To cram page after page of a book with Latin and Greek quotations, generally untranslated, savors more of the seventeenth than the twentieth century, and argues considerable audacity. Those who know their classics will get their reward, though they may be irritated by a fortuitous placing of the Greek accents which often suggests ignorance in addition to carelessness in this matter on the part of the author. But accents are not philosophy, and our only serious criticism of Dr. Bussell's quotations is that they will frighten many an otherwise worthy reader from an unusually thoughtful and penetrating book. Dr. Bussell has an epigrammatic way of putting things. "The practical bent of the Roman mind transferred the Stoa from a mere house of dogmatic paradox into a temple of a devout, though despairing, Theism," he says, and an old truth suddenly becomes fresh. Or he makes a memorable distinction: "Now, the whole difference of philosophic system depends on the one question, Whether the starting-point is from the moral or the intellectual side." Or he translates criticism into poetry: "Thus, in a sense, philosophy performs by anticipation the work of death, showing the constituents, unweaving, like Penelope, the texture of daylight in the gloom of an ascetic wisdom."

But these aphorisms are the adornments and allurements on the way of a substantial and even austere argument. Dr. Bussell takes up the criticism of Seneca and Epictetus and Marcus Aurelius from a point of view which gives him at once the entrance into the heart of their logical contradictions and their unity of intention. "The tendency of all Pantheism," he says in one place, "is to separate more sharply than before the natural mechanism in which it starts, from the transcendent spirit, in which it invariably ends. Every attempt to unify the world in a gigantic and audacious synthesis issues in this strange Dualism." More specifically he applies this truth to Stoicism:

> A like fate probably awaits all schools which start from an assumption of original Unity. Stoicism is but one of many which end in a complete reversal of their most fundamental axioms. Monism has passed into the harshest Dualism; Pantheism into an impossible transcendence; sternness, certainty, and effort into doubt, compassion, and resignation.

Stoicism thus becomes to Dr. Bussell an example of the attempt to supplant the natural and inevitable dualism of the moral sense with a monism created by the reason, and he studies with remorseless penetration the process by which this monism breaks up under the stress of a life into a false dualism which simulates the true. Not often has this reviewer read pages of philosophy which seemed to him to come nearer the heart of things than the chapters in the present work which set forth the Stoical paradox of a universe at once eternal and transient, divine and contemptible, and of a devotion to God side by side with a hatred and scorn of God's embodiment and activity in the world. Hence the pathos of the later Stoic writers. In only one important point do the conclusions of Dr. Bussell appear questionable. Stoicism, he thinks, was driven into fatal self-contradictions because it started out with a false synthesis of religion and science, but "to-day we approach the study of an objective world free from all religious presupposition. Above all, we have abandoned the precarious assumption of teleology." Dr. Bussell would seem not to be aware of the movement which is leading many biologists to abandon the pure Darwinian hypothesis and to assume in the working of evolution a power distinguished more by name than by fact from the old teleological design. The strong, almost poignant, *actualité* of Dr. Bussell's treatment of the ancient Stoics might be taken to show that he himself was aware of a profounder kinship between their philosophy and certain difficulties and tenets of the present day than his own words admit.

Essays on the Spot. By Charles D. Stewart. Boston: Houghton Mifflin Co. $1.25 net.

From the best of Mr. Stewart's essays, we get a flavor which recalls Lowell's too rare casual papers. Whether from a convalescent bed he watches the work and antics of Chicago spiders, or in the open notes the prowess of a wheel ox, or, while splitting the boulder jewels on a moraine, indulges in cosmic reflection—there is a strong, winning, humorous, companionable quality about the man. To say frankly how good he thought the little epic of Bully, the wheeler, the reviewer would have to employ superlatives prudently denied by the overruling editorial providence. Let the reader judge not by opinion but by sample:

> In common with other staggy, philosophic wheelers, Bully had another ability that surpasseth human wisdom. On dry, hot days, at three o'clock in the afternoon, he would suddenly "wo" on his own authority, and having brought them all to a stop he would drop in the furrow. Without any ceremony whatever, he would stop them and plump down on the prairie like a big frog in a pond. The idea of taking a rest seemed to strike him in the head with the force of a sledge-hammer and fell him to earth; and then he would deliberately start chewing the cud. When he did this you could not make any impression nor have any influence with him until the appointed time had come. While you mauled his stout carcass, or put your boot-heel into his strong ribs, or prodded him with the whip-stock, he would ruminate in holy quiet, looking out upon the world with a mild and gentle eye. You might torture his body if you would; you could not affect his inner spirit. He had retired within himself; he had duties with his digestion. In this posture he had a distended Falstaffian paunch and an air according: "Shall I not take mine ease in my furrow?" He seemed to have taken in his feelings where they would be out of harm's way; and I have thought at times that he might be one of those who believe in faith.

While Mr. Stewart is at his best out-of-doors, the flexibility of his humor and common-sense tell in other matters. Excellent is the essay "On the Study of Grammar." It goes without technicalities to the marrow of those bothersome forms, the prepositions and adverbs, makes them almost dramatically interesting. We liked also a shrewd interpretation of Kipling's much discussed story "They." It is for our author an allegory of the writer and his public. Very disconcerting is a lengthy commentary on Coleridge's dream poem, "Kubla Khan." Here Mr. Stewart, with quite extraordinary ingenuity dips in and fishes out an entire statement of man's place in the universe, a metrical compendium of universal theology and philosophy. For a time, one suspected a solemn hoax, but the comment is ultra-serious. Mr. Stewart has the mediæval moralizers of Ovid and the recent Baconians fairly beaten, for they never managed to make so much out of so little. And it is oddly unlike the Mr. Stewart we know. Was it foisted into the book by "another man of the same name"? For one reader, who has twice perused the argument it is far too good to be true. In any case this labored, philosophical essay is out of harmony with the mood of this charming book. We wish Mr. Stewart might have set his trap for the unwary reader in the more candid form of a monograph. But to the celebrant of the Chicago spiders and of Bully, much should be forgiven.

A Military Consul in Turkey. By Capt. A. F. Townshend. With many illustrations. Philadelphia: J. B. Lippincott Co. $3.50.

A British military consul has opportunities of seeing and knowing conditions in Turkey which are hidden from the ordinary resident or traveller; and, on the other hand, his official position is apt to form a partition wall to shut out from his ken some of the things which come within the experience of the unofficial. Capt. Townshend was stationed for about two years at Mersina, in Cilicia, and for a year at Adrianople. His term of service shortly preceded the revolution and overthrow of Abdul Hamid. Both regions in which he served were much disturbed, and a considerable part of his duties seems to have been to protect the Christian populations from oppression or massacre. He sought to get around the partition wall of officialdom by unexpected journeys into disturbed districts, to see with his own eyes the actual conditions, much to the annoyance of the Turkish authorities. He visited, indeed, no unexplored regions, and saw no new things; but, on the other hand, he knew how to use both eyes and ears, and has given a very interesting and instructive account of his experiences and an unbiassed survey of the conditions existing in Turkish Rumelia and southeastern Asia Minor in the years just preceding the revolution. His narrative, while discursive and rough-and-ready in method, and partly on that account very easy reading, leaves a good general impression of the whole matter.

The state of civilization which he describes is fairly comparable with that of mediæval Europe as portrayed, for instance, in Reade's "Cloister and the Hearth"; conditions in Turkey being complicated, however, by the tangle of overlapping races and religions. It is evident that, with all his experience and observation, the Young Turks' revolution, which followed so soon after his departure from the country, was a complete surprise to the author. He discusses the new régime in the last chapter, not very sympathetically or very hopefully. He does not see how Moslem and Christian, much less the conflicting Christian races themselves, can permanently act together. A little glimpse of Koniah in an earlier chapter suggests a partial solution of the problem. This town developed into a busy, cosmopolitan industrial centre as a result of the construction of the Bagdad railway; and here the Armenian dwelt safely in the midst of Turks, Kurds, and Circassians at the very time that a couple of days' journey away his fellow-countrymen were being massacred by the same kind of neighbors. The construction of railways, the opening of mines, the development of industrial enterprises of all sorts, under a more liberal and enlightened government, will be the most efficient means of uniting the divergent and antagonistic elements of the population, by giving them both a common interest and a rational outlet for their energies.

Notes.

The Oxford University Press announces that publication of Dr. Sidney Lee's "French Renaissance in England" has been postponed until early autumn.

A new collection of stories of the late Sydney Porter (O. Henry), entitled "Whirligigs," is announced for publication in September by Doubleday, Page & Co.

A. C. Armstrong & Son, it is announced, have disposed of their publishing business and its good will to George H. Doran Company, publishers and agents in America for Hodder & Stoughton of London. By this disposal the interests of Hodder & Stoughton in this country are amalgamated.

Forthcoming publications announced by the Columbia University Press include "The Authorship of 'Timon of Athens,'" by Dr. Ernest H. Wright; "Stage Decorations in France in the Middles Ages," by Dr. Donald C. Stuart; and "English Tragicomedy," by Dr. Frank H. Ristine.

The Baroness Bertha von Suttner has about finished a new ethical novel, the hero of which is an American of the best type. In this book, entitled "Der Menschheit Hochgedenken," she utilizes the present vogue for aviation to admonish mankind to take an equal interest in mental and ethical flight.

D. Appleton & Co. announce that "The American Year-Book" for 1910, which will be published in February, 1911, is now in preparation. This will be an annual summary of national events, but will include also some account of the most important happenings in foreign countries. The chairman of the board of supervisors of this publication is Prof. Albert Bushnell Hart, and the managing editor is S. N. D. North, recently director of the United States Census.

The next international convention for liberal religious thought will meet at Berlin, from the 6th to the 10th of August. The first of these world congresses was held in London in 1901, the second in Amsterdam in 1903, the third in Geneva in 1905, and the fourth in Boston in 1907. The convention will be termed Weltkongress für freies Christentum und religiösen Fortschritt, and one of its special purposes will be to acquaint outsiders with the religious life and progressive theological scholarship and religious problems of Germany. The announcement of the German committee declares that the Berlin meeting comes at an opportune moment, since a strong revival of religious interests is making itself felt throughout the fatherland. The president of the congress is Dr. K. Schrader, member of the German Parliament.

The pace of Scribner's Memorial Edition of Meredith is quickening. We have again to note two new volumes (XI and XII) containing "Beauchamp's Career." The illustrations in these volumes are photogravures of Watts's well-known portrait of the author, painted in 1893; The Estuary from Holly Hill, the home of Admiral Maxse, Meredith's intimate friend at the time the novel was written; Bursledon, the scene of Nevil Beauchamp's death; and The Old Bridge at Bursledon.

From Maurice Hewlett's novel "Open Country," have been extracted John Senhouse's "Letters to Sanchia" (Scribners). Since they imply a complete episode of love and renunciation, and withal a kind of philosophy of life, their severance from context gives them new emphasis. John Senhouse, realizing one day that he was a free man, walked out of his student's rooms at King's, Cambridge, and became a self-supporting and self-respecting vagabond. A little writing and sketching earned him a cart, a horse, and a tent, with which he proved all the contacts of the roads. It was, however, contact with an eager girl, Sanchia Percival, that impelled him to philosophize and justify his manner of life. His letters to her are a strange mixture of love, impressionistic observation of nature, and guesses at the mysteries of social and individual life. The style is that really eloquent combination of the torrent, the gasp, and the sputter, which, begun by Carlyle, was further developed by Browning and George Meredith. Senhouse wins Sanchia's love, but moved by a double feeling of the impossibility of roadside life for her, and of the inherent unfairness of the marriage bond, leaves her, in lieu of a heart, plentiful fine phrases. Obviously, he is a quite familiar literary figure—the wistful wayfarer of the high romantic stamp who loves and passes, taking refuge instinctively in the free depths of his own personality. Yet Senhouse is not merely the traditional seeker for the blue flower. He has a distinctly modern quirk, or if you will improvement, is convinced that his vagabondage is for the healing of the nations. Let people walk out and be free. Let them stop doing the stupid things that mean wealth and bondage, and elect poverty, freedom, and the road. Again Senhouse is modern in preaching an evangel which he knows will not be heard. His hope is that Socialism will so drastically show the irksomeness of bonds that men will at last be driven, through despair, to his own ideal of freedom. Meanwhile, he talks on the road and sets a good example. Eliminate Senhouse's poetry—an unfair but still clarifying measure—and there remains an old-fashioned, isolated, heart-hungry romantic hero wrapped up with a new-style philosophical anarchist. In a literary way the blend is acceptable; as a fresh glance at the regimented fatuity of the world the letters may even seem important. Philosophically the remedy and its discoverer are compounded of incongruous stuffs. The little book epitomizes the oddly unharmonized elements of Mr. Hewlett's great talent, its fundamental romanticism interpenetrated with an alien realism.

"Rivers and Streams of England," painted by Sutton Palmer, described by A. G. Bradley, is one more of those handsome octavos with colored illustrations which are favored by the Messrs. Black of London (New York: Macmillan). Mr. Palmer's sketches are executed with a solidity and precision which bring them through the ordeal of process reproduction apparently unscathed.

Mr. Bradley's facile vein is too familiar to need characterization. He is fully alive to the picturesque, piscatorial, and legendary features of the streams he follows, and not unmindful of the folk who inhabit the valleys. He takes especial pleasure in the moorland sources of the famous English rivers, preferring these friendly and accessible spots to the sublimities of crag and glacier. These high open moors he thinks are unique. They are not quite so. Their arid counterpart may be found in the high pastures of the Apennines. In spring or early summer the resemblance is close enough to satisfy the most homesick "Englishman in Italy." This is an unusually attractive book.

"Ruskin and his Circle," by Ada Earland (Putnam), brings to focus certain considerations which are slurred in other biographies. Proper emphasis is given to the extraordinary coddling and tyranny he underwent from his parents. At thirty-eight he was ordered to cancel a lecture appointment, and to say "that his parents objected." His physical dependence, narrow evangelical influence, and the absence of normal companionship in youth did much to foster the over-sensitiveness that finally undermined him utterly. This book speaks quite frankly about the ill-omened marriage. Of the honeymoon, with the bridegroom shattered, travelling under his mother's charge, and the bride a kind of tolerated companion, a pathetically vivid picture is given. Certainly no genius, unless it was Elizabeth Barrett, was ever more untowardly "familied," and she had the supreme good luck to escape in time. Ruskin's intimacies with the Pre-Raphaelites, with Carlyle, Lord Acton, Kate Greenaway, and others are pleasantly described. The belated passion for Rose La Touche is sympathetically treated. Of fresher interest is a charming bit of epistolary philandering with old Miss Susanna Beever, who lived across Coniston Mere. There are chapters on Ruskin's ventures in publishing, on his teaching in political economy and education, and on St. George's Guild. While reverent in tone, this book divests Ruskin of something of his awfulness, as a sage, and brings us nearer the real man. In one way or another he was always struggling with principalities and powers, the most formidable of which had their seat within himself. No prophet, surely, was ever more completely a victim of the régime he desired to overthrow. The present tendency is to underestimate his personality and his doctrine. The truer view is that his vision was almost infallible within its range; he merely had more blind spots than most critics of his power. If we use him where he saw, and ignore the cases in which he judged *a priori*, he will seldom fail us. In reminding us how readily he attached to himself the best thinkers and finest personalities of his age, this book will help rehabilitate the memory of a great and misunderstood genius.

The valuable portions of H. K. Sanderson's "Lynn in the Revolution" (W. B. Clarke Co.), with its 504 pages, could be condensed into seventy-five or eighty pages. The first volume contains 148 pages of military history of the American Revolution, gathered from a few standard secondary works, and has no value either literary or historical. Following that is one of the useful parts of this publication, the "Narrative of Henry Hollowell of Lynn, Respecting the Revolution In 1775, 1776, 1777, 1778, 1779, to January 17, 1780." This is thirty-four pages in length, and contains the observations of a man who had eyes to see and some sense of humor. We are not told whether the journal was written from notes made during the war, or from memory, but internal evidence would indicate the latter. It is a fairly interesting account of scenes and incidents common in the Revolutionary period. It is properly reproduced, exactly as its illiterate author wrote it, bad grammar, poor spelling, and incorrect capitalization. This is the only evidence the editor gives of his knowledge of the accepted canons of scholarly editing. The remainder of the first volume, and all of the second volume, are taken up with biographical sketches of the Lynn soldiers who fought in the American Revolution. These sketches are made up of a hodge-podge of information gained from local newspapers, family traditions, tombstones, and town records. This consumes 281 pages, of which the useful part is some half-dozen letters written during the Revolution, and some quotations from the records of the town meetings not presented elsewhere. The book contains a large number of good illustrations, few of which have anything more than local interest. As a whole the work is little better or worse than the average local history. Its patriotism is a little less fervid than that we have become schooled to endure.

Mrs. George Cran is an alert-minded Englishwoman, who was commissioned to visit western Canada and report upon the opportunities for educated women in that land of promise. Her impressions are recorded in "A Woman in Canada" (Lippincott). Every facility was afforded her to study the conditions of life on the Western prairie farms, and she describes what she saw there with the skill of a trained journalist. Some things she criticises frankly and fearlessly, but, on the whole, her attitude is decidedly sympathetic. She does not hesitate to advise her fellow-countrywomen to go to western Canada. England is overcrowded with women, whereas the prairie lands of Canada are crying for them by the thousand. Canada wants women of breeding and endurance, educated, middle-class gentlewomen, many of whom are struggling to-day to make a living in the severe competition of the mother country. She promises them a reasonable certainty of success, if they will adapt themselves to the conditions of a new land. They may look forward to absolute independence, if they will; but Canada needs them primarily to become the mothers of future generations. The Western provinces are full of bachelor farmers, but wives are hard to find. Incidentally, Mrs. Cran enlivens the pages of her book by many vivid sketches of Canadian scenes, and Canadian types, East and West, and leaves one with the conviction that the freshness and vigor and optimism of that land of opportunity made a deep impression upon her heart.

The "Anti-Pragmatisme" of Prof Albert Schinz, already noticed in the *Nation* (May 6, 1909), appears in an Englisl version (Small, Maynard & Co.), enriched with a "Warning to Readers of this Edition," and three appendices, of which the first sets forth at length the author's complaint that the scholarchs of Pragmatism have refused to understand his book or to take it seriously. The English rendering, since it is the work of the author, must be supposed faithful; it is at times divertingly unidiomatic.

The title of Dr. J. M. O'Sullivan's "Old Criticism and New Pragmatism" is scarcely indicative of the book's contents and character. The author or the publishers, no doubt, felt that in bookselling "Pragmatism" is a word to conjure with. The volume is, in fact, composed of three somewhat loosely connected and relatively technical studies. The first, "a comparison of the methods of Kant and Hegel as illustrated by their treatment of the category of quantity," which has already appeared as a monograph in German, fills two-thirds of the volume. The second is a destructive criticism of Kant's reasonings about causality. The third examines the epistemological method of Pragmatism, and analyzes with much penetration the relations of that doctrine to the Kantian theory of knowledge. The author is one of that increasing group of philosophers of the younger generation who, though learned in all the wisdom of the Hegelians, adopt a realistic metaphysics. The sumptuous form of the volume, and the high level of technical competency that characterizes its matter, justify a regret that philosophical books bearing an Irish imprint are quite so great a rarity. (Gill & Son, Dublin; imported by Longmans, Green & Co.)

The supplement of Vol. XXXVII (pp. 313), Transactions of the Asiatic Society of Japan, yields invaluable data to the student of Far Eastern chronology. The elaborate apparatus of the late William Bramsen is reproduced with revision and supplement, and Prof. Ernest W. Clement adds comparative chronological tables of the Christian era, Japanese, Chinese, and Korean eras and rulers, with the years of the sexagenary cycles from 660 B. C. to 1910 A. D. Rev. C. F. Sweet furnishes notes and Professor Sakuma a supplement, the whole making, with indexes, a unique handbook.

"An Introduction to Old French Phonology and Morphology," by F. B. Luquiens (Yale University Press), makes no attempt to supplant the standard work by Schwan-Behrens. On the contrary, Professor Luquiens's efforts have been directed toward making this grammar less difficult to comprehend; to the treatment of the verb, especially, he has added certain mechanical helps, some of which, however, will seem questionable to the stricter type of scholar. The book will be welcomed chiefly by those candidates for the doctorate to whom the German of Schwan-Behrens is insurmountable.

"Im Vaterland," by Paul V. Bacon (Allyn & Bacon), is a manual of information about Germany and German institutions, in the form of colloquies. It was "made in Germany." It is abundantly illustrated with characteristic photographs; it has an appendix of poems and songs, with music, and statistical as well as explanatory notes. The test of experience only can determine whether a hundred and fifty pages of conversation, here and there rather obviously so manipulated as to satisfy young American curiosity about the Fatherland, may not prove monotonous. Mr. Bacon believes that dialogue is the most stimulating form of exposition for learners. There can be no

doubt that his short chapters can be used to advantage concurrently with other reading. The editorial glosses and the Vocabulary are careful and helpful. The book is a worthy companion to the author's popular Grammar.

Klara Hechtenberg Collitz covers with her "Selections from Early German Literature" (American Book Company) the primitive Germanic territory in general, and the mediæval period in Germany, with versions in modern German that best preserve the spirit of the originals, without departing too much from the original form. This anthology, like Professor Thomas's, will serve at least to give a glimpse into what otherwise might be a shelf of closed books to students who are not specialists in Germanics, but who wish to know something about the works they hear of in lectures or read of in literary histories. A bibliography calls attention to sources and editions for those who wish to go farther.

Lucretius and Cicero had both to face the task of creating a philosophical terminology for a language that seemed less fitted than Greek to express abstract ideas. Dr. Katharine C. Reiley's "Studies in the Philosophical Terminology of Lucretius and Cicero" (Columbia University Press) is an attempt to show how far the two philosophers succeeded, how far they had to fall back on Greek, and how their methods differed. This is an inquiry that could not be handled exhaustively in a brief study of 125 pages, though the discussion is of course limited to the field in which their philosophical interests coincide, the mechanical and physical side of Epicureanism. Lucretius's famous phrase about the poverty of his mother tongue—*patrii sermonis egestas*—is his excuse for coining hundreds of new words, and for introducing not a few from the Greek. But, as Munro pointed out, in a passage that Dr. Reiley might have used, the philosophical Latin of Lucretius is much clearer than the Greek of his admired Epicurus and Empedocles. Could Euripides have expounded their theories more lucidly? Even Lucretius dropped his modest airs about Latin when he said:

> quod obscura de re tam lucida pango
> Carmina, musæo contingens cuncta lepore.

Cicero came to the work with complete confidence in his native language and shows greater facility than Lucretius in the same field, as is indeed natural since he was not hampered by verse. The weak point of this comparative study lies there; the poet and the prose-writer had two very different problems to solve. Dr. Reiley's discussion of special groups of terms is clear and careful, especially of such debated questions as the precise meaning of the Lucretian *omne* and *inane*. The question whether Cicero edited Lucretius is not discussed.

Sir George Newnes, publisher of a number of English magazines, died in London last week, aged fifty-nine years. He founded his first venture, the weekly magazine known as *Tit-Bits*, in 1881, and from then on was chiefly engaged in publishing, giving some attention to politics. At one time or another, he founded and bought the *Westminster Gazette*, the *Review of Reviews*, the *Strand Magazine*, the *Wide World*, *Country Life*, *Garden*, the *Ladies*, *Field*, *Woman's Life*, and the *Scholar's Own*.

Koloman Mikszáth, the noted Hungarian writer, died recently in Budapest. His works, which include political and humorous writings, fiction, descriptions of folk-life in Hungary, and several longer poems, fill thirty volumes. Upon the celebration, not long ago, of the fortieth anniversary of his literary career, an estate was presented to him by his admirers.

CAMERA-HUNTING IN AFRICA.

Camera Adventures in the African Wilds: Being an Account of a Four Months' Expedition in British East Africa, for the Purpose of Securing Photographs of the Game from Life. By A. Radcliffe Dugmore, F.R.G.S. With 140 photographs from life by the author. New York: Doubleday, Page & Co. $6 net.

This is Mr. Dugmore's readable and modest narrative account of his remarkable achievements as a camera-hunter of African big game. That he was not the first man to take a camera into the African wilds, readers of the literature of animal photography are aware. C. G. Schillings photographed African animals—even the most dangerous of them—in their natural habitats, several years ago; and he has published two or three books showing the results of his work, notably "Flashlights in the Jungle," which contains perhaps the best of the pictures he secured, and which appeared in this country in 1906. And Herr Schillings himself was preceded by Edward North Buxton, the English sportsman, who advocated the substitution of the camera for the rifle many years ago, and was at first well-laughed at for venturing the suggestion.

So far as actual results are concerned, Herr Schillings's work was the most remarkable that had been done up to that time, and his photographs of the bathing rhinoceroses, the zebras and the leopard at water-holes, and a picture of the giraffe which bears his name, still stand as fine examples of skilful work with a camera. But it must be admitted that Mr. Dugmore's achievements are even more remarkable, and, from the point of view of the naturalist, more valuable than are those of his German predecessor. The flashlight picture of a fine maned lion, which forms the frontispiece, is virtually a perfect likeness of the animal, standing broadside on at a distance of about twelve yards, and showing the characteristic savage expression. This is a veritable triumph in animal photography. Still more extraordinary are the pictures of the rhinoceroses, and especially the one of a huge bull, taken at a distance of fifteen yards; the enraged brute was actually charging Mr. Dugmore. There are three other pictures of charging rhinoceroses which likewise give clear ideas of the animals' appearance, and several which show them at rest in characteristic surroundings, and usually attended by their friends, the tick birds, which feed upon the parasites that infest them.

Besides the extraordinary lion picture already mentioned, Mr. Dugmore got, with a second camera, another picture of the same animal from a different position, showing him advancing toward a dead zebra, which was used as a bait, and there are also two photographs, taken at close quarters, of a pair of lions—one of them wounded—who stalked the author in broad daylight. There are a dozen pictures of hippopotami, showing these uncouth animals in groups or singly, in the water and on land, and several of these are very life-like portraits. A decidedly interesting picture shows a group of about a dozen Grant's zebras digging for water in the sandy bed of the Olgeri River, and there are five other studies of the two species of this beautiful animal shown in its natural haunts, in groups or as individuals, including a remarkably clear and expressive full-page portrait of a perfect specimen of the Grant's type. Mr. Dugmore was also successful in getting characteristic pictures of giraffes, and one of the most informing illustrations in the book shows a herd of six of these strange creatures, in single file and all clearly outlined against the sky—the work of a telephoto lens at a distance of 375 yards. Other animals of which Mr. Dugmore got excellent photographs were the buffalo, hartebeest, wildebeest, dik-dik, water-buck, impalla, Grant's and Waller's gazelles, oryx, eland, forest hog, wart hog, hyena, and jackal. And there are many pictures of birds, as well as studies of native savage types, and several good landscape photographs, including some fine views of Mount Kenia.

The striking fact about Mr. Dugmore's work, however, is that the getting of sixty-odd photographs of more than twenty different species of big game, represented the actual killing of probably less than half a dozen animals, and all of these were rhinoceroses or lions, who were shot purely in self-defence. Indeed, Mr. Dugmore's determination to do no unnecessary killing caused him to subject himself to very great danger. For example, he actually had his companion, whom he relied upon to defend him from charging animals, attempt to stop or turn an oncoming rhinoceros with a charge of buck-shot from a shotgun, an experiment which was successful in the first trial, but which was not repeated after this adventure:

> No sooner had I seized the camera and moved a little to one side, so as to obtain a better view of the animal in case he charged (unless he charged me first!) than the rhinoceros was up and at us. . . . It seemed incredible that so large an animal

could move with such rapidity. I focussed on him as he rushed toward C and the Masai and the two thoroughly scared boys who were behind them. Almost unconsciously I released the shutter when at the moment a shot rang out. C. was trying to turn the animal with a charge of buckshot. The attempt, however, was futile, and the creature came on without even hesitating. C., realizing that the shot had failed, fired a 12-bore ball from the left barrel, and then seizing his revolver, began firing right into its head as it rushed past him not six feet away. It made straight for the Masai, who stood quietly waiting the onrush, and jumped aside when within touching distance of the big horn. Having missed the Masai, it next turned toward me, just as I was endeavoring to put a second plate in position, so that I might get a picture of the actual encounter. In a hurry, I did not put the plate holder all the way in, as I afterward found to my disappointment. But for the moment I had other things with which to occupy my mind, and the camera became less important than the angry beast, when, to my relief, the Masai, with wonderful coolness drove his spear into the side of the rhinoceros. That turned it toward C., who quickly put another revolver shot into its head, and that decided the bewildered animal to leave us alone, and off it went, heading almost directly toward the terrified caravan.

The description of photographing a lion by flashlight at night gives another glimpse of the great danger to which the author exposed himself:

For about two hours I had been straining both eyes and ears, when suddenly to my astonishment a huge lion appeared. . . . As far as I could judge, the big creature was staring at us, and I scarcely dared reach over to my companion and whisper the word "lion." Fortunately, he awoke without making any noise, and leaning gently over me he had his first look at the animal. . . . After a flashlight goes off one can see nothing for several minutes, so the lion might come without our knowing anything until he was on top of us, when shooting would be too late. . . . While we were getting ready for this, the lion seized the zebra, and without the slightest effort turned it round. Fearing that he would carry it off beyond the reach of the cameras, we hurriedly took aim, and as I pressed the electric flash release we both fired. The two shots rang out simultaneously with the explosion of the powerful light, but whether the lion was hit we could not tell. He only went about one hundred yards away, and then began roaring in a manner that made us most uncomfortable. It was not long before he was joined by his mate, and the two kept up the most frightful roars I had ever heard. . . . It was no wonder then that we did not enjoy crawling out of our bomba in order to reset the cameras and flashlight.

Beyond a doubt, Mr. Dugmore, in the preparation of this volume, has rendered a very considerable service to natural history. As we have said, many of the photographs are exceedingly lifelike, and, what perhaps is still more important, they frequently show, as accurately and as completely as a photograph may, the natural habitat of the animal pictured, and its appearance in such surroundings. A still greater value of the book, however, is its effectiveness in calling attention to the really remarkable results which may be obtained by this new and altogether laudable manner of gratifying the love of the chase. It may fairly be doubted whether these results warrant the risks which Mr. Dugmore took in photographing such exceedingly dangerous animals as the lion and the rhinoceros —risks obviously far greater than are taken by the hunter whose only purpose is to kill, and who, as a matter of fact, usually brings down his animal at a comparatively safe distance. But there are many animals which may be photographed with little or no risk of attack, and yet not without the exercise of even more skill, resourcefulness, and determination than are involved in the pursuit of them with the rifle. For, as Mr. Dugmore very truly says: "The efficiency of the modern rifle greatly reduces the chance of failure, and consequently places the balance of chance too much in the sportsman's hands, while the difficulties of photography are lessened almost yearly by the invention of better and more simple devices, with the result that pictures which hitherto were practically unobtainable are to-day becoming common. It will be but a few years before we shall see clubs and societies formed for the advancement of natural history photography."

The last two chapters tell how to arrange a trip to British East Africa, and its cost and equipment; and the photographic outfit needed. The volume is of quarto size and well printed, but apparently is not very durably bound.

Drama and Music.

Arrangements have been completed for the reappearance of Ellen Terry upon the American stage next season, but not—unfortunately—in regular dramatic performances. She is to appear as an entertainer, as Mrs. Siddons, Fanny Kemble, and other famous players did in their time. Her proposal is to give a series of discourses with illustrative acting in Elizabethan costume, on "The Women of Shakespeare," "The Letters of Shakespeare," and "The Children of Shakespeare."

G. P. Huntley, the English comedian who recently played Eccles in "Caste," and Hattie Williams are to play together next season in an English version of "Le Bois sacré," by the authors of "Love Watches" and "Inconstant George." It deals with a woman's demand for the Legion of Honor ribbon.

Sarah Bernhardt continues to defy time and space. Next winter she is to pay another farewell visit to America, and the usual assurances are given that this one, positively, will be her last. According to present arrangements she is to begin her next tour in this country in Chicago, on the 31st of October, and will reach New York one month later, remaining for four weeks. She brings with her an extensive repertory of old and new plays, including "L'Aiglon," "Jeanne d'Arc," "Les Bouffons," "Phèdre," "Monna Vanna," "Hamlet," "Resurrection," "Les Romanesques," etc. During her closing week she will be seen in "La Princesse Lointaine" of Rostand and an act of "Faust." In this she may possibly have the assistance of the eminent actor, Le Bargy.

Hermann Vezin, the well-known actor, died in London on Sunday, aged eighty-one years. He was born in Philadelphia, and was graduated from the University of Pennsylvania. Going to Europe, he there resolved to become an actor, and made rapid success, until, in 1852, Charles Kean engaged him for the part of Pembroke in his famous revival of "King John," at the Princess Theatre in London. He then made a circuit of the English provinces for several years, until he returned to London in 1859, and played "Macbeth" in the Surrey Theatre. Thereafter he appeared with much success as Hamlet, King John, Othello, Shylock, Louis XVI, Sir Giles Overreach, and in "Donna Diana," by Westland Marston; in "The Man o' Airlie," and in "Dan'l Druce," by W. S. Gilbert. In 1868, at the Grand Theatre, Islington, he gave a single performance of "Cenci," Shelley's tragedy, to which the censor had refused a license. One of his famous later rôles was that of Dr. Primrose in "Olivia." He took Henry Irving's place as Macbeth, when the latter broke down, and achieved much success. At eighty years he played as Rowley in Sir Herbert Tree's revival of "The School for Scandal."

W. J. Galloway's "Musical England," which we reviewed in the *Nation* of May 19 from a copy of the London edition, is now published in this country by John Lane Co.

Percy Goetschius does not share the belief that a pupil must study harmony before he can intelligently take up counterpoint. His "Exercises in Elementary Counterpoint" (G. Schirmer) represent in his mind a course in harmony quite as much as in counterpoint, his conviction being that these two courses cannot be separated. While this point is debatable, an attentive student of this volume cannot fail to get a deep insight into the mysteries of harmony (chords and their uses), as well as of counterpoint, or the art of interweaving two or more melodies.

Louis C. Elson's "Pocket Music Dictionary" (Oliver Ditson Co.) is a little book containing in 180 pages, in a condensed form, the information imparted at greater length in the 306 pages of his "Music Dictionary." If singers and players, professional as well as amateur, carried a copy of it in their pocket (it takes up very little space), there would be fewer errors in the interpretation of masterpieces. An appendix of eighteen pages gives the most noted names in music, with places and dates of birth and death—above 500 in all.

"Why do pianos get out of tune? Should they be closed at night? How can the keys be kept white, the varnish clear?" These and many other questions that occur to

owners of instruments are answered in "The Construction, Tuning, and Care of the Pianoforte," by Edward Quincy Norton (Oliver Ditson Co.). Thirteen different reasons are given why strings break, and every other problem that presents itself to the maker, tuner, and player of a piano is treated with the same thoroughness—questions of action, of felt, of temperament, etc., with a page on injuries done by mice.

"Forty-four French Folksongs and Variants from Canada, Normandy, and Brittany" is the title of a collection just issued by G. Schirmer. The songs were gathered and harmonized by Julien Tiersot, and the text accompanying the music is in both French and English. Some of these songs have great rhythmic and melodic charm, and the harmonics added by Mr. Tiersot do not do violence to their spirit. He was pleased to find that, whereas in France such songs are chiefly in vogue among the lower classes, in "New France," particularly in the Province of Quebec, they are far from being despised by the educated classes. It is interesting to note how some of the old songs are colored by the new environment.

Art.

PARIS MUSEUM NOTES.

PARIS, June 3.

In the hall of Greek sculpture of the Louvre Museum, an important addition has been made to the series of archaic "Apollos," as they were once called, or "Kouroi," according to the later, non-committal designation. It is a statue found in the island of Paros in 1902, described the same year by O. Rubensohn (*Athen. Mittheil.*, XXVII, pl. xi), and forming No. 122 in the late work of W. Deonna, "Les Appollons archaïques" (Geneva, 1909). It helps to complete the series begun at the Louvre by the two torsos (Leonna, Nos. 1-2) excavated at Actium by the French consul, who found the Winged Victory of Samothrace, and continued by three fragments in marble of Pentelicus (Leonna, No. 23), and by a head in Parian marble (No. 24). The new piece is a complete figure, head and all, and well enough preserved to furnish the necessary standard of comparison. Three fragments of a larger statue, found at the same place, add to the completeness of the series, which precedes the Medic wars and begins in the second quarter of the sixth century, B. C. The first example recalls the "Apollo" of Thera, the new one that from Mount Ptous in Bœotia, now in the Athens Museum (Deonna, page 157, fig. 32-33).

Farnell ("Cults of the Greek States," Vol. IV, pages 330-1) places these examples of early Greek sculpture, with their multiple relations in archæology, art, religion, and social history:

> The "Apollos" of Tenea, Thera, Orchomenos, etc., have no sure title, for some of these may have been representations of the worshipper who dedicates himself, or of the athlete, or sepulchral monuments of the deceased. . . . It would be too dogmatic and hazardous to say that no Greek divinity had been represented unclothed before 600 B. C. When nudity became the prevalent fashion at the Olympian games, it was natural that the change should affect artistic conventions. That Apollo should have been the first prominent example of the new fashion is an interesting fact, about the explanation of which we may doubt. It may be found in the Dorian worship, in which Apollo was specially associated with the athletic and military epheboi, and therefore himself imagined as essentially a divine ephebos. It may also be that his relation with Zeus which became more explicit in the later period of religious thought, and in which he was essentially regarded as the son of God, assisted the development of the youthful ideal. But it is as a youth in early maturity, not as a boy, that the archaic, and usually also the later, art conceived him.

A transfer from the Auxerre Museum to the Louvre adds a not unimportant example of another period in art history. It is a statuette in limestone, 75 centimetres high, representing a draped woman, and is an undoubted specimen of the sculpture of the "Dædalids," who, from Crete, became the teachers of the Peloponnesians. It goes back to the seventh century B. C., and takes its place in the series of archaic feminine figures of the "xoanon" form. It is related to examples in the Museums of Candia and Athens, and to a find of the English school of Athens at Sparta in the temple of Artemis Orthia. It was described by Collignon in the *Revue Archéologique*, 1908, t. xi, pp. 153-170, pl. x.

A large Madonna in stone, of the years when the latest Gothic tradition was beginning to yield to Italian influence, has taken its place in the hall of Mediæval and Renaissance sculpture. It is of great artistic merit and of historic importance in the series. In the hall of modern sculpture, besides the maquettes of Carpeaux, now appear sketches of Barye, a series of models of David d'Angers, and the ivory statuette of Rachel by Barre. In the collections of the Mission Pelliot gathered from 1906 to 1909 in Chinese Turkestan, besides the manuscript treasure, there are paintings and sculpture showing the transmission of Greek art formulas and types to Indian Buddhism of the Middle Ages. These have a special hall at the Louvre.

The "Inventaire général des dessins du Musée du Louvre," by Jeon Guiffrey and Pierre Marcel (25 francs a volume, or by subscription), continues its good work of rendering this immense and priceless treasure of drawings available for purposes of study in art and history. The fourth volume—French school—comprises 610 illustrations of good quality for the 825 drawings described. The alphabetical order in this new volume happens to concentrate the interest, comprising as it does the work of Corot, Daubigny, David, and Delacroix, all of which is abundantly represented in the Louvre collection. Of particular interest is a series of archæological sketches by David, showing his laborious documentation, and 38 leaves from Delacroix's Moroeco sketchbook. Great space and a learned introduction are given to the drawings of Antoine Coypel, which at his death came in their totality to the royal collection.

The Bibliothèque Nationale has received a legacy of importance for the history of the Restoration. It is the works of the engraver Depaulis, comprising notably a collection of portraits of celebrated contemporaries ordered by Louis XVIII. Alexander I obtained duplicates for the Russian Imperial Museum; but the French collection, which had remained in the engraver's family, will prove more accessible to ordinary students.

The rich decorative art collection of Piet-Lataudrie has now been distributed to different French museums, according to the directions of the testator. The Louvre receives 26 valuable pieces, which have been described by M. Migeon in *Les Arts*, August, 1909. They comprise a series from Persia, Egypt, Asia Minor, and Andalusia, from the twelfth to the sixteenth century. The remainder are of varied European origin from the Middle Ages and Renaissance. The portrait of the donor by Bastien-Lepage will be placed with the collection at the Louvre.

S. D.

"Portrait Miniatures" is the subject of the special spring number of the *Studio*. The text is by the very competent hand of Dr. George C. Williamson, and there are more than fifty plates of fair execution of which more than half are colored. These we think are the less successful. Naturally the treatment has to be selective. Dr. Williamson, for example, gives some attention to Austrian miniaturists, apparently because a book has recently been published on them. No American name appears, though Malbone and Fraser are certainly above the average level of the artists presented. In running through the illustrations one is struck by the general mediocrity displayed. Occasionally the art has allured a Holbein, a Samuel Cooper, and a Füger, but in the main, the Cosways represent its heights and the Plimers its bathetic average. They did things somewhat better, to be sure, in France, where a fair level of technical integrity was maintained. Still the very defects of miniature painting are of an endearing sort. Collectors of a modest kind will doubtless welcome this album of reproductions from rare and virtually inaccessible originals. We regret the absence of Bronzino, who would have added one more great artist to the few here represented.

"English Leadwork, Its Art and History," by Lawrence Weaver, F. S. A., is a large and richly illustrated quarto imported by the Scribners and sold at ten dollars net. The American student of decoration will be astonished at the antiquity and number

of fine remains. Not to mention lead coffins, there are elaborately sculptured baptismal founts of Romanesque period extant in several examples. As we approach the late Gothic period and the classical revival, water pipe heads and cisterns become prominent. Occasionally we find an entire bay window sheathed with the ductile metal. At all times spires and pinnacles have been covered with lead. Often the setting of the plates and the soldering is managed with great vivacity. Aberdeen spires, for instance, are almost without exception picturesquely herringboned. As we reach the century just past, lead work shares the general decline of all handicraft. Many garden statues, mostly copies of classic originals, date from the eighteenth century on. We find this the least interesting and idiomatic employment of the material. The ferment of the arts and crafts movement in England has done something to restore lead to architectural honor. Gutters, water leads, garden tanks—a whole class of decorative exterior plumbing, which had been done flimsily in stamped copper, zinc, or even tinned sheet iron, is now often designed and cast in the more durable metal. Mr. Troup's, Mr. Bankart's, and J. Starkie Gardner's designs all merit praise for their strength, simplicity, and appropriateness to the material. In general exterior leadwork seems best when it is merely serviceable, as roof covering, coping, or water service. The author's warning against milled sheet lead should be noted. With lead used as material for isolated sculpture we have little sympathy. Here there seems to be an æsthetic confusion between the charming little pewter statuettes of the Continental sculptors and the robuster requirements of garden statuary. Concrete or the softer stones for this purpose have every merit of lead and some additional virtues of their own. The appeal of this fully illustrated book to students of English decoration is strong, to practising architects perhaps even stronger.

Louis Auguste Hiolin, the sculptor, died recently at Silly-la-Poterie, aged sixty-three years. He pursued his artistic studies under Viollet-le-Duc, Aimé Perrey, and Jouffroy, and was a member of the Artistes Français, receiving four medals, the last in 1900. Among his works are the monument at Soissons in memory of the defenders of 1870, and the statue of Racine at Ferté-Milon.

Finance.

CAUSES AND CONSEQUENCES.

It is probable that Wall Street tradition will hereafter associate the recent spasm of Stock Exchange liquidation entirely with the collision between government and railways. There will, however, if experience is any guide, be three distinct lines of reasoning. We shall be told that the market would not have collapsed at all, but for Attorney-General Wickersham's injunction. We shall learn that the liquidation was inevitable, but that the Washington action hastened and aggravated it. Finally, we shall hear that economic causes were paramount, and that the railway rate dispute was only a passing incident.

Some light on the judgment of the future may be gained by a rather remarkable parallel case. Observant and reminiscent financiers have generally agreed in the strong points of resemblance between the events of the past few months and what happened towards the end of 1895. The comparison is now an old one, yet a fresh parallel incident is constantly being added. The premature after-panic boom, the violent rise in prices of commodities and stocks, the general outburst of speculation on borrowed money, the turning of an export balance on foreign trade account into an "import excess," the exhausting drain of gold, the wholesale placing of railway loans in Europe to correct the foreign trade position—this was the list of coincidences to date, a fortnight ago. But when financial watchers traced out these rather remarkable parallels, and indulged in more or less vague conjecture as to what would be the outcome on the present occasion, they were not aware that one of the most striking in all the series of parallels was close at hand. What happened next was no more foreseen in 1895 than in 1910, and, on both occasions, it had precisely the same effect on the Stock Exchange.

It was in September, 1895, that the highly unfavorable nature of the economic situation began to be discerned. Prices sold slowly off in the Stock Exchange; but the surplus bank reserve was large, money was very easy, and it was hoped that liquidation in commodities would solve the difficulties. Still, the uncertainty in the Stock Exchange continued, and by December there was anxious discussion, in conservative banking circles, as to whether true economic equilibrium could be restored except through much more radical liquidation. It was then, quite unexpectedly, that President Cleveland sent to Congress on Monday, December 17, his famous Venezuela message.

The wisdom of that message, especially as regards the veiled defiance of Great Britain, was a matter of warm discussion, then and afterward. It was, in fact, a much more disquieting political incident, so far as its ultimate possibilities were concerned, than the railway rate injunction, and the clamor of hysterical excitement which arose throughout the country was such as to make the recent "railway interviews" a trifling matter by comparison. The stock market hesitated; then liquidation on an extreme scale began. Before the week was over, Atchison stock had fallen 7 points, Burlington and Quincy 15, St. Paul 15½, Rock Island 16½, Lake Shore 14, New York Central 10. Even in the Wall Street call money market, rates advanced to 100 per cent. The liquidation in stocks was drastic and complete.

The reader can trace analogies for himself. During the break in stocks in the last fortnight of 1895, it was commonly alleged in Wall Street, first, that no way out of the trouble with England was in sight; secondly, that the Administration had hopelessly injured the financial situation. Yet a very few weeks sufficed to prove that there was a solution to the trouble; England agreed to arbitration of the Venezuela claims, much as the railways last week agreed to leave the rate dispute to the Interstate Commerce Commission. The Stock Exchange, even before the month was over, had recovered half its losses, and the purchases were largely by strong interests, home and foreign.

But the developments which presently ensued in the country's economic position were much more remarkable. During 1895, so deadlocked was the domestic market for capital that an enormously expansive foreign syndicate had to be employed to finance an urgently-needed loan to the United States Government. In January—less than a month after the "Venezuela panic"—another $100,000,000 loan was offered for home subscription by the general public; it elicited total bids of $568,000,000, was taken at a great advance over the price of the "syndicate loan" of 1895, and plainly showed that the market for capital was in a normal condition. Bulwarked thus by a liquidated speculation and by returning soundness in the economic situation, the market sustained with remarkable vitality the shock of Bryan's Presidential canvass. Liquidation was not by any means ended with "Venezuela week"; the markets had some bad quarter-hours in 1896; but three months before election day, prices were rising rapidly in the Stock Exchange; exports of merchandise far exceeded imports; gold poured in from Europe, and the way was prepared for the coming industrial revival.

HAVE JUST ISSUED:

Chas. D. Hazen's
EUROPE SINCE 1815

With 14 Colored Maps. 8vo. $3.00 net.

In this initial volume of the new AMERICAN HISTORICAL SERIES the aim has been to make the narrative so interesting in style as to attract the student, without sacrificing accuracy or proportion. For the sake of impressiveness it has been necessary to concentrate attention upon a relatively small number of topics, but it is hoped that no important step in the development of modern Europe has been s ighted. English history has been interwoven with continental history, and colonial development has received careful treatment. Great pains have been taken to make the bibliographical apparatus really useful to the undergraduate.

Helen R. Albee's
HARDY PLANTS FOR COTTAGE GARDENS

By the Author of "Mountain Playmates." (American Nature Serics.) With some 60 Illustrations from photographs. 309 pp. With Index. 12mo. $1.60 net; by mail, $1.73.

CONTENTS.—In the Beginning—An Incipient Garden—The Garden Grows—My Ambition Grows—Within the Garden Walls—Seeds—A Descent into Particulars—Propagation of Plants—Vices of Plants—Mine Enemies—Photography of Flowers—Some Gardeners I Have Known—A Dedication—Classified Lists—White Flowers—Blue Flowers—Yellow Flowers—Pink Flowers—Red Flowers.

A Further Enlarged Edition of

H. A. Beers' WAYS OF YALE

$1.20 net; by mail, $1.28.

Viola Burhans's
THE CAVE-WOMAN

A Novel of To-day, $1.50.

The action begins and ends in a dark cave. One of America's leading critics who saw this book in MS. commended "the originality of the story, the writer's real literary capacity, the carrying power of the whole."

Letters and Memorials

OF

Wendell Phillips Garrison

Editor of The Nation 1865–1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

THE NATION

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

10 cents a line for 13 times.

The Nation

The Nation.

NEW YORK, THURSDAY, JUNE 23, 1910.

The Week.

Mr. Roosevelt could not have made a better beginning in the renewal of his American life than by the wireless message he sent as he neared shore. He will place an interval of more than two months between his landing and his first public speech; and he "will have nothing whatever to say in the immediate future about politics, and will hold no interview whatever on the subject with any one." During his absence in far-away lands, home affairs have gone through many phases. Some of the developments, political and personal, have been of a sort to engender bitter controversy, some to provoke differences of opinion on complicated questions of fact or of policy. The tariff, and "Cannonism," and conservation, and Ballinger, and railway control have successively had the centre of the stage; and Mr. Taft's personal part in these affairs has been a special thread running through the whole story. Of all this, Mr. Roosevelt has of course acquired, by this time, very considerable knowledge; but nothing can take the place of actual contact with the situation on the spot, and he is wise in waiting awhile before he puts his influence into the scale on the one side or the other of any of these disputes. Apart from this declaration, too, Mr. Roosevelt's message was all that could be desired in point of simplicity and good taste.

The new rule adopted in the House of Representatives, with but one dissenting vote, involves momentous possibilities. It may alter the entire business of law-making by committee, a system which has been bitterly criticised as anti-democratic and inimical to honest legislation, and defended as an absolutely necessary development of parliamentary government, and which, whether we approve it or not, is a very solid fact that calls for recognition. The new rule provides that upon petition by a member of the House that body may, by a majority vote, discharge a committee from the consideration of any bill it has in hand, and that the measure shall then be placed upon a special calendar for action in the House itself. The great argument in favor of the new rule is that it will prevent the killing of bills in committee, a procedure with which the bulk of legislative graft is intimately bound up. And there may be sufficient additional reasons to overcome the obvious argument that the process of committee-taming, if carried to excess, would swamp the House with business.

In passing the bill authorizing the President to withdraw from entry any public lands of the United States which he thinks should not be open to sale or settlement until Congress has decided how they are to be disposed of, Congress has done a good day's work. This Executive power, under previous legislation, has been in dispute. Roosevelt and Garfield believed that it existed; Taft and the Attorney-General did not. In his letter to ex-Secretary Garfield of last November, President Taft consented for the time to allow many of the withdrawals to stand, though he feared that "a considerable stretch of the Secretary's power" was involved. It was of the highest importance that such doubts should be set at rest. This could be only by an act of Congress expressly granting the needed authority. In obtaining it, the President has not only procured one more item in his legislative programme, but—and this is of much greater consequence—has taken a long step forward in fortifying and making impregnable the whole policy of conservation.

The full text of Senator Dolliver's tariff speech appears in the *Congressional Record* of June 15, and we advise all to read it who like a demonstration of the fallacies which lurk in lump sums and general percentages. It was in itself a specious argument for Mr. Payne and Republicans who cited his figures to base the claim of large tariff reductions upon "consumption values"; but even accepting that basis, Senator Dolliver has shown how misleading is the inference drawn when lower taxes on bituminous coal which we import in but small quantities, and on agricultural products which we do not import at all, are reckoned as actual remissions of money paid by the consumer. In his elaborate analysis of the cotton schedule, of which in the special session last year the Iowa Senator showed that he had made himself a master, he is particularly damaging to Senator Aldrich and the tricksters who worked through him.

Judge Grosscup sees no stopping place in the movement to deal with the monopoly problem short of accepting the great industrial concerns as monopolies *de jure*, as they are *de facto*, and regulating their profits and their prices. "Some think," he said in his address at Philadelphia the other day, "the great corporations of the country can be made by law to compete. To compete with whom—when that particular corporation already has a monopoly of the field?" That may be the conclusion to which we shall all be driven at some time in the future, but there will be a good stout fight for the principle of competition before it is abandoned. Strong as is the grip of the monopolistic corporations, most of them have to keep within pretty definite bounds to ward off competition; and who can say what future developments in the way of mechanical changes, and in the way of changes in patent and other laws, may effect?

At a time when chances for Democratic success would appear to be better than usual in most parts of the Union, the situation in Tennessee presents many disquieting aspects. Primarily the difficulties are not political at all. Hostility to the renomination of Gov. Patterson has resulted, as it was manifest that it would, in a split in the Democratic party and the likelihood that two State tickets both bearing the Democratic stamp will be in the field this autumn. Opposition to Patterson is based on his action in the pardoning of the Coopers, father and son—the convicted slayers of Senator Carmack—and in his pro-saloon attitude. The Carmack faction is active and bitter, and with an alliance with the "State-widers" the result of the election would certainly be in doubt. But Patterson is apparently counting on Republican support to offset this defection. He has always been considerate of the negroes, and no Democratic Governor since the war has had

so strong a following among them. On this fact and the feeling among negroes that they have not been rightly treated by President Taft, he is doubtless counting to carry him again into office.

The city of Tacoma, dreaming dreams of empire on the shores of Puget Sound, has built itself a high-school stadium which is said to be capable of holding more people than Harvard's great amphitheatre. This magnificent monument to Tacoma's pride and her ambitions was dedicated last week with appropriate ceremonies which drew "24,000 cheering Tacomans" within the spacious concrete arena. Properly enough, the school children, whose nickels and dimes went to the making of the stadium, played the principal part in the festival. Four thousand of them were grouped in a great American flag. Seven thousand of them went through picturesque drill and dances. The climax came when the children, flags in hand, kept time to the playing of the "Star-Spangled Banner." Thereupon, says the Tacoma *Daily News*, "with one accord the entire audience rose to its feet, cheered the mass of waving flags, and joined in singing the national air. Men doffed their hats and all were thrilled with a new feeling of patriotism. Tacoma will probably never in her history witness such a patriotic sight as that of yesterday afternoon when the living flag was presented." Having thus dedicated her unsurpassed stadium, Tacoma forthwith telegraphed an offer of $101,000 for the privilege of "pulling off" the Jeffries-Johnson fight on that splendid field.

Two and twenty Mayors are taking part in the two-days' discussion of municipal health problems at the conference which is meeting at Schenectady. There will be specialists there to instruct them in the various phases of a question that is as important as any that confronts the chief executive of a city. Housing and health, rest and recreation, the city and life-waste, the city and tuberculosis, health-department organization, city sanitation, and city food-supply are among the problems that are to be taken up for consideration. Why, it may be asked, should Mayors spend time and the public money in listening to information that is accessible enough in printed form? The answer is that personal contact among a group of men doing the same work is a way of stirring the enthusiasm that begins to flag under the strain of daily routine. The Mayor has hundreds of printed volumes to read if he so desires; but has he either the time or the inclination? From a two-days' threshing out of problems, theories, and remedies, the Mayor may bring back a vivid realization of duty and need that no amount of printed pages can supply. The conference of Mayors may supply just the right spectacular spice which is frequently so necessary to the whole-hearted attack of a problem.

Any one who in a telephone booth has been disturbed by loud talking outside, or some other noise to interrupt the electric conversation, will be interested in an article in a German periodical, *Der Gesundheitsingenieur*. The writer tells how he dealt with this difficulty. He had been making some acoustic experiments which convinced him that if a wooden telephone booth were lined with tin, all noises would be excluded. He nailed sheets of tin on the wooden walls with the result that an expert, who had laughed at his idea, was so impressed that he forthwith proceeded to construct a number of such booths. Nor are telephone users the only ones who may profit by this experiment. The writer referred to appeals to architects to introduce tin, or aluminium, in the walls of houses generally, to deaden sounds. He is convinced that if this were done, the neighbor's daughter's piano and voice would cease to be a disturbing factor in life, except, of course, in summer, when all the windows are open. The tin-manufacturers may be trusted to see to it that this plan is properly pushed and advertised.

Missionary literature, in general, has been slow to admit any dark side to the American occupation of the Philippines. In a recent number of *Missions*, however, the official Baptist missionary organ, certain unpleasant phases of the situation are set forth with candor and vigor. A missionary writing from Jaro finds the chief difficulty to lie in the utter inability of the American to rid himself of race prejudice. "The American in the Orient has the air of being the sole representative of the human race, and the Oriental is classed as a sub-human species that may eventually develop, through long periods of progressive development, into the *genus homo*." It is a pathetically rare thing, he says, to find any American resident among the Filipinos who is not continually berating, in both public and private, the entire Filipino race. The natives had at one time given themselves over to a whole-hearted acceptance of American intervention, and set themselves enthusiastically to the task of acquiring American methods of government, industrial development, and education. But the supercilious air with which their aspirations were met convinced them that "there was only social and moral peonage and serfdom along this way."

The charges of American violation of neutrality made by President Madriz may be impertinent. It may be true, as Secretary Knox declares in his reply, "that the policy of the United States remains as set forth in the Secretary of State's letter of December 1, 1909," wherein this Government announced that it would recognize any Nicaraguan faction which succeeded in organizing a stable government and pacifying the country. It may be true that in prohibiting the bombardment of Bluefields by a Madriz war-vessel, we only followed the example of the British at Greytown. It may be that we are in the right on every point against President Madriz; but there is something that we may owe to the people of Nicaragua as opposed to its Presidents or would-be Presidents. The war there has resulted in a deadlock of exhaustion. The economic condition of Nicaragua is described as very bad, and as getting rapidly worse. Under such circumstances, it would not be amiss if the United States, returning good for evil, were to offer its services for the attainment of peace, or even express the wish that some other agent than ourselves might be entrusted with the task. The mere offer on our part would in itself do a great amount of good in depriving Estrada of all excuse for holding out to his deluded followers the chance of American intervention in his behalf.

Another Mexican revolution has been nipped in the bud. It was planned to come off next Sunday, when that blushing young Presidential candidate, Por-

firio Diaz, is to appeal for the suffrages of his fellow-citizens, or know the reason why. Mexico's revolutionists must be either criminally foolish or criminally reckless in picking out just the week and the day when Porfirio Diaz is likely to be widest awake and to have most troops at his disposal. One would imagine that a revolutionary *coup* would be best set for the day after election, when the victor is a bit dazed with his triumph and the vanquished are sore with defeat. The other hypothesis is that the Mexican revolutionists were neither reckless nor foolish, that no outbreak had been set for election day, and that the entire dreadful plot was the discovery of Diaz and his zealous agents. It is, to say the least, unfortunate that the man who holds Mexico in the hollow of his hand should be so badly frightened by his enemies' plots just a few days before election day.

Amid all the rumors of conferences and an agreement, on the Constitutional issue, between the two parties in England, little has been heard of another movement which may have consequences almost as important. We refer to the non-partisan committee in the House of Commons which has been laboring to make a beginning of woman suffrage in England. Called a Conciliation Committee, and composed of 16 Liberals, 11 Conservatives, 5 Irish Nationalists, and 4 members of the Labor party, it has worked out a bill which, it is hoped, may prove non-contentious, and may pass at least in the Commons during the present sitting of Parliament. The proposed measure is considerably short of complete enfranchisement for woman, yet would, if adopted, put the names of many female voters on the register. In brief, two classes of women would be made voters: householders and the owners of a £10 occupation qualification—that is, occupiers of lands, offices, or shops of that renting value. Not many married women would be admitted to the franchise under this plan, since they could not qualify for the same property as their husbands; but, on the other hand, they would not be disqualified. To this moderate proposal all sections of the committee have agreed; and both the great suffrage societies—the National Union and the National Women's Social and Political Union—have officially accepted it as a payment on account.

The system of proportional representation has had its most extensive trying-out in the recent general elections in Belgium. It has operated acceptably well, but without removing all the anomalies of the ordinary system. The anti-Catholic parties in the Chamber have registered a popular vote of 1,125,000, against 1,063,000 for the Catholics; yet the latter hold a majority of six in the Chamber. At Malines, 24,818 votes gained a single seat, while 41,632 votes gained three seats. At Nivelle, it took only 15,419 votes to elect a Liberal but 24,818 votes to elect a Clerical. At Arlon, 20,521 Liberal votes gained a single seat, and 25,294 Catholic votes won two. The failure of the proportional-representation machine to function perfectly is due, in Belgium, partly to the existence of the plural vote which counterbalances the effect of the proportional distribution. But partly the cause is to be found in the mathematics of the particular system used in that country. There is no denying, however, that R. P., as the French-speaking people call it, is effective against gross misrepresentation. In Belgium, where the Catholics in 1900 had a Parliamentary majority of 29, the rectifying influence of proportional representation has cut down their swollen majority to 26, to 20, to 12, and to 6, successively.

The open advocacy by the Prime Minister of entire religious liberty in Spain, and the firmness with which he is proceeding from step to step in order to procure it, are only parts of the large and comprehensive policy which Señor Canalejas is pursuing. This he explained in person and with great directness to the Madrid correspondent of the *Frankfurter Zeitung*. His great aim, he said, was the restoration and quickening of the Liberal tradition. On the one side, this would lead to a vigorous opposition to overweening Clerical pretensions, while on the other it would work against the extremes of the Socialists and Republicans. As regards the latter point, Prime Minister Canalejas may point with satisfaction to some of the results of the recent general election. Although Republican successes were unexpectedly won here and there, in Catalonia, so long the seed-bed of Spanish Republicanism, the old Catalan solidarity was rudely shattered. Whereas in the previous Cortes there were eighteen Republican Deputies, working hand in hand with fourteen "regionalists," in the new there will be only ten Republicans and seven regionalists, the Liberals having made great gains and carried thirteen seats. One remark of Canalejas in the interview is striking. He said of the King: "Alfonso XIII is a thoroughly convinced Liberal and a monarch with modern ideas. I have laid before him my entire programme, without any concealment of the difficulties in the way of its realization, yet he has given me his full confidence and co-operation."

Hungary, like France and Belgium, has just had a Parliamentary election. The results are more significant than in either of the other two countries. The Independent or Kossuthite party, which for a half-dozen years has been sufficiently in the ascendant to make government by any other party impossible while not governing very well itself, has been decisively beaten. And its defeat has come not at the hands of any other great party, but of the Crown itself. The Liberal party, after holding power for many years, was overwhelmingly defeated in January, 1905, by a combination headed by Francis Kossuth and Count Albert Apponyi. Confusion followed, and it was not until April, 1906, that a compromise or "functionary" Cabinet was organized, with Wekerle at its head and Kossuth and Apponyi in important Ministerial positions. The question of universal suffrage and a separate state bank for Hungary brought dissension, and in 1909 the Coalition split wide open. The only remedy was the usual one in the Hapsburg domains—the appointment of an interim Ministry of officials to carry on the necessary business of government. Count Khuen-Héderváry was chosen Premier, and he made preparations for the recent general election in which the country gave him a rousing majority, thus indicating its weariness of party strife and turmoil. Inasmuch as the Independent or Coalition party was bent upon greatly loosening the ties with Austria, its defeat has been hailed by the Premier as a return to the principles of the dual arrangement of 1867, "which form the basis of the country's international position."

RAILWAY REGULATION.

Most of the comments upon the railroad bill, as now signed by the President, play upon the surface of the matter. They refer to Mr. Taft's pleasure—very natural under the circumstances—at having persuaded Congress to do what it long appeared probable that it would not do. There is also much said about the due apportionment of credit—or blame—for the final form of the law, as between Republicans and Democrats, insurgents and regulars. The political effect of the new statute is likewise much discussed. What part will it play in the coming Congressional elections? Will it prove to be a winning card for the Administration? Such questions are inevitable; and the personal equation is brought in as a matter of course; but none of these things goes to the heart of the business.

It is apparent at once that the law represents an enormous advance upon what has gone before. When Mr. Roosevelt's modest proposals, a part of which were finally embodied in the Hepburn bill, raised such an outcry and led to such fierce debates and prolonged struggles, few could have supposed that we should so soon and so quietly be adopting much more radical recommendations. The event would certainly lead Machiavelli, if he were alive and writing of current events, to renew and reinforce his sagacious remark: "Let no one who begins an innovation in a state expect that he shall stop it at his pleasure, or regulate it according to his intention."

The precise "intention" of the framers of the original Interstate Commerce Act has been warmly disputed, but there can be no dispute that their handiwork has now been made over so as to be almost beyond their recognition. The control of the Interstate Commerce Commission over the business of railways has been made both more sweeping and more minute. We say nothing of the regulation of the issue of securities, for that has been put aside for the time being by reference to a special commission. But in what stands we have a great expansion of the supervising and regulating power of the Commission. It may, on its own initiative, and without waiting for a complaint, take up any case of rates or practices that seem unreasonable, and issue its order. Chief in importance is the provision making all increases in railway rates ineffective until approved by the Commission, and squarely putting upon the roads the burden of proof that the advances are reasonable and warranted. Other clauses hedge about what the railway managers have hitherto regarded as their liberties; and the whole act constitutes a more drastic scheme of government regulation than would have seemed conceivable—to say nothing of being practicable—ten years ago.

Even those who argue that this vast extension of the powers of the Interstate Commerce Commission had become necessary, will not deny that it may be fraught with grave consequences. We will not say, with the president of the Baltimore and Ohio Railroad, that it leads inevitably to the government ownership of railways, but it cannot be denied that, if there is a genuine movement for such ownership, it will be greatly accelerated by what has now been done. Happily, Americans remain, with the English, highly illogical in their politics. Because one step seems to demand an immediate next step, it does not at all follow that we shall take the latter. We are still fond of partial experiment, and are very much rule-of-thumb in our public business. The chances are, therefore, that this new venture in railway regulation will have a long trial before anything further is attempted; that a *modus vivendi* will be worked out between the Interstate Commerce Commission and the railways; and that we are not going to see the property of the great transportation companies either confiscated or nationalized.

It is noteworthy that the railway presidents who talk at all about the new measure assume an optimistic tone. Their cheerfulness may be partly forced, but it is certain that any sound railway company honestly conducted has little to fear. It is to be assumed, to begin with, that the members of the Interstate Commerce Commission are upright and capable men. They have no desire to harry the railways. Abuses and illegalities it is their function to repress and punish, but the normal and lawful prosperity of the business they would wish to cherish and cultivate. Moreover, in all the new publicity and compulsion to prove that their rates are reasonable, no substantial right of the railways is imperilled. They may always take their appeal from unjust decisions to the courts; while all that they ought to ask is the privilege of demonstrating to an impartial tribunal that what they propose is proper and necessary. If, for example, it can be shown that the railways, in order to obtain adequate returns, must raise their freight rates, there is nothing in the new law to prevent its being done. Only, it must be done in an orderly and deliberate and public way. No one supposes that inexorable financial laws can be set aside by statute. All that President Taft and the other champions of the new law have contended for is a kind of working agreement between commercial necessities and the rights of the public. And now that the great experiment is to be entered upon, every one must hope that it will be carried through in a spirit of mutual forbearance and with a desire that justice be done to all concerned.

THE NEW STATES.

Arizona and New Mexico have at last been admitted into the Union as separate States, and their peoples must now set to work at Constitution-making. The addition of two more stars to the flag has peculiar significance in the present instance, because they are the last two stars that the present continental territory of the United States, omitting Alaska on the ground of "non-contiguity," can supply. The process of commonwealth-building between the Atlantic and Pacific Oceans is now rounded out; and with it an historical epoch is completed. From unorganized territory to organized territory, from organized territory to Statehood, the process has pursued its play for one hundred and twenty-three years, since the poor, decrepit Congress of the Confederation gave the first solid pledge to the future in the Northwest Ordinance. New Mexico and Arizona enter the Union very much in the same fashion that Tennessee and Ohio came in. This unbroken process is one more striking testimonial to that stability which has gone hand in hand with democracy in this country.

Statehood for Arizona and New Mexico closes also a secondary epoch in the process of commonwealth-building, a period in which the process has moved forward more rapidly than it ever did in the history of the country. In the twenty-two years since the election of Benjamin Harrison to the Presidency,

nine States in all, counting Arizona and New Mexico, have been added to the Union. The only two periods that can show anything like the same record were the years 1812-37, when seven States were admitted, and the years 1840-61, when eight States entered the Union. Of the fourteen States that have been added to the sisterhood in the half-century since the outbreak of the civil war, four were admitted before 1867; then came a pause of nine years, till Colorado, the centennial State, entered; then comes a longer pause of thirteen years, a gathering of strength and wind for the final effort, and the Dakotas, Montana, Wyoming, Idaho, Washington, Oklahoma, and now the two southwesternmost States, are brought within the circle. It is a political growth that has resulted from and kept pace with the marvellous economic development of the last twenty years. And in a way the passing of the territorial form of government from the continental United States suggests that passing of the limitless land areas and limitless resources to which we are just beginning to awaken. The nation has completely grown up and been brought to face the responsibilities that go with maturity. The child ranges free; the man seeks his resources in himself. We speak today of such things as dry-farming and intensive cultivation.

What have these new States to contribute to the Federal partnership? Arizona has 113,000 square miles of territory and New Mexico has nearly 123,000 square miles. Arizona had in 1900 a population of 123,000, but a Federal estimate for the year 1909 places the population at about 155,000. New Mexico has grown a little more slowly and has risen from 195,000 in 1900 to some 227,000 in 1909. It may also be in order to mention that a Federal estimate of five years ago places the value of property in New Mexico as $332,000,000, and in Arizona at $306,000,000, a per capita wealth which is almost the same as that shown in a prosperous old State like Iowa. The public school has kept pace with material prosperity. Arizona's population is one-fifteenth of Iowa's, and so, very nearly, is her school-attendance. New Mexico's record is still better. Her population is one-tenth of Iowa's and her school-attendance is one-eighth. Arizona's fervid objection to Statehood wedlock with New Mexico cannot be justified on the ground that it would be marrying down in the social scale. Of the two, New Mexico, as much the older community, is apparently the more advanced in culture. The prejudice between Arizona and New Mexico is partly racial and partly political.

Politically the admission of the two States will not affect the party strength greatly in either branch of Congress. Arizona sent a Democratic delegate to Congress from 1900 to 1906, and elected a Republican by 700 in 1908, a Presidential year. The Legislature, which had its biennial session last year, stood 27 Democrats to 9 Republicans. New Mexico has sent Republican delegates to Congress, though by majority of less than four hundred votes, but the last Legislature showed a Republican majority of 20 on joint-ballot. Two Democratic Senators from Arizona and two Republican Senators from New Mexico would seem to be the most immediate prospect. The case of Arizona would seem to be the surer one, because in that territory the delays and disappointments it has experienced at the hands of a Republican Congress have engendered sharp resentment. The sentiment has been repeatedly expressed that "the Republican Congress is doing everything in its power to make Arizona overwhelmingly Democratic."

AMERICAN PEACE DIPLOMACY.

Secretary Knox's address at the University of Pennsylvania on "The Spirit and Purpose of American Diplomacy" had a peculiar timeliness. He shows that the whole course of American diplomacy has made for the promotion of peaceful methods of settling international differences, and peaceful means of advancing international welfare; and his words come at a time when attention has been directed to one of the most notable specific developments of these efforts. The permanent arbitration tribunal at The Hague has begun the consideration of the age-long fisheries dispute between this country and Canada; and the fact that two of the leading Powers of the world have submitted this extremely complex problem to judicial determination is justly regarded as an event of the highest significance. The great international jurist who presides over the tribunal, in opening the proceedings, expressed the profound satisfaction which is felt, throughout the world by those who have worked for the promotion of pacific methods, in this signal proof of the progress accomplished in the few years since the first Hague Conference. Mr. Knox's survey shows how this recent development, extraordinary as it has been in scope, and in promise for the future, is a consistent sequel of a long history, in which our own country has a right to feel that it has borne the leading part.

It is interesting to note the source to which Secretary Knox ascribes the early addiction of the statesmen and diplomatists of the United States to peaceful settlement of international controversies. "Representing," he says "a small and weak belligerent nation, beset with difficulties of discipline, organization, equipment, men, and finance, and realizing in the fullest measure, as they did, how near they were to losing, because of these deficencies, their own struggle for what, in their opinion, was a just and righteous cause, it is not strange that these men should have later sought for some method of adjusting their international difficulties other than by the lawless uncertainties of war." John Jay's treaty of 1794, for the settlement of boundary and other disputes with Great Britain, ushered in "the modern era of arbitration," and to the mother country Mr. Knox assigns high praise for assenting to this arrangement when the advantage in an armed conflict seemed so likely to be hers. From that time to this, in a hundred ways, our dealings with a great variety of international affairs have shown a constant tendency in the same direction. Nor has the example of our country in this direction been limited to the promotion of arbitration; the success of its endeavors in promoting various useful ends in China, Japan, Korea, Turkey, and elsewhere, with no threat of force to back its representations, has been a potent factor in the furtherance of the idea that a nation may effect great international results without resort to warlike measures.

A chapter of American diplomacy that has a character apart from all the rest is that which relates to the republics of South and Central America. To the advance of those republics towards their present condition, the United States has contributed chiefly by its constant solicitude for the preservation of their independence and for the inviolability of

their territory. What the condition is, Mr. Knox expressed in his statement that, with some exceptions, they "have achieved government as stable, as enlightened, and as responsible as our own." It is not very many years since such a statement by an American Secretary of State, if mado at all, would have been regarded as a mere bit of conventional politeness. We were in the habit of using the generic term South American republic as synonymous with a country racked by revolution, falling prey, in rapid succession, to one adventurer after another, and incapable of making steady economic, political, or social progress. Now all that is changed; and there could hardly be a more impressive lesson as to the folly of impatient judgment and impulsive action in dealing with the difficulties or imperfections of backward nations.

One landmark in the history of our country's relations with the outside world is conspicuous by its absence in Mr. Knox's address. It has become so customary, in many quarters, to speak of the war with Spain as marking not only a turning-point in our country's history, but the beginning of its importance as an influence among the nations, that it is somewhat curious to find no indication of anything of the kind in this historical survey. One is almost tempted to think that the United States was not an altogether insignificant factor in the affairs of the world even before Dewey smashed the Spanish ships in Manila Bay. Perry's opening of Japan to the world's commerce, for instance, "was justly hailed, both in Europe and America, as a great triumph of peaceful diplomacy"; and—to choose an example that has to do with international wars—the action taken by our Government in 1895 in bringing about the restoration of peace between China and Japan is set down as though it were a respectable achievement. Of the signal part played by the United States, from almost its earliest days, in influencing international law and custom on the subject of the rights of neutrals in time of war, Mr. Knox does not happen to make mention; but the current of American diplomatic effort appears, from his story, as one that has flowed steadily and strongly, and that has made itself felt effectively, from the time of Jay's negotiation of the treaty of 1794 to the present day. Its latest phase is represented by the effort Mr. Knox himself is making, with every prospect of final success, to enlarge the present arrangements at The Hague into a true court, having a continuous life and permanent membership, and devcloping its own body of authoritative rules and precedents—a court to which, in all ordinary conjunctures, the nations of the world will submit their differences just as individuals now submit theirs in an ordinary court of law.

SWELLING PUBLIC EXPENSES.

Gov. Hughes has lopped off nearly $5,000,000 from the appropriations made by the New York Legislature, but even so the total left in force is some $5,000,000 greater than last year. These two facts, taken together, are a telling commentary on the enormous difficulty of keeping down public expenses. Not everything can be charged to the recklessness of the Legislature. It did, indeed, display a cool disregard of the probable revenue of the State, and apparently took no thought for making both ends meet; and it hid away in the supply bills a great many suspicious items through which the Governor thrusts his discriminating pen. There was evidence of a good deal of log-rolling in the make-up of this year's appropriations at Albany; a surprising number of armories were to be built here and there throughout the State, and several local grants in aid of politicians were proposed. Most of these Gov. Hughes has disallowed, and has done it on principle, so that supporters of his in the Legislature suffer as well as his opponents, though the latter are naturally more numerous since more of them had legislative favors promised them for entering into the combination against the Governor. But making allowance for all this, and taking it for granted that Gov. Hughes has cut off every dollar possible, we remain confronted with the unpleasant truth that the necessary expenses of the State have increased $5,000,000 in a single year—or more than 10 per cent.

Yet all of this increase, the Governor shows, falls within the provision of money for the educational, the humane, the reformatory work of the State. The added sum of $540,000 had to be appropriated in order to carry out the Constitutional amendment adopted by the people raising the salaries of the judges. An increase of $325,000 was made in the appropriation for public schools. Hospitals and prisons came in for a provision of needed funds larger by upwards of $2,000,000—though half of this is really arrears. The money required for keeping up with the work of abolishing grade crossings and enforcing the law relating to motor vehicles eats up an additional $850,000. None of these public expenses could be cut off without diminishing the charitable and progressive activities of the State. And the experience of New York is but the same as that of other States and of municipal governments. The public outlay shows everywhere a distinct and seemingly irresistible tendency to increase faster than the growth of population, faster perhaps than the accumulation of wealth.

This, of course, is no argument against making constant and valiant efforts to keep down public expenses. On the contrary, it is a powerful argument for doing it. With so many new demands upon the public purse, that are so hard to refuse, the need of withstanding every form of extravagance and waste becomes all the more imperative. So does the call for perfecting and enforcing better systems of financial control. Of one such we have a happy example in the power bestowed upon the Governor of New York to veto separate items in appropriation bills. The general practice is to compel an Executive to take or reject a measure in its entirety. Under that plan, the temptation to slip all kinds of indefensible projects into an appropriation bill is obvious. Once get them safely tucked within its four corners, and the veto cannot reach them without causing the whole act to fall—and that would often mean serious embarrassment to the public business. Hence the vast importance of being able to strike out dubious items. If President Taft, for instance, had the power of the Governor of New York to single out and refuse to sign bad clauses or vicious details in the money-bills sent to him by Congress, he would be much nearer in sight of effective control of the national expenditures than the Administration can now be said to be. Indeed, at Washington as at Albany, there is much concern over swollen appropriations. Despite the fact that the official estimates were $40,000,000 less this year than the appropriations last year, and notwithstanding all the talk in the Sen-

ate about economy, and the actual formation of something like a budget committee, Congress has been voting money very much in the old fashion, so that the outlook now is, not for a large saving, but for an actual increase in expenses.

Lord Cromer once made a speech on financial administration in which he said that he had always held it a rule in Egypt, whenever the question arose of making a new governmental outlay, to insist upon being shown first where the money was to be found. He added that, of course, the problem was different in a country where elected representatives might force the hand of a Finance Minister. But he said, dryly, that while this altered the political problem, the arithmetical problem remained precisely the same. Money voted has still to be found. And the only place where it can be found is in taxes. Hence before citizens settle down comfortably in the conviction that the increase of public expenses is bound to go on, and that no man, no party, no system can prevent it, they ought to ask themselves whether they will be equally comfortable in the thought that there is to be a like and unavoidable increase in taxation.

GOING FISHING VS. ANGLING.

Only a very dull or untrained reader—of the kind that would confuse fox-hunting with shooting foxes—will stumble over this title. The angler and the man who goes fishing inhabit different worlds, profess mutually incompatible morals, and reciprocally must misunderstand each other. Your angler is essentially an uneasy man, a stickler for form. The mere taking of fish is a trifling incident in a long and complicated process. For months he has weighed the merits and demerits of rod-makers, all winter he has put by with the eye of the critic featly tied flies, has considered the mechanism of reels, by taking thought has cut an ounce from the weight of a rod, and finally, when he reaches lake or stream, he not merely wants fish, but wants them according to an elaborate code. They must be taken on the top of the water, with the lightest tackle. The angler, like a pseudo-classical dramatist, has his unities and scorns mixture of the *genres*. He abounds in distinctions. Under certain circumstances, but carefully restricted, an artificial minnow may be substituted for an artificial fly, but only contempt would be his portion who should add to fly a tiny revolving spoon, or tip the combination with a bit of the loathly earth-worm. In short, the angler seeks not fish, but an engrossingly ceremonious pursuit of them; not relaxation, but a fine and exacting avocation.

Imagine pretty nearly the opposite of this character and you have that of the man who goes fishing. He prefers the coarsest and most handy tackle. Any lure serves him, and a line hitched for security to a tholepin at one end, with a hook at the other, is often his entire outfit. His whole mental attitude differs from that of the angler. Whereas the neo-Waltonian plans an aggressive campaign, the man who goes fishing waits passively until destiny provides fish or night. There is a belief that anglers are contemplative men; Izaak Walton gave some comfort to such a fallacy on his title-page. The error is radical. No one can be more incapacitated for vagrom meditations than he who is conscientiously whipping a stretch of water. After the business of angling, in evening lassitude, an angler might possibly be contemplative; the strength of the mere fishing man's position is that he is never on duty, always free to slumber, to muse, to indulge hazy philosophies, for in so doing he fails in no duty and loses no tactical point. The fish that is simple enough to bite at the crude bait covering a massive hook is doomed to stay on until he is wanted, though a system of morals were evolved the while.

It is, in fact, the simple, instinctive love of vagabondage that takes men fishing. To be for a space dissolved in the flux of things, to escape the calculable, drop a line into mysterious realms above or below conscious thought—this is the privilege of the man who goes fishing. One bond unites him with the angler—neither primarily desires fish, but a special experience; and here the man who goes fishing has the advantage of setting forth impromptu whenever the spirit moves, and of always coming back with some kind of catch. For it cannot be denied that, while the angler, for the sake of a maximum of form, cheerfully puts up with a minimum of fish, the total lack of fish disconcerts him. Here his humbler colleague evinces a superiority, a purer amateurism. Knowing that the inner rewards are his, he has no shame at being outwardly "skunked." It is enough to have restored the unity of his spirit; he has been a-fishing.

A fair consideration of the man who goes fishing will do something to extend the tolerance and reduce the spiritual pride of the angling kind. Angling lends itself to strange perversions; the lowlier pursuit is ever integral and worthy. There are insensate, demoralized anglers who, borrowing the professional fisherman's quite legitimate desire of fish, employ strange artifices. Bottom baits, spinning, or twirling; likenesses of creeping and hopping things there are; nay, one reprobate we have met who shamelessly displayed a moleskin mouse which, twitched on a lake, he held was infallibly appetizing. Such fanatics pursue fish with the ungraceful ardors of a Calvinist doggedly treading the primrose path. They lack the delicacy of the angler, the geniality of the man who goes fishing, and the economic warrant of the pot-fisherman.

It may be urged and should be frankly admitted that the man who goes fishing has the defects of his qualities. Whereas the angler is usually temperate, keeping training as it were, the man who goes fishing is likely to accelerate with stimulants the oncoming of cosmic sympathy. In fact, there is something receptive and sponge-like in his texture; he absorbs either from within or without. To many, on the other hand, the mild progressive narcotization of sun and wind and lapping water is sufficient. These are the elect of the class. There must be times when the angler, substituting laboriously the niceties of his recreation for the rigors of his daily task, envies just a little some motionless vague figure squatted in a punt from the side of which depends inertly a mighty cord. Yet there may be rarer moments, when the trout are leaping, in which the man who goes fishing likewise envies just a little the finished art of the angler.

BUSINESS AND PLEASURE.

A few days ago, an item of news which attracted considerable attention told how a man who had begun life as a bank messenger at the age of fourteen rose to the presidency of the greatest bank in Chicago. Mr. Reynolds, it

was stated, "has never lost a day from sickness; he has never taken a vacation that did not have business inside; he does not drink; he does not smoke; he does not play bridge; he does not play golf; he has no favorite author; he has no hobby but banking; he has no country residence; he does not even take exercise; he works nine hours a day." Mr. Reynolds himself declared that he had adopted as a rule of life the maxim, "Make your business your pleasure." Putting this and that together, one might pleasantly conclude that brilliant outward success and complete inward satisfaction were both within the reach of all of us: work all the time and have unbounded love for your work—that is the sovereign prescription to procure not only success, but also happiness.

Of course, this illusion can be entertained only for a moment; the problem of life obviously admits of no such simple solution. Even if we were to suppose that everybody could follow the prescription if he chose, and that it would be a good thing if everybody did follow it, we should be confronted, first of all, by the manifest impossibility that the result should be similar to that recorded in the case of Mr. Reynolds. High distinction for everybody is a contradiction in terms. It is only in comic opera that the prospect is held out for *all* to become rulers of the Queen's Navee as the reward for sticking close to their desks. There are millions who start in life as messengers or the like; there are tens of thousands who are faithful, competent, and industrious; but those who reach the top must of necessity be counted only by the hundreds. To tell everybody, therefore, to follow Mr. Reynolds's example, with the expectation that this will lead to like achievement, would be obtaining business virtue on false pretences.

As for the maxim, "Make your business your pleasure," it is in itself excellent. To take pleasure or satisfaction in one's work is a prime requirement of contentment; and if a man can have an absorbing love of his work he has gone far toward solving the problem of happiness. In some pursuits, too, it is possible for large numbers of persons to have this unbounded absorption in the labors to which their lives are devoted. The whole tribe of German university professors—as they were, at least, before the commercialization of German life in these latter years—might be reckoned in this class; and there are many artists and musicians who, without achieving high rank or notable artistic success, find a like joy in their labors. But in most fields of activity, such keen satisfaction in the pursuit of the daily business is possible only if a man feels that he is exercising unusual powers and accomplishing unusual results. A man may well be satisfied to be simply an industrious and competent cashier, or foreman, or manager, or what not; but, unless he has a sadly limited range of thought and feeling, he can hardly find that this occupation of itself supplies all the pleasure and gratification that he has reason to look for in the world about him.

There is nothing, therefore, to regret, in the fact that we are not all equally great lovers of work. There is room in the world for an indefinite number of comfortable, easy-going people—people who do not shirk work, but whose appetite for it is limited. But for people of the other kind, who find unfailing joy in ceaseless toil, there is only a limited amount of accommodation. It is for them, indeed, the saying has been invented that there is always room on top; but the saying is rather a truism than a truth. There is always room on top for those persons who can get there; but for those who cannot, it would be folly to order their lives on a plan expressly based on the supposition that they can. Here in America, we are quite as much in need of encouragement to make pleasure a business as to make business a pleasure. Both rules are good in their degree; neither is absolute. Keep your nose to the grindstone by all means, if you enjoy it; but don't tell everybody else that he must enjoy it as much as you do. There is room for a vast difference of tastes in this matter; and the difference of tastes is in itself a good. No one type of man, and no one attitude toward life, should suffice for a whole people; and if there is one thing more than another in which we should benefit by the infusion of a somewhat alien spirit, it is in the appreciation of those pleasures of life which are to be had from a free-hearted use of leisure.

HISTORICAL LITERATURE IN AUSTRALASIA.

SYDNEY, June 1.

Some twenty years ago, the Government of New South Wales decided to publish its early manuscript records. The gentleman commissioned conceived his duty to consist in the composition of an historical narrative from those documents. After the printing of two volumes on these lines, the work was arrested, and the publication of the documents began in 1893. They fill seven considerable volumes, which must remain the foundation of a critical history of Australia. It is fifty years since New Zealand collected in a volume of parliamentary papers the instructive reports of select committees of the British Parliament and other official documents connected with the early colonization and settlement of the islands. At that point, for half a century, the task was left. Then, more than ten years ago, an instructed and capable inquirer, Robert McNab, barrister and farmer, latterly legislator and minister, devoted himself to collecting all discoverable documents relating to the early history of the most southern part of New Zealand. Not only Southland itself, as the portion is termed, but the adjacent islands were his objective, though not the fields of his research, since no documents were to be found there. In Tasmania, Sydney, and London, where he ransacked the Record Office and the British Museum; in many American cities—Salem, Boston, and New Bedford, Nantucket, Providence, and Newport, Baltimore, Philadelphia, and Washington; and in Madrid and Paris—not yet in St. Petersburg, though he does not despair of it—he found the precious materials of his historical labors.

What was it he found, and what did it tell? Such documents as have never before, perhaps, been regarded as materials for history—chiefly the log-books of ancient voyages. Of one such find, he tells with the subdued enthusiasm of the fortunate collector. In "the magnificent collections of the Essex Institute," Mass., Mr. McNab had the good luck to discover a volume, "got, no one knows where," containing three precious logs, especially that of the ship Britannia, which landed the first sealing gang on the coast of New Zealand in 1793. How far afield this indefatigable researcher has gone appears from the facts and scenes now first drawn from the narratives of two great navigators—the Spaniard, Malaspina, and the Russian, Bellingshausen. All these documents he has printed copiously in his "Murihiku and the Southern Islands," published in 1907 after nine years' research. Two years of further research brought within his command such a mass of additional materials as compelled him to reconstruct his work. It now appears under a similar title—"Murihiku: a History of the

South Island of New Zealand and the Islands adjacent . . . from 1642 to 1835" (Christchurch: Whitcombe & Tombs). He has extended the scope of his work in both time and space. He now carries it back to the visit of Tasman and brings it down to the early days of British colonization. Mr. McNab has the merit of discovering the fact that New Zealand had a remarkable early history, and to him it is the most fascinating period of her annals. Few will agree with him, but all will admit that he has revealed a wonderful unknown period, when the sea-elephant hunters and the whalers lorded it over the shores of a new land. He has first described their methods and daily life, told of the discovery of the various islands, and narrated the genesis of antipodean commerce. A book so completely original, containing matter so absolutely new, and so thoroughly documented, is seldom published, and much of it concerns American readers, who will find in it new lights on their early maritime history.

National bibliography follows in the wake of the publication of national documents. It is long since the second French Empire issued a bibliography of its history. More than twenty years ago the librarian of the London Athenæum, amid the laughter of his *confrères*, quixotically undertook to produce single-handed, if aid were not forthcoming, a bibliography of English history. The British colonies, which are ahead of the Motherland in so many other things, are ahead of her in this. Many years ago the Public Library of Sydney brought out a bibliography of the seven colonies. In 1889 New Zealand took a step in advance. Its then parliamentary librarian, James Collier, published under the auspices of the Government a bibliography of the literature relating to the colony. It had some special features. Appended to each title in the chronological catalogue there were notes, sometimes lengthy, containing a précis of the work, and embodying information, sometimes recondite, relative to the book. Next, besides the author and the title indexes, there was a classified catalogue, scientifically arranging the contents of all the publications catalogued under thirty-four heads, so as to make them at once available for historians or students.

Dr. Hocken of Dunedin has now published, under his own name, an enlarged and improved edition of his predecessor's work.* He has closely followed Collier's plan, down even to the details of the typography. He has also supplied the unavoidable deficiencies of Collier's work, and he has brought it up to date. How considerably the subject has grown on his hands will appear if we compare the bulk of the two wholes and of one of their sections. Collier's volume consists of some 1,200 titles; Hocken's, of perhaps 6,000. Again, the number of works or portions of works relative to missions in Collier amounts to 59, while in Hocken it exceeds 130. The disparity is, however, exaggerated by the inclusion in the later work, not only of publications relating to New Zealand, but of all works published in that country. This, as well as the inclusion of works not relating to New Zealand by authors well-known in connection with New Zealand, seems a mistaken policy. Similarly questionable is the long list of publications in the Maori language. Yet this has its value, and a similar defence might be made for the other illegitimate inclusions.

Where Dr. Hocken's policy seems altogether indefensible is his verbatim appropriation of his predecessor's notes, sometimes long and elaborate, on works which the doctor has often not seen, and this without using inverted commas or appending the name of the author. Analyses of ethnological theories traced through a series of erudite works, such as those of Lesson and Quatrefages, Fornander and Lang, and ascertainments of authorship in the case of anonymous or pseudonymous treatises, have been "conveyed" without a word of acknowledgment. They will in consequence be read in future as the offspring of Dr. Hocken's research.

These criticisms being made, the work may be strongly eulogized. It is accurate, comprehensive, and complete. The excellent notes often embody information, personal, literary, and historical, accumulated during half a lifetime of unintermitted labor. It may be doubted if a more exhaustive bibliography exists.

We are still on historical ground when we turn to A. St. Ledger's "Socialism in Queensland" (Macmillan). For, if in purpose it is a keen and unsparing polemic against Socialism, the work is historical in form, and professes to give a truthful account of the origin and developments of the socialist movement in Australia and New Zealand. That had its origin in two famous American books — George's "Progress and Poverty" and Bellamy's "Looking Backward." The first gave birth to the movement for the nationalization of the land in New Zealand, where it has had many legislative developments, and whence it has spread to Australia and now to England. This phase of Socialism the author omits, and devotes himself to that aspect of it which consists in the nationalization of the agencies of production, exchange, and distribution. This form of it had its origin in Bellamy's romance, which converted William Lane into a socialist. Lane was the uneducated son of a Warwickshire farm laborer, but no one would discover the fact from his crystalline and sometimes dainty English diction. A journalist, he founded the *Worker* to spread his new faith. He it was who devised the motto of the Labor party in Queensland: "Socialism in our time." From Queensland the gospel passed to the other States, largely pervading the Labor policy in them and in the Australian Commonwealth. How all this happened is vividly told. One or two criticisms reduce but slightly the value of the book. It does not take account of the tendency towards Socialism inherent in all the Australasian States. Particularly, it gives no adequate statement of its multifarious manifestations in New Zealand. And the author, who is a Senator for Queensland in the Federal Parliament, naturally exaggerates the part of Queensland in the movement, and perhaps the part played by Lane in Queensland. Otherwise, the volume is as instructive as interesting.

We are still exploring the field of history when we accompany Dr. T. S. Hall in his "Geological Rambles in Victoria" (Melbourne: T. C. Lothian), though now it is very ancient history. Dr. Hall is everywhere the geologist. To him the aspect and the flora of a district are the natural expression of the structure and composition of the rocks. Geology must supply the key to physical geography and botany; we may add, to biology, ethnology, and sociology. There are many instructive lessons to be learned from our field geologist. While he admits that "the great moulding agency is running water," he finds districts in Victoria where catastrophes must be invoked to explain the fractures of the earth's crust. In Victoria, too, he finds evidence of a long and severe glacial period compared with which the ice-age of Northern Europe and America is a thing of yesterday. The variety of the ice-borne rocks is wonderful, and proves that there were, not one, but several, glacial periods. The simply written volume is rendered attractive by 39 illustrations and maps. J. C.

Correspondence.

THE SOURCE OF POE'S "SOME WORDS WITH A MUMMY."

To the Editor of The Nation:

Sir: A dozen or more of Poe's tales have been traced to their sources. Griswold a good many years ago made it clear that the original of "The Pit and the Pendulum" was to be found in a tale in *Blackwood's*. Professor Woodberry, collaborating with Stedman in their well-known edition of Poe's works, pointed out the sources of "King Pest," "Hop Frog," "Metzengerstein," and "The Masque of the Red Death," and indicated partial sources for some four or five other stories; and Stedman, in the same volumes, touched

upon Poe's indebtedness to the German E. T. A. Hoffmann. Within the last few years Professor Palmer Cobb of the University of North Carolina has examined more minutely the problem of Poe's indebtedness to Hoffmann. And there have been other notes in the magazines. But no one appears to have suggested a source for Poe's extravagant tale "Some Words With a Mummy." The original of this tale is to be found, I believe, in R. M. Bird's novel "Sheppard Lee." This novel was published anonymously at Philadelphia in 1836, and was reviewed by Poe in September of the same year in the *Southern Literary Messenger* (see "Poe's Works," Virginia Edition, IX, pp. 126-139). "Some Words With a Mummy" first appeared in the *American Whig Review* for April, 1845.

The chief incident in Poe's tale, it will be recalled, is the restoration to life of an Egyptian mummy by means of a galvanic battery. Bird's novel recounts a series of transmigrations of the soul of its hero, Sheppard Lee, who had met death by accident while digging one night for the treasure of Captain Kidd. His spirit betakes itself first into the body of an asthmatic old squire of the neighborhood, then into the body of a Philadelphia dandy, and after other such feats of metempsychosis brings up finally in the person of a slave, Nigger Tom, on a Virginia plantation. As Nigger Tom, the hero of the story is suspected of having taken part in a slave insurrection, and is hanged and buried. Shortly after burial, his body is taken up by some medical students, who wish to test their skill with the dissecting knife. But before beginning operations, one of their number suggests that they first experiment on the body with an electric battery, and, this suggestion being adopted, the experiment is made as in Poe's tale and with like results. The spirit of Sheppard Lee then takes possession of the body of one of the students who had engaged in the experiment and had been frightened to death by its outcome; and in the guise of this young man it soon has the good fortune to come across the body which it had originally occupied, now, however, reduced to a state of complete mummification and on exhibition in a collection of curiosities displayed by an old German doctor who had lived in the neighborhood of Sheppard Lee's searches after hidden treasure. The spirit, acting in the person of this student, manages to break open the glass case in which the mummy is enclosed and to make its way back into its body, and at the same time Sheppard Lee is fully restored to life again, and the story comes to an end.

It was out of the last two of these episodes, if my theory be correct, that Poe compounded his tale. One furnished the idea of restoring a body to life through the agency of electricity, the other supplied the notion of the resurrection of a mummy. The two episodes are juxtaposed in Bird's novel, and are summarized in the same paragraph in Poe's review. By combining the two, Poe obtained the necessary unity of action, and also increased the absurdity of his story—evidently meant as an extravaganza.

Besides these episodes, there are in Bird's romance two minor details which may have suggested to Poe similar situations in his story. These are, first, the snapping, or batting, of the subject's eyes as it begins to show signs of restored animation; and, secondly, the bestowing by the half-resuscitated body of a prodigious blow upon the stomach of the ring-leader of the experimenters. But these minor similarities may be mere coincidences, and of no significance for my purpose—what is almost surely the case with a further coincidence, in that the improbabilities of both stories are explained away on the theory that all had happened in a dream.

I may add that certain parallels between Bird's novel and Poe's more famous story, "The Gold Bug," are also, in my judgment, accidental; though we find in Bird's story not only the digging for Captain Kidd's gold under a large tree in the depths of a forest, but also in Jim Jumble, with his fears as to his master's sanity, and in Sheppard Lee, with his attempts to give the faithful old darkey the slip on the occasion of his excursions in search of gold, faint suggestions of both Jupiter and Legrand in Poe's story.

MISREPRESENTATIONS OF SPAIN.

TO THE EDITOR OF THE NATION:

SIR: May I be permitted to disagree with an opinion recently expressed by one of your critics in regard to Mrs. Villiers-Wardell's "Spain of the Spanish?" "In all matters connected with the newer intellectual and artistic movement in Spain," we are told, "Mrs. Villiers-Wardell is an intelligent and diverting guide." Diverting the book frequently is; but that its author is an intelligent or safe guide to things intellectual and artistic in Spain, any Hispanist will deny.

The chapter on Modern Literature, by far the worst in the book, betrays a lack of knowledge which is abysmal. For example, on page 48, the author naïvely remarks of Menéndez y Pelayo: "The writer has already produced a number of important works." An encouraging pat on the back which ought to inspire the dean of Spanish criticism and the author of "Las ideas estéticas en España" to renewed effort. We are further told that he has completed eight volumes of his edition of the works of Lope de Vega. Thirteen is the correct number. This error would be too insignificant to mention if it did not reveal the method employed by the author in the compilation of this chapter. The statement is taken from a ten-year-old edition of Fitzmaurice-Kelly's "History of Spanish Literature" (New York, 1900, p. 409). The whole chapter is largely a rehash of this well-known text-book. Unfortunately Mrs. Villiers-Wardell frequently departs from her authority and then it is that she is prone to fall into error.

A serious oversight may be noticed in the short biography devoted to Pareda. The greatest of modern Spanish novelists is everywhere spoken of in the present tense, and the author is only too evidently unaware of his death. Pareda died in March, 1906. The failure to notice so important a fact is inexcusable in a chapter which comments upon so recent a work as Blasco Ibañez's "Los muertos mandan." Again the antiquated edition of Fitzmaurice-Kelly has proved a broken reed, and the author's lack of first-hand information stands revealed. Although somewhat more familiar with the bull-ring than with Spanish literature, Mrs. Villiers-Wardell makes a similar error in the chapter devoted to Sports and Pastimes. She had not heard of the tragic death of Machaquito.

If errors of fact are frequent throughout the book, errors of judgment are no less numerous. The chapters relating to Spanish politics, for example, are especially misleading. We are told that the King and Queen have won the affections of the Catalans; that "Cataluña as a storm-centre of revolution has fallen into disrepute"; that "the people have confidence in Maura's government, and sooner or later the Regionalists will, in all probability, join forces with the Monarchical party," etc. Last summer's revolt gave a decisive answer to these and similar optimistic statements. The tragic events of last year could not have been foreseen; yet the most elementary acquaintance with real conditions would have prevented the utterance of statements so contrary to the truth. Señor Maura, now happily out of power, is spoken of as a progressive, enlightened statesman. One would almost imagine him to be a reformer instead of a bulwark of reaction. Is Señor Maura's repeal of the civil marriage law so soon forgotten? But most remarkable is the author's apparent approval of the infamous Conde de Romanones (p. 99-100) who, with other politicians of high rank, long enjoyed the unconstitutional privilege of private coinage, thus doubling the value of the yield of the silver mines which they controlled. So flagrant did this abuse become that in the summer of 1908 an honest minister of the treasury felt obliged to withdraw from circulation nineteen issues of the silver duro, good and bad alike. Of this official freebooter Mrs. Villiers-Wardell naïvely remarks: "He is a man of untiring energy and enterprise, and already he has, by successful speculations, greatly augmented the very considerable fortune left him by his father."

Although many more errors might be pointed out, enough has now been said to show that Mrs. Villiers-Wardell's book is not a trustworthy guide. More than almost any other country of Europe Spain has been misrepresented and misunderstood. The dilettante traveller has claimed the land as his own. Théophile Gautier, Washington Irving, George Borrow, and De Amicis are not guiltless, but charm of style has deservedly caused their books to rank as classics. Most recent writers of books of Spanish travel are neither conscientiously accurate in the presentation of fact nor possessed of a literary touch sufficient to bring pardon for other shortcomings. Honorable exception must be made of René Bazin's charming and sympathetic "Terre d'Espagne" and Havelock Ellis's admirable "Soul of Spain."

THE EARTH OF APOLLONIUS—WAS IT INDIAN?

TO THE EDITOR OF THE NATION:

SIR: Since calling attention in your columns to the perfect manner in which the

Sûrya Siddhânta's conception of the earth, with its two heaven-reaching antipodal polar mountains, interprets the peculiar terms employed by Apollonius in "Argonautica," iii, 158, I have seen Bergk's remarks on the passage as found in his "Kleine philologische Schriften," II, 704. "That two mountains should be mentioned," he says, "is peculiar." He confesses his inability to explain the point. He raises the question whether an "error," or a "misunderstanding" on the part of the poet, must not underlie his language. But the words to which Bergk pays no attention, δοιὼ πόλοι, are as plain as words can be, and they fix the location of the two mountains, not in the East or in the West, or in "the East *and* West," but at the earth's two poles. (Permit me to refer to my recent book, "The Earliest Cosmologies," pp. 79-81, 174, 205). Bergk's difficulty in dealing with the "Mountain of Sunrise" and "Mountain of Sunset" is precisely the one which troubled the Assyriologists until Professor Sayce reached the correct conclusion that the two were "one and the same." See his "Hibbert Lectures," p 361. Since that time he has come to see that this one identical mountain, behind which the sun disappeared every evening, and from behind which it emerged every morning, was in the highest north, even at the pole. And the moment one comes to this insight, the strange assertion of Maspero, to the effect that, in their earliest periods, both the Babylonians and Egyptians "believed that the sun and moon revolved round the earth in a horizontal plane," becomes perfectly easy of explanation, for the sun and moon do so revolve at the pole.

If any of our masters in Greek literature have lighted upon a second passage similar to this in Apollonius, all students in comparative mythology and comparative cosmology will be delighted to learn of it. What would not one give for the lost verse from Ibycus, referred to by Bergk?

DEBATING AT SCHOOL.

To the Editor of The Nation:

Sir: The *Nation* performs an excellent service in its conservative treatment of current tendencies, but now and then it makes an error in condemning that which is new. Such an error, I believe, was made in the editorial of a recent number which attacked the present custom of having students debate modern topics in preference to questions concerning the ancient world. Training for citizenship is undoubtedly one of the primary purposes of the public schools. This being granted, will it not be necessary to concede the corollary, that the discussion of present-day topics by students in schools and colleges will tend to realize this important purpose?

Every one who has given the subject much thought will admit that educational methods are, as a rule, most conservative. The average pedagogue is prone to teach in the same way as he was taught. He clings reverently and firmly to the pedagogic principles of the mediæval schoolmen. This tendency, however, to have the students debate live questions rather than thoroughly dead ones has in it the elements of progress and promise. The student by studying these questions is not only fitted for citizenship in his own country, and in the world, but he at the same time becomes familiar with the best sources of information upon current questions. For the great majority of students in the secondary schools, who cannot go to college, this reference work upon topics of present-day importance will mean the formation of a habit of reading in periodicals which have in them many of the essentials of a liberal education. Such work in the schools will make the public libraries educational centres instead of dispensaries of the latest popular fiction. It will give the nation that which it so much needs—intelligent citizens who are not to be deluded and deceived by the yellow press and the curbstone orator.

Then, too, there are the pupils and students themselves; surely some consideration should be given to their preference. From my own observations I believe that they prefer to study the vital questions of the present rather than the dead issues of the past. One of the most inspiring recitations I ever conducted was a general discussion by high-school students in a class in modern history of militarism vs. arbitration. The students had prepared themselves carefully by reading magazine articles, international conciliation bulletins, and reference books in the public library, so that they had a fairly intelligent idea of what they were talking about.

This book to which you refer in the editorial mentioned may be all that the editorial would indicate, and more, but your condemnation of the principle associated with it is unjust. Does the *Nation* aim to support worthy and well-qualified progress, or is it so bound to the past that it can see no good in anything new?

CLARENCE GREEN.

Tacoma, Wash., June 11.

THE TARIFF AND WAGES.

To the Editor of The Nation:

Sir: For as many years as any of us can think back, we have been told that the need for high tariff duties, besides the procuring of revenue, was the protection of American against foreign "pauper" labor. Where European manufacturers employ female labor principally, especially in the so-called "house industries," the wages paid are really so far below any prevailing in the United States that were we attempting that sort of manufacturing, competition on equal lines would be hopeless. However, such is not the case; we have no large numbers of hand-workers skilled in lace-making, embroidering, and the like—the great industries of the United States are built up by means of labor-saving machinery, and it is their products that must compete in the world's markets. Why we are able so to do, our higher wage rate notwithstanding, facts that have come to my knowledge will illustrate.

A New York manufacturing engineer, placed in charge of its English branch by an American firm, told me within the week that the 200 employees under his control, receiving less than half American wages, turned out less than half the amount of work that the same number engaged in similar work on our side do. The profits over here averaged so much less on the output than with the home company, that he was sent over for the very purpose of endeavoring to make this "pauper labor" as productive as that of the high-priced workers in the United States.

A few years ago an American in charge of a similar industry in Berlin employing upward of a thousand men put their outturn as two-thirds that of Americans in the same line.

It has been pointed out, time and again, that comparisons of wages without statements of what such wages represent in production are valueless and misleading. Also, it is necessary to know what the money wages procure in the way of the necessities of life in the countries between which comparisons are made. Modern brick four-room cottages were pointed out to me in English villages, of which the rent is five shillings a week, $1.20; and they had ground attached, large enough to furnish the family vegetables.

A tariff commission can do no more enlightening and useful work than to bring out the facts which will make possible real and intelligent comparisons on the above lines.

MAX LOWENTHAL.

London, June 9.

A RARE PAMPHLET.

To the Editor of The Nation:

Sir: The writer of News for Bibliophiles in the *Nation* for June 16 calls attention to the discovery of a fourth copy of "The Humble Request of His Majesties loyall Subjects," issued by Winthrop and others from Yarmouth, "aboard the Arbela, April 7, 1630," and he justly lays stress upon the value and importance of the pamphlet. He and others interested in our colonial history will be glad to know that there is a fifth copy, in perfect condition, in the library of All Souls College, Oxford.

CHARLES M. ANDREWS.

Johns Hopkins University, June 17.

GEN. GRANT'S FATHER.

To the Editor of The Nation:

Sir: In November, 1865, I was on a Pennsylvania Railroad train, eastbound from Pittsburgh. In the next seat was an old fellow—that's the way you would describe him—with "country" written all over him. He opened a conversation with our party, and asked if we were going to Washington; said he was going there; and added, with pauses, "I've got a son in Washington—Gen. Grant." Of course, the response was, "Indeed," etc.; and so, feeling encouraged, he turned about with his arm over the back of the seat and proceeded to "tell all about" his son.

I remember it all as plain as yesterday, though I have never written it down till now.

"Yes, he's my son, and he's made quite a name for himself." Long pause and meditation. Speaking slowly and with a great deal of repetition and a country manner, but much earnestness: "They are talking about making him President. They don't want to make him President. He's no man for President. He'd be no good in that place. A soldier is what he's fit for. He ain't good for anything else but a soldier. Why! I've had to set him up in business more than once. He was never any good

in business. He's just a soldier; he's good at that. No, he ain't the man for President. He wouldn't make a good one."

And so on, to this effect and substantially in these words. I remember too many of the words and phrases to be mistaken. It was a striking incident, and I have often thought of it since.

Good, straight-forward, simple-minded old man! That was Jesse R. Grant; and it was six months after the war.

Sheridan, Wyo., June 10.

Literature.

A FINE OLD ENGLISH TORY.

Gathorne Hardy, First Earl of Cranbrook: A Memoir, with Extracts from His Diary and Correspondence. Edited by the Hon. Alfred E. Gathorne-Hardy. 2 vols., with portraits and other illustrations. New York: Longmans, Green & Co. $7 net.

One by one the biographies of the later Victorian statesmen of the second rank are coming to light. Within a few years, Dufferin, Northcote, Randolph Churchill, Northbrook, Lytton have had their lives written, some of them with such speed as to suggest that biographers realize the necessity of grasping at the brief immortality accorded to most public men. Salisbury is still uncommemorated, and probably years will elapse before the documents are released which alone can give permanent interest to his unsympathetic personality. But Gathorne Hardy, although he died as late as 1906, already belonged to the past generation, and he was not sufficiently at the heart of things to share exclusive confidences and political secrets which it would be indiscreet to publish now. Doubtless, as his son and editor announces, passages have been suppressed and names withheld in the material printed; but there can be little left out that was essential. As to Gathorne Hardy himself, we have here all the elements for a full-length life-like portrait of the most typical, enlightened Tory of the Victorian era. If only one book could be preserved to exhibit to posterity modern Toryism in its most comprehensive and convincing embodiment, that book should be this memoir of Gathorne Hardy.

He was born in 1814, of a middle-class family, which traced its origin to an Irish laborer living in Yorkshire in 1670. The statesman's grandfather laid the basis of a large fortune by buying the Lowmoor Iron Works in 1789; his father was a successful barrister, a judge, and a member of Parliament. He himself went through the brutal schooling which was then supposed to be necessary to the education of English gentlemen. In 1833, he entered Oriel College, Oxford, where he acquitted himself creditably; he read law and was admitted to the bar in London, and soon established a lucrative practice. In 1855, he was elected to Parliament from Bradford, and thenceforth until the general election of 1895, he was continuously in public life, either as commoner, minister, or member of one or another important commission. In the course of his career he was offered every portfolio, and at different times he served as President of the Poor Law Board, Home Secretary, Secretary for War, Secretary for India, and President of the Council. In every position his chief characteristic was his talent for routine work. No better bureaucrat ever sat in an English cabinet. He was neither a great legislator nor a great orator; but he was invaluable to the Premiers under whom he served, because he could be relied upon to defend their platform with unfailing loyalty and discretion, and to carry out their measures with promptness, honesty, and thoroughness. He had "no nonsense about him," which is the highest praise that an Englishman, be he peer or potboy, can bestow. Gathorne Hardy lacked magnetism, but that is a quality which modern Tory statesmen have been so proud to dispense with that they finally chose for their leader Salisbury, who had not only no magnetism, but not even manners.

The most pertinent part of Hardy's memoir covers the thirty years from Disraeli's reëntrance to power in 1874. The Eastern Question and Turkish War, the Berlin Conference, the Bulgarian atrocities, Afghanistan, and Gladstone's unprecedented Midlothian campaign, are the topics that come uppermost during the earlier years of this period; Home Rule, with its collateral problems, occupies the last two decades. Amid the tides and tempests of every crisis, he stood inevitably on his Toryism, like "Teneriff or Atlas unremoved." He had no doubts; from first to last the question presented to him only one side—his side. He looked upon the Liberal proposals in regard to Ireland as either insane or deliberately wicked; so that he seemed to himself to be thwarting the subversive efforts of hordes who had broken loose from prison or from an asylum. And it cannot be denied that he defended his cause as stanchly as any Crusader. Nevertheless, we fail to thrill at his devotion, not because it was not sincere, but because it was tainted with that class selfishness which is the essence of Tory, Junker, or Bourbon ideals.

Hardy, indeed, never suspected that he was not unselfish. A long experience in caste control has bred in England a peculiar form of cant. In America your protected manufacturer can hardly restrain a smile when he declares in public that the protection which makes him a millionaire is wholly for the benefit of the American laborer: he knows that nobody believes that he believes that. But in England, cant has so sunk into the very marrow of the privileged classes that some of them honestly deceive themselves in their attitude towards politics, religion, and society. Gathorne Hardy was one of these. During his ninety-two years he never seems to have questioned the divine sanction of Toryism, either as a system, or in any of its parts. We see at once how homogeneous he was if we contrast him with Malmesbury, among the elders, or with Balfour and Curzon to-day. Liberalism and Radicalism have also their special forms of cant, but these although they may be equally objectionable, are different.

One of the chief charms of memoirs like this is the sidelights they throw on public men. Much depends, however, on the memoirist's gift for reading character and his skill in depicting it. Hardy was neither subtle nor vivid. In most of his records and letters here quoted we find him using, even for expressing his inmost emotions, that impersonal, not to say sterilized style, which English newspapers adopted long ago for reporting public speeches. Nobody would be surprised to read in the London *Times* that "the noble lord rose and said that he regarded it his duty, in reply to the Right Honorable Gentleman who had last spoken, to express the opinion boldly, but always subject to correction, if later reports from His Majesty's Meteorological Bureau should fail to confirm his honest conviction, that it was going to sprinkle." Thus guardedly does Hardy commune with himself in the earlier sections of his journal. It is only in denouncing Gladstone that his language approaches the picturesque. Every historian who aspires to know the state of mind of the unadulterated Tory towards Gladstone—a state of mind which became an obsession, and greatly influenced British politics—will have to read Gathorne Hardy's criticisms of him. We hold no brief for the People's William, but we confess that we are surprised at some of Hardy's remarks. "Having broken in upon the principle of property, sacred, and private," he writes, December 19, 1885, "he [Gladstone] will probably try his hand at severing the United Kingdom." In another place, Gladstone's "appointments roused an instinctive abhorrence in every gentleman." And again: "The conscience, which Mrs. Gladstone assured me, always guided him, and allowed him to sleep tranquilly, *was not a light but a darkness*, and misled him, to the permanent injury of his country." (The italics are ours.) And as a sample of the Tory's historical acumen, we commend his contrast between Bismarck and Gladstone—"construction versus destruction. . . . One made an Empire, the other

nearly destroyed one." Nevertheless, Lord Cranbrook, as Gathorne Hardy became in 1878, seems to have entertained the belief, we will not say the *hope*, that Gladstone might possibly get to heaven. They were, for many years, the foremost lay members of the Anglican Church, but Cranbrook was a hardheaded, "practical" churchman, while Gladstone delighted in weaving theological subtleties and in settling ecclesiastical quibbles.

Quite different is Cranbrook's verdict on Disraeli. The versatile Jew's apparent flightiness and flamboyance troubled the "no-nonsense" Britisher a little at first; but from the moment when Disraeli became the mainstay of the Tories, and the Queen's favorite minister, Cranbrook came to have an almost unlimited admiration for him. He still maintained his private opinion in matters of detail, but, so far as appears, he accepted the "Chief's" guidance on general policy. How little either of them really possessed the statesman's foresight is shown by the immense surprise with which each beheld the shipwreck of the Tory government in 1880. Yet what could be expected of a flippant Premier who could write to his colleague on December 10, 1879: "It certainly is a relief, this drenching rhetoric has at length ceased, *but I have never read a word of it.*" The "drenching rhetoric" was Gladstone's Midlothian speeches, which drove Beaconsfield from office; yet, with characteristic insouciance, the Tory chief and his lieutenants did not think they were worth paying attention to. That is the very strawberry mark of Toryism—to despise your opponent to the point of ignoring his strength; and then your enemy gives you an unpleasant shock—as the Gladstonians gave the Conservatives in 1880, as the Boers gave the British Jingoes in 1899, and as the Germans have more recently done.

Hardy's pages give so true a picture of Tory environment that one sees clearly why it was that Disraeli held for twenty years the ascendency in a party whose leaders should have had *à priori* only distrust or contempt for a Jew, a cynical infidel, a writer of extravagant novels, a glib and shifty talker, a politician without convictions and without scruples. Disraeli possessed what they lacked—wit, mobility, audacity, and the art of getting returns. So a party which had floundered and gone down under the leadership of such aristocratic respectables as the Scotch Earl of Aberdeen and the English Earl of Derby did well to turn to Israel for its salvation.

Scores of other persons, great, small, and mediocre, are mentioned by Hardy, but very few of them stand out distinctly. Most of his associates he speaks of in non-committal phrases; occasionally, however, as in his references to Carnarvon and to the Fifteenth Earl of Derby, he allows his personal antipathy to peer out. His devotion to royalty was so unquestioning that he deplored, in 1889, the niggardliness of Parliament's provision for the Queen's large family. "It augurs ill for monarchy to be so thriftily treated," he remarks. The paradox did not occur to him that the two British sovereigns who had laid the heaviest permanent burdens on the British taxpayers were Charles II—the most profligate—and Victoria—the most virtuous. Like all other court writers of this period, Hardy takes so much care to state, in mentioning the Queen (or the Tecks or other members of the Royal Family), that she was "most gracious," or "most polite," that one cannot help suspecting that politeness was the exception and not the rule in that circle. Once, indeed, Hardy lets slip the interesting news that the Duke of Cambridge went to sleep at a dinner-party and that proceedings had to stop until he woke up.

We lay stress on the great value of these memoirs as a revelation of the highest type of English Tory in the Victorian era, because that is, we believe, their chief distinction. Through Gathorne Hardy we understand an entire species. What would we not give for a similarly exhaustive autobiographic confession of a Spanish grandee under Charles V, or of a Venetian procurator under Tommaso Mocenigo, or of a Roman patrician under the Antonines? The contribution to the political history of his time which Hardy makes is not to be disparaged; but it is of secondary importance compared with the biographical and caste considerations. His son has so selected from his father's mass of memoranda that we cannot follow consecutively any event or measure to its conclusion. Even the records for the first months of 1878, when, as Beaconsfield wrote him on March 27, "we are drifting into war," have so many gaps, that one must seek elsewhere in order to learn what the Tory Cabinet itself was doing. At almost every step throughout the two volumes the editor refers the reader to Morley's "Gladstone" for a clear and fair statement of the matter in question. This is a deserved tribute to John Morley, but a serious defect in biographical construction. The humor of elucidating Hardy by means of Gladstone, whom Hardy regarded as a fearful incarnation of the Spirit of Darkness, seems to have escaped the editor's notice. A few of the confidential letters that passed between Cranbrook and his colleagues have real importance. The long private dispatch from Lytton, describing the situation in India in the summer of 1878, may be regarded as an "original source." But, in general, the representative character of these memoirs gives them their highest value.

In emphasizing this fact, we have necessarily passed by some of the more personal matters. Gathorne Hardy had many excellent traits which are not the monopoly of Tories, but the possession of all sterling natures. His virtues, however, were almost exclusively practical. There is in the two volumes hardly a smile, or a twinkle of the eye—and that, in spite of the Irish peasant ancestor. So, too, there are few references to books, and none whatever to ideas: but a prevailing mastery of business facts and an unflagging interest in political administration. Although not born in the purple, Gathorne Hardy was predisposed to accept the aristocratic régime as the highest manifestation on earth of the Divine will. His talents and party service entitled him to a peerage, and the profits from the family iron works enabled him to accept it, instead of his being obliged, as he tells us Monty Corry was, to rely upon a rich aunt to finance his ascent to the House of Lords. There will always be Tories, but there will be no more Tories like him. A peerage recruited from the proprietors of yellow journals and of breweries, from successful promoters, and from transportation managers, has already gone far towards losing that glamour which used to wrap the British lords. Every one understands now that money is as indispensable for the maintenance of an aristocracy in England as for the creation of a plutocracy in America. The first Lord Cranbrook belonged to the earlier period, when the glamour had not yet been stripped off. What that glamour was—what the ideals and beliefs were which exhaled it—can nowhere be more concretely observed than in his Memoirs.

CURRENT FICTION.

Samuel the Seeker. By Upton Sinclair. New York: B. W. Dodge & Co.

The childlike youth, upon whom the world dawns as an object not hitherto observed, seems to be fairly taking his place as the most popular of modern heroes of fiction. Three recent examples, notable out of many, are Mr. Locke's Septimus, Mr. Herrick's Hugh Grant, and Mr. Sinclair's Samuel. Between the two latter there are especially strong resemblances. Samuel, like Hugh, is a farmer's boy, who has reached manhood before setting out to make a living, and to learn the meaning of life, in the cities. Like Hugh, he has grown up in a state of guileless innocence of the ways of the world such as may have been possible for rustic youth before the era of the telephone and the Sunday newspaper. Like Hugh, he must be accepted as the central figure in a parable, rather than a portrait drawn from the model.

The day comes when, eager and ingenuous, he sets out for New York from

his native village. He is lured into danger by the first man he meets, robbed by the second, and cast forth, penniless and starving, into the busy town of "Lockmanville." This is a city built upon the sands of dishonor and selfishness. The arraignment of old man Lockman by a burglar acquaintance of Samuel's may be quoted as the basis for Mr. Sinclair's tale:

> He began by cheating his sisters out of their inheritance. Then he foreclosed a mortgage on a glass factory and went into the business . . . they say he burned the plant down for the insurance. . . . He made a crooked deal with some of the railroad people—gave them stock, you know, and got rebates. And he had some union leaders on his pay rolls, and he called strikes on his rivals, and when he had ruined them, he bought them out for a song. And when he had everything in his hands, and got tired of paying high wages, he fired some of the union men and forced a strike. Then he brought in some strike-breakers and ordered some thugs to slug them, and turned the police loose on the men—and that was the end of the unions. Meanwhile he'd been running the politics of the town, and he's given himself all the franchises. . . .

Nothing is omitted from the indictment of this all-round villain. And his wealth, Samuel finds, gives him power over all the supposably better element in Lockmanville society. In the end, Samuel makes up his mind to expose the rottenness of the place. His method is naïve to the point of ludicrousness—the method of the socialist agitator—to make a speech in public. The police forbid, but, backed up by the local socialist body, a meeting is attempted, which is quickly put down by the police, Samuel himself being knocked in the head by a "thug." And so the action ends with an inconclusive street squabble which evidently seems to Mr. Sinclair a meaning battle for the right. Mr. Herrick's Hugh Grant had no solution for the political and industrial corruption of American society: Mr. Sinclair's solution is Socialism.

The Taming of Red Butte Western. By Francis Lynde. New York: Charles Scribner's Sons.

It is a little difficult to see how a self-confessed coward could be brave enough to go through all the dangers and trials endured by Lidgerwood, superintendent of the Red Butte Western. The author, however, is not troubled by this at all. He sets forth the condition of the railway, and then describes Lidgerwood's attempts to better it. Without a doubt it was much in need of betterment. The engineers were mostly desperadoes, the firemen brutes, the switchmen ghouls, the dispatchers escaped convicts. The line was laid across the Red Desert, the chief town was named Angels, and wrecks happened every day. With all that we can understand why Lidgerwood shied at the appointment, when Ford, vice-president of the system, offered it to him. He told Ford candidly he was a coward. To prove it he related his experiences at the hold-up of a stage coach, in which he was riding with the girl he loved. After the highwaymen had departed with his money and the lady's rings, she asked why he had not shot the robbers dead with his revolver. He failed to show cause, whereupon she spoke bitter words and left him forever—or rather, for a year. But Ford still thought he could do it, and Lidgerwood spent the above-mentioned year wrestling with the Red Butte Western and his rascally subordinates. During this time, we are supposed to trace the transformation of the coward into the brave man. But Mr. Lynde's psychology is lame. He keeps insisting on Lidgerwood's cowardice, while he is making him do all sorts of courageous things. Not till the end, when the author realizes the responsibilities of the modern novelist, does he abruptly change front and admit that Lidgerwood is a hero after all.

Maurin, the Illustrious: A Translation from the French of Jean Aicard by Alfred Allinson. New York: John Lane Co.

Dr. Mitchell and Mr. Hewlett were none too successful in their attempts to revive the *picaro*, perhaps because the one turned to eighteenth-century Italy, and an English "fool-errant," the other to the great French Revolution. For M. Aicard has drawn something of a *picaro*, too, in his woodsman Maurin; and has been better rewarded for his pains by wisely eschewing historical romance. The present is his time, a corner of Provence his scene. And his Maurin is the happy result: a Provençal who comes near to rivalling Tartarin. Like Daudet with his Tartarin, M. Aicard has found it profitable to devote more than one volume to his hero's fortunes.

And such volumes! This sequel to "The Diverting Adventures" runs to more than four hundred pages. The characters in the new volume are those of its predecessor. Maurin is the same "Don Juan of the Woods" to the end, dying of a wound inflicted by the hand of woman. His anecdotes are, perhaps, a shade less piquant. The author is grown almost moralistic; though when Pastouré, Maurin's best friend, waxes metaphysical, his philosophy is ever of the simplest: and not the less sound for that.

Best of all, however, are the accounts of weddings, funerals, and political reunions, in this vivid Southland; where men are, as Daudet expressed it, forever drunk with the alcohol of the sun. A fine, earthy story, wholly dependent upon incident and character, with no plot to speak of, but redolent of the woods and marshland where its hero fills his game-bag so easily and so well. A novel—if one may so name it—spicy with love and sport and apt escapes from constables. Mr. Allinson is to be praised for his competent Englishing of these lively occurrences.

The Garden at 19. By Edgar Jepson. New York: Wessels & Bissell Co.

A London bachelor who has come into a little money buys a house in Hertford Park. He soon discovers that an air of mystery hangs about the place, and that the other houses in the street, with the exception of No. 19, are empty. Strange sounds and odors, and stranger emanations of an indefinable nature, assail him from this garden. He finds the house is occupied by a young girl and her morose uncle. The former he, of course, falls in love with; the latter turns out to be a necromancer, from the terror of whose influence the girl is to be rescued. The subject, baldly stated, may seem rather puerile. As a matter of fact, Mr. Jepson has surrounded the proceedings of the necromancer and his group of adepts with a sense of mystery which is likely to stir a creeping of the flesh on most readers. The first coming of the terror in the invisible beast is thoroughly effective, and the rites in the garden about the statue of Pan are veiled with just the right amount of ambiguity, leaving the reader in doubt whether the effect on the performers is the work of hypnotic suggestion or of some real emanation from the abyss. Unfortunately, the terror does not maintain itself quite to the end of the book.

LEADING AMERICANS.

Leading American Novelists. By John Erskine. New York: Henry Holt & Co. $1.75 net.

Leading American Essayists. By William Morton Payne. The same.

These two volumes in the Biographies of Leading Americans do not ask to be taken over-seriously. Dr. Erskine says frankly: "In so far as each biography pronounces any final judgment on the writer, I have tried to render the opinion of the best critics of to-day, rather than my own impression." And Mr. Payne, in his turn, asserts: "In the preparation of the present volume, the author has relied almost wholly upon the work of his predecessors." It would almost seem that the writers have been coached to attempt nothing original, and are putting their work before the public with some nervousness lest a trace of personal bias or conviction may here and there be discoverable. This is not an attitude which can be expected to produce biography of a high order, but it is an excellent working attitude for the bookmaker. We do not know to

what specific audience this series is addressed, but it is evidently an audience which publisher and editor wish to instruct rather than to reason with; and a process of bookmaking, very good bookmaking, is the result.

It is, perhaps, as well not to question Dr. Erskine's choice of "leading American novelists." A strong emphasis on the word "American" is the key to it. But for their Americanism, and for their interest as landmarks along the relatively obscure trail of American literature, Brockden Brown and Simms would appear to have no reasonable place in a book of this kind. Their works are dead: they have long been no more than material for the literary historian. Mrs. Stowe was a great power, but hardly a great novelist, and Bret Harte was not a novelist at all. We may best take the book as a series of brief biographies of certain American story-writers. Whatever the choice of minor names, Cooper and Hawthorne would still stand head and shoulders above them.

Taken by itself, the chapter on Brown is an interesting study of a man, though it does not make out very much for the author.

> He was not by temperament a novelist; he could neither tell a vital coherent narrative, nor draw a true picture of manners. That he wrote stories at all was due to his need of a medium for his speculations about life, and as Godwin had used the novel effectively to attack domestic tryanny, it was easy for Brown to exploit his psychological notions through the same form.

Godwin was Brown's master and superior, but "Caleb Williams" would scarcely give him place in a group of leading English novelists. Brown's real power, as Dr. Erskine says, lay in his character of publicist. "It is to his credit as a citizen that Brown probably never wrote without the welfare of men, especially of his countrymen, in mind." In short, we are to cherish Brown's memory as a bad novelist, on the ground that he was a good citizen; though his apologist would hardly include him in a study of leading American citizens. The valuable and original portions of this paper, as of the chapter on Simms, are the passages which analyze and criticise the more important works of these half-forgotten novelists.

In the chapter on Cooper, too much space is given to the analysis of books which "every school-boy knows." The résumé of plot is unnecessary, and the criticism, if, as we suppose, the volume is intended for the school-boy, is often over-subtle—as, for example:

> He makes the dim moonlit forest seem to close in upon the human adventure and supplant it; had his temperament been less sane, so much susceptibility would have endowed the northern pinewoods with sylvan deities out of hand.

The chapter on Hawthorne, inevitably the most important in the book, is uncommonly good: here, certainly, Dr. Erskine belies his waiver of critical originality. The analysis of New England Puritanism, and of Hawthorne's interpretation of it in his art and embodiment of it in his nature, is much more than an echo or a variation. He finds the secret of Hawthorne's character and work to be "the subjective habit of Puritanism." . . . "The Puritan vision in him is his only reality, and by comparison the outside world seems to him a thing of phantom and allegory. He is the child of the author of the 'Faerie Queene.'" It is doubtless because of one's interest in the writer's study of Hawthorne's life and character that one feels here especially a certain obstructiveness in the long critical analyses of the romances which so frequently bar the narrative. One notes a little over-severity in the treatment of "The Blithedale Romance"; but its real weakness is fairly explained. This is due, says Dr. Erskine, to the subject itself: "Hawthorne was at home only in the moral world, and only in problems of such gravity as to involve the salvation of a soul. Here there is no sin, no ancient wrong, nothing that connects itself with the idea of retribution."

Mr. Payne's volume is furnished with an introduction of some forty pages which gives not so much a discussion of the essay in America, as a series of Who's-Who-like sketches of the chief American essayists born before 1860. The make-up of the book proper has suffered greatly from the fact that it is one of a series. One must question the editorial policy which excludes Holmes and Lowell from a book of this title, even if one agree with the doubtful premise that the place of either is primarily with the poets. As matters stand, the team of essayists chosen to represent us (to use a vulgar figure) is necessarily small. It would still have been easier, however, after all concession to the poet and novelist, to find four essayists to consort with Irving and Emerson than it was to find four novelists to figure worthily in the same volume with Cooper and Hawthorne. Mr. Payne's style is conscientious rather than animated. He has diligently studied the authorities, and here sets forth, as it were, in a fair round hand, the results of his investigations. The treatment of Thoreau and Curtis seems fresher, largely, no doubt, because they have fallen less frequently into the hands of the minor biographer. Emerson and Irving have figured repeatedly as matter for the short biography of the present type and scale; and Mr. Payne has little or nothing to add to the picture thus afforded. The sketch of Thoreau, on the other hand, is the first, or among the first, of its kind, and very good of its kind. He has the advantage over Dr. Erskine of simplicity, and by dealing less in criticism and more in biography, better fulfils, we suppose, the purpose of the series. Taken by itself, each of these brief "lives" has its sterling qualities.

Ezra Studies. By Charles C. Torrey, Professor of Semitic Languages in Yale University. The University of Chicago Press. $1.50 net.

The Chronicler—the author of Chronicles, Ezra and Nehemiah—is rather an imaginative reconstructor than an historian; he transfers the ideas and usages of his time (the third century B. C.) to the past, and in addition freely embellishes his material. But, as in Chronicles he takes material from Samuel and Kings, it is possible that in Ezra and Nehemiah also he has preserved good historical matter. This is admittedly true in the case of Neh. i-vi, but in regard to the rest of these two books there is difference of opinion among critics. Holding, apparently, that the land was practically depopulated by the Chaldeans (2 Kgs., xxv), he represents the building of the temple and the introduction of the complete ritual law as having been accomplished by the exiles who returned from Babylonia—and this statement is accepted as historical by the majority of critics today. Professor Torrey's volume is a protest against this view. He maintains that the Chronicler was himself the author of the Ezra story (Ezr. vii-x, Neh. vii-xiii), and that his object was not to write history, but to champion the Jewish sacred institutions, especially against the Samaritans, who claimed to have a share in them; therefore, Torrey concludes, "there was no return of exiles, no scribe-potentate Ezra, no law brought from Babylonia, no wholesale expulsion of Gentile wives and children." The larger and more important fact elicited by this treatment of the Chronicler is that the religious development from Deuteronomy to the time of the Roman rule was continuous—the influence of the Dispersion on the Jews of the home-land was broadening and salutary, but "Judaism grew up in Judea, it was not transplanted from foreign soil."

As regards the continuity of the religious development Dr. Torrey's contention must be accepted as correct—it is proved by the great Prophetic writings (parts of the Second Isaiah, etc.), the book of Job, and certain psalms. It is no longer possible to make the exile a dividing fact between a higher and a lower literature. Nor is there conclusive evidence that the later legal development was made in Babylonia. On this point data are lacking. And, it must be added, so far as the growth of Jewish thought is concerned, it is immaterial whether the contributions to it came from Judea or from Babylonia or Egypt.

The logical and chronological disorder in Ezra and Nehemiah Torrey proposes to remedy by a couple of transpositions and insertions. First, he puts Neh. viii (more precisely vii, 70—viii, 18) between Ezra viii and ix; thus the great movement for putting away foreign wives (Ezr. ix) is explained by the public reading of the law (Neh. viii), which presumably aroused the conscience of the people, and in Neh. ix is followed by a general separation between Israelites and foreigners. This transposition certainly makes the narrative clearer, and it is not difficult to suppose that the original order of sections may have been changed by a scribe. The other revision defended by Professor Torrey is more revolutionary, and has given rise to much discussion: it is to insert after Ezra i a passage (iv, 47b—v, 6) from the apocryphal book known as First Esdras, or Third Ezra, which (after "Darius" has been changed to "Cyrus") gives a detailed account of the provision made by Cyrus for the building of the temple, and thus fits in with the statement of Ezr. iv, 5 that adversaries hindered the building from the time of Cyrus to the time of Darius. Torrey's view, set forth with great skill and learning, is that First Esdras is not an apocryphon, but a fragment of the old Greek translation of Chronicles-Ezra-Nehemiah (a view previously held by Sir Henry Howorth, but elaborated by Torrey). The question does not affect the historical material, since Ezra and First Esdras are virtually identical in historical content. The latter, however, contains the interesting story of the three youths at the court of Darius, a discussion of the question, "What is the strongest thing in the world?" This Torrey properly regards as a popular story inserted by a scribe. Probably there were in circulation different forms of the Ezra story, and one of these is preserved in First Esdras; Torrey is right in holding that the book is not properly an apocryphon.

To the perplexing question as to the genuineness of the royal decrees and certain letters in Ezra (all, except the decree of Cyrus in ch. i and the letter of Artaxerxes in ch. vii, written in Aramaic), Torrey's answer is that they are wholly the invention of the Chronicler. The current opinion is that they are trustworthy documents, though colored by Jewish scribes. It is urged that they are too full of details to be inventions, and that no motive can be assigned for their invention. Torrey replies that such free compositions are found elsewhere in ancient historical writings (in Thucydides and Livy, for example), that they are quite in the Chronicler's manner (see Abijah's speech in 2 Chron. xii, not found in Kings), and that his obvious motive in inserting them was to glorify his nation by representing it as honored by great princes. In view of these facts, the possibility must be admitted that the documents in question are pure inventions. On the other hand, it is equally supposable that they contain real historical facts, good traditions of favors shown by kings (so Artaxerxes was very friendly to Nehemiah), dramatically elaborated and dressed in Jewish language by the imaginative and clever Chronicler. Until we get a better knowledge of this obscure period of Jewish history it is hardly possible to decide between the rival theories. Also there is much to say in favor of the view that the second temple was built by the people who had remained in the land, and not by returned exiles; this point, however, does not affect the final result or the course of the Judean religious development.

In addition to these historical discussions Professor Torrey has done admirable work on the Greek and Aramaic texts involved. He makes it probable that our received Greek translation is that of Theodotion, and shows that the Alexandrian codex is in the main here superior to the Vatican, which is the one generally adopted. He publishes for the first time a part of the Hexaplar text of Nehemiah. He has made a careful study of the Aramaic of the book of Ezra, with comparison of other Aramaic writings of the period. His concluding chapter is a suggestive sketch of the fortunes of the Jews from the deportation to Babylonia down to the time of Nehemiah (586-444 B. C.), and valuable observations are scattered throughout the volume. Whether or not all his results be accepted, it remains true that his scholarly investigations offer a noteworthy contribution to our knowledge of Jewish life in the period under discussion and to the criticism of a considerable part of the later Old Testament writings.

Equal Suffrage: The Results of an Investigation in Colorado made for the Collegiate Equal Suffrage League of New York State. By Helen L. Sumner, Ph.D. New York: Harper & Bros. $2 net.

The subject matter of this volume is accurately indicated in the sub-title. The investigation was undertaken under a stipulation creditable alike to the League and the author, that the inquiry should be prosecuted without bias and with scientific impartiality. With no "formulated conclusions" upon the question of equal suffrage, Dr. Sumner in September, 1906, began fifteen months of field work in Colorado. The investigation proceeded "on the assumption that the answer to the proposition, Shall women vote? is to be found in the good or evil effects of equal suffrage in practice." The methods chiefly employed were, first, the issuance of a rather comprehensive *questionnaire*, which was answered by about twelve hundred out of five thousand persons addressed; secondly, the examination of newspaper files, registration books, and official reports, both State and local; thirdly, the attendance upon nominating conventions and other public political meetings; and, lastly, the frequent interview. The good faith and scientific impartiality of the investigator are undoubted. She has not concealed or minimized evidence adverse to equal suffrage, although she has personally emerged with a conclusion favorable thereto, largely on the grounds that "while the effect on party politics has been slight" (p. 258), the ballot has enlarged women's interest in public affairs and developed "the spirit of comradeship between the sexes" (p. 260).

Two questions suggest themselves after a perusal of the volume: how may Dr. Sumner's significant findings be epitomized; and how far ought these findings to weigh in assuming an attitude upon the whole matter?

As to the first, it may be said that in Colorado, where women have had full suffrage since 1894, about 40 per cent. of the vote cast is cast by women. Their activity in the primaries is very much more limited than at the polls. Over a tenth of the men who answered the *questionnaire* declared that "no women attend" the primaries. Certainly, less than one-fourth of those at primaries throughout the State are women. It appears, too, that political activity among the women is very much more noticeable in the cities and towns than in the rural districts. At nominating conventions a few women delegates frequently appear, although in this rôle, as well as in the rôle of nominee for elective office, women are somewhat less in evidence than when equal suffrage was first tried. In the cities a greater percentage of the women in the better residence districts register and vote than in the slums or cheap tenement-house districts. On the other hand, "prostitutes generally vote, and their vote is cast solidly for the party in control of the police force. This is true not only in Denver, but usually in Pueblo, Cripple Creek, and Trinidad, and often in other cities. . . . Neither is it surprising to learn that the prostitutes vote not only once, but often more than once . . . [for] registration books are most easily and unobtrusively 'padded' . . . in the red-light districts" (p. 84).

So far as the influence of the women voters on politics and the resultant type of government is concerned, it appears incontestable that the party managers have grown chary of nominating "men of notoriously unclean lives and men connected with saloons" (p. 47). "Outside of the question of personal morality and relation to the liquor business . . . women take little interest in the char-

acter of candidates" (p. 47). Apart from these two points not a dozen of all who testified to the improvement of the character of candidates by reason of equal suffrage "even so much as mentioned the standard of ability, business honesty, and public honor" (p. 48).

Though several women have sat in the Colorado Legislature, no particular preëminence is claimed for legislation passed since 1894 in the interest of women or children. Women's property rights in Colorado had been well secured by law prior to the extension of the suffrage (p. 181). "On the social evil, too, it is impossible to see that equal suffrage has had any effect" (p. 205). On the other hand, in the administration of schools and charities women in increasing numbers have shown marked capacity as public servants. The effect of equal suffrage on the economic status of women in Colorado in the last dozen years "has evidently been slight" (p. 178). The effect of suffrage upon the character of women themselves has been imperceptible. Certain types of women, ambitious and imperious, have, at times, been prominent in politics. They have sometimes not kept aloof from corrupt political practices, such as repeating. On a list of fraudulent registrations, published in 1900 by the chairman of the Arapahoe County Republican Central Committee, there were the names of 3,512 men and 1,772 women (p. 85). Dr. Sumner concedes that "the one direct evil of equal suffrage" is that it imbues some women politicians with the pernicious "tricks of the trade" (p. 258). So far as any net effect has been exercised by equal suffrage upon the care of the home and the children therein, it has been exiguous (p. 250). On the whole, our author is inclined to think equal suffrage has exercised a good influence. It ought to be credited, we are told, with cultivating intelligent public spirit among the majority of women, with enlarging their interests, with developing in many cases public administrative ability of a high order, and with broadening the comradeship between men and women.

How far the crucible of political experiment can avail to solve the issue of equal suffrage is perhaps doubtful. If our author is correct in her contention that "to fully perform, under the existing system, the duties of an enfranchised citizen requires not only an inflexible moral code, but the public spirit, the self-immolation, and the unselfish devotion of a martyr" (p. 258), there will be some who will still incline to argue that so heavy and so universal a "public responsibility should not be laid upon the already overburdened shoulders of mothers." Many a thoughtful citizen will echo the bull that the only weak brother he cares much about is his wife. The Colorado practice of excusing women, though legally liable, from jury service, on the ground that "the duties of a housewife cannot be postponed during her service on a jury" (p. 129), would seem to be in point here. Upon one truth there can hardly fail to be agreement. If men are going to confer political power and responsibility upon women, the men voters would do well first to procure both for themselves. If the conditions of machine politics are such that virtue has gone out of the nominal sovereigns; if even in Colorado, as Dr. Sumner tells us, "equal suffrage . . . serves to show, in the most striking way, the essential rottenness and degrading character of the present [political] system" (p. 96), it should seem almost a worthless gift to convey to women this hollow shell of decayed political power. One is inevitably reminded of the young woman in class meeting who confessed that when she found her jewels were dragging her down to perdition, she gave them to her sister.

Confessions of a Barbarian. By George Sylvester Viereck. New York: Moffat, Yard & Co. $1.25 net.

The name of young Mr. Viereck is doubtless known to a good many readers of the *Nation* as author of certain well-advertised poems, not, as we suppose, very widely read, but generally understood to be of rather a shocking character. In the present volume he shows himself proprietor of a prose manner oddly compounded of Shaw, Chesterton, and George Moore. He struts, he sparkles, he belabors; he waves his capital I with happy abandon in the face of a startled world. Like his great original, he disdains not the cart-tail or the drum. Bumptiousness is the god of whom, to take him literally, he is the delighted prophet. "This book," he announces with triumph, "reveals America to herself by interpreting Europe. I stand in symbolic relation, so to speak, to both hemispheres." That is, Mr. Viereck was born in Germany, and entered this country with his teens. The book records a series of impressions evoked by a return to Europe, some dozen years later, as an American. The timeliness of the performance is, he declares, no limitation—for him. The book "is journalism only in the sense in which that term may also be applied to the 'Reisebilder' of Heine. . . . Only those are of all time who, like Rabelais, Cervantes, and Voltaire, are in immediate touch with their own time." Cheered by this reflection, he goes on to state, with much enthusiasm, if less coherence, the upshot of his present work:

> I urge Europe's gospel of tolerance. I lead those who follow me out of the Babylonian captivity of Puritan prejudice. I have been accused of posing, because, in a world of antinomies, I am an inveterate truth-teller. This is my flesh and blood. I could not more frankly denude myself in the sanctity of the Confessional. I speak with the truthfulness of Saint Augustine, of Rousseau, and of George Moore.

Also, we observe, with the impudence of Shaw. . . . Miching mallecho!—let us look out for ourselves. Something a bit "racy" is, no doubt, to be divulged: something connected with the liberality observed by European society in relation to—we know very well what.

Let us hasten to offer our tribute in the form of a confession that certain passages in the book have revolted us not a little. We have been able to encounter without excessive perturbation the not altogether novel theory that matters of sex have nothing to do with morals. But a "tolerance" which permits the poet's fancy to busy itself ardently with the horrors of sexual perversion is a thing to be loathed. The author's command of paradox doubtless enables him to acquit himself on this head. The Kaiser is "logical, because he is illogical." So-and-so is a perfectly healthy man, because he is morbid; and so on. Apart from the passages in question, there is nothing shocking or even surprising in the book. When Mr. Viereck is able to get away from the concerns of sex he is often better than brilliant. The chapters on "The Philosophy of Militarism" and "Inspired Bureaucracy" give a sympathetic interpretation of the German system. His pronouncements on art and life commonly fall too far short of dignity to deserve serious appraisal. There is little to be said for the critic who is pleased with himself for declaring: "We shall never have a full-blooded art until we develop the liaison"; or who, far less tolerably, announces: "I am fully aware that all art is a form of exhibitionism."

A History of Mediæval Political Theory in the West. By R. W. Carlyle and A. J. Carlyle. Vol. II: The Political Theory of the Roman Lawyers and the Canonists, from the Tenth Century to the Thirteenth Century, by A. J. Carlyle. New York: G. P. Putnam's Sons. $3.50 net.

The second volume of this painstaking work is devoted to an analysis of the legal and political conceptions of the civilians and the canonists belonging to the period under review. In Part i certain mediæval manuals of Roman law (the "Brachylogus" and "Petri Exceptiones") are referred to, and then the views of jurists of the Bologna school are given, Irnerius, Placentinus, Azo, Accursius—a mention of whose dates might assist the non-specialist reader. Mr. Carlyle discusses the significance of definitions of *æquitas*, *jus*, and *justitia*, which these *Glossators* borrowed or adapted from Justinian's Digest; then their theory of the *jus naturale*, and of slavery which existed in apparent opposition to its mandates.

Next their ideas as to the source of political authority are discursively presented, and their views are set forth upon the mutual relations and respective prerogatives of the ecclesiastical and secular governments and courts.

Part ii adds a somewhat lengthier and more suggestive treatment of like matters by the Canonists—their theory of law in general, of natural law, of slavery, property, of secular authority, of the nature and character of canon law, and of the relations between Church and State. In this part of his volume Mr. Carlyle emphasizes two points: The first is, that with the Canonists, Scripture, and the *jus naturale* so closely related to Scriptural precepts, contain the peremptory law of God, and that every contravening ordainment, whether emanating from a secular or an ecclesiastical source, is void—Constitutiones ergo vel ecclesiasticæ vel seculares, si naturali jure contrariæ probantur, penitus sunt excludendæ. According to this view, which is Gratian's,

> The canons of the church belong to the same category as the civil law of the state; they do not represent an absolutely final authority, but are rather the expression of the authority residing in the church and its proper officers for the government of the society, subject always to the authority which lies behind the society. But they are binding upon all the members of the society; to refuse to obey them is to refuse to recognize the authority of God, from whom this authority is derived (p. 177).

Such an exposition makes evident how many things that view left open to dispute!

The second point is perhaps more novel, and, so far as sound, of much importance to students of the relations between mediæval kings or emperors and the papacy. The author says:

> It is necessary to distinguish carefully between incidental and sometimes hasty sayings, made under the stress of some great controversy, and judgments expressed in legal and other works which were compiled in cold blood and represent reasoned and considered conclusions (p. 93).

He then proceeds to show that the statements which were embodied in authoritative compilations of canon law, regarding the supremacy of the papal church over rulers and states, and touching the sinful nature of secular power, were considerably less extreme than the language used, for example, by a Hildebrand (before or after he became Gregory VII), or by a Boniface VIII, whose utterances the authors of this work expect to discuss in a later volume. In the meanwhile, the conclusion is thus stated:

> And finally, we think that an examination of the subject will have made it clear that while the church had come to claim a tremendous authority in relation to the empire, it is not the case that the church as represented in the deliberate judgments of the canon law claimed to be supreme over the state. The normal doctrine of the canon law down to the time of the Decretals [of Gregory IX, completed in 1234] is the same as that of the fifth and the ninth centuries, that the two authorities, the ecclesiastical and the civil, were equally and separately derived from Christ, and that strictly each was supreme in its own sphere (p. 254).

As the present volume sets forth but the first part of the argument of our authors, it would be premature to offer a decision—at least one adverse to their contention. Yet if the matter were to be judged on the evidence given in this volume, we should say that a good deal of stress is laid upon the omission of extreme pretensions from certain papal documents, and a disclaimer is inferred from their silence, where there was no call to speak. Moreover, the authors' position seem to counter the conclusions, or generalizations, of Dr. Otto Gierke's "Deutsche Genossenschaftsrecht," a section of which was translated by the late Frederic William Maitland, and made by him into that wonderful little book (*multum in parvo!*) entitled "Political Theories of the Middle Age." Pages 11 to 16 of the Maitland-Gierke book, with the corresponding notes (9 to 39), bear on this matter.

In conclusion, a reviewer's duty to the craft of book-making compels a disapproval of the way in which the preface, and to some extent the "Texts of Authorities referred to in Volume II," give a list, meagre enough, of modern works without stating the dates of their publication. And we must remark that the awkward language (style we cannot call it) of the author not infrequently retards the reader's apprehension of his meaning.

Notes.

Theodore Roosevelt's book about his African trip, which will be published by the Scribners in August, will contain some material which has not yet appeared in magazine form. The book will be a large octavo of about 500 pages.

Houghton Mifflin Co. publishes this week "An American Citizen: The Life of William H. Baldwin, jr.," by John Graham Brooks.

A volume of essays on English language and literature, by members of the English Association, is announced for publication next autumn by the Clarendon Press. The editor will be A. C. Bradley; the contributors will be Dr. Henry Bradley, Robert Bridges, Prof. W. P. Ker, Dr. George Neilson, Prof. George Saintsbury, Miss Edith Sichel, and Prof. C. E. Vaughan.

A correspondent informs us that the late Goldwin Smith left upon his death a volume of "Recollections," ready for the press. These will make a work of about the size of Mr. Smith's "United States."

A selection of poems from the manuscripts which the late Father Tabb left is announced for publication next week by Mitchell Kennerley.

Publication of a volume of speeches of the late Samuel L. Clemens (Mark Twain) is announced by Harper & Brothers. The book will cover some forty years of his life, and will appear late this month.

The Putnams announce for immediate publication "The Real Roosevelt," a volume of selections from his speeches, arranged by Alan Warner; "The Government Ownership of Railways," by Judge A. Von Wagenen; and "The Commercial Power of Congress Considered in the Light of Its Origin," by David Walter Brown.

Henry Frowde announces for early publication "The Oxford Book of Italian Verse, XIIIth Century—XIXth Century," chosen by St. John Lucas; "Wood-Carvings in English Churches. I, Misericords," by Francis Bond"; "Selections from the Latin Literature of the Early Empire," edited by A. C. B. Brown; and "Gesenius's Hebrew Grammar," as edited and enlarged by E. Kautzsch, and translated by A. E. Cowley.

Henry Holt & Co. announce the addition to their foreign language texts this month of three volumes: "La Barraca," by Ibañez, edited by R. H. Keniston; Ludwig's "Der Erbförster," edited by Morton Stewart; and a new edition, with vocabulary, of Heyse's "Anfang und Ende," edited by Professor McLoutb.

A comprehensive summary of "The Iron Ore Resources of the World," which has been compiled under the auspices of the executive committee of the eleventh International Geological Congress, and edited by J. G. Anderson, general secretary of the congress, is now nearly ready, according to an announcement of the publishers. The volume may be had from Lemeke & Buechner of New York.

In the *Geographical Journal* for June, Dr. T. G. Longstaff gives an account of his recent explorations in an unsurveyed part of the Himalayas. The most important geographical results were the fixing the exact position of the greatest watershed in Asia—that which divides the rivers flowing to Central Asia from those which flow to India—and the discovery of a peak which may prove to exceed Mount Everest in height. His rough observations made it about 30,000 feet. An American traveller, Hamilton Rice, in describing two trips on a South American river, the Uapés, in Colombia and Brazil, gives most interesting facts in regard to the life of the Indians living on its shores. Attention is directed by Prof. J. W. Gregory to the undeveloped wealth of northern Australia, and its fitness for colonization by white races. It has large tracts of fertile land, considerable mineral deposits, and a wonderful stock-raising capacity, while its magnificent harbor, Port Darwin, is only six days' voyage from the great markets of Southern China.

"La Transhumance," or the migration of sheep between their summer and winter pastures, according to A. Fribourg in the *Annales de Géographie* for May, has exerted a profound influence on Spain for a thousand years. Up to recent times they traversed the country in every direction by regularly prescribed routes in herds 10,000 strong, led by a *mayoral*. In 1347

the owners formed a union called La Mesta, which obtained from the government certain privileges, especially that of feeding their flocks in the lands adjacent to these routes. Consequently, in extensive regions agriculture became impossible, forests disappeared, and a large part of Castile was turned into an arid desert. This privilege was taken away in 1837, and now the railways take the larger part of the "transhumants." In this number attention is called to the opening in April of the railway connecting the capital of the Chinese province of Yun-nan with the sea at Haiphong, Tonkin, thereby shortening a journey of a month to two days and bringing within reach of the markets of the world a region rich in deposits of coal, copper, and tin. And interesting facts are given as to the great increase at the present time of the rubber cultivation in the Federated Malay States. There are now plantations of about 200,000 acres, with between forty and fifty million trees cared for by 80,000 coolies.

The Prix Delalande-Guérineau, which is at the disposal of the Académie des Inscriptions et Belles-Lettres has been divided in two parts and awarded to George Doutrepont, author of "La Littérature française à la cour du Duc de Bourgogne," and René Sturel, author of "Jacques Amyot, traducteur de Plutarque." Of the Prix Santour, which has been divided in several portions, the larger shares have been awarded to M. Masqueray, for his 'Euripide et ses idées," and to Paul Vilatte for his "Apologie d'Apulée."

Those who have graduated from bridge to auction bridge, or are contemplating that promotion, will find help in a volume on the game, with cases and decisions by the committee of the Portland Club, reviewed and explained by "Badsworth." The book is published by G. P. Putnam's Sons.

Duffield & Co. have added two volumes to their complete edition of the writings of Fiona Macleod (William Sharp), brought out under the supervision of Mrs. William Sharp. The present instalment embraces the stories collected under four titles: "The Dominion of Dreams" and "Under the Dark Stars," "The Sin Eater" and "The Washer of the Ford." Mr. Sharp had before his death set about a revision and rearrangement of his works, and the changes, including some rather drastic omissions, now introduced, are in accordance with his express directions. The volume of "The Sin Eater" contains the interesting introductory letter written to George Meredith from Iona, in which Mr. Sharp sets forth his notion of the Gaelic spirit, and the part it is destined to play in English literature of the future. On the whole, the contents of these two volumes are rather further removed than were those of the first volume, "Pharais and the Mountain Lovers," from the ordinary passions and imaginations of mankind, and strike us as less successful artistically. They are, however, a rare addition to letters.

We wish the word "lost" might have been omitted from the title of Horatio S. Krans's "Lost Art of Conversation" (Sturgis & Walton), for the contents of the book nowhere take so desperate a view of the art. The editor, to be sure, says in his introduction: "The assertions that present-day conversation has sunk far below the high levels of the talk of the past; that our conversational performances are flat, thin, and poor; and the even more sweeping assertion that conversation is indeed a lost art—these are commonplaces that pass unchallenged, and can hardly be gainsaid." The book is made up of essays on conversation by Bacon, Swift, De Quincey, Mahaffy, Hazlitt, and Stevenson. It would hardly be maintained that conversation has become a lost art since the day of Hazlitt and De Quincey. The latter, in the essay here published, plainly treats conversation as an art still in its infancy. It had, he argues, hitherto lacked the regulation of which other arts had the advantage:

> A corresponding change will gradually take place in the usages which regulate conversation. It will come to be considered an infringement of the general rights for any man to detain the conversation, or arrest its movement, for more than a short space of time—which gradually will be more and more defined. This one curtailment of arrogant pretensions will lead to others.

In the preface to his treatise on "The Principles of the Art of Conversation," Professor Mahaffy states it as one of his qualifications that he lives "in a country where the practice of it is confessedly on a high level, and where the average man is able to talk well." Clearly, it does not occur to him that it may be a dead art of which he is about to discourse. Hazlitt, in the papers here reprinted, speaks of conversation as if it were a stable thing in all ages, chiefly varying in quality in accordance with the classification of the speaker—author, lord, or what not. And in the three essays by Stevenson, which bring the volume to a close, there is no suggestion that the art of conversation (a phrase which, to be sure, he does not use) is obsolete or obsolescent. But the title of the collection is less important than the essays themselves. Mr. Krans has supplied a good text, and in his introduction has a few appropriate comments to make upon a somewhat casually assembled group.

The career of "Edward Bulwer, First Baron Lytton of Knebworth," has many of the elements that go to make an interesting book, and these have not been neglected by T. H. S. Escott in the volume now published by E. P. Dutton & Co. Bulwer's novels, if publishers' figures are a proof, have by no means lost their favor with the larger public, but they are probably little read by those to whom a solid biographical study like this of Mr. Escott's would naturally appeal. Toward the close of Bulwer's literary career Routledge (the London publisher of the present biography) paid £20,000 for a ten years' right of producing nineteen of his novels in cheap form; and the venture was a success. Such a transaction we can understand, but it is not so easy to-day to put one's self in the place of an intelligent critic like Plumer Ward, who said of Bulwer: "He is the most accomplished writer of the most accomplished era in English letters, practising all classes and styles of composition, novelist, dramatist, poet, historian, moral philosopher, essayist, critic, political pamphleteer—in each superior to all others, and only rivalled in each by himself." Critical readers of a younger generation are, on the contrary, too likely to forget the large amount of genuine entertainment his books provide, and to overlook the fact that, with all the melodrama and despite the cheapness of tone that mars so much of his work, the pages of "My Novel" and its companions are packed with the shrewdest remarks on politics and life in general.

In his biography Mr. Escott gives a full account of Bulwer's political career, with a sufficient number of anecdotes. Perhaps the most entertaining of these is the remark of Disraeli when at Bulwer's house he was asked to take Mrs. Wyndham Lewis down to dinner. "Oh," was the answer of Mrs. Lewis's future devoted husband, "anything rather than that insufferable woman. But Allah is great." The political careers of Bulwer and Disraeli were not without resemblances, but their matrimonial ventures were sufficiently diverse. Mr. Escott naturally, and no doubt purposely, takes the part of Bulwer in the long disease he called his marriage. Perhaps, however, the character of Bulwer on this side was not fairly presented without some specimens of the superlatively foolish letters to his wife, which Mr. Escott virtually ignores. The most interesting part of the book is that which gives the youthful years of Bulwer with their broken education and melodramatic passions. The child in this case was truly father of the novelist.

The University of Berlin, in a congratulatory letter on the fiftieth anniversary of the late Prof. Philip Schaff's career as a teacher, pronounced his "History of the Christian Church" "the most notable monument of universal historical learning produced by the school of Neander." Dr. Schaff did not live to complete the work, and it was left for his son, David S. Schaff, professor of church history in the Western Theological Seminary of Pittsburgh, to treat the period from 1050 to 1517. This filial duty he has now performed, a former volume, published in 1907, having covered the period to 1294, and the present volume (V, Part ii; Scribner) bringing the narrative to the opening of the German Reformation. The son has written in the manner of the father. There is the same wealth of fact, the same caution of opinion, the same mild Protestant prejudice, the same graphic characterization of periods and persons with parallels from all ages. The historian is still of the "school of Neander," not of the modern scientific historians. One does not find new judgments of men or movements, based on newly discovered documents or new interpretations of the sources, but there is always wise selection of the best judgments wrought by others. The period treated is that of the decline and corruption of the papacy, the reformatory councils, the great mystics, the early reformers, and the Renaissance. The bibliographical references are full and valuable, the volume has a good index, and is published in the style of the series to which it belongs.

In the New International Year Book for 1909 (Dodd, Mead & Co.) we find a work adapted to the uses of the newspaper office as well as the general reference library. It is a bulky volume of nearly 800 quarto pages, and it makes good use of its generous elbow room of nearly a million words. An exception, however, is the article on Polar Research, which, in view of the dramatic and essential importance of the facts it has to record, might easily have been two or three times as long. We still find the most

valuable single feature in the historical summaries for the year accompanying the articles on the States and foreign countries. If only vigorous precautions be taken against error, these summaries are bound to grow more valuable from year to year, and the file of the International Year Book will serve the historian as appreciably as the long chain of Appleton's Annuals now extinct. Specialized tables like those given under Necrology and under Gifts and Bequests are particularly useful.

Winthrop Packard, in his "Woodland Paths" (Small, Maynard & Co.), describes the oncoming of spring with the trying imperturbability of the professional nature lover. He sees muskrats and crows fighting for their lady loves, dates you the returning birds by the calendar, greets the moths and butterflies by their Latin names. All this he does with a certain whimsicality and humor, but the stride of his fancy is pretty short, and the little book contains long, tedious passages to all who are not enthralled at the budding of simple primroses or the antics of "Grapta interrogationis." But, of course, the book is intended for the devout observer of times and seasons. For him it even provides several pages of index well stuffed with birds, beasts, insects, trees, herbs, and flowers. The uninitiated, if, indeed, any one has escaped the teaching of the "how-to-know" books, will find more to their purpose a capital sketch about the manly art of bobbing for eels, or an amusing characterization of grotesque young night-herons unadvisedly adopted as pets. There is a tang to these things that we miss when the author muses on clouds and butterflies. He conveys an enormous deal of nature, to be sure, but usually with rather slight personal contribution of imagination. Six pen drawings, by Charles Copeland, have a pleasing old-fashioned quality. To all appearances they might have come out of the portfolio of some patriarch of the Hudson River School.

The last publication of the Pali Society is a volume by Mrs. Rhys Davids, entitled "Psalms of the Sisters" (Henry Frowde), being verses attributed, in the tradition of the Pali Canon to certain eminent sisters (Theri-Bhikkhunīs) of the Buddhist Order, and forming the second and smaller portion of the work known as Thera-therī-gāthā (*i. e.*, verses of the Elders, Bretbren, and Sisters), which was first committed to writing in 80 B. C. In her labors as a translator, Mrs. Rhys Davids has derived great assistance from the Commentary of Dhammapāla of Kāñcipura, and it is because the MSS. of the first part of this work—that on the Thera-gāthā, or psalms of the Brothers—are less numerous and harder to obtain than those on the Therī-gāthā, not from any wish to invert the ancient order, that this, the latter division, has been put into English earlier. While no one, not even the pious Buddbist, any longer believes that these poems contain the actual words of the women to whom they are ascribed, or that the Bhikkhunīs in question conversed in Pali slokas, they are none the less valuable as registering for us the thoughts and aspirations which large congregations of believers have for centuries ascribed to saintly builders-up of certain ideals, and as forming part of a literature, which has for so long a period been revered as holy writ. Allowing for variations in the history and temperament of the heroine, the theme of these poems is everywhere the same. It is the thanksgiving of the enlightened, the joyous utterances of one who "having made a resolve (to escape the round of rebirths) under former Buddhas, and heaped up merit in this and that state of becoming," has under this Buddha dispensation severed herself from earthly ties, has overcome all unholy desires, and, having attained to "thorough knowledge of the Norm in form and meaning," has Nirvāna already within her grasp. Mrs. Rhys Davids's rendering is masterly—in places it reflects what seems to be very fine poetry—and her notes and introduction sustain her high reputation as a scholar.

"En Haïti" (A. Colin, 380 pages, 32 phototypes, 2 maps, 5 francs), by Eugène Aubin, is the well-written description of present-day Hayti by an experienced traveller who had eighteen months' close observation in the interior of that not easily accessible island. To this the author joins a minute knowledge of the colonial history; and he writes with the personal photographic sprightliness of French correspondents. Landscapes, fêtes, Voodoo worship, the manner of common life, are vividly and authentically portrayed.

"Les Finances des cités grecques" (H. Champion, 315 pages, 7 francs), by Henri Francotte, professor in the University of Liège, is a collection of learned studies which show agreeably that Greek cities, quite like our own, were not without their money worries. The taxes of the autonomous cities are first explained, including separately the *Eisphora* at Athens; next, subject or allied cities; then financial administration as organized, and in its history from Pericles and the Peloponnesian war down to the third century B. C., with a special chapter on the finances of the temple at Delphi; a few pages of conclusions regarding the effect of finances on Greek history; and a good index of proper names, subjects, and Greek words.

Thomas Hitchcock, journalist, died on Monday in New York city, aged seventy-nine years. He contributed social and financial articles to the *Sun* for many years, signing himself "Matthew Marshall," and was author of one book, "Unhappy Loves of Men of Genius."

John Austin Stevens, founder and sometime editor of the *Magazine of American History*, died at Newport, R. I., last week, aged eighty-three years. Mr. Stevens was graduated from Harvard in the class of 1846. He was active in public affairs at the time of the civil war, and was elected secretary of the Chamber of Commerce in 1862. While in this office he had charge of publication of the colonial records of the chamber, and was, some years afterward, elected librarian of the New York Historical Society. Always interested in the affairs of patriotic societies, he founded, in 1876, the order of the Sons of the Revolution, and one year later the *Magazine of American History*, which he continued to edit until 1882. Mr. Stevens wrote much on the colonial and Revolutionary history of this country. His principal works are "Memoirs of George Gibbs, Librarian," "Progress of New York in a Century," "The Burgoyne Campaign," "The Expedition of Lafayette Against Arnold," "The French in Rhode Island," "Memoirs of William Kelby, Librarian," "New York City in the Nineteenth Century," and the "Life of Albert Gallatin."

Sir William Butler, writer of many books of travel and adventure, died last week in Ireland, aged seventy-two years. His writings, which enjoyed great popularity among English readers, were a history of the Sixty-ninth Regiment, "The Great Lone Land," "The Wild North Land," "Red Cloud, the Solitary Sioux." "Far Out," "Akim-Foo, the History of a Failure," "Life of Gordon," "Life of Sir Charles Napier," "The Life of Sir George Pomeroy-Colley," "From Naboth's Vineyard," and "The Light of the West."

Julius Wolff, the popular poet of the school of Victor Scheffel, died recently in Charlottenburg, at the age of seventy-two. He wrote many military poems, besides his lyrical verses. Among his works are the "Rattenfänger," "Till Eulenspiegel Redivivus," "Wilder Jäger," "Der Raubgraf," "Das Recht der Hagestolze," and "Die Hohkönigsburg."

Georg, Freiherr von Oertzen, died recently in Freiburg im Breisgau. He wrote extensively, but was best known for his poems and satires, some of which are "Aus Kämpfen des Lebens," "Deutsche Träume, Deutsche Siege," "Lieder und Leute," and "Zwischen Runen und Rosen."

Science.

Rara Arithmetica: A catalogue of the arithmetics written before the year MDCI, with a description of those in the library of George Arthur Plimpton of New York. By David Eugene Smith of Teachers College, Columbia University. Boston: Ginn & Co. $5.50 net.

The collection of fifteenth and sixteenth century arithmetics owned by George A. Plimpton of New York is the largest of its kind ever made, not excepting the famous private libraries once owned in Italy by Libri and Prince Boncompagni. Professor Smith has made a genuine contribution to the history of science by cataloguing and describing the books in this collection, stating briefly their contents, and adding a list of other arithmetics published before 1601. Altogether 550 different works are mentioned, which aggregate to about 1,200 books, if all the editions are included in the count. Besides this, a large number of manuscripts on arithmetic are catalogued and described. It is the most complete bibliography of early arithmetics yet attempted.

The volume as a whole is a remarkably fine example of the modern art of book manufacture. There are nine plates, illustrating certain interesting parts of manuscripts and books. Moreover, the title pages of the more prominent texts are reproduced by photography, as are also many pages illustrating the notation and the methods of computation in use during the Renaissance.

Not only is this publication of inter-

est to teachers and lovers of old books, but it contains material which will be of marked service to the historian. Thus, a book of 1483 contains a passage believed to be the first reference to a slate. The rhyme beginning "Thirty days hath September" is given in Latin as early as 1488. A very close approach to the invention of decimal fractions, which are usually attributed to Stevin (1585), occurs in a book dated 1492. There appears in photographic reproduction the finger symbolism for numbers, published by Paciuolo in 1494. Pascal's arithmetical triangle, so-called, is shown in an engraving made a century before Pascal. One photograph exhibits symbols which may throw some light on the disputed origin of the dollar symbol, $.

The reader may, at times, wish that Professor Smith had given a still greater variety of arithmetical detail, even if some facsimile illustrations of title pages had been forced out in consequence. Bibliographically the title page may seem the most important page of a book for facsimile reproduction, but historically the case may be quite different. We have looked in vain, in this volume, for an illustration of the old "scratch method" of extracting square and cube roots. Professor Smith examined the mathematical works of Maurolycus, but, by confining his attention to elementary matters, he missed the capital discovery that in this book occurs for the first time (so far as now known) the method of "mathematical induction," a method of vital interest, which has been variously attributed to such later writers as Kaestner, Jacob Bernoulli, Fermat, and Pascal. No doubt many such points will be brought out in a work on the history of arithmetic during the Renaissance, which Professor Smith has now in preparation.

Wilhelm Ostwald reiterates in the introduction to his new work, "Die Entwicklung der Elektrochemie" (Leipzig: J. A. Barth), his theory that "the history of the sciences offers the best and most authoritative material for the study of law in the evolution of mankind." The history of science, as Professor Ostwald sees it, is not merely history for history's sake, but a new method of study, a new way of getting at the results of research. The nineteenth century was too full of creative work in the various fields of science to give historical studies their full play. The new century, on the other hand, though it has achieved already some very remarkable results in the way of positive additions to our knowledge of the forces of nature, will offer a larger field for historical studies, for the reason that the practical value of such studies will be more clearly demonstrated. The author deprecates the idea that pure science can have no connection with life. The great investigators, he says, "were almost without exception in their younger days passionately enthusiastic over some concrete, practical aim, and it was in the course of the further and higher development of these problems (which indeed followed rapidly one upon the other) that they themselves attained a wider and higher point of view. The tree of knowledge raises its crown high in the ether of pure science, but it is rooted in the firm ground of human needs and activities." Electrochemistry is particularly adapted to the subject of historical study in this sense. Its history is not yet more than a century old, and it has received a powerful impetus from men still living. Its documents are all easily available, and require no special linguistic or diplomatic criticism in order to be unearthed and interpreted. Furthermore, its technical importance is evenly balanced with its scientific. In an interesting paragraph the author sets up against each other the great books, works of men of genius, and the text-book writers who usually are men of moderate stature. We find, he says, so much in the original works of the great scientists that has not become part and parcel of the text-book literature. The selective work of the text-book writer is the result of his deliberate judgment, and the mere fact that he has profited by the advance of science does not necessarily give him the requisite critical faculty. He acts as a sieve which retains the wheat but lets the gold sand slip out.

"La Vie du language" (A. Colin, 310 pages, 3.50 francs), by Albert Dauzat, reasons very readably about the various evolutions of sounds and words, the psychological and social phenomena with which they are connected, and their literary influences. The book goes from phonetics, Greek and Roman formations, the "noble" style, to popular reactions. One of the latest of these was the Parisian common people's effort to pronounce Wilbur Wright, resulting in "vilburétt" which they promptly turned to "vieille burette" (old oil-feeder).

The Janssen gold medal has been awarded by the Académie des Sciences to W. W. Campbell, director of the Lick Observatory, in California. The Prix Boudin, of 3,000 francs, goes to I. G. Chauveaud, for the "Etudes sur les tissus des plantes vasculaires"; the Prix Hébert to Professor Barbillon of Grenoble, for his works on electricity; and the Prix Lalande to Messrs. Cowell and Crommelin for their work on Halley's comet.

Drama and Music.

"Glass Houses" is the title finally chosen for the adaptation of the "Connais-toi" of Paul Hervieu, made by Kenneth Barnes, and recently produced in the London Globe Theatre with a fair measure of success.

Robert Arthur's revival of the Robertsonian Comedies at the London Coronet Theatre has begun, apparently very successfully. The first piece, "M. P.," had a most cordial reception and seems to have been well acted.

Cyril Maude, the well-known English comedian, is to try his hand at Rip Van Winkle. He is a player of intelligence, humor, and delicacy, and therefore has some obvious qualifications for the undertaking. An entirely new stage version of Irving's tale will be made for him—by Austin Strong—in which special stress will be laid upon the preternatural scenes in the Catskills. There certainly ought to be no difficulty in making a better play than the bit of dramatic patchwork employed by Jefferson, but Jefferson's Rip himself was a creation which is not likely to be equalled, let alone improved upon.

Lewis Waller will make his first appearance here in September in "Henry V." His impersonation of that gallant monarch is said to be full of nobility and eloquence. Old playgoers will remember the popularity which George Rignold won in the part thirty-five years ago. Richard Mansfield, an actor of higher degree, was far less successful in it. Mr. Waller will bring several other plays with him.

The revival of Henry Arthur Jones's comedy, "The Case of Rebellious Susan," at the London Criterion Theatre seems to have been a decided success. Sir Charles Wyndham is once more seen at his best as Sir Richard Kato, Mr. Bishop is as richly humorous as ever as the old Admiral, while Miss Mary Moore resumes her old part of Lady Susan Harrabin with all the old effect.

Owing to the demand from many parts of Great Britain, the colonies, and America, from persons who were unable to witness the annual Shakespeare birthday celebrations, it has been decided to hold a summer festival at Stratford-upon-Avon of three weeks from July 25 to August 13. Mr. and Mrs. F. R. Benson and their Shakespearean company will present many of the plays of Shakespeare, several being given in the open air. "The Piper," the prize play by Josephine Preston Peabody, will be produced on Wednesday, July 27, its original production having been postponed owing to the death of King Edward. Miss Marion Terry has been engaged for the part of Veronika. The festival programme will also include concerts—arranged by Mr. and Mrs. Albert Mallinson—Morris dances, country dances, folk songs, and old English games.

The Irish Abbey Theatre Company has been drawing good audiences and attracting much favorable critical attention at the London Court Theatre, but some of their pieces are puzzling even to the most ardent admirers. They show a tendency to drift toward the merely extravagant or grotesque—a common weakness of such organizations. In their plays of peasant life they are almost always delightful, but in their more ambitious efforts they are less happy. The scene of one of their latest productions—"The Glittering Gate," by Lord Dunsany—is laid in hell, whence two burglars, one killed during a robbery and the other hanged, break into heaven; only to find it empty space. Another play, "Harvest," by S. L. Robinson, purporting to be a study of the effects of a bad system of education upon a particular family, seems to be too extravagant, depressing, and illogical, to be valuable either as entertainment or suggestion. "The Eloquent Dempsey," by William Boyle, a study of modern municipal politics, in which the hero strives to be all things to all men and is finally repudiated by everybody, is described as an amusing piece, full of native humor, but somewhat deficient in variety and action. "The Image," a three-act comedy, by Lady

Gregory, relates to the determination of a group of village gossips to devote certain money to be raised by the sale of two whales, to the erection of an image. While they are debating the matter, one whale is appropriated by rivals, and the other washed away. The plot is the thinnest thing in the world, but the characterization is said to be admirable.

The French minister of public instruction and of fine arts has submitted to the President of the republic for signature a decree by virtue of which the "reading committee" of the Comédie Française, which was abolished in 1901, is to be re-established. For the last nine years the power of accepting or rejecting new plays has been vested in the director of the theatre. The committee is to consist of ten regular members and two deputy members, who will consider new plays under the presidency of the director. The ten regular members are to comprise the six members of the managing committee of the theatre, together with two *sociétaires* elected by the general body of their fellows, and the two senior female members of the society. It is provided that at least seven members, in addition to the president, must be present at meetings of the committee. New plays are to be read either by the author himself or by his representative, or by a member of the committee in the presence of the author, if he desires to attend. The committee will express its views by ballot, and the president will have a casting vote. The abolition of the reading committee constituted one of the grievances which M. le Bargy alleged as a reason for his resignation from the Comédie Française.

"Le Drame en France au XVIIIe siècle" (A. Colin, 600 pages, 12 plates, 10 francs), by F. Gaiffe, *docteur ès lettres*, is a very complete study of an important subject in the history of French literature. It begins from the decadence and transformation of tragedy and comedy in the eighteenth century; the influence of foreign literatures, and the social origins of the "Drame"—a new *genre* created by the philosophic party to soften and moralize *bourgeoisie* and people by presenting to them touching scenes from their own adventures. The second part takes up in chronological order the history of this dramatic *genre*, from the "Fils naturel" (1757) and Diderot as leader of a school to the transformation of the Comédie Italienne and the proclamation of the liberty of theatres in 1791. The third part studies the matter of the "Drame"—its philosophic and moral ideas; characters, portrayal of sentiment, sensibility (that eighteenth century discovery); its scenes of contemporary society, historical truth, and local color. The fourth and last part deals with the form of the "Drame"—its classic rules, romance, and mingled tones; the verse, language, and style; the representation, declamation, pantomime, costumes, and stage decoration, and a summing up of its influence on melodrama which sprang from it, and its success in foreign countries; its connection with romantic drama and modern comedy, and four complete indexes.

William R. Chapman announces that the next Maine Music Festival will open in Bangor on October 6 and close at Portland six days later. The list of soloists includes Alma Gluck, Marie Rappold, Estelle Harriss, Mary Desmond, Pearl Benedict, Luigi Samolli, besides Cecil Fanning who sang also at last year's festival. The programmes will be made up largely of excerpts from operas—"Lohengrin," "Samson and Dalila," "Carmen," "Mefistofele," "Queen of Sheba."

Italy's leading opera house, the Scala of Milan, kept its doors open the past season considerably longer than usual. Formerly the season always ended with the carnival; this time it extended even beyond Easter day, the object being to reduce the deficit, which in the previous operatic year had been 270,000 francs. This sum was reduced to 100,000 francs by the extra spring performances. The outlook for the future is encouraging, as the city fathers have voted to increase their annual contribution from 60,000 francs to 150,000, for a period of eight years. The chief difficulty is the scarcity of singers, as the best continue to migrate to North and South America, where salaries are high. First-class conductors also are becoming scarce, the music-lovers of Milan mourn the loss of Vitali, who has gone to Buenos Ayres. The number of performances given during the past season at the Scala was seventy-two. Only eight operas were included in the repertory. "La Damnation de Faust" led with 15 representations, followed by "Sonnambula" with 13, "Walküre" 12, "Medea" 11, "Samson and Dalila" 8, "L'Africaine" 8, "Rhea" 3. Two performances were also given of "Margarete," a new opera by Alfred Brüggemann, whose music suggests, it is said, the influence of Puccini, Strauss, and Debussy.

Art.

A Catalogue Raisonné of the Works of the Most Eminent Dutch, Flemish, and French Painters, Etc. By John Smith. Eight volumes and supplement: A textual reprint of the original edition, imported by E. P. Dutton & Co. $25 net.

In the year 1839, John Smith, picture dealer of London, published tentatively with one of the longest title-pages on record the first volume of this remarkable catalogue. Its usefulness was apparent, and volume succeeded volume until the series was concluded by a supplement, in 1842. His aim was to include only important artists and paintings of a certain consequence. His taste was that of his time. Systematically he disregarded all Dutch painters before Rembrandt, and all Flemish painters before Rubens. Of the French school only three French masters seemed worthy of record, Poussin, Claude, and Greuze. Within his chosen limits his diligence was extraordinary. He consulted thoroughly the sales catalogues of the seventeenth and eighteenth centuries, thus catching many pictures before the dispersion of the old galleries. He travelled much, and watched closely the greatest picture market of the world, London. So faithful was his search that even now, after seventy years, of the artists whom he treats only one work out of five, on a rough average, escaped his notice.

We have said his taste was limited. Frans Hals did not seem an artist important enough to be fully listed. Vermeer of Delft makes a bare appearance as an imitator of De Hooghe and as a painter of street scenes. Several of the signed works of this incomparable artist are set down to the mediocre Eglon van der Neer. To do Smith justice, Vermeer impressed him; considering the scarcity of works by this painter, he writes: "It is quite inexplicable how he attained the excellence many of them exhibit." Yes, Smith's taste was pretty restricted, but a narrow taste may be remarkable within its range. Smith's was that. His observations on the quality of the Dutch little masters are as keen as they are unpretentious. It would be an interesting exercise to note the many instances in which he has anticipated the criticisms of Taine and Fromentin. He was not merely an excellent connoisseur, but an enthusiast; and it still is a comforting thing to dealer or collector to be able to identify a favorite picture as "Smith, No. —," and to quote a word of praise. He came upon the end of an exclusive enthusiasm. Before his catalogue was finished a little book, called "Modern Painters," by a "Graduate of Oxford," had, though no one knew it, announced a new period of taste. Still, the half-gods with whom Smith chiefly dealt survived the coming of the primitive gods, and his work is still valuable enough amply to justify this handsome reprint. Not that the catalogue is ideal. Smith himself frankly admitted its limitations. Frequently, the measurements are only approximate. Sometimes the ambiguous "right" and "left," that bugbear of cataloguers, makes trouble. Signatures are neither facsimiled nor located on the pictures. But with all its faults it remains the completest census we have of a national school.

The reissuing of a standard work of reference of this sort is always something of a poser for a publisher. He is under pressure to revise it and bring it up to date. Unquestionably, if a connoisseur of, say, Dr. Bode's competence would give us a revised and enlarged Smith, tracing the fates of the pictures, and adding the works and the artists that were omitted—such a catalogue would be invaluable. On the other hand, such a revision could be undertaken with more confidence twenty years from now, on the basis of monographs on the single artists. Within the short memory of the reviewer at least ten unlisted pictures by Frans Hals have been published. Evidently, the situation as regards the painting of the Low Countries is still fluid, and no list made now could pretend to definitive character.

Accordingly, the publishers, avoiding the temptation of partial revision, which is generally worse than none, have simply reprinted textually the original catalogue, bringing it into the more convenient form of nine volumes, and adding, beside the original engraved illustrations, an excellent photogravure for nearly every artist mentioned. It is a minor defect that the location of these paintings is not given. Most of them, however, are in famous galleries and readily recognizable by those interested. Since the original edition is both scarce and dear, this seemly reprint, with its white labelled backs, is very welcome. These extra tall octavos would lend themselves to the purposes of the extra-illustrator, and, in fact, the serious student of the painting of the Low Countries could probably take no better course than to make this catalogue the basis of an album.

A committee, headed by Lawrence Alma Tadema, asks subscriptions to a memorial fund with which to purchase from the executors works of the late John M. Swan, for presentation to the British people, through the National Art Collections. The committee wishes to place several examples of Mr. Swan's drawings or paintings of animal life in the British Museum, the Tate Gallery, and perhaps elsewhere. Subscriptions will be gratefully received by J. C. J. Drucker, No. 24 Grosvenor Street, London, W.

"Sir J. E. Millais, P.R.A.," by J. Eadie Reid, is the latest addition to the "Makers of British Art" (Scribner importation). It is conceived in a mood of excessive and unmodulated enthusiasm and is commonplace in style. The method is annalistic with one or two semi-critical chapters to top off with. If one wants pretty much all the facts about this eminently British master, here they are. Mr. Reid, as a brother painter, holds firmly to the faith that Millais's development was perfectly normal and temperamental. There is no question of a great refusal of Pre-Rapbaelite faith, or of recreancy. Here the fellow worker sees more clearly than most critics. The Pre-Raphaellte gospeller Holman Hunt caught Millais at a young and impressionable age. Millais succumbed, as at seventeen a sympathetic lad will to any stronger nature. It was mere luck that he trooped with the Pre-Raphaelites. But for this fortuitous enthusiasm he would have placidly started in to be the continuer of Sir Thomas Lawrence in portraiture, of Stothard in illustration. When he came to man's estate he shook off a false entanglement and followed his star. Possibly he had gained something by the minute naturalism of his apprenticeship, but we think not much. His gift lay elsewhere, and was of an essentially insular sort. Outside of England his pictures look oddly insignificant. With the technical facility of the eighteenth century masters he united a peculiarly Victorian sentiment, fresh, unsophisticated, and without distinction. Essential seriousness was denied him at all times. His juvenile pictures are his best, simply because his kind of nature is chastened by the requirement of an elaborate and painstaking make-believe. Masquerade is often a dignifier. Millais could have been a better Baron Leys had he chosen to take the pains. His elaborate confections are always engaging after the friendly fashion of Leigh Hunt's "Francesca da Rimini" or Tennyson's "Princess." But the root of self-discipline was rarely in the man, and he breaks the level surface of British pictorial achievement only in virtue of a technique which after all was not superlative. We think the future will value the few fine drawings he made for engraving longer than it will his pictures. As an illustrator of Tennyson and Trollope he was ideal. His line was singularly expressive, his method concise and austere. A discipline was forced upon him from without by the requirements of old-style wood-cutting. One almost regrets a prosperity that made this work exceptional. As a man he is a very amiable and characteristic figure. He represents that facile sympathy and quick response to obvious sentiment which England gladly accepts as an equivalent for artistic inspiration. He was the common man's ideal of a great artist, and his gift was specific enough to content the critics, large enough in fact to suggest that had any capacity for self-criticism been granted him he might indeed have become a great painter. The present volume gives many details as to date, ownership, and even prices of his pictures, and is illustrated with twenty-one cuts.

Finance.

THE AUTUMN MONEY MARKET.

No one who reads, marks, and inwardly digests the New York bank statement can fail to discover what the matter is with the financial situation in the United States. It is doubtless comforting to be told that last week the surplus reserve of the New York banks was materially larger than for any corresponding period in ten years, with two exceptions. But there is a fly in the ointment, for these exceptions were 1904 and 1908. The first half of 1904 and the whole of 1908 were periods of hard times when money piled up in the banks for want of confidence. Obviously 1910 is not without resemblance to two and six years ago.

But even more interesting as an object of study than the surplus reserve is the variation in the total amount of specie and legal tenders held by the banks—that is, in the amount of lawful reserve money. At the close of business last Saturday, the New York Clearing House Banks held in round numbers $327,500,000 of gold, or its equivalent, as against $382,200,000 on June 19, 1909. That is, they had something like $54,700,000 less money for reserve purposes than twelve months earlier, and, as a consequence, they had almost $220,000,000 less deposits. Other things being equal, this would imply that they had reduced their outstanding loans by virtually $220,000,000 also. But, as a matter of fact, they cut them down by only about $147,000,000. Obviously their loan item has in the first half of 1910 eaten much more heavily than usual into their capital and surplus.

The loss of $54,700,000 gold in the past year is easily accounted for—the metal has gone abroad. On the face of it, this is not a light matter. In the first place, there is no evidence that the country has derived any general benefit from buying more than it sold abroad; for that is what the movement amounts to, virtually none of this $54,000,000 being sent out for the purpose of bringing back interest. A large part of it, no doubt, represents unproductive expenditure. The long and short of the matter is that our manner of life has been such during the past year as to cut into our principal, and we have had to borrow of Europe, in order not to sell our assets for what they would bring. Of late months, Europe has wished to see some of her money, and we have had to liquidate, in order to satisfy her.

The result is that we are not to-day in the best condition to take care of this year's crops. But, of course, the crops must be harvested and marketed, and money must be found somewhere for these purposes. There seem to be but two sources—further liquidation at home or renewed borrowing abroad, or both. Each of these contingencies is sufficiently near at hand to merit careful consideration. Seldom have the banks of this country been to a greater extent "loaned up" than during the last twelve months. Capital has lost a large measure of its fluidity and acquired a fixed character. Several months ago, the Eastern banks saw the necessity of getting it once more into a state of flux, and more recently the Western banks have set themselves to the same task. This is always, however, a thankless effort. So far, the result has been a heavy liquidation in securities and a pretty general and pronounced recession in commodity prices. Unless money can be borrowed in unusually large amounts abroad, this process must go on, for there is certainly not enough floating capital in the United States to-day to take care of this year's crops and finance

general business on a liberal scale; were it not for the fact that the demand for money from merchants and manufacturers is abnormally light, it is quite conceivable that we might now be confronted with a really acute situation.

Two contingencies are at present receiving a good deal of consideration—a collapse in the Western land speculation and a wholesale unloading of surplus stocks by agriculturists. The amount of capital tied up in land at enhanced prices and in products of the soil that are being held for higher quotations than are now current, is believed to be altogether larger than can be spared at this time from the industrial operations of the nation.

But this aspect of the situation cannot be treated apart from the question of Europe's attitude toward us. Will she have the money to finance us in case of need this autumn? And what is equally important, will she have the inclination? It is fairly safe to answer the first question in the affirmative. The exceptionally large proportion of reserve to liability which the Bank of England has shown of late weeks, when taken in connection with the Bank's extensive holdings of bullion, is auspicious for us. The indications at the moment point to an unusually comfortable state of affairs in the European money market during the balance of the year. Several months ago Paul Leroy-Beaulieu declared in *L'Economiste Français* that Western Europe was in danger of being burdened with an excessive amount of capital, for which it would be impossible to find employment at home. He looked the world over pretty carefully to discover outlets, and reached the conviction that the only thing that could prevent a drop in the return on capital similar to that of the closing years of the nineteenth century was a strong demand for money from America, or from national governments in pursuance of large financial schemes. For some weeks after M. Leroy-Beaulieu ventured this prediction, the international money market seemed bent on giving the lie to him. If, however, he had then any justification for saying what he did, he has perhaps even more justification for such a prophecy to-day. America will no doubt need money badly enough three months from now; but there is more than a little ground for the hope that she will be able to get an adequate supply in Europe at a price which she can afford to pay.

HARVARD COLLEGE LIBRARY

The Nation

VOL. XC.—NO. 2348. THURSDAY, JUNE 30, 1910. PRICE TEN CENTS.

Little, Brown & Company's New Publications

A powerful new novel by the author of "Quo Vadis," "With Fire and Sword," etc.

"Henryk Sienkiewicz has added another epic of his native land to current fiction. . . . 'Whirlpools' deals with the agrarian strikes and socialistic revoits that are agitating Poland. The romance of the book is developed with intense realism."—*Baltimore Sun.*

"Never has Sienkiewicz created a sweeter or more natural girl than Marynia. The mature and thoughtful will find in it both emotional and intellectual interest of unusual quality."—*Chicago Record-Herald.*

WHIRLPOOLS
By HENRYK SIENKIEWICZ.
WHIRLPOOLS
By HENRYK SIENKIEWICZ.
WHIRLPOOLS
By HENRYK SIENKIEWICZ.
Cloth, $1.50

"A novel that will command a careful reading from thoughtful people. It has all the brilliancy of dialogue, of narrative and description that characterizes some of this writer's best work."—*Boston Herald.*

"'Whirlpools' is full of the spirit of Poland, and follows the groping of the new thought through the darkness of an intellectually chaotic transitional period. The book is one of great power."—*Philadelphia Ledger.*

"By far the best and most important book Mr. Oppenheim has written."

THE ILLUSTRIOUS PRINCE

By E. PHILLIPS OPPENHEIM.

One literary editor in a personal letter to the publisher, says:
"Let me thank you for the personal pleasure I took in reading this well-written and swiftly-moving story, 'The Illustrious Prince.' It is one of the few bits of present-day fiction that I have actually read with a keen sense of interest."

THE BOSTON TRANSCRIPT says:
"A new Oppenheim book has come to mean something more than one more book. It means a story that will bo read enjoyed and remembered. Even the villain in this tale is a very fascinating figure."

THE NEW YORK TIMES says:
"Mr. Oppenheim has won the high regard in which he is held among readers by his gifts as a story-teller, and he has told no better story than this, of his latest book."
Fully Illustrated. Cloth, $1.50

A Book of Legal Reminiscences

REMINISCENCES OF A K. C.

By THOMAS EDWARD CRISPE.

Mr. Crispe, King's Counsel, is a well-known member of the English bar, who has been associated with tho famous judges of the Victorian Era, and with celebrated wits whose personalities and bons mots make excellent literary material.

BOSTON NEW YORK CHICAGO

School Advertising IN THE NATION

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

10 cents a line for 13 times.

NOW READY

Conditions of Progress in Democratic Government

By Hon. CHARLES EVANS HUGHES

Governor of the State of New York.

To every man who appreciates his civic responsibility this volume, containing the Dodge Lectures of 1909-1910 at Yale University, will be most welcome. It is inspired with the statesmanlike character of the distinguished author.

"No person is better fitted to give advice or to point out practical ideals in American government."—*Lowell Courier-Citizen.*

"One feels confident that it is likely quite to serve its purpose—since it puts the case 'of decency and justice' in a manner clear and eloquent through unpretentiousness."—*Chicago Inter Ocean.*

Price, $1.15 net; postpaid, $1.25.

(IN THE SAME SERIES)

The Hindrances to Good Citizenship

By Right Hon. JAMES BRYCE

British Ambassador to the United States.

"Mr. Bryce has written much excellent political literature; but we doubt whether any wiser words have come from him than those in which he describes and analyses the many forms in which the enemies of self-government disguise themselves."—*London Times.*

"There is no American citizen who would not be the wiser for reading this book."—*New York Sun.*

Price, $1.15 net; postpaid, $1.25.

The Nation.

NEW YORK, THURSDAY, JUNE 30, 1910.

The Week.

Fifty years ago there was held at the old Front Street Theatre in Baltimore a session of a party convention that made world history. The Democratic National Convention at Charleston, which had failed to nominate a candidate for President, and which was already plainly facing the prospect of a rupture in the party that would mean a rupture of the Union itself, had adjourned to meet again at Baltimore on June 18. But—as had been expected by all who looked the gravity of the crisis in the face—conciliation proved impossible, and on the fifth day of the convention the Southern members walked out and held a meeting in another hall. The regulars nominated Douglas, the seceders Breckenridge, and the die was cast which resulted in making the "irrepressible conflict" a bloody reality. The great party insurgencies of those thrilling times make present-day struggles over postal savings banks, or the details of railway-rate regulation, seem tame and innocuous. But each age has its own problems and conflicts, and there may be enough perilous matter underlying our economic tussles to develop all the stature of heroic conflict in the fulness of time. Meanwhile, we can afford to smile at some of our own excitements when we contrast them with the events of fifty years ago.

It will not do to take the endorsement of Gov. Harmon for the Presidency, by the Ohio Democrats, as merely a good-natured and unmeaning bringing forward of a "favorite son." There can be no doubt that the Ohio Governor stands as the most promising Presidential candidate of his party now in sight. His firm and clear attitude on the tariff, his vigor and honesty and skill as an administrator, his success in running down rascals and making political corruption in Ohio unsafe as well as odious, mark him as a man to be reckoned with. In presenting him before the country the Ohio Democrats called special attention to his own phrase, "guilt is personal." These were the words he used when, as special counsel appointed by President Roosevelt, he urged a legal process against Secretary Morton of Roosevelt's own Cabinet. It will be remembered that the delicate Roosevelt would not permit such rough methods to be used against a friend. As he is said to have expressed it, he "would not throw Paul Morton to the wolves." But it is certain that Gov. Harmon's rugged honesty and directness on that occasion would be recalled to his credit if he were to be the nominee of the Democrats two years from now. The immediate question is that of his reëlection as Governor; but national questions certainly will be injected.

That it took a blind senator to discover corruption in a pending bill, is not wholly to the credit of the senators with normal vision. Yet the charges made by Senator Gore were too specific to be ignored. The evidence that interested parties were trying to get scandalous and fraudulent contracts of theirs with the Indians of Oklahoma validated by Congress, and that they used, or offered to use, bribery in order to compass their ends, was too strong for Congress to disregard. It was a good thing to order a thorough investigation of Senator Gore's detailed allegations. Stealing money from Indians is a shade worse than robbing children. Children have parents to look after them, but the Indians have no one—unless they can find real guardians in the government whose wards they are. It is for Congress not merely to clear its own skirts by dealing rigorously with the members implicated, but also to show that the defenceless Indians need not appeal in vain for their rights.

A voluminous report has been made by the Senate committee on the increased cost of living, of which Senator Lodge is chairman. The full document is not yet available, but a somewhat comprehensive summary has been given in the press dispatches. There is to be a minority report later on, made by the Democratic members of the committee, who are not content with the conclusions drawn by the majority members from the figures. To pass judgment on the report upon the basis of the summaries given in the press dispatches, would be rash. One statement, for example, that appears in the epitome given in many papers is on its face absurd. Speaking of wholesale prices of food-products, it says:

> A comparison of meat prices in the United Kingdom and the United States shows that bacon in 1900 was 73.4 per cent. higher in the United Kingdom than in the United States, and that in 1909 it was 31.5 per cent. higher in the United Kingdom than in the United States. About the same ratio existed in comparing beef, mutton, wheat, and corn.

The members of the committee may not be great economists, but they can scarcely have made just this statement. Certainly, the price of wheat and corn, and the wholesale price of beef and other refrigerator meats, cannot have been, either in 1900 or in 1909, higher by more than the merest trifle in the United Kingdom than in the United States; though it is possible for the English price to be somewhat *lower* than the American price, owing to our tariff.

In the main, however, the report is doubtless sufficiently represented by newspaper accounts. As might have been expected, the influence of the tariff in the matter is wholly denied; but it is surprising that so extremely subordinate a place should be given to the increased production of gold as a cause of the high prices. This latter circumstance must be accepted as in some degree an evidence of good faith; some persons of muck-raking proclivities, it may be remembered, have been seeing in the propagation of the doctrine that gold production is the main cause of the high prices a deep conspiracy on the part of the Trusts and the tariff-protected interests. Had we entertained these dark suspicions, we should now be ready to make a humble apology, and accept the Lodge report as a complete exculpation. But since that is not the case, we are constrained only to remark that, however complete may be the *bona fides* of the committee in this matter, we have no reason to believe that their judgment on the subject of the influence of gold-production upon prices is entitled to a particle of weight. If the full report should contain matter calculated to alter this estimate of their authority in such a matter, we shall be glad to acknowledge the fact.

Now it is the ultimate government ownership of ships that Mr. Bryan advocates. In an article contributed by him to the July *American Exporter*, he argues against subsidies, but takes the view that, inasmuch as it is essential to do something to restore the American commercial marine, the government should go into the business. "Government ships," he writes, "would help our trade." "Our Government can own a few transports and use them in time of peace to develop trade. They could be leased to carriers on conditions which would enable the Government to train seamen. . . . and the policy could be stopped any time if found unprofitable." Nothing could better illustrate the happy-go-lucky nature of Mr. Bryan's mind and statesmanship. Here is a subject upon which it is evident that he has thought little, yet he throws out a large and revolutionary suggestion with the cheerful air of a man for whom such things as details do not exist, though in such a matter the details are everything. But none of these things troubles Mr. Bryan. In his finest happy-thought manner, he advises us to embark lightheartedly upon the great venture, and then if we find that it does not prosper, to abandon it with equal light-heartedness. And yet people complain that there is a dearth of Democratic leaders!

There are encouraging signs that the agitation against technical absurdities and unnecessary delay in our courts of justice is having its effect. In Chicago, recently, the court made short work of a contention in the Lorimer case, which virtually amounted almost to a plea that under the laws of Illinois bribery is not a crime. This did much to discourage the worst type of modern defence—that built entirely on technicalities and not at all on a real denial of the crime. In Oregon, a circuit judge has taken the Kiernan case, which was clouded with fictitious issues by a score of pettifogging lawyers, and disposed of it in an hour and a half. Now comes a case in Kansas which exhibits true Western audacity. A Kansas statute defining embezzlement had been printed with the word "State" spelled "estate." A lower court held that, as the word "State" was not in the statute, embezzlement by a State officer was not a crime. But the Supreme Court of Kansas held that the illiteracy of the typesetter should not prevail over the morality and common sense of the whole people, and that the manifest intent of the statute should be adhered to. The law is common sense. This is a sound ideal of justice, but one with too little of the refinements of quibbling to suit many of our courts.

The bribery trial at Chicago in connection with the Lorimer case has also brought out into striking relief that other curse of our judicial system—the abuse of the right of appeal. It has been made manifest that counsel for State Representative Lee O'Neill Browne, charged with giving $1,000 for a Lorimer vote in the Legislature, have not done all they could to secure a favorable verdict for their client. The reason appears in the position taken by Browne's principal lawyer, who "has insisted from the beginning that he is not concerned materially over the outcome in the criminal court, as he has made out a legal case for his client to stand on in a higher court." Here is as frank and as outrageous an affirmation as we can recall of a lawyer's intention to take advantage of the technicalities which may win him his case in a higher court without regard to the essential merits of the question. According to this view, which regards conviction or acquittal in a lower court with indifference, the jury system is reduced to absurdity. For if the higher court may be confidently counted upon to undo what the lower court has decided, it is obvious that the calling in of twelve good men and true to pass on the guilt or innocence of the accused is only a survival that has long lost its meaning. And not only the jury, but the lower court itself, stands forth as an expensive rudimentary organ in our system of judicial procedure.

The news of the unqualified acquittal of Chief Kohler, and his reinstatement as Chief of Police of Cleveland, will be received with sincere pleasure throughout the country. There was abundant reason to suspect from the beginning that the charges against him were the result of malicious fabrication, but it was a good thing to have them brought out into the open and disposed of by full legal inquiry. It appears, further—what was also fairly evident from the beginning—that the attack on Kohler was part of the reaction against the standards and methods of Tom Johnson's Mayoralty which set in with the election of the present Republican Mayor; and the vindication of Kohler is therefore matter for congratulation in its bearing on sound municipal government in Cleveland. But the wider interest in Mr. Kohler turns on his extraordinary initiative and efficiency in carrying out his special views of police administration. His work in this direction, whether open to criticism in some of its aspects or not, is worthy of study by municipal authorities everywhere.

The English playwright, Henry Arthur Jones, has lately been making remarks that deserve attention. He asserted, what is indeed matter of common knowledge, that there has been a marked "decline in the art of speaking blank verse on the English stage." Yet this is the very foundation of any tolerable school of Shakespearean acting. Mr. Jones recalled his own experience of Shakespearean productions during the last thirty years, and declared that the rule was to hear the great passages "merely mangled and mumbled." Too often a similar verdict would have to be passed upon the rendering of significant prose on the modern stage. The failure to grasp accent and pause in verse passes over into prose dialogue, and results in that entire displacement of emphasis and absence of articulate and expressive delivery which so frequently torture the ear of a sensitive theatregoer. Whether it be the "star" system or the disappearance of the repertory theatre or the extinction of stock companies that is chiefly at fault, the melancholy fact remains that an art which is based upon good speaking seems more and more to neglect it in ways that deserve worse reproaches than those addressed by Hamlet to the players.

The Chicago *Record-Herald* is excited over what it calls the "ridiculous honorary degrees," not because it thinks them out of place but because it finds them badly named. "Has not the time come for a little modernity and vitality in the system of honorary degrees itself?"

Miss Addams, the *Record-Herald* argues, is an author and public educator, but such a degree as, say, master or doctor of practical sociology and applied social science would mean much more in her case than that of master of arts. Here is Oberlin giving degrees of doctor of laws to the Wrights, pioneers among air conquerors. The Wrights

deserve all the honors that Oberlin can confer, but nothing can make them doctors of laws. They were repairers of bicycles a few years ago. Why should not a degree be established to apply to such inventors, mechanical geniuses, daring and resourceful experimenters, as they have shown themselves to be?

This is pretty heavy girding at nothing in particular. Once the degree is admittedly "honorary," what difference does it make what its two or three letters spell if behind them is simply the desire to confer generous recognition? In England, distinguished chemists, statesmen, brewers, soldiers, ship-builders, and poets, all end up as lords. In France they all become chevaliers or commanders of the Legion of Honor. Here we do the best we can with an M.A. or an LL.D. Master of Practical Sociology would be an attempt to define that indefinite thing we mean when we give Jane Addams a degree. It is all *causâ honoris*.

Among the more important laws enacted were those giving greater advantage to foreign mining interests; facilitating the colonization of public lands; validating foreign educational degrees conferred upon native students; improving the consular and diplomatic services; encouraging the construction of artesian wells throughout the country, and providing for the coinage of 18,000,000 bolivars in gold and silver.

What country can it be, the work of whose Legislature is thus recapitulated upon its adjournment? But for the word "bolivar" we should not look for it in South America at all; and even so, it must be outside that terrible Caribbean area in which revolutions and counter-revolutions are the only public events of interest, unless it be the robbery of the people by the government for the time being, and the imprisonment and execution of those not content with the process. But the date-line of the dispatch from which we have quoted is Caracas, Venezuela, June 27; and the body that has been occupying itself with these peaceful and apparently virtuous measures is the Venezuelan Congress. Castro's country was unquestionably for years a horrible example of the depths to which South American misrule and violence were capable of descending; and yet it now seems that it was a wise thing to let Venezuela live and work out a better state of things, rather than gobble her up and make her an everlasting problem.

In a letter to the London *Economist* Lord Eversley—better known as George John Shaw-Lefevre, long one of the leading public men of England—subjects the increase of naval expenditure to a searching criticism. The cost of the navy for the current fiscal year, 1910-11, will exceed that for the preceding year by about $28,000,000, and that for the year 1908-9 by about $38,000,000, the total naval appropriation in the present budget being nearly $200,000,000. This is four times the amount annually expended during the decade 1870-80, and double the amount of the expenditure during the years 1880-1890. But Lord Eversley falls foul not only of this enormous increase taken as a whole, but of certain of the particular applications of the money. He points out that the big spurt made by Germany in naval construction has been largely provided for out of borrowed money, with the object of making up for past deficiencies, and that after 1912 the annual increase of the German navy will shrink to modest proportions, while the British programme is based on the idea that Germany is to keep up the present pace. Again, if enormous increase in the construction of new ships is justified on the ground that existing ships are becoming obsolete, Lord Eversley asks why the old vessels are not put out of commission, thus reducing the expense of upkeep and personnel. Indeed, it is in the vast cost of the personnel of the navy that he finds perhaps the greatest grievance; the number of men in the navy is now 132,000, a great force maintained at the cost of the nation and withdrawn from industrial work. The programme for future years is kept a secret; a new policy by which, says Lord Eversley, "the only persons hoodwinked are the taxpayers of this country, for foreign governments have no difficulty in getting underhand information;" but it is certain that 1911-12 will make a large advance over the swollen figures of 1910-11, the prospective increase in the appropriations on account of the building of Dreadnoughts already undertaken being, in itself, at least $13,000,000.

Announcement of a new treaty between Korea and Japan tends primarily to raise the wonder that Korea should still have anything to give away by treaty, or Japan should still have anything to take. The latest convention confides to Japan the entire Korean police administration. A unified police system is to be created under the authority of a commander of gendarmes. This move would indicate that despite the lack of disturbing news from Korea recently, the grim work of "pacification" has by no means been brought to an end. It is one of the marvels of folk-psychology that a people so notoriously lacking in courage as the Koreans when it comes to open fighting at fair odds, should be so steadfast in carrying on a guerrilla warfare against their Japanese masters when the odds are so hopelessly against them. Japan's methods of maintaining peace and order in Korea are described in the handsomely printed and bound "Second Annual Report on Reforms and Progress in Korea," issued by the Japanese Resident-General's office at Seul. The basis of Japanese authority in the peninsula is the garrison army of a division and a half. A garrison gendarmerie force of some 2,200 Japanese and 4,000 Koreans, under the command of a major-general and charged with functions of "high and ordinary police," covers the country like a network.

The regular police force in Korea consisted in 1908 of 1,837 Japanese and 3,171 natives. Our report states that, in view of the "complicated" conditions existing in the country, a policeman in Korea is a good deal more than what the name ordinarily signifies. He sometimes acts as public bailiff "in the matter of distraining properties," and a police inspector or sergeant may serve as prosecuting officer in a district court where no such functionary exists. If in spite of garrison army, garrison gendarmerie, and police, aided by such modern devices as "political telephone-lines" designed for use against the Korean insurgents, the latter persist in holding the field, the conclusion is unescapable that their ranks are made up of others than brigands, pirates, and "forest robbers," as the report asserts. With characteristic Japanese precision, prominence is given to a detailed table of casualties in the campaign against the Korean insurgents. It shows that from July, 1907, to the end of 1908, the Japanese lost 179 soldiers, gendarmes, and policemen killed, and 277 wounded. Of the insurgents, 14,566 were killed, and 8,728 surrendered. The figures are eloquent testimony to Korean courage and resolution.

PERFORMANCE AND CREDIT.

Mr. Wade Ellis, chairman of the Republican Executive Committee of Ohio, is promptly out in an interview with the assertion that Congress has kept all the Administration's pledges, and that nothing remains but to count up the big majorities by which President Taft will be sustained in Ohio and everywhere else. This is a trifle premature. There can be no doubt, however, that the unexpectedly good record of the session has led to the revising of a great many political figures. Mr. Taft unquestionably came off with a much better showing of laws enacted than for a long time seemed possible. For this result his personal activity is conceded to have been largely responsible, and it cannot be denied that his prestige, both personal and political, is correspondingly heightened. They are not very delicate scales of justice in which the people roughly weigh such things; and as politics go, Mr. Taft will get most of the credit for what Congress did, just as he would have received most of the blame if it had failed to do anything. But those who strive to make a nicer estimate of performance and credit therefor must see that there is something to be done besides lumping the whole thing.

In the matter of the railway bill, for example, it has to be noted that the measure which finally passed bore very little resemblance to the bill which the Attorney-General kindly drafted for Congress. In the course of debate many of its clauses were entirely rejected, others radically made over, while several new provisions were inserted. Thus, if there were to be a strict apportionment of credit, a great deal would have to be set down to the account of the insurgent Senators, who, with the Democrats, really shaped the law in many of its main features. Nor should the exertions of the House insurgents be overlooked. They broke down the autocratic power of the Speaker's machine, and undoubtedly contributed in that way to the passage of the railway bill in a form much more satisfactory than we should otherwise have got. Moreover, they demonstrated that it is not necessary to have a little clique in absolute control of the House in order to "get things done." In praising, as he does to-day, the past session as one of the most fruitful in legislation that he has ever known, Speaker Cannon is tacitly giving the lie to his former protest that the destruction of his individual power would make it impossible for the Administration to get any laws passed at all.

In referring to these aspects of the case, we have not the slightest thought of taking from the President what is his due. The general opinion in these matters is likely to be pretty nearly right, and there can be no question that the general opinion about President Taft has changed very much during the past few weeks. Perhaps his fortunes were not actually at so low an ebb two months ago as most people thought, and possibly all is not so clear sailing for him now as his friends assert; but there is no dispute that he stands much better with the country, and that this is to be accounted for largely by his success in inducing Congress to enact so many of the bills he favored. In the language of his favorite sport, the President has made a fine "recovery," after slicing badly into the long grass, but it still remains to be seen how skilfully he will be able to approach the November green and hole out.

It is needless to go again over the list of bills which are displayed as so many Presidential trophies. To them was added in the dying hours of Congress a law to compel the publishing of election expenses. This, too, was a measure to which the President stood committed, and it was presumably owing to his urging that it was finally passed. It is a novelty in Federal legislation, but is in line with the most progressive State laws, and ought to prove a useful check upon inordinate or corrupt expenditure in national elections. To have been able to add this important act to the railway bill, a conservation bill, the postal-savings law, the Statehood bill, with several minor measures, certainly entitles the President to the felicitations which he is receiving.

At one point he confesses that his programme has failed. He has not been able to compass the economies in government which he strove for. The estimates vary as usual, but it seems certain that the total appropriations of the Congress will exceed those of the past fiscal year by from $10,000,000 to $40,000,000. If the President had vetoed the river and harbor bill, carrying more than $50,000,000, he would have turned the balance on the right side. And a veto would have been highly popular. It would have served also to deepen the impression of his political force and courage. He himself frankly says that at one time he thought it would be his duty to veto the bill, but careful consideration inclined his judgment the other way. He concluded that the meritorious and indispensable projects so far outweighed the doubtful or indefensible appropriations that the good ought not to be sacificed in defeating the evil. We have no doubt that Mr. Taft took pains to reach a judicial decision in this matter; and to stand by it may have required more courage than would have been demanded by a veto sure to be applauded. His determination to sign the bill, however, accentuates the bad practice of holding back such log-rolling measures till the final days of Congress, when there is no chance to reconsider them after a veto. If the President could have vetoed separate items, it is clear that many of those in the river and harbor bill would have fallen before his pen; and in reluctantly deciding to approve, Mr. Taft knew that he was fixing the charge of extravagance upon a Congress legislating in a time of Treasury deficits.

All this balancing of performance and credit is usually the preliminary to confident prophecies. In fact, sweeping predictions are made in the press: the President will be triumphantly vindicated at the polls; his eleventh-hour recovery will not avail to save him, and the Democrats will win a great victory in the autumn elections. The reader may make his choice according to taste and fancy. However, after a time of such political confusion as we have been going through, the wise man will be chary of prophecies. He will first demand a guarantee that present conditions will continue; and before deciding that the record of Congress will be sufficient to carry the Administration through, he will want to be assured that the voters are going to make that record the chief issue. They may possibly vote in resentment of high prices, which Congress did nothing to lower. All told, there never was a better time for prophets to hold their peace and to wait for that infallible wisdom which comes after the event.

PLAIN HONESTY INSPIRING.

Two public men have recently been subject to the same criticism. They do not closely resemble each other, whether in their personal traits or their political convictions, but the objection has been made to both alike that they are uninspiring. Of Gov. Harmon of Ohio it is admitted that he is upright and able, a hard worker, an enemy of rascality, a vigorous hunter down of corruptionists, but, it is added, there is nothing stirring or thrilling about him. A Westerner when asked what he thought of Harmon as a possible Democratic candidate for the Presidency, replied: "Oh, he's a good man, but archaic. He is not capable of uttering a note of spiritual summons." Our readers must know how often similar remarks have been made concerning President Taft. "Oh, yes, a solid and steady man, no doubt, but too easy-going and humdrum, no dash about him, no clarion appeal."

Now, we do not wish to write a word against enthusiasm in public life or brilliant leadership and magnetic personalities. These things are of the highest value, and at times they are absolutely indispensable. When mighty abuses are to be attacked and uprooted we are thankful enough if some man of native energy and audacity and infectious zeal comes along to get up an excitement and rouse the masses of the people and build up a great personal following and call forth the driving forces without which radical reforms cannot be carried to completion. But such political geniuses are rare. Their rarity is one proof of their genius. And the fact that we sometimes fall upon a period when there is a dearth of such men, or of the crises which call them into activity, is no excuse for shutting our eyes and hearts to the sturdy if less showy qualities of other men. It might be argued, in fact, that one of the evils which follow in the wake of a captivating and spectacular leader is that he spoils a certain number of men. They must always, after their experience with him, be set vibrating with emotion and be thrilled by spectacles of political daring, or they lose all interest and refuse to budge. If one good custom may corrupt the world, one public man all fire and dynamics may leave behind him a set of citizens with jaded but yearning sensibilities, who will not be satisfied until they again have a leader ready to drink up Esel and eat crocodiles.

It is, in a word, dangerous for the public palate to be fed so long on highly-spiced food that it rebels at good bread. Moreover, the very susceptibility to political emotion has, by the process, been narrowed in range. For our part we should think it a very bad sign if men like Harmon and Taft lost their peculiar appeal to Americans. Is there nothing to move us in the sight of a Governor pushing aside the selfish promptings of the bosses of his own party, little and big, and going straight on to do what he thinks right? Have we lost our power to respond to displays of downright honesty and independence? If we have, we had better look to the state of our own souls before complaining that men in public life have become very flat, stale, and unprofitable to us. We pity that man who did not feel his pulses quicken as he read the calm but determined reply of President Taft to the labor leaders. There was no firing of the Ephesian dome about it, but there was a quiet courage in it, and a manly note, that are really as thrilling as the sound of a trumpet.

We would also ask those who impatiently demand grand spiritual uplift and passionate appeals from their leaders, to note the fact that the great mass of government work is not theatrical, but plodding. It will not do for high officials to be always in a condition of lofty exaltation, seeing visions and warning the people and leading on the valiant host. There is an immense amount of humdrum labor which they must attend to; and what they need is not shouting and triumphant song, but the sober qualities of industry, thoroughness, sagacity, honesty as long as the day, and sincerity as transparent as light. We cannot be always storming breaches and slaying dragons; there are a thousand and one bills to be drafted and scrutinized, appointments to be made, scoundrels to be unearthed, public charities to be sweetened and made more efficient, leaks in the Treasury to be stopped, assaults on the public honor to be repelled—in short, a vast and complex work of administration to be done. And we maintain that the honest, the courageous, the indomitable man sticking to these thankless but necessary tasks is really as much of a hero there in the routine dust of his official duties, and is truly as inspiring a figure, as the other who charges the battlements and sets the crowd to huzzaing. We repeat that we are not averse to political excitements when there is fit occasion for them. The alarm-bell must be rung, as Burke said, and a clamor raised, when the house is on fire. But we should be ashamed to ask for glories every day, on pain of becoming indifferent, or to refuse our meed of admiration to the exhibition of the homely virtues which, after all, make up nine-tenths of what is important in our public life.

SERIOUS HUMORISTS.

Mark Twain's memory may suffer from a certain paradoxical habit we have fallen into when passing judgment on the illustrious dead. The habit consists in picking out for particular commendation in the man what one least expects. If the world thinks of him as a great humorist, the point to make is that at bottom he was really a philosopher. If his shafts struck at everybody and everything, the thing to say is that he liked best what he hit hardest. If one of his books sold five thousand copies, the attempt is made to base his future fame on the comparatively unknown book. The motive behind such reasoning is commendable enough. It is the desire not to judge superficially, the desire to get at the "real" man behind the mask which all of us, according to tradition, wear in life. It is a praiseworthy purpose, but, in the hands of the unskilled or the careless, a perilous one. And worse than either is the intellectual snob whose business it is constitutionally to disagree with the obvious. We make no attempt to classify the writer who has declared that Mark Twain, when he wrote "Innocents Abroad," was terribly in earnest; that he set out to satirize and was funny only because he could not help it. This represents the extreme of a tendency that is made manifest on every side, to turn Mark Twain into everything but what he was—a great compeller of laughter.

One gets dreadfully weary of such topsy-turvy criticism. There are times when one would like to believe that Napoleon will be remembered because he won Austerlitz and Marengo, and not because he divided up France into a vast number of small peasant holdings; that Lincoln was a great man because

he signed the Proclamation of Emancipation and wrote the Gettysburg address, and not because he kept his temper under criticism and in adversity. It is well to try to pierce behind the veil of Maya, but no amount of analysis can do away with the popularly accepted beliefs that mothers are primarily maternal, that actresses' talents lie in the direction of the stage, that joyful people laugh, and that people who make wry faces are either pessimists or dyspeptics. What use is there in trying to make a serious book out of the "Innocents Abroad," when we know well that the Mark Twain who wrote it was primarily a fun-maker? For ourselves, we confess that we have been unable to find any grave purpose in the "Jumping Frog of Calaveras." We recall the Hawaiian stranger whom Mark Twain kissed for his mother's sake before robbing him of his small change. We recall the horse he rode in Honolulu; it had many fine points, and our traveller hung his hat upon one of them. We recall that other horse behind which he went driving one Sunday with the lady of his choice; it was a milk-dealer's horse on week-days, and it persisted in travelling diagonally across the street and stopping before every gate. These adventures are easy to recall, but the hidden serious purpose within them remains hidden from us.

The serious element in Mark Twain the man and the writer, it would, of course, be futile to deny. His hatred of sham, his hatred of cruelty, his hatred of oppression, appear in the "Innocents Abroad," as they do in his "Connecticut Yankee" and in his bitter assaults on the Christian Scientists and the American missionaries in China of the Boxer days. But to say that Mark Twain was a great humorist because he was an intensely serious man is not true, whatever truth there may be in the formula that humorists are humorists because they are men of sorrow. We would reverse the formula. We would say that humorists are often sad because they are humorists, and that from much laughing the rebound must necessarily be towards much grief. If it is commonly asserted that the humorist laughs because of the incongruities of life, it is, nevertheless, just as safe to maintain that the man born to laughter will be driven by his instincts to search out incongruities. There was no fundamental pessimism in Mark Twain. As Mr. Howells brings out in his chapter of reminiscences in the last *Harper's*, Mr. Clemens had the soul of untamed boyishness. He was boyish in his exuberance of manner, in his taste for extraordinary clothes, and in his glee at earning a great deal of money:

> The postals [announcing his share of the daily profits from the "Gilded Age"] used to come about dinner-time, and Clemens would read them aloud to us in wild triumph. $150—$200—$300 were the gay figures which they bore, and which he flaunted in the air before he sat down at table, or rose from it to brandish, and then, flinging his napkin into his chair, walked up and down to exult in.

One thing there was in Mark Twain that was not apparently boyish or simple. Mr. Howells asserts positively that in his later years Twain believed neither in the Christian theology, in God, nor in immortality:

> All his expressions to me were of a courageous renunciation of any hope of living again, or elsewhere seeing those he had lost. He suffered terribly in their loss, and he was not fool enough to try ignoring his grief. He knew that for that there were but two medicines; that it would wear itself out with the years, and that meanwhile there was nothing for it but those respites in which the mourner forgets himself in slumber. I remember that in a black hour of my own when I was called down to see him, as he thought from sleep, he said, with an infinite, an exquisite compassion, "Oh, did I wake you, did I *wake* you?" Nothing more, but the look, the voice, were everything; and while I live they cannot pass from my sense.

Here at last we have the disillusion that is said to dwell in the innermost soul of the great humorist. But here, too, we seem to feel that the gray vision of the future was with him not a cause, but a result. When the buoyant soul sinks back upon itself it is apt to feel the riddle of life very keenly indeed.

THE CASE OF GEORGE MEEK.

George Meek had been eighteen years a bath-chair man at Eastbourne, England, had suffered from the uncertainties of his calling, contributed to the Socialist press, and nourished more ambitious plans of books on ethics and scientific progress, when, falling in with H. G. Wells, he was induced to write instead his autobiography. The book, "George Meek, Bath Chairman, by Himself" (Dutton) has no great literary merit; but it does tell a varied and pitiful story simply and with unsparing self-revelation. Mr. Wells insists that it is a genuine document, and an important one, and we are willing to take him at his word. For, after all, whether this particular Mr. Meek (and we confess that the very name bears the suspicion of a hoax) was ever born in the flesh, or is the creation of Mr. Wells's exuberant and self-complacent fancy, he has all the pungency of life and raises questions that are very real. Society must sooner or later answer the question, "What is to be done with our Meeks?"

It is easier to put such a question than to answer it. Candor will sometimes impose the acknowledgment that no answer can be found. Let us assume that Mr. Meek's miseries are, as Mr. Wells declares, highly typical, and ask what society could have done. First, plainly, we have to know Mr. Meek's vicissitudes. Under the lax bringing up of an indulgent grandfather, he passed a happy boyhood. Handicapped at the outset by defective sight, due apparently to his mother's ignorance and neglect, he had a desultory schooling, but learned no trade. As opportunity offered, he passed from employment to employment, always of a casual sort. He was by turns a helper in a Liberal club, a baker, a theatre dresser, before he settled down to piloting a roller chair. At intervals he got several kinds of religion, relapsing ultimately into a fatalistic agnosticism. Happening upon a couple of Socialist books, he became a Fabian. At the visionary task of blending the oil of Fabianism with the vinegar of Social Democracy, he worked with self-abnegating devotion. Idyllic intervals in an existence mostly distressful were an inconclusive love affair and a visit to American farmer-cousins where peace and plenty reigned. Marriage taxed his very slender earning capacity. He lived much in a squalor and amid neighbors singularly repugnant to a man whose tastes were essentially gentle, and on one occasion he was imprisoned for what, but for the fine name "contempt of court," was good old-fashioned inability to pay a debt. Through all his troubles he maintained a kindly and quizzical attitude towards life, consoled himself by much reading, and kept unquenched some tenuous spark of literary ambition. To complete the story, a well-to-do American uncle turned up opportunely, and the Meeks will henceforth have a surer support than the chair business or mere litera-

ture affords. The question, What shall we do with our Meeks? is thus academic, unless Mr. Wells is right that the instance is typical.

George Meek is the unskilled workman exposed to the hazards of casual employment. Yet he is both more and less than this. He has none of the stolidity that helps such unfortunates to bear their lot, nor any of the instinctive resourcefulness that blindly moves such laborers towards work. Being a superior person, in his measure an *intellectuel*, his lack of initiative is amazing; so is his lack of thrift. Mentally, he is an avowed vagabond and dilettante. Impelled by a desire for experience and a royal disregard for ways and means, speculative and devoid of practical ingenuity, he really belongs to a class that thrives only under parasitic conditions; is somewhat in the isolated and precarious position of a windflower to whom no foster-parent tree has been assigned. Temperament more than circumstances is responsible for his sorrows, and as successful dilettantism in every sphere implies a patron, the real solution of Mr. Meek's case has probably been found in the American uncle *ex machina*.

Unhappily, this remedy cannot be generally applied. Moreover, against the misfortunes of casual employment society can do something. Even a Socialistic régime probably could not have prevented Mr. Meek's father from choosing a worthless wife, but government as it is can help to insure to babies the use of good eyes, and by practical education may raise the general average of efficiency; it can improve the conditions of poor relief, and even the manners of prison warders. But it might as well be avowed that these things are palliatives, not remedies. They must be striven for without indulging millennial hopes. Even the fatherly Collective State could not reach those profounder dissonances between duty and temperament, ambition and capacity, which are of the essence of Mr. Meek's pale tragedy. Of course, there are those who cherish the dream that the Socialist State may play the veritable American uncle to all good fellows in distress. Even Mr. Wells, however, will admit that the question, Who shall pay? would in that case soon cry down the futile challenge, What shall we do with our Meeks?

POPE.

After all this, it is surely superfluous to answer the question that has once been asked, whether Pope was a poet? otherwise than by asking in return, if Pope be not a poet, where is poetry to be found? To circumscribe poetry by a definition will only show the narrowness of the definer, though a definition which shall exclude Pope will not easily be made.

When Dr. Johnson handed down that famous decision he had no means of foreseeing, and indeed would not have cared to see, the great romantic revival which was to ask a good many times whether Pope was a poet, and was to circumscribe poetry with innumerable definitions. Even so cautious and classical a critic as Matthew Arnold was reduced by his Wordsworthian fervor into saying that, "though they may write in verse, though they may in a certain sense be masters of the art of versification, Dryden and Pope are not classics of our poetry, they are classics of our prose." Probably the majority of readers of verse to-day, certainly the lagging "official critics," still talk of Pope in an off-hand way as a great writer, perhaps, but as at bottom scarcely a poet at all. Yet there are signs that the sounder taste of the present, grown a little weary of the old romantic presumptions, borrowed from Germany, is tending rather to rehabilitate the neo-classic school. A pleasant witness of this returning sanity may be found in the new life of Pope* by Miss Symonds, whose measured judgment shows by its very lack of originality—I mean nothing disparaging by the phrase—the new set of the tide.

I.

No doubt the character of the poet and the indecorous squabbles in which his life was passed have had something to do with the critical obloquy that has occasionally fallen upon him. If you wish to hear the worst of him—and it is pretty bad—you have only to read Professor Lounsbury's learned work, in which the quarrel between Pope and Theobald over the "Text of Shakespeare" is made the excuse for raking together half the scandalous doings of the little bard. Professor Lounsbury, as an eminent and honest scholar, may show just a touch of partiality for the able editor and poor poet against the slovenly editor and great poet, but, with the best of allowances, his exposition of Pope's treacheries and endless machinations leaves the would-be moralist a sorry figure to contemplate. Well, let us admit that in stooping to Truth, as he boasted, Pope showed rather a magnificent contempt for the prosaic precepts of that Goddess. As a claimant on eternity he was ready to treat the periods of passing time most cavalierly, antedating and post-dating his satirical thrusts quite as it suited him. All this can be admitted, yet much is left to be said on the other side. Wit was a recognized warfare in those days, and the honors went too often, no doubt, to the ablest and not to the most honorable; but the reverse is also true that dishonor has now overtaken Pope, not because he was more treacherous than his rivals, but because he was cleverer—time is likely to take this revenge on a man for lying too successfully.

Outside of that warfare Pope had his admirable traits. His filial piety was scarcely less beautiful because he made poetical capital of it. His friendship, barring the grievous and deplorable feud with Addison, was with his real rivals to fame; and the correspondence of these men, though its frank moralizing may sometimes offend an age grown dull to the distinction between reflection and affectation, is one of the great documents for human nature. When Pope lay "dying of a hundred good symptoms" he said to the priest, after taking the last sacraments: "There is nothing that is meritorious but virtue and friendship, and indeed friendship itself is only a part of virtue." It was indeed so accounted to him. Warburton, possibly as much to affront the world as to elevate Pope, called him "one of the noblest works of God, . . . an honest man." And Spence, in his anecdotes of Pope's last moments and of Bolingbroke's tenderness, raises their friendship into something almost as beautiful as the faith that gave sanctity to the death-bed scenes of the previous century.

I suspect that we should be indifferent enough to the blamable passages of his life—for it needs a rare literary detective to trace his winding satirical course—were it not that his greatest poems have become to us what Johnson called one of his letters, "nothing but tedious malignity." We might forgive the man his irritable tricks, if for no other reason, for his poor, crazy body and raw nerves; but as a poet he needs, as he gave, no mercy. There are, of course, aspects of his work which can arouse no resentment in the reader of to-day. Mr. Courthope has made a strong plea for the variety and beauty of the heroic measure in his hands; and it is certainly a dull taste that will not respond to the sweet felicity of that couplet in the "Rape of the Lock":

> The meeting points the sacred hair dissever
> From the fair head—for ever and for ever;

or feel the passion of Eloisa's solitary cry:

> Shrines! where their vigils pale-eyed virgins keep,
> And pitying saints, whose statues learn to weep!

*"Mr. Pope: His Life and Times." By George Paston [Miss E. M. Symonds]. Two volumes. New York: G. P. Putnam's Sons. $6.50 net.

Though cold like you, unmoved and silent grown,
I have not yet forgot myself to stone.

II.

But dexterously wrought out as such gems may be, we shall have a feeble case for Pope if we rest his claims on work in this *genre;* magnificent as it is, it lacks the glamour, the last touch of magic, which even the little poets of another school could command in isolated passages. And for the same reason true admirers of Pope will feel a touch of impatience at the extravagant praise so often bestowed upon "The Rape of the Lock," as if his consummate success in this filagree of the mock-heroic should be held up as an excuse for his failure in the more serious style. There is only one honest way to deal with him; we must treat him squarely as the poet of satire, and, unfortunately for his fame, the world has come to regard satire as scarcely poetry at all. If it is not poetry, then, indeed, Pope was but the fragment of a poet. There are, no doubt, special reasons why such a satire as the "Dunciad," which by reason of its size and scope comes first to mind, should find few and painful readers. All great poems, even those most universal in their human appeal, require a fairly high-developed historic sense for their appreciation, and it is idle to suppose that the Æneid will mean much to those who have not trained themselves to live in the Latin world, or that "Paradise Lost" can ever be interesting except to the scholar. No poem of the past is really popular, but the "Dunciad" demands for its comprehension an altogether exorbitant acquaintance with men and manners of a brief particular age.

And even after the necessary minute knowledge has been acquired—and to the scholar this local habitation and name of the "Dunciad" may have a special though somewhat artificial attraction—there remains the fact that the current of historic sympathy has set strongly away from Pope, and that most of us in our hearts are stung by his ridicule as were his living enemies. For that battle of the wits was no causeless or merely bookish event, but was part of the great political war of the land. It grew inevitably out of the ruinous divisions, as it echoed the drums and tramplings, of the previous century; and if ink now flowed instead of blood, the contest was hardly the less venomous for that, or the consequences less serious. It all goes back to that terrible mischance which in the days of the Stuarts divided the imagination and the practical sense of England into irreconcilable camps, and separated the loyalty to symbols of authority so far from the actualities of force. That separation kept its character through the following century, if it has not continued down to this day. Bolingbroke's vision of the Patriot King was a reassumption of the faith of the Cavaliers, and as it was a product of the imagination divorced of practical sense, we see its working out in the follies of George III and the loss of an empire. Walpole's policy was at bottom a continuation of the empire of Cromwell, and as it failed to make a place for the imagination in its practice, we see the result in the gradual lowering of England's ideal life. At the beginning of the eighteenth century she was the intellectual leader of Europe; at the end she followed at a distance. I know of no more distressing fact in history than the situation which, at the critical moment of 1714, set almost all the notable men of letters on the losing side—all of them, I should say, with the exception of Addison and Steele, for Defoe at least served Harley and fell with him. Consider the consequences to literature of the coming of the Hanoverians: Harley himself imprisoned and tried for his head; Bolingbroke frightened out of the country; Atterbury exiled; Swift confined to Dublin; Parnell also kept in Ireland; Pope cut off from political life and retired to Twickenham; Gay nursing the insult of an offer to be gentleman-usher to the infant Princess Louisa; Prior imprisoned for two years, and then sinking to a frowsy degradation; Arbuthnot removed from St. James's, and at the end writing to Pope his pathetic plea for euthanasia. It was with no mere poetic license that Pope painted the new sovereignty:

She mounts the throne: her head a cloud conceal'd,
In broad effulgence all below reveal'd
('Tis thus aspiring Dulness ever shines);
Soft on her lap her Laureate son reclines.
Beneath her footstool Science groans in chains,
And Wit dreads exile, penalties, and pains.

There is personal spite aplenty in the "Dunciad," innumerable strokes of mean retaliation and wanton offence—these faults cannot be severed from the character of the author; but beneath these motives of personal satire we shall miss the whole meaning of the poem if we fail to see the passionate warfare of the losing party of wit against the triumphant party of practical, not precisely common, sense. Picture to yourself one of the dinners at Lord Oxford's, the guests that met there and what they stood for, or call up one of the more intimate evenings in the apartments of that great talker and gourmand, Dr. Arbuthnot, at St. James's, and in comparison with these think of what passed in the palace of George I and his son, or even in the chambers of Caroline, and what these things meant to letters. There is no doubt much to admire in the deistic society that Caroline affected, and an evening at St. James's, when the Queen and perhaps Mrs. Clayton drew out the conversation of Berkeley or Clarke or Butler is one of the things I like best to contemplate in those days, even though, as Chesterfield and Walpole unite in saying, the mistress of the palace only bewildered herself in metaphysical disputes which she did not comprehend. But the master of the palace, like his own master, Sir Robert, had, I know, "a contempt for *Belles Lettres,* which he called trifling," and the Queen herself, I remember, in place of the poets she frowned upon or neglected, showered her favors upon the sad thresher-poet Stephen Duck, whom she made librarian of her grotto, "Merlin's Cave," in Richmond Gardens. George called the grotto "silly stuff"; what he thought of the poor favorite who was patronized to suicide, I do not know.

In the contrast of Queen Anne's reign with that of the Hanoverians lies the real meaning of the "Dunciad," and therein is the excuse for its bitterness. The pity of it is that politically, at least as we contemplate affairs within a narrow range of years, the Hanoverians were right, and as they seem to us right, we are drawn away from sympathy, even of a literary sort, with the satire that exposed the intellectual bareness of the land.

III.

But there is still a deeper cause of our distaste than the old echoes of faction and our political incompatibility. A great change has come upon us in our attitude toward human nature itself, and, curiously enough, Pope himself is one of the prime movers of this revolution which has carried us away from the very comprehension of his own principal works. For there is this paradox in the philosophy of Pope. On the one hand, we have his contemptuous treatment of mankind, as if his satires were no more than a long development of the text of Machiavelli that "all men are caitive [*cattivi,* captive to the base impulses of egotism], and are ever ready to use the malignity of their spirit, when they have free opportunity." While on the other hand, in his "Essay on Man," inspired by the dubious optimism of his friend Bolingbroke, we have the deistic conception of the world as the best possible creation and of men as naturally altruistic in desire and as needing only liberty from restraint to develop into unselfishness of action. Now deism, which, it should be noted, was the express theme of the philosophers and divines who hung upon the court of Caroline, won the day, altering our whole conception of society and our manner of judging the individual. We have in the course of the last two hundred years acquired a kind of tenderness for humanity, which causes us to shrink from the old theological notion of absolute evil in the world, and also from the literature of the moralists which was based on the same belief. With that tenderness, if it be not the source of the feeling, our in-

dividual sensitiveness has increased enormously, so that we take in a quite personal way the attacks of moralist and satirist on mankind in general. We can listen to the singing of the still sad music of humanity with a delicate selfpity, but from the philosophy of a Rochefoucault or a Machiavelli we start back as if a hand were laid on a concealed sore. It is certainly true that he who has imbibed deeply this modern humanitarianism will be repelled from the literature of which Pope's satires are so perfect an example; in those attacks on the meanness and folly and dulness and venality of the world he will suffer a kind of uneasiness, and, taking his revenge by decrying them as a base form of art, will turn for consolation to what Cowper calls the

charity that soothes a lie,
And thrusts the truth with scorn and anger by.

I would not say that Machiavelli expressed the whole truth, any more than did the deists, but it may as well be recognized that, without some lingering suspicion of the eternal deceitfulness of the heart and some malicious glee in the unveiling of the deceit, no man shall feel at home in the old battle of the wits. Only the absence of that suspicion and glee can account, I think, for the common apathy toward Pope's masterpiece, the "Epistle to Dr. Arbuthnot," which is at once the prologue and the consummation of his satires.

IV.

For myself I will admit frankly that I have read the "Epistle" oftener, perhaps, than any other English poem except "Lycidas," and that long familiarity with its lines has given me always a deepening admiration for its art. If it is not poetry, I do not know where poetry is to be found. That Pope's inspiration moves on a lower plane than Milton's, I should be the last to deny. Yet in a way their themes, despite the great difference of their age and faith, have an odd similarity. Milton, like the poet of Queen Anne, wrote in the heat of battle, and with him, too, *fecit indignatio versus*. In a way, one is complementary to the other, and nothing can better show the mischievous nature of the division in the Stuart days than the fact that the practical party which Milton represented—so far as he can be said to have represented anybody but himself—was now the people of Dullness, while the party of the imagination, as we see it in the writings of Swift and Pope, was divested of all the old magnificences of morality. Yet if the "Epistle to Dr. Arbuthnot" lacks Milton's mighty impulse of religion and draws from lower springs of Helicon, it still has its great compensations. The indignation is as terrible, if its causes are more mixed. Here, even more ruinously than in the "Dunciad," and without the longer poem's tediousness of obscure detail, the dreaded secret is revealed—

That secret to each fool, that he's an ass.

We may doubt what was the exact nature of that two-handed engine which Milton suspended against the enemies of Puritanism, but there is nothing ambiguous about the revenge of Pope, whether with one blade he hews down his open enemies or with the other attacks his pretended friends. From the opening appeal to the poet's old and faithful servant:

Shut, shut the door, good John! fatigued I said;
Tie up the knocker, say I'm sick, I'm dead.
The Dog-star rages! nay, 'tis past a doubt,
All Bedlam, or Parnassus, is let out:
Fire in each eye, and papers in each hand,
They rave, recite, and madden round the land—

to the last fling at the hypocrites:

One from all Grub-street will my fame defend,
And, more abusive, calls himself my friend—

there is a succession of lines of almost dazzling wit, and every line a stab. Thackeray, as the father of Pendennis and the half-ironical patron of the Grub Street of his own day, has some pretty words of abuse upon Pope for fixing in the public mind this notion of the snarling, starving attic-world of authorship. No doubt Pope has touched up the picture with high lights, but an acquaintance with the lesser literature of the day, and with the periodicals, not omitting Pope's own blackguardly *Grub Street Journal*, gives all the justification needed for the portrait. And here again we shall miss the point if we take this fury as purely personal. There were principles involved, though Pope himself, I dare say, never really knew the difference between his principles and his spite. Something more than personal hatred envenoms the deadly caricature of Lord Hervey and the desire to "flap this bug with gilded wings." With the culmination of the satire,

Or at the ear of Eve, familiar toad,

should be read Jonathan Richardson's comment:

I have heard that this lord had actually a seat managed behind the queen's hunting chaise, where he sat perched behind her close at her ear, but he could never stand it above three or four times. Besides the ridicule of his friends, folks hooted at him as the machine passed along.

The real animus of the attack is the relation of Hervey to Caroline and the Hanoverian court, and all that this meant to the intellectual and imaginative life of England. This, too, must be the excuse for the portrait of Addison, though it may scarcely palliate the author's shiftiness in regard to the date of writing the lines. They must be quoted:

Peace to all such! but were there one whose fires
True genius kindles, and fair fame inspires;
Blest with each talent, and each art to please,
And born to write, converse, and live with ease:
Should such a man, too fond to rule alone,
Bear, like the Turk, no brother near the throne,
View him with scornful, yet with jealous eyes,
And hate for arts that caused himself to rise;
Damn with faint praise, assent with civil leer,
And, without sneering, teach the rest to sneer;
Willing to wound, and yet afraid to strike,
Just hint a fault, and hesitate dislike;
Alike reserved to blame, or to commend,
A timorous foe, and a suspicious friend;
Dreading e'en fools, by flatterers besieged,
And so obliging, that he ne'er obliged;
Like Cato, give his little Senate laws,
And sit attentive to his own applause;
While wits and Templars every sentence raise,
And wonder with a foolish face of praise—
Who but must laugh, if such a man there be?
Who would not weep, if Atticus were he!

Of the exquisite finish of these verses there can, I suppose, be no question, unless De Quincey's frivolous criticism is to be listened to. The other day, while they were fresh in my memory, a friend of mine who loves and gathers beautiful things was showing me his collection of Japanese sword-guards; and as I looked at those wonderfully wrought plates of steel and considered their ancient place on the instruments of battle, it occurred to me that their craftsmanship was not unlike that which had gone into the making of this detached masterpiece of words. And it seemed to me that the rectitude and patience of the work in each case was one of the causes of their perpetual charm. I have a prejudice in favor of genius, an invincible feeling that true art is in some way based on truth. And so, whether this portrait of Addison was written, as Warburton declares, in 1815, because the Earl of Warwick, Addison's stepson, had warned Pope of Addison's jealousy and of his instigation of Gildon to publish a scurrilous pamphlet against his supposed friend, or because Pope believed Addison to be responsible for Tickell's rival translation of the Iliad—whatever may have been the devious ways of Pope in explaining and spreading abroad the satire—I am convinced that Addison was not entirely blameless. In some way the jealousies of his trade had set free the deceitful spirit of egotism that lurks beneath the fairest character. It must be remembered also that in the year when the satire was written, and when the circle of Pope was suffering in so many ways from the death of Queen Anne, Addison as Chief Secretary to Ireland was enjoying the fruits of his service to the Whigs.

That, indeed, may be to his credit politically; it will help to explain, nevertheless, why Pope placed him, not among the dunces, for that would have been to stultify the writer, but among those who in the desperate battle of the mind followed the false standard—the one lost leader, when so many lesser and more ignoble men were faithful. I think Pope had loved, and did always admire, Addison. There is the true pathos of wit—and wit may have its tears—a cry of grief from a very great bitterness and regret in the last line,

Who would not weep, if Atticus were he!

If the emotion here is not genuine, we may as well shut our bosoms to every appeal of books.

V.

But there is in this satire something besides sorrow for the perversion, or at least the failure, of a noble friend; it must be read in connection with Pope's own feeling of weariness, if not of degradation. By the side of this scorn of the dull and the base, runs the contrasted note of friendship, which was always the finest trait of his character. Nowhere else does he express the union that bound together this body of defeated wits with so exquisite a charm as in the lines to the genial, much-beloved physician:

Friend to my life, which did you not prolong,
The world had wanted many an idle song.

In comparison with that peaceful bond, of what profit was the long-protracted and in the end losing enmity which inspired his satire? What evil genius projected him into this hateful air of conflict?—

Why did I write? What sin to me unknown.
Dipp'd me in ink, my parents' or my own?

To understand the "Epistle" we must read it as Pope's *apologia pro vita sua*, at once an excuse for the warfare in which his days had passed and an acknowledgment of their waste and bitter fruit. With a kind of childlike and, I think, utterly sincere regret he compares the quiet tenor of his father's life with the discordant ambitions of literature, and counts as the one indisputable blessing to himself the homely respect for that life which he had preserved against all the inroads of the world's malice:

O friend! May each domestic bliss be th'ne!
Be no unpleasing melancholy mine:
Me, let the tender office long engage,
To rock the cradle of reposing age,
With lenient arts extend a mother's breath,
Make languor smile, and smooth the bed of death,
Explore the thought, explain the asking eye,
And keep awhile one parent from the sky!
On cares like these if length of days attend,
May Heaven, to bless those days, preserve my friend,
Preserve him social, cheerful, and serene,
And just as rich as when he served a queen.

Not Goldsmith himself painted a sweeter picture of resignation and piety; and, whatever else may have been true of Pope, these lines also speak the truth of him.

VI.

It may seem that the beauty of these contrasted notes in Pope's greatest poem is lost to the world to-day, because one of them at least, the warfare of the wits, was a temporary thing, now long forgotten and of interest only to the special student. To a certain degree and in form this is no doubt the case. Yet the warfare substantially is not ended, and shall not end while the differences of human nature remain unreconciled. Men in this living age, always a few, are still fighting for the rights of the mind against a dull and delusive materialism, for the freedom of the imagination against a prosaic tyranny, for a pure and patient ambition against the quick successes of vanity and pliant cleverness, for the reality of human nature against a fatuous self-complacency. To these the triumphant satire of Pope is a perpetual encouragement, while his pathetic apology expresses for them the relief needed when success appears far away, or, even if near, not worth the cost in the humiliating wager of soul against soul. Nor is the theme of the "Epistle" without its more universal aspect. For after all life itself, not for the wit only, but for each man in his place, is a contest, and poetry, from the time when Homer portrayed his heroes battling with sword and fire on the banks of the Simois, and longing for the peace of hearth and kindred and friends across the seas, has been the expression, varying in form and instruments, of that inevitable fate. The presentation of this truth may in Pope be narrowed to a particular manner and time, it may assume ignoble images and speak too often in reprehensible language, nevertheless he who does not respond to the deep emotion and humanity underlying the "Satires" has travelled but a short way into the realm of letters; he has even, I dare assert, felt but a little of the great realities of man's life.

Correspondence.

"LEST WE FORGET."

To the Editor of The Nation:

Sir: Authors are apt to be strangely forgetful of facts in their own literary history, and have therefore sometimes misled editors and critics in their comments and annotations. Your keen-eyed bibliophile has more than once called attention to these lapses, as in the *Nation* for July 22, 1909, where he illustrates them by Lowell's inaccuracy in his note on the final edition (1890) concerning the composition of the "Fable for Critics." Lowell there says:

This *jeu d'esprit* was extemporized, I may fairly say, so rapidly was it written, purely for my own amusement, and with no thought of publication. I sent daily instalments of it to a friend in New York, the late Charles F. Briggs. He urged me to let it be printed, and I at last consented to its anonymous publication.

And in a letter to R. W. Gilder (February 9, 1887) he had said of the poem: "I wrote it (slap-dash, in less than a week, I think) with no notion of publication."

The fact was that in November and December, 1847, Lowell sent "about six hundred lines" to Briggs, with instructions for its publication. From that time he worked upon it irregularly, with much prodding from his friend and the printer, until October, 1848, when the poem was completed and published.

Tennyson was more surprisingly forgetful in regard to the date of his first book, the "Poems by Two Brothers." It was certainly published in March, 1827, as all authorities agreed down to 1892. Dr. Van Dyke so gave the date in the "Chronology" appended to the first edition of his excellent "Poetry of Tennyson" in 1889 and to the second in 1891. But in the third (1892) it is changed to "1826," with the following note:

It was post-dated according to the common custom among publishers at that time. For this true date of its appearance, which has I believe never before been given correctly, I am indebted to Lord Tennyson.

He had visited the poet in 1892, "a few weeks" before this third edition went to press. I noticed the error as soon as I saw it, for I remembered, though Tennyson forgot it, that the preface of his book is dated "March, 1827," and the "Memoir" by his son so states it. Title pages are often "post-dated" (particularly in the case of holiday books brought out late in the year, compelling cataloguers and bibliographers to print two dates), but prefaces are likely to give the true date. The book was doubtless sent to press in 1826, and many of the poems in it were written some years earlier, as we know, but Tennyson confused the facts. The error, however, is not corrected in the seventh (1896) edition of Dr. Van Dyke's book, the latest that I have seen.

Within a few months I have accidentally discovered that Tennyson led me into a similar mistake in my notes on the second poem entitled "Freedom," which was first printed in this country (from "advance copy") in 1884. The second line then had "column'd Parthenon" instead of "pillar'd Parthenon," the reading in the "Tiresias" volume, published the very next year (1885), which I followed in "Enoch Arden and Other Poems" (1887), referring in the notes to the earlier reading. I sent the book to Tennyson, and, when acknowledging it, he said I was wrong in ascribing "column'd" to him, and intimated that it was a blunder in the *Independent*. I took his word for it, without looking the poem up in *Macmillan's Magazine* (where it first appeared in England in December, 1884), and "corrected" the note accordingly in my next edition, as also in a revised and enlarged edition in 1895, in Vol. VIII of the *de luxe* twelve-volume edition of Tennyson's works (1896), and in the "Cambridge" edition

(1878). But, having occasion lately to look into *Macmillan's* for something else, my eye chanced to fall on the poem there (printed of course from the poet's manuscript), and found "column'd Parthenon." So much for an honest effort on my part to be accurate!

I may add that the fifth stanza in this poem ("Of Knowledge fusing class with class," etc.) was added in the "Tiresias" volume, and some minor changes were made.

Tennyson also wrote to me once—or told me at one of my visits to him—that often what were supposed to be new readings in his poems were really the original ones. I am quite sure that in some cases of the kind they were not the first readings *in print*, though they may have been in the first *manuscript* to which he subsequently returned.

It is well known that occasionally he altered his printed text, and was led by the criticisms upon the new reading to restore the earlier one. In "Lady Clara Vere de Vere," for instance, he changed "The gardener Adam" of 1842 to "The grand old gardener," which was generally condemned, and in 1875 he returned to the first reading. The extensive changes made in "The Charge of the Light Brigade" were more vehemently resented by the critics, and the poem now varies only slightly from the earliest printed text.

The reader may remember that in a former letter to the *Nation* (May 6, 1909), I showed that the poet printed no less than four considerable variations of a passage in 'Merlin and Vivien," one of which appears only in the first American edition (1857); and *three* forms of some passages in his works are by no means rare.

I am strongly inclined, moreover, to think that Tennyson sometimes forgot (as Browning occasionally admitted that he did) what he meant in certain figurative passages in his earlier poems; but "that's another story," and I will not dwell upon it here.

Another eminent author, Mr. Gladstone, caused me more than one "bad quarter of an hour," on account of a supposed injustice I had done him, in the notes of my edition of "In Memoriam" (1895). Among the tributes to Arthur Hallam which I had quoted therein, was one of considerable length, ascribed to "W. E. Gladstone"; but when I sent him the book, he wrote to me somewhat curtly, asking on what authority I had mentioned him as having written it. After search through twenty or more books on Tennyson, I found it in Mr. E. C. Tainsh's capital little "Study," of which three editions appeared (1868, 1869, 1870). Then I wrote to Gladstone, referring him to Tainsh, and begging him to inform me whether the passage had been wrongly attributed to him, in order that I might make the necessary correction in my next edition. He did not write in reply, but two years later, when the "Memoir" of Tennyson, by his son, appeared, I found the passage quoted there (Vol. I, p. 299), as from a review of "In Memoriam," "by Mr. Gladstone," which the poet "thought one of the ablest." The quotation was said to be from "Gladstone's 'Gleanings of Past Years,' Vol. II, pp. 136-137." There it is credited to the *Quarterly Review*, October, 1859, with a foot-note stating that the sentence beginning "The writer of this paper," and ending with the quotation, "I marked him," etc. (from De Vere's "Mary Tudor") "has now (1878) been added." Tainsh had evidently taken it from the "Gleanings," with one slight accidental change ("the rapid, full, and rich development," instead of "the rapid growth and rich development"). It is curious that Gladstone, after reprinting the paper and adding to it in 1878, should have forgotten that he wrote it. His note to me, however, was written when he was eighty-five years old; and he died in May, 1898, less than a year after the Memoir of Tennyson was published. I had not troubled myself to write to him again about the matter. W. J. ROLFE.

Cambridge, Mass., June 21.

ENGLISH ROMANTICISM.

TO THE EDITOR OF THE NATION:

SIR: Mr. Mather's able essay on Professor Babbitt's "New Laokoön" raises many points of interest. The doctrine that art should be governed rather by reason than by the emotions is unquestionably a sound one for America to-day. A public which prefers Tchaikovsky to Bach, which dotes on Puccini and neglects Mozart, is in urgent need of higher intellectual standards.

Yet it is unfair to let the reader infer that the so-called romantic movement in English poetry about 1800 was a mere worship of emotionalism. It was rather a loosening of conventional strait-lacings which allowed the poet not only to breathe, but also to think more freely. The result was, as Mr. Courthope shows in his "History of English Poetry," an individualism according to the temperament of the given poet; and although each of them went to some extreme, each made a valuable contribution to the future possibilities of the literature by opening a new field of thought or developing a new method of expression. Thus Wordsworth enriched our contemplative joy in nature for all time, and Shelley gave us visions of political perfection, many of which have come true since he wrote. These two poets widened the thought as well as the emotional range of posterity. Nor should we forget that this was the period of our most inspiring critics: Coleridge, Lamb, Hazlitt, De Quincey.

Perhaps we can best gauge the value of the romantic poets by observing their influence on the more classic of the Victorians. Tennyson and Arnold till the soil broken by Keats and Wordsworth; or we might call the romanticists the pioneers and the Victorians the settlers. Again, what a charm is added to Augustinism by a fresh personal impulse, as in the lyrics of Mr. Austin Dobson! In his rondeaux and ballades we have all the dainty perfection of "teacup times," combined with a wistful touch of feeling that is original and captivating.

CHARLES WHARTON STORK.

University of Pennsylvania, June 22.

PARTY PLATFORMS.

TO THE EDITOR OF THE NATION:

SIR: I have long been contemplating the suggestion that our political parties are too diffuse in their platforms, and that only one or two issues should be set forth and continued until they are fought to the finish. The old parties will hardly consent to this—the present old party leaders I mean. Why not the Progressive party?

Let the tariff issue or the conservation issue or the corporation issue be taken up—perhaps all three—and placed in the platform of each Congressional district this autumn. Then have the general statement made that all other issues which happen to come up in Congress will be referred to the Progressive constituencies for their approval before final action is taken upon them by the Progressives.

In addition then to the one—or two—issue platform, we would have the referendum introduced.

Here is a solution of our present political difficulties.

CHARLES A. WENFIELD.

Providence, R. I., June 20.

CHAR-À-BANC.

TO THE EDITOR OF THE NATION:

SIR: What is the earliest date of the appearance of *char-à-banc* in an English book? The first example cited in the Oxford Dictionary is dated 1832. But the following passage from James Edward Smith's "Sketch of a Tour on the Continent," III, 174-5 (second edition, London, 1807), shows that the word was used in England at least a generation earlier:

Sept. 4, [1786]. From hence I sent back the mules of Chamouni, hired at Salenche, with their owner, and proceeded to Villeneuve in a *char-à-banc*, a singular species of vehicle, in which one rides sideways very little raised above the dirt or dust of the road, and quite open to it.

Literature.

ALASKA AND THE FAR NORTH.

Cruises in the Bering Sea, being Records of Further Sport and Travel. By Paul Niedieck. Translated from the German by R. A. Ploetz. New York: Charles Scribner's Sons. $5 net.

Trailing and Camping in Alaska. By Addison M. Powell. New York: A. Wessels. $2 net.

The New North, being Some Account of a Woman's Journey through Canada to the Arctic. By Agnes Deans Cameron. New York: D. Appleton & Co. $3 net.

Handbook of Polar Discoveries. By A. W. Greely. Boston: Little, Brown & Co. $1.50 net.

Tent Life in Siberia. By George Kennan. New York: G. P. Putnam's Sons. $2.50 net.

An Explorer's Adventures in Tibet. By A. Henry Savage Landor. New York: Harper & Bros. $1.50.

Mr. Niedieck describes a journey to Kamschatka and Alaska, in the summer of 1906, with a passing glimpse at Japan. About half the book is devoted

to Kamschatka, and the balance to Alaska. While the primary object of the expedition was to hunt bears and bighorn along the Siberian coast, and moose on the American side, its chief value lies in the author's interesting notes on the geography, fauna, and ethnology of the region about Bering Sea. His account of the Siberian coast is particularly welcome, the available literature on that subject being very meagre. We have had better opportunities of becoming acquainted with Alaska, but this book offers an excellent summary of the history and development of the territory, and at least in the chapters on the manners and customs of the aborigines, and their mythology, contains much that has not hitherto appeared in print. A synopsis of the animals collected during the expedition is given in an appendix, and the book is illustrated by a large number of excellent photographs, as well as a chart.

With every desire to see the good points of "Trailing and Camping in Alaska," the reviewer fails to discover the reason for its writing. It is almost everything that a book of description and travel should not be. In his introduction, Mr. Powell tells us that "many incidents which were commonplace to the author, but which might have proved interesting and unusual to the reader, have been curtailed or withheld in order not to interfere with the general character, or to become tedious by their added length." Unfortunately, his book is packed with commonplace incidents. That in itself is no fault. Commonplace incidents may be made highly entertaining. These are not. That Mr. Powell knows Alaska one can have no reasonable doubt; but he lacks the gift to make his knowledge either serviceable or interesting to others. One gets the impression of a collection of unrelated notes, strung together in narrative form; a jumble of history that is common knowledge, anecdote that is lifeless, and facetious comments that do not amuse. The one redeeming feature is the photographic illustrations, many of which are admirable.

The extent to which a writer may make or mar a good subject is strikingly illustrated in the book just mentioned and in Miss Cameron's "New North." The same elements are present in both, but the result is very different. Miss Cameron describes a journey from Edmonton to Athabasca Landing, and down the Athabasca, Slave, and Mackenzie rivers to the Arctic. The incidents of the journey are often commonplace, but she has made them intensely interesting. Her history and anecdotes are always well told, and to the point; the narrative is enlivened by touches of humor that is spontaneous and real; and the whole is presented in a style that lifts the book well above the average story of travel. She describes the life of fur-trader and Indian, missionary, Eskimo, and whaler, with a touch that is sympathetic, vigorous, and compelling. She reveals to us a new field of achievement, full of human interest; and incidentally opens to the traveller a virtually undiscovered country, readily accessible, and most attractive from every point of view.

In the fourth edition of his well-known handbook, Gen. Greely has added the results of Arctic and Antarctic discoveries within the last few years. One scarcely realizes the extent and importance of recent explorations until one compares this with the previous edition. The twentieth century has already been marked by achievements in these fields surpassing those of many previous centuries. Abruzzi, Amundsen, Ericksen, Peary, and Sverdrup, in the north, and Bruce, Charcot, Nordenskiold, Scott, and Shackleton, in the south, have thrown a flood of light upon hitherto unknown regions; the North Pole has been actually reached, and the South Pole brought within measurable distance. Generally speaking, comment is unnecessary upon the character of the book as a work of reference. It has long since taken its place as an indispensable companion to the student and general reader. It must, however, be matter of regret to the compiler that he did not await the issue of the dispute touching Dr. Cook's alleged polar discovery. The standing of his work is seriously impaired by the unreserved acceptance of Dr. Cook's claim to the discovery of the North Pole.

As long ago as 1870 Mr. Kennan issued his narrative of life and adventures in Siberia, and because of the readable qualities of the book, as well as the interest of the subject, it has never since ceased to find readers. He has now revised and enlarged his narrative, and added a considerable number of excellent illustrations. "Tent Life in Siberia" embodies a history of the explorations and surveys of the Russian American Telegraph Company, on the Siberian side of Bering Strait. Although first issued so many years ago, Mr. Kennan's account of the country, its scenery, and the manners and customs of its people, is still valuable, and has been made more so by the addition of several new chapters, notably one embodying the incidents and adventures of a winter journey overland from the Okhotsk Sea to the Volga River—a "straight-away sleigh-ride of more than five thousand miles."

In his larger work, "In the Forbidden Land," Mr. Landor gave a detailed account of the scientific results of his memorable journey through Tibet in 1897. The intensely dramatic story of the journey itself, stripped of scientific data, is now made available in "An Explorer's Adventures in Tibet." Seldom indeed has any traveller lived to tell such a tale of privation, suffering, and hairbreadth escapes. The story is one of unconquerable pluck and endurance, under extraordinary difficulties. Although his presence in Tibet was known from the moment he crossed the boundary, and troops of soldiers were constantly searching for him, Mr. Landor almost succeeded in his mad attempt to reach the sacred city of Lhassa, before he was finally captured. He was cruelly tortured, but by rare good fortune his life was spared, and he was conducted back to the boundary. Of the many important geographical results of his journey, perhaps the most interesting was the discovery of the sources of the Brahmaputra and Sutlej Rivers.

CURRENT FICTION.

East London Visions. By O'Dermid W. Lawler. New York: Longmans, Green & Co.

Imagine a combination of "Sartor Resartus" with the "New Arabian Nights," the blend slightly tinctured also by the "Vita Nuova," and you will gain some notion of the most oddly fascinating book that for many a day has come under one reviewer's eye. Ostensibly, this is the autobiography of a star-gazing young poet struggling with the conditions of East London. Many of the characters are plainly drawn from the life. Admirable is the picture of the hero's sardonic, friendly, irascible father. Even more massive is the effigy of the Jew Abzedion, lord of his alley and keeper of a fried-fish bar. Vastly amusing and pathetic is the confession of an evangelical clergyman who without a faith, by the shifts and turns of the comedian, "keeps the show going." The women, however, are almost without exception symbols of the religious life. Indeed, the book, taken broadly, is an allegory of the search for a faith.

What redeems it from the aridity of its kind is the foundation of urgent realism and the passion with which the symbolism is created and unwound. This book has eloquence and emotion, and its texture is of a cunningly varied interest. It is humorous withal, with something of the rich extravagance of a Sterne or a Carlyle. We have found its mixture of the sublime with the topsy-turvical always refreshing. Obviously, the widely assorted ingredients of the work make the task of the critic a difficult one. What strikes him as raey and enjoyable in an æsthetic sense, may to another reader seem of oracular importance; to a third, sheer nonsense. We prefer, then, to avoid the judicial duty, merely recording a keen personal enjoyment and representing the temper of the book by an extract.

The author, metamorphosed in a vision into a bird, flits above the haunts

of three religions. He tries in vain to catch the ear of the ritualists, and finally gets the answer from a priest, "I neither see you nor understand you; but I am quite willing to admit anything you say." Wholly failing to get the attention of the evangelicals, a folk who seemed to lack a social language, he next tried the religious nurslings of the gentle skeptic, Matthew Arnold:

> Then I flitted to a third group between the two others, and repeated my operations, desiring to call their attention to the stellar arrangements. But they were talking of Religion. "Religion," said one, "is Morality touched with Emotion." On this, with an effort, I found my speech: "What a culinary definition!" I exclaimed. "You take a little Morality, and you touch it with a little Emotion (kind of Emotion not stated—Query, Spite?) and behold—you produce Religion! How little you comfortable people know about it! I tell you Religion is—Life!"—"But what is Life?" asked a gentleman.
>
> I was glad of the interruption. . . . "You People put," I said, "the cart before the horse. Steam is—Locomotion—touched with Explosiveness. What do you think of that absurdity? Are you totally unaware of the Threefold Arch of Being?—THAT WHICH IS—THAT WHICH MAKES—THAT WHICH IS MADE!"
>
> To this there was no answer. Perhaps it sounded to them perilous nonsense, just as their high-class words had sounded to me. They disregarded me, and I flew back to my roof.

A Marriage Under the Terror. By Patricia Wentworth. New York: G. P. Putnam's Sons.

As a story which won first prize in an English novel competition, this has a certain preliminary claim upon the curiosity of the reader. Three competent woman-judges, it is announced, all well-known writers of fiction, independently chose this as the best novel submitted. Of course the choice under the given conditions might naturally lie between worse and the better, rather than between better and the best. Certainly the three judges in question could hardly have been expected to pick an historical romance. Such, however, on the face of it, is "A Marriage Under the Terror," and a highly respectable achievement of its kind. The action begins on the very eve of the Terror. A convent-bred girl of noble birth is brought to Paris to marry a middle-aged roué to whom she has been betrothed as a child. She has barely been presented to her affianced, when he and his worldly mistress and all the circle to which they belong, are arrested and imprisoned in La Force. The girl, Mademoiselle de Rochambeau, follows them to the jail, but is refused admission. A stout *bourgeoise* rescues her from the street, and she becomes a seamstress, taking a plebeian name. When we say that one of her housemates is Dangeau, young and handsome champion of liberty, of ordinary blood, but a heart of gold, we have told the rest of the story. They love, but aristocratic prejudice forbids her succumbing; they are nominally married under dramatic necessity. Thereafter they are separated, and after many adventures connected with the rise and passing of the Terror, after they have been brought side by side to the scaffold, Fate kindly, if not unexpectedly, rescues them. In fact, Robespierre takes that appropriate moment for falling, and thereby makes two lovers happy. There is, it will be seen, a good sort of plot for this sort of story; and the historical part of the tale, the picture of that perturbed and finally obsessed Paris of the Revolution, is managed with a good deal of vividness.

The Illustrious Prince. By E. Phillips Oppenheim. Boston: Little, Brown & Co.

The first few pages of Mr. Oppenheim's latest production promise a detective story of thrilling quality. At the very start, a mysterious American traveller, who has sufficient influence to command a special landing when the Lusitania is unable to put her passengers ashore at Liverpool, and to conjure into being a special train for the run from Liverpool to London, is murdered in that train in a peculiar manner, and to the bewilderment of the guard. Only a chapter or two further on, another murder in a London taxi-cab thickens the plot, and makes the lover of the detective story settle down more comfortably in his easy chair. But his hopes are dashed, for from this point the story seems to go to pieces; motives spring up apparently without reason, characters develop to fill vacancies with surprising readiness, and all the while the reader, being entirely certain of the identity of the criminal, is only annoyed, not mystified, by the attempt to divert suspicion to new characters.

Meanwhile the heroine falls in love with the paragon of all heroes, Prince Maiyo of Japan, after first believing that she hates him; and even when she realizes her true feeling, she becomes engaged to an athletic young Englishman. Under these conditions she is scarcely the proper champion of the Prince's cause, whom all the while she believes to be the murderer!

Altogether Mr. Oppenheim has given us an unsatisfactory and disappointing book, which is not saved as a detective story by an ending which lacks conviction. It is possible that it was not meant for a detective story at all, but for a serious warning to England to beware an alliance with Japan. Evidently the Prince is made the spokesman of the author's theories of European politics, as he denounces the death of true patriotism in England—due, he says, in large measure, to the British love of "sport"—and predicts the world domination of Japan and China, when the United States shall have been fought and conquered.

The Messenger. By Katharine Holland Brown—*The Lifted Bandage.* By Mary Raymond Shipman Andrews. New York: Charles Scribner's Sons.

Though by different writers and not in the same volume, these are companion stories, and the publisher has recognized the fact by printing them in almost identical form. They have to do with the same theme: the hunger of the modern skeptical or worldly mind for a belief in the hereafter. In the first tale, a young widow struggles in vain to feel that death has not cut her off forever from her husband. They have never talked of death; she does not know what he has believed about it. Her quandary has become almost an obsession, when chance brings to her proof that he has been absolutely certain of a future life; with the knowledge, the cloud lifts from her spirit, and she feels herself once more united to her dead.

Mrs. Andrews's sufferer from doubt is an old man whose dead son has been accused of murder by a coroner's jury. In default of a belief that he is to be reunited to his wife and son, his only possible reason for continuing to live would be a belief in the son's innocence of the charge. But he admits the evidence, and is on the way to madness when a sudden revelation comes to him of the continued existence of those he has loved, and of the beneficent nature of things which have hitherto seemed to him cruel and unjust. Both stories are effectively told; curiously enough, the style is so similar in the two tales that they might easily have been written by the same hand.

THE CIVIL WAR.

The History of the Confederate War. By George Cary Eggleston. New York: Sturgis & Walton Co. 2 vols. $4 net.

Mr. Eggleston has here set himself the large task of telling the story of the civil war with "absolute loyalty to truth." He believes that the time has come when this may be done, and that no fair-minded American desires any longer a perversion of facts. The implication that some, at least, of the host of previous historians of the war have inclined to distortion or suppression of facts is, unfortunately, not without foundation, though whether Northern or Southern partisans have been on the whole the more culpable is not apparent from these pages. Be that as it may, Mr. Eggleston himself has sought to lay aside prejudice, to forget the chagrin of defeat and the joy of

victory, to reckon no participant as either friend or foe, and to set down, in the clear, dry light of nearly a half-century of peace, the history of the greatest of all wars as that history really is.

It would, indeed, be gratifying if criticism could give to the substance of these well-printed and attractive volumes as high praise as must be accorded to the spirit in which the writing of them was undertaken. That the book is readable goes without saying. In the appraisal of the motives and conduct of the South and its leaders, there is notable restraint, and the really heroic character of the Southern resistance, both in the field and on the lonely plantation, is so delicately touched as hardly to do full justice to it. If Mr. Eggleston has had any expectation that his book will warm the Southern heart, or make the present generation prouder than it now is of the deeds of the fathers, we fear that the response will be less enthusiastic than he has hoped; for the balance of commendation, if balance there be, inclines to the North.

As a serious contribution to history, however, the work cannot be called weighty. The absence of footnotes makes it, to be sure, impossible to say what authorities Mr. Eggleston has used, but the text gives no evidence of special research, nor even of an altogether careful study of secondary narratives. From time to time, we are assured that this or that view of the matter in controversy is sustained or disproved by the "documents"; but since the conclusions of the author do not differ from those already familiar in the pages of other historians, one cannot help questioning whether Mr. Eggleston has examined the authorities for himself. Some loose and inaccurate statements could have been avoided had even the secondary authorities been more carefully followed. The claim of impartiality, too, must at times be challenged. The administrative incapacity of both Federal and Confederate officials is severely scored, though with little apparent recognition of the difficulties, political and other, which attended the conduct of the war on both sides; while the denunciation of Halleck, especially for his treatment of Grant, is so insistent as to pass the bounds of scholarly disapproval.

In its discursiveness and emphatic iteration, Mr. Eggleston's writing suggests the later manner of Mr. Roosevelt. The inevitable antithesis of good and evil is heightened by a strenuous application of adjectives. Neither men nor actions appear in simple, unadorned relations, but as "absolutely" this or "unquestionably" that. All the great are colossal, all the small contemptible. There are a few good descriptive passages, but, in general, the accounts of military operations, though commendably clear, are not inspiring; while the most touching scene among them, the surrender of Lee, is not described at all. Of other than strictly military matters, the narrative as a whole takes only incidental notice—an omission the more regrettable because of Mr. Eggleston's intimate acquaintance with Southern life, both before and after the war. The summary account of American history down to 1861, with special reference to slavery and the relations of the sections, which fills nearly half of the first volume, might well have been dispensed with in favor of a fuller treatment of economic and social conditions.

The value of Mr. Eggleston's work consists in its exposition, first, of the inevitableness of the war, in view of the divergent history and interests of the two sections; and, secondly, of the sincerity of those who fought for the success of the Southern cause. While for legal purposes the struggle is perhaps best described as a rebellion, it was rebellion of so large and fundamental a sort as to elevate the contest to the plane of public war, and give to it the character of a war for independence. Mr. Eggleston would have us believe that those who fought to disrupt the Union were, after all, patriots, and entitled, now that the strife is over, to be held in honor for their principles, as well as for their courage and constancy. We cannot take this view, but we can at least rejoice with him that slavery was abolished and the Union saved, and praise the chivalry that essays a story which the victor may read without glorying, and the vanquished peruse without pain.

Central America and Its Problems: An Account of a Journey from the Rio Grande to Panama, with Introductory Chapters on Mexico and Her Relations to Her Neighbors. By Frederick Palmer, F.R.G.S. New York: Moffat, Yard & Co. $2.50 net.

In these days of subsidized official "boosting" one cannot help being grateful for the presentation in book form of Mr. Palmer's Chicago *Tribune* correspondence. Let it be admitted at the outset that the book has the defects of its journalistic origin. Snap judgments, brilliant generalities, and startling emphasis are not the qualities which go to make a standard work. At the same time, Mr. Palmer is a clever writer and a discerning observer, and his book is decidedly readable and entertaining. The first two hundred pages, devoted to the narrative of his hurried journey from one Central American capital to another, are really fascinating. Nothing so interesting has been written about Honduras since Richard Harding Davis's "Three Gringos" journeyed across that debt-laden republic. It is a pity that Mr. Palmer thought it necessary to fill out his volume with so much theorizing and preaching about matters for which his short trip did not qualify him to speak with authority. Nevertheless, many of his observations show good judgment and keen penetration. Such remarks as the following deserve repetition: "Waste your money in any way you please, but do not put it in a rubber plantation in Mexico"; "Let it be repeated without equivocation that anybody who invests in any land or plantation scheme south of the Rio Grande, when he has not seen the property or does not know his men, may consider his money lost"; "Too frequently the American concession-hunter judges the country's possibilities by its natural wealth, rather than by the human handicaps."

Apart from these astute warnings, the most noticeable work which Mr. Palmer has done is the presentation in a graphic fashion of incidents and conditions which lead him to the conclusion that if we are going to stand by the Monroe Doctrine we must take the consequences. The diplomats we send to tropical America should be the ablest men in the service and their hands should be strengthened, not weakened, by a badly informed State Department. It should be their aim, says Mr. Palmer, without arousing local animosity, to keep the bellicose republics from falling foul of each other and to prevent the inevitable dictators from taking advantage of our protection to give their tyrannical tendencies free play. Without for a moment implying that we should annex any of that territory, the inference is that we must do something to make it possible for the unfortunate inhabitants of Central America to enjoy the blessings of civilization which have been denied them hitherto as one of the results of our dog-in-the-manger policy. In a word, we must face squarely the responsibilities which logically follow our adherence to the Monroe Doctrine in the form in which it has been put by recent presidents. Mr. Palmer has done a distinct service to the cause of Pan-American peace by enabling his fellow-citizens to see this side of the question more clearly. His book deserves to be widely read.

The Life of Mary Lyon. By Beth Bradford Gilchrist. Boston: Houghton Mifflin Co. $1.50 net.

One catches in this enthusiastic book bare glimpses of an ardent personality, a teacher of apostolic hopefulness and energy, a prophet of sound and practical education for her sex. Yet somehow the individuality only half defines itself. There is nothing in her letters and very little in the notes that rapturous students took of her Mount Holyoke talks to explain the spell that Mary Lyon cast upon her contemporaries. This deficiency cannot be laid wholly at the biograph-

er's door. It is more or less in the nature of the case. Mary Lyon belonged to that class of artists who deal immediately with mankind as their material. Such artists, unless they evoke a Plato or a Boswell, slip away quickly, are merged in their specific work. In fact, the conditions of such dominant personal influence are not quite those of art. The tactful shifts that a Mary Lyon had to make before a generation skeptical about solid education for women, the deft repetitions implied in persuasion, the genial commonplace of encouragement and exhortation to her girls—all this is refractory material, cold star dust in which the glow refuses to be rekindled.

As far as the facts of her life go, and in recalling the temper of the New England in which she worked, this biography is excellent. The descriptive part is carried off with animation; the author has a sense of the relevant incident. How eloquent are the mere statistics of the first fund for Mount Holyoke Seminary. Largely through the personal appeals of the founder $27,000 was collected from 1,800 people living in ninety-one towns. Certainly, few bagmen of great causes have paid so generously with their persons, and Mary Lyon herself was so exhausted in these solicitations that she reigned only a few years over her Academe. We think that, despite the defective materials, a keener analysis might have done something to make the woman clearer. She was obviously far finer than anything she wrote or said. Her biographer, while adequate on the descriptive side, lapses into rather lifeless technicalities in her brief attempts at interpretation, depends too much upon documents from which the savor has departed and too little on her own insight. We have to do with a singular flowering of the New England temperament, its doggedness ennobled by a great and central cause, its rather ungentle shrewdness become fine worldly wisdom, its narrow and individualistic religion raised to social passion, its "closeness" converted into that administrative prudence that guided a lavish generosity. Out of her little savings Mary Lyon gave and lent recklessly to her seminary, and, when better days came, she devoted a large share of a tiny income to missions and charities. People criticised her public speaking and begging for her cause. She wrote, "My heart is sick, my soul is pained with this empty gentility, this genteel nothingness. I am doing a great work. I cannot come down." Such outbursts are rare, but they bring us near the real mood of the smiling advocate of what passed for a dangerous innovation.

With its partly inevitable shortcomings, this book is a valuable one both for the student of woman's education and of New England in its constructive moment. All the facts are well deployed and the stage is well set. If the heroine's voice only rarely carries across the footlights, that may be small fault of the stage management. Those who talk themselves out fully to their contemporaries seldom possess cadences adjusted to the more difficult ear of posterity.

Sumerian Administrative Documents from the Second Dynasty of Ur. By David W. Myhrman, Ph.D. 146 pp. and 72 plates. Philadelphia: Department of Archæology of the University of Pennsylvania. $6.

The 171 tablets and fragments in this volume represent part of the material obtained from the first three expeditions sent out to Nippur by the University of Pennsylvania. The excavations were conducted by Dr. J. P. Peters and J. H. Haynes, with the result of enriching the collections of the university with thousands of tablets coming from various periods and representing chiefly business documents. Dr. Myhrman is to be commended for the admirable copies that he has furnished of these difficult texts. He has avoided the mistake made by some copyists of following too closely the shadings and peculiarities of the scribes, and thus merely increasing the labor of those who are to study the copies.

We cannot agree with Dr. Myhrman in his use of the phrase, "Second Dynasty" of Ur, and he fails in his introduction to justify his view that there were two such dynasties. Not so many years ago Assyriologists supposed that there were three, or even four, Ur dynasties, but the general consensus now holds that there was only one. Dr. Myhrman is inclined to place the five rulers of Ur, who constitute what he calls the "Second Dynasty," from 2408 B. C. to 2291 B. C. In this respect he differs from Prof. Eduard Meyer and others, who place the beginning of the Ur Dynasty about a century later. It all depends upon the question whether the so-called First Dynasty of Babylon was immediately followed by the Kassites or not. Dr. Myhrman thinks that there must have been a considerable interval between the two; but satisfactory evidence for this is wanting; and until further material of a definite character is forthcoming the problem will have to be kept in abeyance.

The most valuable part of Dr. Myhrman's introduction is in the chapters on the date formulas, and on the names and orders of the months, according to the tablets published by him. He has given a complete list of the dates attached to the documents, which are entered according to events in the careers of the reigning kings. The custom of dating according to the years of rulers was not introduced into Babylonia until the days of the Kassites. Supplementing the material furnished by his text from that to be found in other publications, we have now a complete series, with the exception of sixteen years in the rule of the first member of the dynasty, and ten years in the rule of the second member. In his chapter on the names and orders of the months he has shown that during the Ur Dynasty no less than four different series of Sumerian names were used. From other sources we know that each month had even a larger number of names than four, and there is a problem connected with this rather bewildering state of affairs that remains to be solved. An advance towards its solution has been made by Dr. Kugler in the second volume of his great work on Babylonian astronomy, which unfortunately came out too late to enable Dr. Myhrman to discuss the points in which he differs with Dr. Kugler. There appears to be even some question as to the order of the months, though it is doubtful whether Dr. Myhrman is justified in raising the question whether one order was used at Ur and another at Nippur. The names, or rather the various series of names, being the same, the presumption is in favor of a uniform calendar at this period throughout the Euphrates Valley. There was apparently, however, a shifting in the order of the months, for a designation that appears in one series as the seventh month appears in another as the eighth. The question is a most important one, and deserves a fuller treatment than Dr. Myhrman was able to accord it in his summary introduction.

The Works of James Buchanan. Collected and edited by J. B. Moore. Vols. IX, X, XI. Philadelphia: J. B. Lippincott Co.

With the eleventh volume the publication of Buchanan's works is complete, so far as the text is concerned. There remains only an index volume. The last three volumes cover his service as Minister to the Court of St. James, his Presidency, and his retirement. An appendix contains the comparatively small number of letters which had escaped the search of the editor. When in London he was concerned with the occupation of a part of Central America by Great Britain, in contravention, as was supposed, of the Clayton-Bulwer treaty, and with trade between Canada and the United States. His relations with the Aberdeen Ministry were cordial, and the points at issue were about to be settled, when Aberdeen gave place to Palmerston, and at once Buchanan saw that the probability of coming to an agreement was remote. His voluminous letters to Marcy contain much that is of interest, from court-dress to the war in the Crimea, and mark the real ability of the

man to deal with the conditions. He went to the Ostend Conference reluctantly, and, although the report was prepared by him, he did not place a high estimate on the value of the performance. All this time he denied that he was seeking or desirous of receiving the nomination to the Presidency. His party called him, and he was elected. It cannot be said that this series of volumes will materially alter the general opinion of Buchanan's character and capabilities.

He was first a politician, and not until he returned to England did he develop a statesmanship which stood him in good stead at the time, but proved to be inadequate when the real test came. The slavery question hampered him time and again, and necessarily narrowed his range of vision as well as of action. He never realized the greatness of the question involved, and could not lay aside his opinion formed in Jackson's day, never seeing that in more than thirty years the problem had become a moral as well as a social question. He believed no one understood his policy as President, and gathered material for a defence of his conduct. But he could not agree with Black, whom he selected to prepare this defence, and so the material came to naught. He lived long enough to see the end of the war, and the first experiments of reconstruction, but he contributed nothing to the history of the times after his retirement. Mr. Moore has been very industrious in gathering his material and skilful in its use. The number of private letters is astonishingly small, and they are not rich in historical material. It is much to have this well-arranged set of papers, for the growth of Buchanan is more readily measured. We wish the editor had not been so sparing of notes, and that he had more often given his experienced view of the course of diplomatic relations coming under Buchanan's direction.

Notes.

The Index of the *Nation*, January 1 to June 30, will be printed with the issue of July 7.

J. F. Taylor & Co., New York, announce for publication early in August "Ingersoll: A Biographical Appreciation," by Herman E. Kittredge. This volume will be uniform with the Dresden edition of Robert G. Ingersoll's works.

"The Ships and Sailors of Old Salem," by Ralph D. Paine, was credited in our review of June 16 to the Outing Publishing Co. It should have been noted that the books of this house have been taken over by A. C. McClurg & Co. of Chicago.

Sturgis & Walton Co. announce for publication next autumn "The Suffragette," by Miss E. Sylvia Pankhurst; "Leopold II, King of the Belgians," by Angelo S. Rappoport; "Hunting Camps in Wood and Wilderness," by H. Hesketh-Prichard; and "Famous Impostors," by Bram Stoker.

George H. Doran Company has obtained the exclusive selling agency for the book and calendar publications of the Life Publishing Company.

The Society for the Preservation of New England Antiquities, which has for its object the purchase and care of places of historical or other interest, has just issued the first number of its illustrated bulletin. The society invites applications for membership. Information may be had from W. S. Appleton, No. 20 Beacon Street, Boston.

The Société des Gens de Lettres has awarded the French Bourse Nationale Littéraire, 3,000 francs, to the poet, Maurice Levaillant. Two books of verse, "Le Miroir d'étain" and "Le Temple intérieur," have been published by M. Levaillant, who is a native of Normandy.

"Federal Fish Farming" is the suggestive title of an interesting account of our fish cultural work by Deputy Commissioner Hugh M. Smith in the *National Geographic Magazine* for May. Beginning nearly forty years ago with the investigation of the reported decrease of food fishes in New England waters, the bureau now puts out yearly more than three billion fishes—the perch being the largest number. Among its subsidiary contributions to our national welfare is the discovery of widely prevalent fish cancer, which may be of great and far-reaching consequence because of its bearing on the cause of human cancer, and the improvement of the fishing vessels. By the introduction of a type of craft which combines large carrying capacity and great speed with enhanced safety, the loss of fishing schooners from the port of Gloucester alone has decreased from 82 vessels and 895 men in the ten years ending in 1883 to "only a fourth as many vessels and men" in the ten years ending in 1907. "One of our worst enemies.' the house-fly, is described by N. A. Cobb, with enlarged photographs, and Harriet C. Adams tells of a trip by the recently opened Transandine Railroad from Buenos Ayres to Valparaiso. All the articles are illustrated in the admirable manner now characteristic of this magazine.

Hutchins Hapgood shares with Gilbert Chesterton an odd philosophy of commonness, but illustrates it in a fashion at once more vague and less paradoxical. He holds that in mankind brought through poverty or vice near to the limit there inheres a distinction born of complete spontaneity. The lowly (like aristocrats, who are also brought near to the limit by the opportunities of wealth aiding a strong sense of life) are the "real thing." They know how they feel, and say what they mean, are open hearted and unvexed by small scruples. Thus the aristocrat and the tough are akin in being infinitely superior to the bourgeois, who is *par excellence* the unspontaneous man. Already the thesis of the book begins to look familiar. We have the romantic craving for extremes, the romantic scorn for qualified or middling things. But readers generally of Mr. Hapgood's "Types from City Streets" (Funk & Wagnalls) will bother rather little about the thesis. They know that Mr. Hapgood has thoroughly coasted his Bohemia and Alsatia, and that his discoveries are usually interesting, invested with a glamour that looks like that of life, and is perhaps the more attractive because it is nothing of the kind. Such readers will hold high expectations of a book that presents not merely a single thief or a small group of anarchists, but a full hundred of eccentric types. In the eating of the pudding, however, there may be some disappointment. Most of this work is early and sketchy. A great enthusiasm, a fairly religious zeal for the morally unbraced individual, is everywhere apparent; but the types themselves are of a disconcerting sameness. They seem dissolved in the author's admiration of them, so that what one really gets is not a vivid and various picture of the low life of New York, but a continuous revelation of a soul privateering among phantoms which it generously takes to be tall fellows. The reason for a kind of "woolliness" in this book is probably that in these early explorations Mr. Hapgood's eye was less on the object, than on the general gorgeousness of the quest. There may have been a still sorer obstacle to clear vision. Just as the too sympathetic physician may actually induce all manner of symptoms in a sensitive patient, so it seems possible that Mr. Hapgood so captivated his types that they insensibly assumed the colors of his expectations. However that be, the book is of a beguiling enthusiasm, and that reader who should explore the East Side in the hope of seeing it with Mr. Hapgood's eyes would have to blame for a disappointment merely his own lack of critical psychology.

The latest section of the "New English Dictionary," prepared by W. A. Craigie (Clarendon Press), carries the story from *round-nosed* to *ryze*. It is interesting to notice that in the last three sections the language has been almost equally indebted to the Teutonic and to the Romanic tributaries. Among the words of obscure origin, *rowdy* is one of the most piquant. It is of pretty recent coinage, and it is assigned to America. In the first instance, 1819, it was a term for American backwoodsmen—"the hunters, or Illinois Rowdies, as they are called, are rather troublesome." In Queensland, in 1872, one could speak of a "rowdy bullock." In England, in 1862, the term was applied to the brawlers at an election. The leviathan of this gathering is the little word *run*, a rich idiom-maker, which, with all its forms and senses, occupies thirty-seven columns—simple reading for one to the manner born, but appallingly difficult for a foreigner. Fancy, for example, the sorrows of a French schoolboy pondering on the difference between *running up* a road and *running up a bill*; *running for* office or *running for the* office, and *running for* life or a silver cup; *running off* a race and *running off* the track; *running down* a hill and *running down* a pedestrian or a rival; looking *run down* or letting a clock or a house *run down*.

The historic vista which this section opens and the change which has taken place in the ideals of dictionary-makers may perhaps be suggested by saying that it carries the story from *Round Table* to *rubberneck*. Even though the material had been accessible, it would have appeared to the classical Dr. Johnson sheer idleness to wade through mediæval romance, blazing his way to Wace's *Roman de Brut* (1155) to find the first mention of the Arthurian board. To-day a student wishing to investi-

gate that famous institution may turn to the dictionary for a fairly extensive directory of original sources. Chesterfield, who, though not essentially frivolous, had a keen relish for frivolity, urged Johnson in a periodical of the day to include in his forthcoming dictionary a list of the gay cant words of polite society, including "flirtation," at the birth of which he had himself assisted. But, alas for the earl, the lexicographer, with a thunderbolt in his sleeve, was meditating at that time on the meaning of literary patronage, and was in no mood for the cant of polite society. *Tempora mutantur*—hence the indecorous act, and the atrociously indecorous word for the act, of "rubbernecking," and their record in the treasury of our speech. The reflection that many of us here at this hour assisted at the birth of this ill-featured monster should lead us to set a guard upon our lips. The indiscretions of yesterday become the precedents of to-morrow; the hapless purist must be prepared to hear the schoolboy's irrefragable retort, "It's in the dictionary!"

"An Outdoor Breviary," by M. Jourdain (London: The Academy Press), is one of those rather numerous books about nature in which preciosity of phrase and plentiful literary allusion serve to cover essential thinness and vagueness of feeling. Thus the annual round in England is tricked out with oddments of a somewhat rococo sort, the result being perhaps entrancing to the more sophisticated reader of to-day. A stray figure or two may serve for allurement or warning. Cherry blossoms "shine like the silver veins of a niello"—such reversion from nature to art is characteristic. "The sun, from beneath a blue cloud pours his rayed water-carriers, regular as the pale amber sticks of a delicate fan, upon the heavy-headed elms steeped in a film of blue, and upon the infinite distance built up of wet light and pale cloud-like forms of hill and plain." Here is distinction, of a sort, but the sort is pretty familiar.

To the attractive uniform edition of the works of Vernon Lee, the John Lane Co. has added the volume of essays on social subjects entitled "Althea." Sympathy and frugality on the part of the favored class is the sum of the matter as threshed out by the amiable figureheads who speak the author's thoughts. One or two of them have a certain life of their own. The dialogues are an eloquent plea for a discreet undoctrinal Socialism that implies rather change of heart than overturning of political forms.

From English writings of the thirteenth and fourteenth centuries the Rev. W. W. Skeat has collected 302 proverbs. These are illustrated by parallels from English and other literatures, so that the total mass of proverbs is large and instructive. Professor Skeat remarks the scarcity of such "bywords" in Anglo-Saxon literature. This is due surely only to the fact that we have almost nothing of a truly popular sort transmitted from this period. The proverbs must have existed, they merely did not get written down. Recent criticism has suggested that such thirteenth century documents as the "Ancren Riwle" and much of the material in Morris's "Old English Homilies" are really transcripts of originals neary two centuries older. If so, a certain amount of the proverbial stuff in this book should be credited to Anglo-Saxon times. But Professor Skeat is silent as to these redatings. Chaucer is naturally the chief source of proverbial wisdom, providing more than a third of the whole. His sapient Pandarus in "Troilus and Cressida" is full of sententious examples, but the fair Cressida herself is skilful in glozing her own frailty by these moral commonplaces. Civilizations are pictured in proverbs. We say to-day, "Don't crack a hazelnut with a triphammer." The fourteenth century equivalent of this maxim is "Don't start a falcon at a fly" (No. 102). This learned little book, which is called "Early English Proverbs" (Henry Frowde), represents the recreations of a great scholar. It will not fail to interest readers of antiquarian bent.

In one of the last letters Grover Cleveland ever wrote he expressed the belief that the man to lead the Democratic party back to its old creed and its old policies was John A. Johnson, thrice elected as a Democrat Governor of Republican Minnesota. When Gov. Johnson died last autumn Theodore Roosevelt wrote from Central Africa to Mrs. Johnson that her husband's death was a "loss to good citizenship," and characterized him as "one of those Americans who we like to believe are typical of our people as a whole." Few Americans in public view in the past decade have so strikingly illustrated the opportunities of American life as Gov. Johnson. The story of his career is interestingly told by Frank A. Day and Theodore M. Knappen, two of his close associates, in their "Life of John Albert Johnson" (Forbes & Co.). The book, as the authors explain, is not intended to be a critical biography. Their hope is "to extend as widely and as soon as possible the influence that Gov. Johnson would have continued to exert in person had he lived." As far as any memorial biography can accomplish such an end, this will probably accomplish it. It is too early to measure the man's influence or determine his place in the history of the nation, but the sympathetic picture here presented by those who knew and loved him is well worth preserving. That this son of poor immigrant parents, who was born in a frontier State in one of the civil-war years, and spent almost his entire life as the editor of a little country newspaper, should in so brief a time have overcome both political and social obstacles and stood forth as a Presidential possibility, is reason enough to make the story of his life worth telling.

Prof. J. H. Wigmore, not content with the contribution made in his elaborate "Treatise on the System of Evidence," has now rendered the trial lawyer a further service by compressing into a compact code the essential rules of the subject ("A Pocket Code of the Rules of Evidence in Trials at Law"; Little Brown & Co.). In this handbook of 485 pages of text (and 80 pages of index) the law of evidence is stated in the form of some 230 leading propositions, with their various qualifications running into more than 2,000 sections, with no citation of authorities but with a multitude of cross references and of citations to the corresponding discussions in the "Treatise." We can agree that the usefulness of Stephen's "Digest" has been "barred by limitation," and may add that, even if such were not the case, its usefulness will lessen appreciably with the appearance of this code. The make-up of any such book is an important matter. There is here the ordinary device of blank alternate pages, and a system of brackets gives real guidance to the fast worker. The recognized rules of evidence are stated in ordinary form. Those rules, or modifications, which prevail in some, but not all, jurisdictions, are placed within single brackets, while propositions which are nowhere recognized as law, but should be, are within double brackets. The curved brace is used to identify a rule which "is the law in every jurisdiction, but ought not to be law"; only two instances of this last notation are found, although its place seems sometimes to be taken by a footnote (§§ 710, 712). Where the single bracket is used, in addition to the citation to the discussion in the "Treatise," a foot-note often indicates the jurisdiction of dissent. The bracket may enclose only one word, often "not," in a rule, but it at once puts one on inquiry. That a careful use of this code will guard the prudent trial lawyer against proceeding on a chance is shown by the fact that the single bracket appears in more than 500 instances. In some cases, the single bracket seems wrongly superseded by the double, as in the proposition (§16) that the "judge may express to the jury, after the close of evidence and argument, his personal opinion as to the credibility or weight of the evidence or any part thereof," the foot-note adding: "This is not the law to-day in any jurisdiction, except in New Jersey and in the Federal courts. But it ought to be." Professor Wigmore files a claim on his quarter-section of legal authorship by the notice that he proposes to bring out a series of the code with special annotations suitable for each of the jurisdictions "having voluminous authorities." It is to be hoped that the New York edition will be widely used. His preface points out truly, with unpleasant candor, that "an accurate familiarity with the local rules of evidence is to-day lamentably lacking among practitioners who try cases (most notably in metropolitan courts)."

In the *Nation* of February 17 reference was made to the approaching completion of the Weimar edition of Goethe. Since that date two of the promised volumes have appeared, the final volume of the "Gedichte" (V^2) and volume XLIX of the "Briefe." The volume of the poems, edited by Julius Wahle, is composed for the most part of the critical apparatus, with some necessary commentary, to volumes IV and V^1. It includes also the corrections and additions essential to offset the errors and oversights arising out of and revealed by the change of editors, Loeper having died in 1891 and Redlich in 1900, with the difficult editorial task still far from completed. Under the head of "Nachträge" there is given but one poem by Goethe, viz., "Das Tagebuch," which doubtless would not have been included in this edition at all, if it had not already appeared elsewhere. Goethe probably intended that it should never be published, because, as he said, "the world is accustomed to call such things immoral." His own manuscript was sealed up some years ago, never to be opened, not even for this edition. But Hirzel published his unauthorized copy of it privately, in 1861, for a small circle of Goethe admirers, and one

or more of the copies passed into strange hands, to be seized upon by unscrupulous publishers as an irresistible lure for the pathological public. The poem was later included in some of the editions of Goethe. Among the "Paralipomena" are a considerable number of interesting scraps from the poet's workshop, which Wahle endeavors, with rare knowledge and insight, to bring into their proper connection. The alphabetical index of first lines includes not only the poems of the first six volumes, but also all the lyrics scattered throughout the many volumes of the edition, except those to be found in the dramas. Why the latter should have been omitted, we are not told. The index is the work of Hans Gerhard Gräf, and will be of great service to all who use the edition, especially as convenience for reference was not the fundamental purpose of the arrangement of the early volumes. The Weimar edition being the only complete one and the only one that attempts to give full information as to manuscripts, first publication, and variant readings, scholars are now for the first time in possession of all the critical material bearing on the poems. The volume of the letters, edited by Max Hecker, covers the period from July, 1831, to the poet's death in March, 1832. It contains 194 letters, of which 65 are here published for the first time in their entirety, though extracts from some of them have previously appeared in other publications. The last letter of the series is the important and oft-quoted one of the 17th of March, 1832, to Wilhelm von Humboldt. Goethe died five days later. By a peculiar slip of the pen, or oversight in proof-reading, Hecker gives the date of his death as the 9th of March (p. 287), perhaps a confusion of the 9th of May, the date of Schiller's death (in 1805), with the 22d of March.

George A. Hubbell has given us the most satisfactory biography of Horace Mann that has been written, under the title "Horace Mann: Educator, Patriot and Reformer" (Philadelphia: Wm. F. Fell Co.). When the author was teaching a village school in Ohio, a copy of the inaugural address of Horace Mann as president of Antioch College fell into his hands and greatly moved him. Later as a student and as a professor at Antioch he studied and was greatly influenced by the life work of this our greatest educational reformer. He has spent six years in the preparation of the biography and a large amount of material has been placed at his disposal by the family and friends of Mr. Mann. The book is affectionately appreciative. It seems almost as though it were written by one who had known Horace Mann and loved him. And yet it is not unmindful of his faults. Not only his career as a reformer in the Massachusetts Legislature and in Congress, and those years of struggle in which he did the greatest work for American education that has ever been done, but those more peaceful final years at Antioch are adequately portrayed. We see here a fascinating personality and a great and devoted leader. The story is told in a style simple and direct.

The value of such a manual as "L'Age d'Or de la littérature française," by Louise Delpit (Heath), is questionable. American students are likely still to turn, if they read French, to Lanson or Pellissier, to which this book adds little. A manual in English, based upon such substantial works, would probably have a better chance.

In "Education for Efficiency" (Heath & Co.) Prof E. Davenport of the University of Illinois makes a vigorous and convincing argument for such changes in our schools, and especially in the high schools, as shall make them serve all the people in their needs for everyday life. He thinks that through vocational studies in the already established institutions, and not through separate trade schools, our youth should obtain that education for efficiency and service which is more and more demanded. He would give one-fourth of the time of the high-school pupil to this vocational work. Professor Davenport writes from the agricultural standpoint and points out very clearly and definitely how vocational work in agriculture can be made a part of the course of schools which draw their pupils wholly or in part from the country. We wish that he or some one else would indicate how vocational training for every one can be given in a city high school, which draws its pupils not from a single occupation like farming, but from a multitude of occupations.

"L'Invention et la composition dans l'œuvre de Rabelais" (H. Champion, 400 pages, 8 francs), by Jean Plattard, *docteur ès lettres*, has a triple interest—in history, in university matters, and in language and literature. In successive chapters it deals with the relations of Rabelais's work to the romance literature of his time; of *moinage* and the Respublica Scholastica; law studies and legists; medical science; humanism; popular wit; and the general characters of Rabelais's style.

"Les Civilisations de l'Afrique du Nord" (Armand Colin, 400 pages, 4 maps, 4 francs), by Victor Piquet, treats with succinct erudition of the past history of what is now a French sphere of influence—Tunis, Algiers, and Morocco. Except for Tripoli, this answers to the former Barbary States. The present volume has to do with Berbers—the primitive, and still the most numerous race—conquering Arabs and Turks, and notes by the way such adventitious elements as Phœnicians of Carthage, Romans and Byzantines, and Spaniards. It stops short of present French "Berberie," to which a future volume is to be given.

Ludwig Rapp, the historian, died recently at Innsbruck, at the age of eighty-two. Among his works, which deal chiefly with Tyrolese history, are "Königin Magdalena von Oesterreich," "Hexenprozesse in Tirol," and "Eine Jakobiner Verschwörung in Tirol."

Science.

Frederick A. Stokes Company will publish, early in July, "Common Weeds of the Farm and Garden," by Harold C. Long.

At the meeting of the board of trustees of Cornell University on commencement day, June 23, Burt G. Wilder, the last active member of the original faculty, having resigned after a service of forty-two years, was made emeritus professor of neurology and vertebrate zoölogy.

The "History of Gardening in England," by the Hon. Mrs. Evelyn Cecil (Dutton), has now, after a lapse of fifteen years, appeared in a third edition, enlarged and revised. It is an interesting book, appropriately illustrated, and made with the unusual combination of industry and taste. Its multitudes of facts are almost bewildering, but the general impression is curiously the same as that made by Curtler's "Short History of English Agriculture," lately reviewed in these columns. For centuries after the period of stability under the Romans, agriculture and gardening in England flourished in peace, languished in domestic war. There were, for the simple home folk, dreadful periods in the dark ages, when neither prosperity nor glimpses of beauty could be counted on, sometimes for generations together. Taste was not known; gardening was scarcely undertaken outside of monastery walls. But when these walls were thrown down by Henry VIII we mark the commencement of England's internal prosperity, which, except at two epochs under the Stuarts, has continued till this day. Then first began the general home-gardening, which meant comfort to the householder; next followed the development of styles.

To Americans the glimpses into English gardening are interesting, chiefly for the thoroughness with which changes in taste were accepted by the nation, and the great scale on which improvements were made. Enormous gardens made for fêtes to visiting ambassadors were but temporary; large undertakings at noblemen's country seats seldom lasted longer than from father to son. It is only the gardens of the eighteenth century, and very few of those, which have lasted till our day. When we read of the five-hundred acre garden at Stow, we marvel. If an imitator's garden of but twenty-eight acres cost, with its walks, ponds, fountains, and bridges, its statues, temples, and columns, the greater part of the great fortune of its owner's wife, what must have been the outlay on the larger place? Every change of style produced similar expenditures throughout the kingdom. And the changes were wide. When the excesses of the Dutch style, with its formal designs and sheared trees, brought about the imitation of landscape (it was Kent, says Walpole, who "leaped the fence, and saw that all Nature was a garden"), the extreme of fashion was as great. "Capability" Brown made the final developments of a style according to which an avenue of trees was a blemish, and a flower visible from the house a painful discrepancy. It is interesting to find that in the changes from these two excesses of taste an influence was exerted by men of letters, in the first case Addison and Pope, in the latter, Scott. The landscape style was eventually followed by the bedding system, by which for three months the garden flared with the brilliant hues of hothouse plants, and for the remaining nine was a withered waste. William Robinson, late in the nineteenth century, brought about the beginning of the change to the old hardy plants which now, in a combination of wildness and formality, procure for English gardens (alas, not for ours!) flowers for every month. This is made possible, of course, partly by climate partly by the wonderful plant discoveries of the nineteenth century. Innumerable new varieties, and even species, were found,

imported, and propagated, so that now, with bulbs and shrubs, and new hardy annuals and perennials, the English garden is at a far remove from the monastery *herbarium*. When we read the list of plants recently discovered, but not yet propagated in England, we realize the further possibilities of the English garden —and of our own.

"Mosquito or Man" (Dutton) is the title of a handsome and attractive book by Sir Rubert W. Boyce, a professor of the University of Liverpool, who has extended personal knowledge of his subject and writes charmingly about it. As indicated by a secondary title, the author's purpose is to show the relation of the mosquito to the diseases of man, and to make clear what may be done to exterminate the mosquito or limit its harmfulness to man in tropical countries. The point of view is that of the British schools of tropical medicine, and the problems considered are those of British residents in the tropics, but the writer is thoroughly and appreciatively familiar with the important work done by Americans, more especially that in Cuba and at New Orleans. Less attention is paid to the problem as it presents itself in the temperate zones, but here the solution is essentially the same. The practical work in other countries is briefly treated. These qualifications do not impair the value of the book, which is one of the best for the general reader, well calculated to give him a clear idea of what man may do for his own protection. In a few short final chapters some other diseases due to insects, or other causes controllable by hygienic measures, are considered most suggestively, but almost too briefly. Boyce calls particular attention to the fly, the common house fly (*Musca domestica*), proposing to name it in general the "septic fly." Howard's name, the "typhoid fly," he holds to be unsatisfactory in its apparent limitation of the vast variety of harm done by this animal, which is the disgrace as well as the pest of domestic economy. The thoughtful reader will quickly perceive that when the community really recognizes what the fly can do there will begin a campaign far more remarkable than that against the mosquito, wonderful as that has been. The book has many interesting illustrations, exceptionally well reproduced.

Although not so stated, either on the title page or in the preface, the "popular" edition of Prof. Elie Metchnikoff's "Prolongation of Life" (Putnam), translated by P. Chalmers Mitchell, is a reprint of the edition published in 1908. There is therefore nothing new in it except the introduction by Prof. Charles S. Minot of the Harvard Medical School. Professor Minot says that Metchnikoff's greatest contributions to science are his two volumes, "Lessons on the Comparative Pathology of Inflammation," published in 1892, and his "L'Immunité," which appeared in 1901. Professor Metchnikoff's discovery that the white blood cells (leucocytes) are the scavengers of the body has exerted a tremendous influence in promoting experimentation with sera and anti-toxins. This discovery alone should be sufficient to award him a lasting place in the history of medical experimentation. The optimism of Professor Metchnikoff is evident in all his work, and as Professor Minot puts it, "One feels that here is a man to whom hope is a habit of mind." For more than forty years (he is now sixty-five) Metchnikoff's great gifts have been employed in the cause of science, and, unlike some of his less fortunate predecessors and colleagues, he has seen these gifts bear rich fruit in the service of mankind.

Drama and Music.

A Garland to Sylvia. By Percy MacKaye. New York: The Macmillan Co. $1.25 net.

This is an early work begun originally in 1897, when Mr. MacKaye was a senior in Harvard, and completed in 1899, when he was a student in Italy. He now publishes it with an explanatory preface, or rather two prefaces—his present introduction including one written at a much earlier period—and after some editing, the extent of which is not indicated. On the title page, it is called a dramatic reverie, which is, perhaps, as good a definition as any other. Its dramatic value is nil and its purport vain, but regarded as a poetic fantasy, born of youthful speculation in unfathomable metaphysical and psychological mysteries, it is fanciful and interesting. Briefly it is a tale of a Harvard undergraduate of mystical tendencies, who has chosen for the heroine of his first play the subject of Shakespeare's famous song, "Who is Sylvia?" He pictures her as a daughter of Pan, the spiritual essence of all loveliness in Nature, and having embodied her in his poetic vision, falls in love with his own creation and has moments of illusion when he can see her and speak with her. In the play she is the object of general adoration, but can be won only by that suitor who shall be able to divine her secret, which is that, although apparently mortal, she is actually a spirit. The riddle is solved only by the villain, Sandrac, a dealer in magic; and the problem is how she may be saved from him, without the violation of dramatic truth, which to the poet lover is sacred. Finally, in despair, after a hint from the apparition of Sylvia herself, the author, as a last resource, burns his manuscript.

Then in a vision—the reverie is a play within a play—he sees his plot enacted, and discovers that the fanciful creatures whom he has willed into existence have become persistent entities in the realm which they inhabit, and that he no longer has the power to divert them from their destined course. They are the living beings while he is a futile ghost. Then he is compelled to stand by in impotence and see his adored Sylvia delivered into the power of the hated Sandrac. In the end, however, Sylvia teaches him how even dreams must perish in the waters of oblivion, and Sandrac and his mates having been beguiled into drinking of Lethe's stream, the lovers are happily united and the curtain falls.

Such a scheme could not be worked out with any great semblance of logical coherence, even on the theory of which the young poet seems to have been enamoured—that men are as insubstantial unrealities as the fancies begotten of them. Inconsistencies in the workmanship weaken its effect, either as fairy tale or allegory. But underlying it all is a pregnant suggestion of the persistency of the uttered thought and of the incalculable influence of the personality of the dramatist, not only upon the inventions of his fancy, but upon the actors who interpret them and the individual minds of the spectators. The idea of the play originated, Mr. MacKaye says, in some such considerations as these, which, of course, are not entirely new. But in his more mature preface, Mr. MacKaye is careful to disavow present responsibility for either the philosophy or the fallacies of this juvenile product, which, however, is well worthy the dignity of print. With all its occasional crudity, imitativeness and temerity, it is often amazingly clever and contains much charming poetry. Many of the conceptions of nature are particularly striking.

Daniel Suily, the actor, died on Saturday at Woodstock, N. Y., at the age of fifty-five. After some years' experience in music halls he wrote, in 1884, "The Corner Grocery," playing the leading part in this for five years. He produced several other pieces, and, in 1889, "The Parish Priest." In this and in a number of subsequent productions he always appeared in the rôle of a priest. He was well known throughout the United States. He retired in 1907.

A monograph upon the life and work of the late Edward MacDowell, by Mrs. Elizabeth Fry Page, is announced for immediate publication by the Dodge Publishing Co., New York. This house will also publish, in September, a work on costumes, covering nineteen centuries, by Mrs. Charles H. Ashdown.

The revival of the "Mikado" in New York has been rewarded with crowded houses, and its run has been extended two weeks. The theatrical managers should be laying the moral to heart. They are constantly telling us that the public gets what it deserves; they say they would be glad enough to put on good things, but good things never pay. Their mistake is plain to be seen. Finding that many good things—things that the inner circles rave about—have no attraction for the mass of men, they conclude that it is their goodness that works their undoing. But this is not in the least true. To be sure, there are many out-of-the-way things that are excellent of their kind, and yet do not win large popularity. But that is not because they are good, but because they are of a certain kind. As Chesterton says, "the public does not like good introspective sonnets, but neither does it like bad introspective sonnets." Similarly, the public may choose bad comic opera rather than good grand

opera, but it had still rather, any day, have good comic opera. Certainly, there is a very large public that has been craving the Gilbert and Sullivan repast—many have been craving it without even knowing of its existence. And their hunger is not sated. Besides, the "Mikado," with all its abounding fun, is a good deal less delightful than "Pinafore," and a good deal less clever than "Patience." Surely, the much-abused public has proved that it deserves to be subjected to these tests, too!

There is great satisfaction in England over the appointment of Henry J. Wood as conductor of the Birmingham Festival in succession to Hans Richter. Owing to the glamour which still attaches to the foreigner, where the British musical public is concerned, it was feared that English conductors would be overlooked.

In Germany alone there are 373 composers who belong to a society formed six years ago for the purpose, chiefly, of collecting fees for performing rights. Such fees were gathered in 1909 to the amount of $62,500, an increase of $15,000 above the receipts of the previous year. No less than 80 per cent. of the sum collected went to the composers, librettists, and publishers, who are included in the society to the number of seventy-six. The number of librettists is not given. Since 1904, the society has collected altogether $220,000. Among the members are Richard Strauss, Engelbert, Humperdinck, and Georg Schumann. A similar organization has been founded in England.

It is reported from Dresden that Richard Strauss's next opera, "Cavaliers of the Rose," will be produced for the first time there early in December. The libretto is by Hugo von Hofmannsthal, and the subtitle for the opera is a "comedy for music." The plot is the hackneyed one—a young *elegant*, entrusted with a proposal of marriage on behalf of an elderly, rich suitor, falling in love with the lady, and having his love returned. The scene is laid in the middle of the eighteenth century, in Vienna, at the time of Maria Theresa.

The story of Mascagni's new opera, "Ysobel," which is to be produced for the first time in any country in America next autumn by the newly organized Bessie Abbott Opera Company, is taken from the legend of Lady Godiva, the oldest known version of which dates back to the thirteenth century, but which is most familiar through Tennyson's poem. The action is set in the town of Coventry, in the eleventh century. Luigi Illica, the librettist, who also wrote the libretti of "Tosca" and several other standard operas, has departed from the original legend in many instances. It is "Ysobel," the daughter of the Earl of Chester, who makes the famous ride to save her townfolk. To protect her during her act of sacrifice, an edict is issued condemning any to the loss of eyesight who do not remain behind closed doors, while Ysobel makes her ride. The hero of the opera, a young huntsman who has worshipped Lady Ysobel from afar, takes advantage of the only chance to bring himself to her notice by defying the edict. He remains on a balcony and pelts her with flowers as she passes. Hero begins the love story around which the opera is built. A descriptive intermezzo will depict the ride. Signor Mascagni will himself conduct each performance of the new opera.

Art.

The Boston Museum of Fine Arts. By Julia de Wolf Addison. Illustrated. Boston: L. C. Page & Co.

Since the New Art Museum at Boston has been opened barely six months, this book has a topical character unusual in its class. At times it betrays the haste of its preparation, but in general it gives about the technical, historical, and biographical information that a visitor will wish. It is more discursive than most of the series to which it belongs, and, in a way, less business-like. It is readable without much sense of proportion. For example, the Wedgwood potteries are quite preposterously overwritten, while Chinese porcelains are treated quite inadequately. The work is planned for the longitude of Boston, which, since there will be its best reading, should perhaps not be counted a defect. For anybody but a Bostonian the story of the disputable Velasquez, and the famous referendum to a lot of more or less competent artists is unduly amplified. It would be enough to say that this was a transitional work, presumably genuine, but of rather slight artistic importance.

The matter of this book, barring exceptions which will be noted later, is much more satisfactory than its manner, which is, in a word, the New England amateur literary style. It is a diction as marked and worthy of investigation as, say, African Latinity. The cardinal maxims seem to be, When you have nothing to say, say it pretentiously, and when you have very little, say it repetitiously. A fair example is the phrase in which the author praises the installation of the Far Eastern department. "Not until such a museum as this is seen, may a visitor fully understand the message of Japanese art as displayed in this way." Here is merely an extreme case of a frequent defect.

In spite of these drawbacks, the book contains a considerable amount of relevant illustrative material, and with a little overhauling can be made very useful. A few suggestions are offered for a second edition. David Cox and D. Roberts are apparently taken to be American artists, and furthermore no mention is made of Cox's importance as a technician. The Museum's remarkable collection of drawings by William Blake is not properly emphasized. Hokusai's Thirty-six Views of Fuji, the large colored series, is erroneously described as a first stage towards the unduly famous Hundred Views in monochrone and small dimensions. On page 209 Dürer receives credit for a woodcut, Death in the Belfry, which must be Rethel's well-known composition. On page 116 a rug is dated 1640, but the corresponding illustration reads "sixteenth century." Spagnoletto, page 63, is a very ugly misprint for Lo Spagna. A number of the foreign names have been distorted in the types. Mezzotint engraving might have been treated more at length, but toward the merely charming in art our author is inexorable. Of Boucher's tapestry designs she says that they are "lacking in dignity as the type of a noble art." This is uncontrovertible, and she proceeds, "It would be as justifiable to treat the mane of the British lion with Marcel waves as to cover these textile monuments of human industry with these fluttering idiocies." At this point it appears unmistakably that Boston disapproves of Trianon: "It was all part and parcel of the smirking sentimental folly of that France which could not hear its own death-knell ringing in the groans of the oppressed who were compelled to suffer that the court might scintillate." We agree that these were feckless folk, but are as glad, from the point of view of art, that instead of pursuing the melancholy duty of listening for their death-knell, which our author retrospectively advises, they thoughtlessly employed such artists as Watteau, Boucher, and Fragonard.

Feeling that it is a mistake te try to see all the pictures of the chief European galleries in a single season, Mrs. Lorinda Munson Bryant has prepared a book called "What Pictures to See in Europe in a Single Summer" (John Lane Co.). Her counsel of moderation and selection is pretty well vitiated by her lack of knowledge, taste, or confidence in the teachableness of her readers. They are sent out of Italy without having seen anything of Giotto but the Dante portrait still falsely ascribed to him in the Bargello. They quit the Berlin Museum without seeing the Van Eycks or the Holbeins that are its glory. In the Louvre the book makes no mention of Watteau. For the author no working distinction between various Ghirlandalos and Vivarinis exists. The comment throughout is thoroughly philistine and poor in expression. On the other hand, it may for that reason be better adjusted than a better guide could be to the capacity of those whom it addresses.

Charles A. Lasar, in "Practical Hints for Art Students" (Duffield), sets forth in brief maxims, which are frequently repeated, the law and gospel of the modern neo-impressionistic method of landscape painting. Purple is the great harmonizer. Blue—shades of Sir Joshua!—is an advancing color; red a retreating one. Of course this is only true when painting is a purple feat. Perugino's distances, perhaps the loveliest and remotest we have, are in blue untempered by warmer color. But then the artless Umbrian laid in his foregrounds in the despised browns and went back through cool grays. We fear that to take Mr. Lasar's color hints literally would result in a generation painting uniformly like Mr. Redfield. Still the maxims are wholesome as to simplicity, elimination, and concentration of effect. The initial chapter on linear design and the expression of the figures, though eccentric in phrase, should be useful. It hammers into

the beginner the truth that composition is not merely an arrangement of the obvious lines, but of their projections in space. A few quotations will suggest the temper of this little manual:

Civilize everything except the eye.
Never economize knowledge, but economize labor.
Every scene has a principal sensation, multiply this sensation until the spectator can get at it quickly.

This book is calculated to make the beginner think. Its defect is a too narrow contemporaneousness. The student should add to Mr. Lasar's maxims the old prosaic one—"There are many ways."

The Société des Artistes Français has announced the award of four prizes, as follows: The Prix Rosa Bonheur to Louis Désiré Lucas, for his Femme à la Quenouille; the Prix Marie Bashkirtseff, to Léon Cassel, for his Sortie du Salut: Béguinage de Bruges (exhibited in this year's Salon); the Prix Balin-Dolet to F. L. Duluard, for his original etching, Le Triomphe de Mardochée, and the Prix Raigecourt Guyon to C. L. E. Signoret for his two pictures which he showed in the Salon.

Finance.

BALANCE OF TRADE.

The persistent hold of the mercantilist idea of the balance of trade on the general mind was never more strikingly illustrated than in the place given to it in the late Secretary Hay's splendid eulogy of President McKinley. That portion of his speech which dealt with the economic advancement of the country under McKinley's Administration reached its climax in the following passage, relating to the extraordinary increase in the balance of trade—the excess of our merchandise exports over our merchandise imports:

> But, coming to the development of our trade in the four McKinley years, we seem to be entering the realm of fable. In the last fiscal year our excess of exports over imports was $644,592,826. In the last four years it was $2,354,442,213. These figures are so stupendous that they mean little to a careless reader—but consider! The excess of exports over imports for the whole preceding period from 1790 to 1897—from Washington to McKinley—was only $356,808,822.
>
> The most extravagant promises made by the sanguine McKinley advocates five years ago are left out of sight by these sober facts. The "debtor nation" has become the chief creditor nation. The financial centre of the world, which required thousands of years to journey from the Euphrates to the Thames and the Seine, seems passing to the Hudson, between daybreak and dark.

Coming from a man of Mr. Hay's broad culture and fine intellect, and upon so high an occasion, this bears singular testimony to the dominion exercised over men's habitual thought by the old notion that to sell more to foreigners than you buy from them is the great desideratum, the potent cause of prosperity, the sure sign of commercial and financial dominion.

To those who acclaimed in this way the balance-of-trade figures of the McKinley years—figures which, indeed, were highly remarkable and noteworthy—the showing of the fiscal year now drawing to a close ought to be extremely depressing. The excess of our exports above our imports during the eleven months ending with May is only $179,000,000, and the final figure for the fiscal year will not exceed $200,000,000. To find as small a "favorable" balance as this in the past, we have to go back fourteen years. In the fiscal year ending June 30, 1897, the excess of exports was $286,000,000, and it has been above $400,000,000 in every fiscal year since that time, with the single exception of the year ending June 30, 1909. For each of the four full fiscal years of McKinley's Presidency, the balance was well above $500,000,000; the average annual balance for those years was nearly $600,000,000. On the other hand, for the four years 1907-10, the average will be but a trifle above $400,000,000, a falling off of thirty per cent. as compared with the four McKinley years, in spite of the vastly increased scale of business and the world-wide rise of prices. In 1909, we came down to $351,000,000; and this year, as already stated, we shall have to record the melancholy figure of a paltry $200,000,000. In two of Cleveland's years we did better than that—$237,000,000 and $286,000,000 in the years ending June 30, 1894, and June 30, 1897, respectively.

But the worst remains to be told; for these results are only what we get on the face of the figures, and a mere glance at what is behind them suffices to show that the precious balance has suffered much more than appears on the surface. Even the most devoted believer in the saving grace of a "favorable" balance of trade does not hold that its blessings arise from the mere existence of the figures in a statistical report; the beneficent fact to him is that we have actually sold to foreigners so much more than we have bought from them. Well, we all know that to get at this surplus we have to make heavy deductions from the figures of excess of exports above imports. The two most important deductions are the amounts we pay out for transportation by foreign carriers, and the amounts expended by American travellers abroad. Neither of these big items enters into the government tables giving excess of merchandise exports over merchandise imports. It has long been customary to reckon these two items together at more than $200,000,000. But whatever they were in the past, it is evident that both of them are greatly increased now. The habit of European travel has been growing rapidly and steadily, year by year; the amount spent by Americans abroad has been increasing by leaps and bounds. And as for freight charges, since the total volume of our foreign trade has increased enormously, it is certain that we have had to pay decidedly more to foreign carriers than in former years. It is highly probable that, if these two items of expenditure were duly taken into account, and allowance also made for undervaluations, our balance of trade this year would be found a pretty heavy "adverse" one, instead of being a "favorable" balance of $200,000,000; and in any case, so far as a comparison with the McKinley years is concerned, the falling off in the balance is much greater than that shown by the statistical figures, heavy as this is.

Now, from the point of view of the financial expert the ups and downs of the merchandise balance are sometimes highly important elements in the casting of the business horoscope; but they are but one factor in a complex whole, and their significance, such as it is, varies with varying circumstances. A sudden increase in the "favorable" balance, for instance, may mean that we are buying back our own securities, or that we are making investments abroad; but that does not necessarily mean that we are doing better, or saving more, than we should be if we utilized all our capital in enterprises at home and even invited fresh foreign capital for investment. Again, if we kept on having enormous "favorable" balances, and made vast investments abroad, a time would come at last when the annual returns on those investments would be so great as to do more than balance the new investments made each year, and thus, while still increasing our holdings abroad, we should be having, year after year, large "adverse" balances; this has long been the condition of England. In fact, a nation's economic status can no more be inferred from the mere figures of its balance of trade than the condition of a corporation can be told by merely ascertaining the amount of its receipts and its expenditures, without inquiring how much of those expenditures were for running expenses, and how much for permanent betterments.
